PREFACE

It is now over twenty years since the author first began to specialize in interstate commerce matters. In that time a great change has taken place in the field of traffic law. From 1887 to 1908 all the decisions of the Commission could have been digested in manner similar to the Lust Digests into a volume of about 250 pages. After the passage of the amended Act in 1906, the Commission became very much more active. The year 1910 when teeth were put into the law, really marked the beginning of the period of intensest activity on the part of the Commission. So from 1908 to 1912 it took a volume of about 1000 pages, being the first volume of our set of Abridged Reports and Digest of Decisions, to digest the decisions of the Commission.

Since that time the work of the Commission has ever increased, so that every year a volume of almost 1000 pages could be issued.

The Abridged Reports in the bound form are published every two years. Thus No. 8 the volume preceding this, and also known as Supplemental Digest No. 7, is a volume of 1400 pages. The present volume is the same.

Recognizing that the Lust Digests have become a trifle cumbersome for quick reference, that is to solve a situation or settle a disputed point in a few minutes, we published in 1925 the Consolidated Digest in two volumes.

This set had a double purpose.

It was a complete Digest of Decisions of the Commission from 1887 to 1908, the period that was not covered by the original Lust Digests.

In addition from that time on, while it rendered immediately accessible only the high lights of the commission's work, it did contain a reference to every principle and every case decided under the particular subject.

A problem of economy has now arisen in supplementing the Consolidated Digest. Economy in financial investment as well as in time of the subscriber. It is recognized that there are a number of sub-

scribers to the Consolidated who are also subscribers to the Abridged Reports.

To give them two volumes containing practically the same information would appear to be a useless expenditure of money on their part and at the same time confusing to them.

Furthermore, the additional investment necessary on the part of the publisher would be large.

In this case it might be interesting to observe that in 1926 Senator Hawes introduced a resolution in Congress, directing the Commission to prepare its own Digest, and that the same should be printed by the public printer. The resolution was passed.

The following day Senator Curtis called attention to the fact that the mere cost of printing alone to the government would be $60,000.00, without figuring the cost of compilation. The resolution was thereupon rescinded. As a matter of fact, the Abridged Reports and Current Digests, of which this is Volume IX, could not possibly be duplicated for less than $125,000.00.

The field is limited. The publication has never been remunerative and has been continued by the author as a matter of pride, because from the many letters of commendation constantly being received, he has believed it was useful.

The volume presented here accomplishes a three-fold purpose. It is Supplemental No. 8 of the "Digest of Decisions Under The Interstate Commerce Act." It is volume 9 of the "Abridged Reports and Current Digests." It is also volume 3 of the "Consolidated Digest of Decisions Under The Interstate Commerce Act."

There is contained in this volume all decisions of the Interstate Commerce Commission, and of the various United States and states' courts construing the Interstate Commission Act, decided since publication of the preceding volume. This takes in all the decisions from 85 I. C. C. through 112 I. C. C. Roughly the period covered is from the latter part of 1924 to almost the end of 1926.

This book is arranged alphabetically, similar to the preceding volumes, by such subjects as are the ordinarily accepted divisions into which the principles governing interstate traffic naturally classify themselves. This can best be seen by referring to the Table of Contents, which immediately follows, and is a reprint of the entire classification. It is earnestly recommended that readers study this classification, printed in the front of the book. By seeing the entire

classification together, it is easier to become familiar with it, and it will be found a simple way of finding the decisions desired.

The classification, section numbers, and topics in this volume, with the exception of the new subjects added, are exactly the same as in the other volumes, so that when the reader finds decisions of interest in any volume, he can turn to the same subject and section number in any book and obtain all other distinctions and variations on that principle.

Owing to the rapid development of traffic law, some new subjects have been added, which were not in the other volumes, because at the time of their publication, such divisions of the law had not yet been developed. Others will be found greatly amplified since the publication of the preceding volume.

It is again earnestly suggested that readers of this book study the Table of Contents very carefully. As about ten thousand points of traffic law are classified, it can readily be understood that familiarity with the classification is necessary to make the book of the quickest available use. It has been attempted to evolve a logical and careful analysis of the field of traffic law and a classification which affords a birds-eye view of the entire subject. But no classification is self executing.

Inasmuch as there are many points which may not be logically classified under a particular head, but which may, nevertheless, have some bearing on it, cross-references are inserted redirecting the reader to such points.

In all cases where it is possible to do so a so-called "fact point" has been made. These "fact points" show tersely, but completely, all evidence on which the Interstate Commerce Commission or the court bases its decision in the particular case. The author has attempted to summarize in an easy, readable style, ton-mile revenues, distances, commodities, rate comparisons and other evidence presented in the particular case. Not only therefore, have all traffic principles been classified but also the economic principles and facts governing each particular case.

The decisions are arranged chronologically under each section, the most recent decisions being placed last.

At the back of the book will be found indexes to the cases involved. In the previous volumes are indexes also to the commodities and localities. The Commission is now preparing an index of commodities and localities from the inception of the Commission. There

is also published by private interests a cumulative index of commodities. The demand for such indexes in the one volume does not appear intense and such indexes are therefore discontinued. It is believed more benefit will be derived by the subscriber in eliminating any feature which subsequent development may cause to become mere "padding."

The author takes this opportunity of thanking the many subscribers whose kindly letters of appreciation have been a real reward for the large expenditure of personal time involved in the preparation of this work.

HERBERT C. LUST.

I. APPLICATION OF ABSORBED RATE.

§1. In General.

(a) M. P., respondent, proposed to cancel its rules pertaining to the absorption of switching charges on traffic originating at or destined to North Kansas City, Mo., and to make effective in lieu thereof its present absorption rules applicable on traffic originating at or destined to Kansas City, Mo., Kas. The effect of the proposed change will be to discontinue respondents present practice of absorbing the charge for the switching service necessary to reach industries located off its line at North Kansas City on carload traffic originating at or destined to certain of respondent's local points. This will increase the freight charges payable by the shipper on traffic between certain local points of respondent and North Kansas City by $6.30 per car. North Kansas City is a separate municipality but within the limits of the Kansas City switching district. Generally speaking respondent absorbs the charges for switching to and from industries off its line in Kansas City from and to competitive points, but does not absorb charges on traffic from and to noncompetitive points on its line. If the schedules under suspension are permitted to become effective all industries similarly situated within the Kansas City switching limits, including those in North Kansas City, will be upon the same basis, and the existing preference in favor of protestant and other industries at North Kansas City will be removed. Respondent's practice of absorbing the switching charges of the Burlington at St. Joseph, Mo., is one for which respondent alone is responsible. Its participation in joint rates with the Burlington on traffic which moves from St. Joseph to Kansas City is not necessary, because it has its own rails from St. Joseph to Kansas City. Its withdrawal from participation in those joint rates would put an end to the necessity urged by it as justification for its practice of absorbing the Burlington's switching charges at St. Joseph. HELD, all shippers similarly situated within the Kansas City switching district should be placed on the same basis. HELD, proposed schedules not justified but schedules may be filed which will accomplish the same result without violating the fourth section. Switching charges at North Kansas City, Mo., 91 I. C. C. 369.

(b) Shipment moved from Cushing, Okla., to Lawn switch, a point within the Omaha, Nebr., switching limits. Carrier assessed a charge for movement from Omaha to Lawn switch, in addition to charges to Omaha. HELD: Shipment found overcharged as applicable tariff of line-haul carrier provided for absorption of connecting lines' switching charges at Omaha. Reparation awarded. Douglas County, Nebraska v. A., T. & S. F., 92 I. C. C. 717.

II. DISCRIMINATION.

See Discrimination.

§1½. In General.

(a) Proposed cancellation of absorption of the North Shore's switching charge at Racine and Racine Junction, Wis., on all interstate traffic found not justified. The record shows that industries in the vicinity of Racine, apparently in substantially the same situation as protestant's plant, have all or a portion of their switching charges absorbed by the line-haul carrier and it would be unreasonable to continue that practice and to deny similar treatment to protestant. Undue prejudice would be created if the Milwaukee were permitted to cancel the absorption of $2.50 on crushed stone from protestant's plant and continue a like absorption from the

competing plant at Ives. Absorption of Switching at Racine and Racine Junction,Wis., 101 I. C. C. 60.

§2. Absorption Subsequent to Shipment.

(a) Contention that admissions on part of carriers, by their offer to perform spotting service, their subsequent absorption of charge for that service, and payment of reparation, and admission on part of director general, by offer of settlement, establishes fact that line-haul rates included spotting service at points of loading and unloading, or at point of final placement within plants. HELD, these admissions, although entitled to consideration, are not conclusive. Director General is not chargeable with concessions which may have been made by corporations which succeeded him. His offer was in nature of a compromise, and in accordance with familiar rules of law is not to be held against him. Pressed Steel Car Co. v. Director General, 93 I. C. C. 224, 232.

§3. Refusal to Absorb.

See Compress Companies and Charges II (g) (k), III (a); Facilities and Privileges §3 (a).

(a) Complainant alleged practice of defendants in restricting absorption of outbound switching charges at Toledo, O., between March, 1920, and April, 1922, resulted in the exaction by defendants of through charges on grain, grain products and feed, originating at points west and southwest thereof, milled in transit at, and the finished products forwarded from Toledo to various eastern and southeastern destinations as unreasonable and unduly prejudicial to extent they included certain unabsorbed switching charges. Complainant's mill is on the terminal, and its competitors at Chicago, Peoria, St. Louis, Indianapolis, Detroit, Cleveland, Cincinnati, Columbus and Buffalo dispose of their products in the same general territory. With some exceptions it is and has been the practice of the line haul carriers in central territory to absorb charges for movements to and from feed mills located on rails of terminal lines. The published through rates are the same via the several competing points and the absorption of switching charges, where such service is rendered, results in shippers being placed on an equality with respect to their through transportation charges. Prior to March, 1918, it was the custom for defendants to absorb the switching charges of the terminal, but on that date they continued to absorb only a part thereof coincident with an increase in the switching charges of the terminal, but in April 1, 1922, the charge of the terminal was reduced to an equality with the absorption rules of defendants. During the period in question complainant has been required to pay varying amounts in excess of the through rates, whereas shippers located at competing points served by these defendants, where the situation is not shown to be substantially dissimilar, have not been required to do so. HELD, failure of defendants to absorb the switching charge of the terminal during the period in question unreasonable, reparation awarded. Larrowe Milling Co. v. A. A. R. R., 92 I. C. C. 32.

(b) L. & N., respondent, proposed to restrict the amount of switching charges absorbed by it at Gulfport, Miss., on carload traffic destined to New Orleans, La., to amounts not in excess of those applicable on similar traffic to other destinations. The tariff now provides the L. and & N. will absorb the switching charges of the G. & S. I. on all car load freight from Gulfport, Miss., to New Orleans, the suspended schedules proposing to cancel this provision, which will leave the general absorption provisions of the tariff at Gulfport the same on traffic destined to New Orleans as to all other places. On March 12, 1924, the G. & S. I. increase its switching charges from certain industries to a large amount, and to protect its revenue from this traffic from undue depletion respondent filed the proposed schedules. The preponderance of all traffic will ordinarily move between Gulfport and New Orleans over the lines of respondent's competitors. There need be no actual increase in rates and charges to any shipper from Gulfport to New Orleans. No public good would be subserved by the maintenance of a preference of traffic destined to New Orleans over traffic destined to other points. HELD, proposed schedules justified. Absorption of switching charges at Gulfport, 92 I. C. C. 168.

(c) Failure of defendants to absorb total switching charges of the Toledo Terminal R. R. at Toledo, found unreasonable, and through charges on grain, grain products, and feed stuffs, milled in transit at Toledo, found unreasonable to extent they included such unabsorbed switching charges. Line-haul

carriers in c. f. a. territory generally absorb charges for movements to and from feed mills located on rails of so-called switching, belt, or terminal lines, and shippers at competing points, where the situation is substantially similar, have not been required to pay anything in excess of the through rate. Switching charges were subsequently reduced to a point equaling amounts absorbed by line-haul carriers. Reparation awarded. Larrowe Milling Co. v. A. A. R. R., 92 I. C. C. 32.

(d) Proposal of L. & N. R. R. to cancel its unlimited absorption of switching charges of the Gulf & Ship Island at Gulfport, Miss., on c. l. traffic destined to New Orleans, and to restrict its absorption to amounts not in excess of those applicable on similar traffic to other destinations, found justified. No traffic has moved from industries where the proposed restriction would result in increases, preponderance of all traffic will ordinarily move between Gulfport and New Orleans over competing lines, and no public good would be subserved by the maintenance of a preference of traffic destined to New Orleans over traffic destined to other points. Absorption of Switching Charges at Gulfport, 92 I. C. C. 168.

(e) Nonabsorption by Lehigh Valley at Elmira, N. Y., of switching charges of the Pennsylvania on anthracite coal moving from Hazelton, Pa., found not unreasonable or unduly prejudicial. While Lehigh Valley absorbs connecting lines' switching charges at other New York points, at still others no absorptions are made. Those here involved were discontinued when the Lehigh Valley reduced its rates to Elmira in conformity with rates prescribed for other lines in Anthracite case, 35 I. C. C. 220. Chapel v. P. R. R., 92 I. C. C. 662.

III. CONTROL AND REGULATION.

See Control and Regulation.

§4. In General.

(a) The commission can not compel trunk lines to absorb switching charges of connecting lines in absence of unjust discrimination or undue prejudice. Wood & Son, 45 I. C. C. 587, 589. Simms Oil Co. v. H. & T. C. R. R. Co., 85 I. C. C. 537, 539.

IV. REASONABLENESS.

§5. In general.

See Reasonableness of Rates.

(a) Complainant alleged failure of defendants to absorb switching charges of the Minneapolis Eastern and Minneapolis Western on grain, in carloads, shipped in 1920 and 1921 from South Dakota to industries on the rails of those carriers and also to industries on other lines reached in connection with those lines, resulted in connection with those roads of rates that were unreasonable, unjustly discriminatory, unduly prejudicial and without tariff authority. Complainants case is grounded primarily upon 247 U. S. 490. The record does not establish that the switching charge attacked was unreasonable per se or that collection thereof in addition to the line haul rate resulted in the exaction of unreasonable charges for the entire transportation furnished. HELD, charges attacked not unreasonable, complaints dismissed. Shanard Elevator Co. v. M. E. Ry., 93 I. C. C. 151.

(b) L. N., respondent, proposed to restrict the absorption by it of switching charges on coal, carloads, from stations and mines on its line in eastern Tennessee and southeastern Kentucky to points within the switching limits, suburbs, and industrial limits of Atlanta, Ga. Respondent has its own line from the coal fields to Cartersville, Ga., where connection is made with the N. C. St. L., over whose rails it operates to Atlanta under trackage rights. Under the tariffs now in effect the L. & N., absorbs the entire switching charges of connecting lines at Atlanta and the receivers of coal pay the flat Atlanta rate. Respondent proposed to restrict its absorption of switching on coal to industries in the Atlanta district of $2.25 per car, which has been its policy with respect to the absorption of switching charges of the Southern Ry. since 1906. Thus switching charges of connecting lines at Atlanta, in excess of $2.25 per car would be added to the line haul rate and would be paid by receivers of coal. While it is desirable, in the interest of uniformity, for the L. & N., to revise the absorption by it of connecting lines switching charges at Atlanta so that the amount which it absorbs is the same with respect to all lines serving Atlanta,

such revision must not be accomplished in such manner as to materially increase the total charges which receivers of coal must pay. The present level of rates from L. & N., mines to the Atlanta industrial district are not unreasonably low, particularly as the L. & N., transports the traffic over its own line under operating conditions which are favorable, and as it restricts the rate to the route over its own line, although there are other routes in connection with the Southern Ry. which are feasible and which can be used to advantage without any increase in the rate. HELD, changes proposed not justified. Coal & Coke to Atlanta, 98 I. C. C. 11.

(c) Overruling Conf. Ruling 341. FOUND, that where a common carrier subject to the act performs an intermediate service in connection with traffic moving at joint rates, it should concur in such joint rates and receive divisions thereof, divisional arrangements to be so adjusted as to, in effect, result in absorption of the common carrier's division by the line that delivers traffic to it. Peoria & Pekin Union Ry., 93 I. C. C. 3, 22.

(d) Proposed restriction of absorption of switching charges on coal from L. & N. R. R. stations and mines in Tennesee and Kentucky to points within the switching limits, suburbs, and industrial limits of Atlanta, Ga., which would result in increased rates to Atlanta, found not justified. The present level of rates from L. & N. mines in Tennessee and Kentucky to Atlanta Industrial district is not unreasonably low, particularly as the L. & N. transports the traffic over its own line under operating conditions which are favorable, and as it restricts the rate to the route over its own line, although there are other routes in connection with the Southern Ry. which are feasible and which can be used to advantage without an increase in the rate. Coal and Coke from Kentucky and Tennessee Mines to Atlanta, 98 I. C. C. 11.

(e) Fact that absorption provisions of the carrier at point of origin, during Federal control, were less liberal than at other points found not to have resulted in unreasonable charges on sand from Falls Creek, Pa., to Vandergrift, Pa. Complaint dismissed. United Engineering & Foundry Co. v. Director General, 98 I. C. C. 447.

V. REPARATION.

See Reparation.

§6. **In General.**

(a) In 91 I. C. C. 300, the Commission found that defendants had failed to justify increased rates during the period from April 1, 1914 to April 14, 1915, in so far as they resulted in transportation charges exceeding those contemporaneously in effect to and from trunk line points in the same rate district; and that the aggregate charges were unjust and unreasonable. The increased rates were brought about by the trunk lines discontinuing their absorption of the switching charges of the industrial roads heretofore found to have been common carriers subject to the act, lawfully entitled to receive from their respective trunk line connections divisions of joint rates or absorptions of switching charges under appropriate tariff provisions, such divisions or absorptions to be reasonable. HELD, reparation awarded. Jones & Laughlin Steel Co. v. P. & L. E. R. R., 93 I. C. C. 637.

(b) Following Jones & Laughlin Steel Co., 91 I. C. C. 300, reparation awarded complainants and interveners in respect of interstate shipments on which they paid charges of the Monongahela connecting, South Buffalo, and Union railroads, in addition to district rates of trunk-line connections, defendants having failed to justify increased rates during nonabsorption period in so far as they resulted in transportation charges exceeding those contemporaneously in effect to and from trunk-line points in same rate districts, the aggregate charges applicable during period of nonabsorption having been found unreasonable to that extent in the cited case. Jones & Laughlin Steel Co. v. P. & L. E., 93 I. C. C. 637.

ALL CITATIONS

Oklahoma S. W. Ry. Co. v. St. L. S. F. Ry. Co., 88 I. C. C. 235.

ACROSS LAKE RATES

(a) Complainant attacked commodity rates on silicate of soda, in tank cars, from Carrollville, Wis., to Grand Rapids, Mich., of 19.5c in effect prior to March 15, 1922, and 18.5c thereafter, as unreasonable, unjustly discriminatory and unduly prejudicial. Carrollville is on the Northwestern 12.5 miles south of Milwaukee. The general basis of rates on silicate of soda in central territory is 85 per cent of sixth class. Since Jan. 3, 1922, Carrollville has taken the same class rates as Milwaukee on traffic to Grand Rapids moving over the cross lake routes, which are the car ferry routes of the G. T. and P. M. Over the all rail route the distance from Milwaukee to Grand Rapids is 269 miles; over the cross lake route 118 miles via G. T., 204 via P. M., and over C. & N. W., through Manitowoc, Wis., and P. M., 243 miles. The all rail class rates from Milwaukee to Grand Rapids which apply from Carrollville are higher than the class rates from Milwaukee to Grand Rapids via cross lake. Prior to Jan. 13, 1922, Carrollville took the Waukegan, Ill., rates via cross lake routes but on that date it was placed on the Milwaukee basis. On March 15, 1922, the carrier canceled the cross lake commodity rate of 19.5c from Carrollville and substituted 85 per cent of sixth class or 18.5c prior to July 1, 1922, and 16.5c thereafter. HELD, rate attacked not unreasonable or otherwise unlawful, complaint dismissed. American Fibre Package Company v. C. & N. W. Ry., 91 I. C. C. 334.

(q) Respondents increased local, proportional, and reshipping rates on grain, grain products, and grain by-products in carloads, from west bank Lake Michigan ports across lake, upper Mississippi river crossings, St. Louis, Mo., Chicago, Cairo, Thebes, Peoria, Springfield and other interior Illinois basing points to destinations in a limited area situated midway between Cleveland and Youngstown, Ohio. The purpose of the proposed adjustment is substantially the same as that of 101 I. C. C. 7, in which the suspended schedules were found not justified as they would create violations of the fourth section. It is proposed to change the rate basis from the Cleveland to the Youngstown group. Shipments from Chicago to this destination area generally move through Cleveland. Fourth section violations would be created at points of origin covered by the suspended schedules in that rates by such points from more distant points would remain on the Cleveland basis. HELD, suspended schedules not justified without prejudice to the publication of the Youngstown basis of rates on the traffic herein considered provided that the unlawful situations referred to herein are avoided. Grain and grain products between c. f. a. points, 101 I. C. C. 662.

ACT TO REGULATE COMMERCE

I. CONSTITUTIONALITY.
II. INTERPRETATION IN GENERAL.
III. TIME OF TAKING EFFECT.
IV. ENFORCEMENT.
V. AMENDMENTS.
§1. War Legislation.
VI. TRANSPORTATION ACT.
§2. Construction in general.

CROSS REFERENCES

See Bills of Lading §1a; Carmack Amendment; Commodities Clause; Crimes §2; Cummins Amendment; Discrimination; Government Control; Interstate Commerce; Long and Short Hauls II; Loss and Damage I; Panama Canal Act; Special Contracts II; State Rates and Regulations; Telephone and Telegraph Companies III; Transportation Act; War Legislation.

I. CONSTITUTIONALITY.

See Discrimination §1; Loss and Damage §1, §2; Pipe Lines §2; State Rates and Regulations.

(a) The constitutional power of Congress to regulate interstate and foreign commerce is supreme, and cannot be rendered important by anything a state may do. City of Newark v. Central Ry. Co. of New Jersey, 297 Fed. 77.

(b) Where act is of such character that it may be general in its application to a subject which demands uniformity of regulation, power of Congress to act

is exclusive, and states may not legislate whether Congress has acted or not; but, where no such uniformity is required, the states may legislate until Congress has acted. Whitman v. Northern Cent. Ry. Co., (Md., 1924), 127 Atl. 112.

(c) In prescribing limitation, Congress is not restricted by Const, U. S. art. 1, §10, prohibiting impairment of contracts, which applies solely to states, but is controlled equally with latter by prohibition against deprivation of property without due process. Philadelphia, B. & W. R. Co. v. Quaker City Flour Mills Co., (Pa., 1925) 127 Atl. 845.

(d) Statutes of limitation are statutes of repose, enacted for common weal to quiet threatened disputes or litigation, and generally apply to actions occurring after passage, unless expressly, or by necessary implication, made to cover existing rights of action. Philadelphia, B. & W. R. Co. v. Quaker City Flour Mills Co., (Pa., 1925) 127 Atl. 845.

(e) Legislative determination as to what period for bringing suits on causes of action existing when act was passed is reasonable should not be interfered with by courts, unless time allowed is so short as not to give parties affected reasonable opportunity to protect rights under new laws. Philadelphia, B. & W. R. Co. v. Quaker City Flour Mills Co., (Pa., 1925) 127 Atl. 845.

(f) Congress may prescribe limitation, where none existed, or change one already established; parties having no vested right in particular limitation. Philadelphia, B. & W. R. Co., v. Quaker City Flour Mills Co., (Pa., 1925) 127 Atl., 845.

(g) As operation of public service motor vehicles in interstate commerce admits of and requires uniform regulation, it is exclusively within national domain, and nonaction by Congress does not warrant regulation by state, but merely indicates congressional will that such commerce shall be free and untrammeled. Newport Electric Corporation v. Oakley (R. I., 1925), 129 Atl. 613.

(h) Power of state to tax goods from other states is not measure of powers of Congress over interstate commerce. United States v. Live Poultry Dealers' Protective Ass'n, 4 Fed. 2d 840.

(i) There can be no divided authority over interstate commerce, the acts of Congress on the subject being supreme and exclusive. Missouri Pac. R. Co. v. Stroud, 45 Sup. Ct. 243.

(j) Power of Congress to regulate commerce with foreign nations and among the states is supreme. City of Newark v. Central R. Co. of New Jersey 45 Sup. Ct. 328.

ALL OTHER CITATIONS

Lilly Co. v. O. S. L. R. R. Co., 85 I. C. C. 644; C., M. & St. P. Ry. Co. v. U. P. R. R. Co., 88 I. C. C. 312.

II. INTERPRETATION IN GENERAL.

See Crimes §2; Discrimination §1; Export Rates and Facilities §1½; Long and Short Hauls II, §2½; Loss and Damage §2; Panama Canal Act.

(a) The new act seeks afiirmatively to build up a system of railways prepared to handle promptly all the interstate traffic of the country. It aims to give the owners of the railways an opportunity to earn enough to maintain their properties and equipment in such a state of efficiency that they can carry well this burden. To achieve this great purpose, it puts the railroad systems of the country more completely than ever under the fostering guardianship and control of the Commission by fixing adequate rates for interstate commerce, to secure a fair return upon the properties of the carriers engaged. Rates and charges on grain and grain products, 91 I. C. C. 105, 155.

(b) Even if Congress had not announced a fixed policy, being public utilities carriers are entitled as individual entites to receive from all their rates revenues sufficient to pay expenses and a reasonable return upon the value of their properties, economically and efficiently managed, if obtainable through rate schedules not inherently unjust. The carriers' right to fair return is based on the fact that theirs is private property devoted to a public use, and, as such, certain rights are safeguarded by the Constitution. Rates and charges on grain and grain products, 91 I. C. C. 105, 155.

(c) Issues in action respecting charges for transportation in interstate commerce must be decided according to paramount United States statutes so far as they are applicable, and according to common law where not controlled by such statutes. American Ry. Express Co. v.

Mohawk Dairy Co. (Mass. 1924), 144 N. E. 721.

(d) The words "such transportation" in paragraph (2) of section 1 of the act can only refer to transportation of passengers or property by common carriers described in paragraph (1), and effect of such second paragraph is to impose additional restrictions to application of provisions of the act over transportation by these carriers. Motor Truck or Wagon Transfer Service, 91 I. C. C. 539, 546.

(e) In so far as Code Pub. Gen. Laws, art. 23, §413, defining term "common carrier," is insistent with definition of word "carrier" in Interstate Commerce Act, §20a, subsec. 1, as added by Transportation Act Feb. 28, 1920, §439 (U. S. Comp. St. Ann. Supp. 1923, §8592a), such state law must yield to the federal act. Whitman v. Northern Cent. Ry. Co., (Md., 1924) 127 Atl. 112.

(f) The Transportation Act of 1920 naturally resolves itself into four divisions; they are definitions of terms, termination of federal control of railways, disputes between carriers and their employees and subordinate officials, and amendments to the Interstate Commerce Act (U. S. Comp. St. §8563 et seq.). State v. Seaboard Air Line Ry. Co. (Fla., 1925) 104 So. 602.

(g) The Interstate Commerce Act was passed for the purpose of regulating commerce throughout the nation, and, as amended by the Transportation Act of 1920, for purposes of interstate commerce placed the transportation system of the country completely under supervisory control of the Interstate Commerce Commission. State v. Seaboard Air Line Ry. Co. (Fla., 1925) 104 So. 602.

(h) The Interstate Commerce Act (U. S. Comp. St. § 8563 et seq.) passed in pursuance of Const. U. S. art 1, §8, does not assume to regulate interstate commerce by motor vehicles, though Congress has the right to occupy this field. Interstate Transit Co. v. Derr Co. (Mont. 1924), 228 Pac. 624.

(i) The word "transportation" as used in section 1 (12) of the act is not limited in its meaning to transportation for compensation, but includes also transportation of carrier's own coal over its line. Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701, 715.

(j) The great, underlying purpose of the act, amplified and strengthened with each successive amendment and supplemental act, is to sweep away every form of favoritism based upon the personality of the shipper or upon his relations with the carrier as a customer; and to place all, the large and small, steady and occasional, and the rich and poor upon a plane of equality in the right to service; and to condemn and make unlawful every regulation, device, or subterfuge which undertakes to give to anyone an advantage based upon conditions other than those inhering in the transportation itself and alone. Rules Governing Ratings of Coal Mines, 95 I. C. C. 309, 332, 333.

(k) The act does not require common carriers to hire instrumentalities for the performance of a transportation service. See 34 I. C. C. 442. Walsh Fire Clay Products Co. v. Director General, 95 I. C. C. 439, 443.

(l) The Supreme Court concluded that the collocation of term "practices" with "classifications" and "regulations" was intended to confine it to acts or conduct having the same purpose as its associates and that it was not to be understood in the broad sense contended. The court noted that a contrary conclusion would apparently give the commission power to order enlargement of terminal facilities, increase in the number of locomotives, and extensions of tracks and branches. Los Angeles Passenger Terminal Cases, 100 I. C. C. 421, 427.

(m) A change in rates which is detrimental to the interests of a particular community is not necessarily inconsistent with the general public interest which the statutes administered by the commission were designed to protect, although those who fear injury may be more vocal than those who expect benefit. Certainly this largely voiceless public interest is one which we should not overlook. Southern Class Rate Investigation, 100 I. C. C. 513, 604.

(n) When the question is whether a federal act overrides a state law, the entire scheme of the statute must of course be considered and that which needs must be implied is of no less force than that which is expressed. If the purpose of the act can not otherwise be accomplished—if its operation within its chosen field else must be frustrated and its provisions be refused their natural effect—the state law must yield to the

regulation of Congress within the sphere of its delegated power. Train service on N. P. 112 I. C. C. 191, 195.

VI. TRANSPORTATION ACT.

See Transportation Act.

§2. Construction in General.

See Discrimination §1.

(a) It is the policy of the Congress as declared in section 8 of the merchant marine act, 1920, and section 500 of the transportation act, 1920, to promote, encourage, and develop transportation by water and to foster and preserve in full vigor both rail and water transportation. Wool rates investigation, 1923, 91 I. C. C. 235, 248.

(b) The Transportation Act shows that what is intended is to regulate interstate and foreign commerce and to affect intrastate commerce only as that may be incidental to the effective regulation and protection of commerce of the other class. It contains many manifestations of a continuing purpose to refrain from any regulation of intrastate commerce, save such as is involved in the rightful exertion of the power of Congress over interstate and foreign commerce. State v. Seaboard Air Line Ry. Co. (Fla., 1925) 104 So. 602.

(c) Fact that word "damage" appears in section 206 (c) of the transportation act, in contradistinction to words "full amount of damages" appearing in section 8 of interstate commerce act, has no special significance. The commission concludes and finds that the director general is liable for "the full amount of damages" suffered by a shipper through collection of an unreasonable rate by Director General of Railroads, or his agents, during Federal control; and that measure of that liability is the same as that of a common carrier subject to the interstate commerce act, the sovereign right of the Government having been waived to this extent by act of Congress. Shreveport Creosoting Co. v. L. & P. Ry., 92 I. C. C. 519, 526.

(d) Section 206 of transportation act is procedural in character. Nothing contained therein indicates that Congress intended to repudiate or in anywise alter, amend, or reduce obligations and liabilities imposed upon the President by the Federal control act and act to regulate commerce, or to relieve the agent appointed by the President under the transportation act from such obligations and liabilities as had been incurred by Director General of Railroads in his operation of properties of carriers. Shreveport Creosoting Co. v. L. & P. Ry., 92 I. C. C. 519, 525.

(e) It is the policy of Congress as declared in section 500 of the transportation act, 1920, to promote, encourage, and develop water transportation, service, and facilities in connection with the commerce of the United States, and to foster and preserve in full vigor both rail and water transportation, and the provisions of section 8 of the merchant marine act, 1920, are of the same tenor. Galveston Commercial Asso. v. G., H. & S. A. Ry. Co., 100 I. C. C. 110, 122.

See Alaska; Canada; Coastwise Traffic; Foreign Commerce; Long and Short Hauls §4½ (b); Loss and Damage §2½; Mexico; Porto Rico; Through Routes and Joint Rates.

(a) Proposed charge of 25 cents per shipment for opening, recoopering, and rewrapping packages for customs exam-

ination at the border ports on import shipments by express from Canada to points in the United States found not justified. This charge would not apply on shipments where the American Express Co. acts as the broker and attends clearance details, nor on shipments of milk or cream. The suspended schedules ordered canceled without prejudice to the filing of new schedules which will provide that a charge of 12 cents per shipment be assessed on shipments when one or more packages are actually opened by order of the Customs and will not apply on any shipments where the American Express Co. or other concern or individual acts as broker for the importer and in that capacity attends to the physical work above described. Charge for Opening, Recoopering, and Rewrapping Packages for Customs Examinations, 98 I. C. C. 284.

(b) Charges resulting from rates on sheep and lambs, in double-deck cars, from Montreal, Canada, to New York, N. Y., and Somerville, Mass. and minima provided in connection therewith, found not unreasonable. This traffic between points involved is very light in volume, the present yield per car is not excessive as compared with rates and minima on like traffic between other points for similar distances, and to prohibit the lines within the United States serving the destination points from participating in a joint rate with Canadian carriers from Montreal, with the present fixed minimum, would possibly result in the application of combination rates to and from the border which would produce total charges in excess of those returned under the prevailing joint rate. Swift & Co. v. G. T. Ry. Co. of Canada, 98 I. C C. 649.

(c) The commission has no jurisdiction to require the establishment of joint rates for future from or to a point in United States to or from a point in a foreign country or from a point in United States through a foreign country to a point in United States. See 69 I. C. C. 337, 343. San Diego Chamber of Commerce v. A. & V., 102 I. C. C. 27, 29.

(d) Where shipments move under unreasonable joint rates from points in adjacent foreign countries to points in the United States, the American lines participating in the transportation are tort feasors and the full amount of reparation may be awarded against them. Lewis-Simas-Jones Co. v. S. P., 102 I. C. C. 245, 246.

(e) Motion of carrier to dismiss complaint, alleging commission lacks jurisdiction over joint rates from points in an adjacent foreign country to points in United States, denied, following 66 I. C. C. 627. Lewis-Simas-Jones Co. v. S. P., 102 I. C. C. 245, 246.

(f) When the commission has no authority to establish a rate of transportation in an adjacent foreign country, nor to order the maintenance of a rate for future from a point in United States to a point in an adjacent foreign country, it may require American carriers to cease and desist from continuing to apply a joint through rate, or any rule, regulation, or practice in connection with that joint through rate, and may, where such rate has been voluntarily maintained, inquire whether it has been reasonable, and if found unreasonable, award damages in that behalf. See Black Horse Tobacco Co., 17 I. C. C. 588, 590, 591; International Nickle Co., 66 I. C. C. 627. American Splint Corp. v. C. P. Ry. Co., 88 I. C. C. 221.

I. CONTROL AND REGULATION.

See Control and Regulation.

§1. **Jurisdiction of Commission.**

See Interstate Commerce Commission I; Jurisdiction of Commission.

(4) **To suspend advance.**

See Suspension of Rates.

(a) Upon contention that a suspension order of the commission prohibiting proposed increased rates from going into effect and requiring maintenance of present rates, constituted the establishment of present rates "pursuant to a finding or order of the commission," and that therefore the commission has authority to require readjustment of divisions of the present rates back at least to date of order of suspension. HELD, an order of suspension is not an order such as is contemplated by Congress when it refers to the "establishment" of a rate by the commission's order. Petroleum Oil from Arkansas to Louisiana, 95 I. C. C. 55, 64, 65.

II. JUSTIFICATION OF INCREASE.

§2½. **In General.**

(a) Where a short line's compensation has not kept pace with general increases in the rates of trunk lines, although its operating expenses have increased in common with theirs, such short line should be accorded the benefit of a proportionate share of the increase in the rates. See Ohio & Kentucky Ry. Co. case, 77 I. C. C. 636, 643. New York Dock Ry. v. B. & O. R. R. Co., 88 I. C. C. 695, 706.

(b) Proposed increased rates on matches, from Bellefonte, Pa., to Chattanooga, Tenn., and stations grouped therewith and to Knoxville, Tenn., for purpose of restoring rates to basis formerly existing, found justified. Proposed rates will reflect the proper increases and reductions authorized since March 15, 1917, and compare favorably with rates from other match-producing points to Chattanooga and Knoxville and to other destinations throughout the South. Matches from Bellefonte, Pa., 89 I. C. C. 337.

(c) A mere desire to readjust through rates on grain to equal the combinations upon particular gateways does not constitute justification for increases in the through charges. Grain from western trunk line points, 91 I. C. C. 632, 634.

(d) Proposed cancellation of commodity rates on stoves, ranges, gas water heaters, and furnaces from Detroit, Mich., and certain intermediate points to Chicago, Ill., Milwaukee, Wis., and St. Louis, Mo., and to upper Missouri River crossings, leaving in effect higher class rates, found justified in part. Principal grounds of justification are that class rates afford normal basis for this traffic, and that present commodity rates are unremunerative. Stoves, Ranges and Furnaces from Michigan, 91 I. C. C. 554.

(e) Increases in grain rates designed to place rates upon full combination upon market points will not be found justified unless clearly shown to be reasonable in themselves, free from undue prejudice or unjust discrimination, and otherwise lawful. Omaha Grain Exchange, 53 I. C. C. 249, and other cited cases. Grain from Western Trunk Line Points, 91 I. C. C. 632, 634, 635.

(f) Respondents proposed to increase the rate on egg carrier fillers, egg cases and egg box material, carloads, minimum 30,000 pounds, from Coffeyville, Kans., to points in Arkansas on the M. & N. A., from 34 to 37c per 100 pounds. Protestants competitor is at Quincy, Ill., and opposed the proposed increase only because no corresponding increase was made in the rate of 42c from Quincy. The increase was proposed because this

competitor asked for a lesser difference between the two rates. The division to the M. & N. A., under the rate now in effect from Coffeyville is greater than that under the rate from Quincy. The rates from both Coffeyville and Quincy are blanketed to destinations on the M. & N. A., from the Missouri-Arkansas state line to Heber Springs. The suspended schedules continue a rate of 43c from Hutchison, Kans., a producing point which is about 70 miles nearer the M. & N. A., point than is Quincy. HELD, schedules not justified. Egg case fillers from Kansas, 101 I. C. C. 1.

(g) Proposed cancellation of interstate commodity rates on hay and straw, from points in Indiana, Illinois, and Ohio to destinations in Indiana and Illinois, certain Ohio River crossings, and Massillon Ohio, leaving in effect fifth-class rates, found not justified. Present commodity rates are of long standing; hay is of low value; and any increase in rates must, under prevailing competitive conditions, be met by reducing amount paid farmers, who are already in poor financial condition. Hay and Straw to Mississippi River Crossings, 92 I. C. C. 128.

(h) Proposed increased rates on sugar from Macon, Ga., territory to Arkansas, Louisiana, Missouri, Oklahoma, and Texas, which fail to conform to long-and-short-haul and aggregate-of-intermediates provisions of the fourth section, found not justified. However, in view of fact that present rates are unduly low as compared with corresponding rates from New Orleans, carriers' proposal to establish a blanket rate, modified in such particulars as to avoid fourth-section departures, and result in rates which are not unreasonable or unduly prejudicial, found justified. Sugar from Macon Territory, 92 I. C. C. 275.

(i) Carriers in complying with an alternative order of the commission advanced lower instead of reducing higher rates. Such advances were suspended and subsequently found not justified. HELD: Fact that order was in the alternative did not relieve carriers from responsibility of publishing rates which would not contravene the act; and whether carriers' literal compliance with such order by proposing increases, or commission's action in suspending them, led to exaction of unreasonable rates during suspension period is immaterial and not controlling in so far as an award of reparation is concerned. If rates in effect during suspension period were unreasonable, carriers are not entitled to retain the excessive portion even though it be said that rates were in effect despite their efforts. Wadhams Oil Co. v. C. & N. W., 92 I. C. C. 361.

(j) Proposed readjustment of rates on live and dressed poultry, butter and eggs from points in Kentucky, Tennessee Alabama and Mississippi to eastern cities and Buffalo-Pittsburgh zone, resulting, among other things, in removal of discriminations, found justified. Dairy Products from Southern Points, 100 I. C. C. 756.

(k) Except where differences in transportation conditions or other dissimilar circumstances exist, rates should not increase in exact proportion with the distance. Class Rates between Memphis, Tenn.; Cairo, Ill., and W. T. L. Points, 102 I. C. C. 207, 216.

§3. Burden of Proof.

See Advanced Rates §19 (d); Burden of Proof; Evidence I; Perishable Freight (c).

(a) While it may be conceded that the burden is on respondents to show the propriety of the proposed charges under section 3 as well as under section 1 of the act, it does not follow that undue prejudice is to be presumed from the mere fact that compensatory charges at Detroit will differ from the charges in effect at other points, particularly as to protestant shippers who have not contended or made any effort to show that they will be handicapped by the establishment of such charges at Detroit in meeting competition from other points. Nashville Switching, 40 I. C. C. 474. Increased switching charges at Detroit, Mich., 91 I. C. C. 82, 96.

(b) For each rate, a carrier offers and obligates itself to perform a certain amount of service. If the service so offered and for a long time performed in consideration of that rate includes taking the property transported from a given point and delivering it at a given point, the delivery at that point is in no sense a free service. The carrier may increase the rate or it may curtail the service performed by that rate, but if such action is challenged it must bear the burden of showing that the new rate or

service is reasonable and free from unjust discrimination. Loading of less carload freight, 91 I. C. C. 394, 397.

(c) The law places upon respondents the burden of showing that the suspended rates are reasonable and otherwise lawful. The fact that they are made in accordance with a basis of long standing, while entitled to due weight, does not of itself constitute sufficient justification. C. 514, 516.
Cotton linters to Indiana points, 95 I. C.

(def) The burden of justifying increased rates cast upon carriers by the act does not depend upon the purpose or intent of the carriers in naming the increased rates. Grain from Kansas City, 96 I. C. C. 154, 156.

(g) Carrier in instant case relieved of burden of proof to justify increased cost of service resulting from discontinuance of a spotting service formerly rendered by it, and converse case of Hanging Rock Iron Co., 87 I. C. C. 373, distinguished. Jackson Iron & Steel Co. v. Director General, 91 I. C. C. 201, 205, 206.

(h) The law places burden upon carriers to prove that a proposed adjustment of rates is just and reasonable, and mere fact that they are attempting to make readjustment because some participating carriers desire that they do so, or that it may help to remove a complaint of discrimination pending before commission, is not sufficient evidence of proof of reasonableness of rates proposed under adjustment, or that present rates are unremunerative or unreasonably low. Boots and Shoes from New York Points, 91 I. C. C. 591, 596.

(i) In reissuing a tariff carriers unintentionally increased arbitrary on fruit, vegetables, and grape packages over rates on lumber to a basis higher than that authorized in Increased Rates, 1920, 58 I. C. C. 220. HELD: Burden of proof is upon carriers, and, since they failed to justify rates as increased, unreasonableness found to extent that arbitraries exceeded those authorized in cited case. Reparation awarded. Package Sales Corp. v. U. P. R. R. Co., 91 I. C. C. 697.

(j) Proposal to increase rates on imported fertilizer and fertilizer materials from New Orleans and related points, to points in Louisiana, by raising rate level by amount of handling charges at the ports, by eliminating certain commodities, and by increasing the minimum weight, found not justified. Respondents failed to satisfactorily explain reasons for changes in commodity lists and minimum weights, and were under impression that import rates applied mainly to fertilizer factories. However, many items listed in proposed schedules move directly from ship side to farms. Fertilizer from New Orleans, 92 I. C. C. 151.

(k) Carriers made no attempt to justify increases in rates on ground of reasonableness, stating that they were merely paper rates and therefore needed no justification. HELD: Burden is clearly upon carriers to justify increases in rates of whatever character. Combination Rule on Cotton and Linters, 92 I. C. C. 165, 167.

(l) Where carriers, under tariffs, hold themselves out as offering for a given rate to render a specified service, and withhold part of that service, shippers not preventing carrier from rendering the complete service offered, there has been an increase in the rate no less than if after a certain date a higher charge had been made for the service. Rates in Chicago Switching District, 34 I. C. C. 234, 242; United Chemical & Organic Products Co., 73 I. C. C. 100, 103. Borden's Farm Products Co. v. N. Y., N. H. & H., 92 I. C. C. 270, 272.

(m) In the western classification boilers were included in list of articles under heading "Machinery and Machines" but carriers removed it from that list, which resulted in making commodity rates on machinery and machines inapplicable to boilers and in leaving full classification basis to apply. After shipments moved, boilers were restored to machinery commodity basis. HELD: Carriers having failed to sustain burden of proof cast upon them to justify rates as increased, class rate assessed on shipments of boilers from Muncie, Ind., to Houston and Orange, Tex., found unreasonable to extent it exceeded lower commodity basis and reparation awarded. National Supply Co. of Texas v. C., C., C. & St. L. Ry., 92 I. C. C. 295.

(n) Where increases under Increased Rates, 1920, 58 I. C. C. 220 have been applied in such a manner as to produce greater net increase in carriers' freight revenue than was authorized under that

decision, burden of justifying resulting rates is upon carriers. Houston Cotton Exchange v. A. & S. Ry., 92 I. C. C. 363, 366.

(o) Rates on fluorspar, as increased to basis higher than that authorized in the Fifteen Per Cent case, 45 I. C. C. 303, and subsequent general advances, and subsequently reduced to basis reflecting proper authorized advances, found not unreasonable. Complainant offered no evidence to indicate that earnings under rates attacked were excessive, but merely urges that rate was unreasonable per se. Moreover, the subsequent reduction of a rate is insufficient to establish unreasonableness. General Chemical Co. v. Director General, 93 I. C. C. 193.

(p) Upon contention that burden of proof to justify rates increased since January 1, 1910, was not met by defendants due to their nonappearance at the hearing, and that complainant is, therefore, entitled to an award of reparation on shipments moving under the rates as increased. HELD, before the commission can find that a shipper is entitled to reparation it must find that the rate is unreasonable, and fact that no evidence was offered on behalf of carriers does not preclude the commission from determining whether or not the rate was in fact unreasonable. Nebraska Bridge Supply & Lbr. Co. v. A., T. & S. F., 93 I. C. C. 301, 303.

(q) Proposed increased rates on cotton piece goods, any quantity, from Texas and Oklahoma points to St. Louis and points in defined territories, published to comply with order entered in connection with Memphis-Southwestern Investigation, 77 I. C. C. 473, denying fourth-section relief, found not justified. Respondents made no attempt to justify the increases, but merely stated that they were forced to make the revision to comply with the fourth-section order. However, such compliance does not require substantial increases proposed, and respondents' revenues would not be reduced to any extent by application from intermediate points of present rate from Texas producing points. Commodity Rates from Southwestern Points, 93 I. C. C. 394, 396.

(r) Proposed increased rates on iron and steel articles, between Newark and points grouped therewith, and New England points, found not justified. Carriers rely entirely upon fact that proposed rates will restore the spread between Newark and Philadelphia groups established following the decision in Pardee Works, 39 I. C. C. 162. For over seven years that spread has been treated as one varying with rates and not as a fixed differential. Moreover, there is no evidence that rates from Newark group are subnormal as compared with rates from other groups, and former relationship, if desired by carriers, could be readily restored by reducing rates from Philadelphia group instead of increasing those from Newark group. Iron and Steel between New Jersey and New England Points, 93 I. C. C. 499.

(s) Proposed increased rates on coke from points in southwestern Virginia, Benham, Ky., LaFollette and Chattanooga, Tenn., to Cincinnati and certain points in vicinity thereof, and to Maysville, Ky., designed for purpose of restoring a parity of rates from these coke-producing points, disrupted following the general increases authorized in Increased Rates, 1920, 58 I. C. C. 220, found not justified. Although record does not indicate that proposed rate to Cincinnati would be unreasonable, it would result in undue prejudice at that point and in undue preference of other Ohio River crossings where a similar situation exists and where a similar increase is not made. Coke to Cincinnati Group, 93 I. C. C. 572.

(t) It does not follow from fact that the commission has approved increases in handling charges at certain ports that a lower basis of charges would have been unlawful. Carriers may, subject to certain restrictions, initiate rates lower than commission may prescribe. The question is as to whether or not they are proposing to go to such lengths in attempting to meet competition and attract business that resulting charges will be so low as to create a burden upon other traffic. Handling Charges on Cement, Fertilizer, and Salt, 93 I. C. C. 640, 644.

(u) Proposed increased rates on crude and refined petroleum oil from points in the Smackover-El Dorado, Ark., field on the C., R. I. & P. to points in Louisiana on the Y. & M. V., found not justified. Except for evidence bearing upon divisions, record contains no evidence purporting to justify the proposed rates, and if permitted to become effective, the Y. & M. V. would be responsible for the maintenance of preferential rates from points on Missouri Pacific to same destinations. Moreover, mere categorical statements of representatives of carriers that present rates are low do not support a finding of justification of the proposed rates. Petro-

leum Oil from Arkansas to Louisiana, 95 I. C. C. 55.

(v) Mere categorical statements of representatives of carriers that rates are low does not support a finding justifying their increase to a higher level. Petroleum Oil from Arkansas to Louisiana, 95 I. C. C. 55, 57.

(w) The law places upon carriers the burden of showing that proposed increased rates are reasonable and otherwise lawful. Fact that they are made in accordance with a basis of long standing, while entitled to due weight, does not of itself constitute sufficient justification. Cotton Linters to Indiana Points, 95 I. C. C. 514, 516.

(x) Proposed increases and changes in method of assessing gathering charges, or proportional rates, on citrus fruits from interior Florida points to Florida basing points to be used as factors of through rates to certain transcontinental and intermountain territory found not justified. Carriers attempted to justify the proposed increases merely by explaining the change in method of determining freight charges. However, instead of promoting uniformity the proposed method of stating charges up to the basing points would further confuse a situation already so complex and disordered that shippers and carriers have difficulty in applying and understanding, or even explaining, the adjustment. Citrus Fruits between Points in Florida, 95 I. C. C. 532.

(y) Carriers can not justify increases in transportation charges, especially when fixed by the commission, merely by explaining a change in method of determining freight charges. Citrus Fruits between Points in Florida, 95 I. C. C. 532, 537.

(z) Proposal to cancel application of wrought-iron pipe commodity rates on iron or steel sucker and pull rods from St. Louis and points in c. f. a. territory to destinations in Kansas and Missouri, leaving in effect higher class rates, found not justified. Pull rods and sucker rods have hitherto been accorded same rates and no justification was offered for the proposed rates under which rates on pull rods would be materially higher than on sucker rods. While evidence indicates that present rates are in need of revision and that present relationship of these rates with those to Oklahoma points results in prejudice to localities in the latter territory, the class rates proposed would result in some instances in rates higher than those to Oklahoma points, and considerably higher in many cases than those proposed by carriers in a pending proceeding. Sucker and Pull rods from St. Louis, 95 I. C. C. 599.

(aa) Through rates, no matter how constructed, must in all cases be reasonable and where increases are proposed the burden is upon carriers to justify the resultant increased rates. Butter, Eggs, Dairy Products, and Poultry, 96 I. C. C. 19, 29, 30.

(bb) Proposed increases in rates on glass and glassware from points in Oklahoma and from Fort Smith and South Fort Smith, Ark., to Mississippi River crossings, Memphis, Tenn., and south, found not justified. There is no satisfactory showing of record that the existing rates to Mississippi Valley points are reasonably compensatory and the data of record do not indicate that the maintenance of such rates is necessary to enable the southwestern producers to obtain a fair share of the trade in the Mississippi Valley. Glass and Glassware to Interstate Points, 98 I. C. C. 83, 89.

(cc) In 93 I. C. C. 499, the Commission found that the proposed increased rates on iron and steel articles, in carloads and less car loads, between Newark, N. J., and points grouped therewith, and points in New England are not justified. The Commission has considered the record in the light of the briefs filed since the promulgation of the original report and are of the opinion that the respondents have not sustained the burden of proof. HELD, previous finding affirmed. Iron and steel between New Jersey and New England 107 I. C. C. 83.

(dd) The statute casts upon respondents the burden of justifying the proposed changes on suspension by the Commission, and the subsequent withdrawal of the protest which led to suspension does not of itself permit the conclusion that the changes are justified. Classification of hand pea hullers, 109 I. C. C. 143, 145.

ALL OTHER CITATIONS

International Harvester Co. v. N. Y. C. R. R. Co., 88 I. C. C. 371.

§4. Effect.

(a) Where carriers under tariffs hold themselves out as offering for a given rate to render a specified service, and withhold a part of that service, the shippers not preventing the carrier from rendering the complete service offered under the rate, there has been an increase in the rate no less than if after a certain date a higher charge had been made for the service. Bordens Farm Products Co. v. N. Y. N. H. & H. R. R., 92 I. C. C. 270, 272.

§5. Right to Advance.

(½). In General.

(a) Proposed increased rates on wool and mohair from points west of Mississippi River to eastern defined territories found not justified. Substantial increases would result from Pacific coast and interior territory, from which rates at present are maintained on a low basis under fourth-section relief, and wool and mohair are not required to pay more than their fair share for transportation service rendered. Wool Rates Investigation, 91 I. C. C. 235, 264.

(b) Increases in grain rates designed to place rates upon full combination upon markets points will not be found justified unless clearly shown to be reasonable in themselves, free from undue prejudice or unjust discrimination, and otherwise lawful. Omaha Grain Exchange, 53 I. C. C. 249, and other cited cases. Grain from Western Trunk Line Points, 91 I. C. C. 632, 634, 635.

(c) Proposed readjustment of rates on poultry, butter and eggs from points in Kentucky, Tennessee, Alabama, and Mississippi to Chicago, Ill., Ohio and Mississippi River crossings and certain other destinations, resulting in heavy increases in rates in practically all cases, found not justified. Dairy Products from Southern Points, 100 I. C. C. 756.

(d) Proposed increased rates on egg-carrier fillers, egg cases, and egg-box material, from Coffeyville, Kans., to points in Arkansas on the M. & N., for purpose of lessening differences between rates from Coffeyville and rates from Quincy, Ill., competing points in destination territory involved, found not justified. Rates from both Coffeyville and Quincy are blanketed to destinations on the M. & N. A., and division accruing to that road under present rates from Coffeyville is greater under the rate from Quincy. Suspended schedule ordered canceled. Egg Case Fillers from Kansas Points, 101 I. C. C. 1.

(e) Proposed change in description of glue stock between points in official territory so as to except from its provision such articles as are edible ingredients of food for human consumption making applicable thereon fifth-class instead of present sixth-class rates and rating, found not justified except as to "pork-hide trimmings" or "fresh-frozen or green-salted pig skin," which are used almost exclusively in manufacture of edible gelatin. Glue Stock in Official Classification Territory, 101 I. C. C. 601.

(f) Respondents proposed to increase their trans-lake rate on salt, carloads, from Ludington and Manistee, Mich., to Chicago, Ill., and intermediate points, applicable over the car ferry route of the P. M., to Milwaukee, Wis., and St. Paul beyond. The increase proposed is from 12 to 13c and would make the trans-lake rate the same as the all rail rate. The P. M., has its own rails from Ludington and Manistee to Chicago, but the 1c differential in favor of the trans-lake route attracts all the traffic. The distances to Chicago over the trans-lake route are 185 miles from Ludington and 229 miles from Manistee. The all rail distances from Ludington and Manistee to Chicago are 299 and 298 miles. There never was a differential in favor of the trans-lake route on salt to Chicago prior to the establishment of the present rate. The Commission sees no sufficient reason for changing the finding made in 92 I. C. C. 388 to the effect that a trans-lake rate of 13c is justified. HELD, schedules justified. Salt from Ludington group 112 I. C. C. 255.

ALL OTHER CITATIONS

Wood Pulp from International Falls, Minn., 85 I. C. C. 95.

§5 (2). To Equalize Rates.

See Equalization of Rates; Relative Rates.

(a) Respondents proposed changes, in the rates on pig iron and iron brisquettes, carloads, from Chicago, Peoria, St. Louis, etc., to certain Iowa destinations. Prior to July 25, 1924 the rates on pig iron from Chicago were $2.80 minimum 44,800 pounds, to Cedar Rapids, and $3.04, minimum 49,280 pounds, to other

destinations. Certain of the destinations are intermediate to Winona, Minn., from Chicago via the C. G. W., and rate to Winona was $2.31, minimum 49,280 or lower than the rate to the intermediate points. No change was made in the alternative rate of $2.80. On July 25, 1924 rates were reduced to intermediate points to the basis of the Winona rate and this proceeding was brought about when this rate was canceled and allowing the advanced basis to apply. The record indicates that one of the purposes of this proposed adjustment is to enable pig iron manufacturers at Duluth and Chicago to reach these consuming points at the same or substantially equal transportation costs. The record does not show that the proposed alternative reduced rates subject to minimum of 60,000 pounds are in any way related to or connected with the proposed rates under consideration. They are published to different points of destination. No good reason appears why these reduced rates should not be permitted to become effective. HELD, proposed schedules not justified except in so far as they relate to the alternative reduced rates, proposed schedules ordered canceled. Pig iron Illinois to Iowa, 95 I. C. C. 409.

(b) Proposed changes in rates on petroleum and products from points in Missouri, Kansas, and Oklahoma to stations on M. & O. R. R. between East St. Louis and Cairo, Ill., for purpose of placing all the destinations on Chicago, Ill., basis, but which would represent increases at East Carondelet and Cairo and reductions at intermediate points, found not justified as to increases, but justified as to reductions. Under respondent's revised proposal fourth-section departures at Murphysboro, Ill., and other intermediate points, while lessened in degree, would be continued. Petroleum from Southwestern States, 91 I. C. C. 464.

(c) Proposed increased proportional rates on canned goods and iron and steel articles from Gulf ports to points on and north of Ohio River, applicable on traffic from Pacific coast through Panama Canal, designed for purpose of equalizing such rates with local rates applicable from New York, N. Y., to Chicago, Ill., found not justified. No similar increases are proposed from south Atlantic ports, and undue prejudice in favor of such ports would result. Canned Goods and Iron and Steel Articles, 91 I. C. C. 623.

(d) Proposed readjustment of rates on grain and products (a) from points in southeastern Missouri to Memphis, Tenn., New Orleans, La., and other points in Mississippi Valley, designed for purpose of bringing rates from southeastern Missouri points into harmony with the rates of east-side lines from southern Illinois points by increasing rates from west-side groups on wheat and articles taking same rates, to basis of St. Louis and Cairo locals, and (b) between points in southeastern Missouri and St. Louis, Mo., Cairo, Ill., and related points, designed for purpose of keeping rates to St. Louis, Cairo, and related points properly aligned with those to Memphis, found justified in part. Grain and Products, 91 I. C. C. 666.

(e) Respondents proposed to increase class rates from stations on the C. & O., N. & W., and R. F. & P., taking Virginia rates or differentials higher to destinations on the Charleston division of the B. & O. The present rates are 107.5c first class, proposed rates 115.5c. The present rates are the same as the rates from Virginia cities to points in the 87% group in central territory, of which Cincinnati, O., is representative, and are lower than the rates from Baltimore to the 87% group by 8c first class. These arbitraries are employed in making rates from Virginia cities to points on, south, and west of the N. Y. C., T. & O. C., and P. C. C. & St. L., from Charleston through Point Pleasant, W. Va., and Columbus, O., to Chicago, Ill. The Baltimore rates apply from Virginia cities to destinations in central territory north and east of that line in groups taking 82% rates or higher and to destinations in percentage groups taking rates lower than 82% rates or higher, and to destinations in percentage groups taking rates lower than 82%, the 82% basis is maintained as minimum. While the Charleston division was operated as the Coal & Coke Ry. the natural and preferred route from traffic to and from these stations was through Charleston. Respondents at the hearing expressed a willingness to maintain the same bases between Virginia cities and points on the Charleston division as those at present maintained from and to Baltimore, that is, rates made on a scale beginning with $1.085 westbound,

and $1.135 eastbound. HELD, proposed rates not justified. Class rates from eastern points, 100 I. C. C. 215.

(f) A mere desire to readjust through rates on grain to equal the combinations upon particular gateways does not constitute justification for increase in the through charges. Grain from trunk line points, 100 I. C. C. 745, 750.

(fa) Proposed establishment by M. & O. R. R. of new rates and charges on uncompressed cotton from Meridian, Miss., to Carolina territory, for purpose of restoring normal differential relationship between rates on uncompressed cotton with carrier's privilege of compressing, and cotton compressed at shipper's expense, found justified. The disrupted relationship was published in error only by the M. & O. and applied only on shipments delivered to it at Meridian, whereas from surrounding points the normal differential was maintained. Moreover, commission's tariff rules require changes in rates to be specified in tariffs containing them, either as advances or reductions, but tariff here referred to published increases as though they had been mere continuations of rates previously in effect. Cotton to Carolina Territory, 92 I. C. C. 125.

(fb) Proposed modification of rules governing intermediate application of rates on lumber and articles taking same rates from stations on the Frisco between St. Louis and Springfield, Mo., to Missouri River cities and certain points beyond, for purpose of eliminating application of St. Louis rates from such points, found not justified. Combination rates which would result would be in line with rates from points in surrounding territory to same destinations, but because of maintenance of lower rates from St. Louis to points beyond Missouri River, would violate the long-and-short-haul provision of the fourth section. Intermediate Rule on Lumber, 92 I. C. C. 153.

(fc) Proposed changes in ratings and minimum weights on automobile fenders in the three general classification territories, involving both increases and reductions, for purpose of establishing absolute uniformity in l. c. l. ratings and practical uniformity in c. l. ratings, found justified, except as to finished fenders, in carloads. Classification of Automobile Fenders, 92 I. C. C. 223.

(fd) Increased rates can not be justified solely upon showing of desire for uniformity in tariff provisions. Iron and Steel Articles to Southwest, 93 I. C. C. 31, 36.

(fe) Proposed increased rates on cotton and cotton regins, uncompressed, any quantity, and on cotton linters, uncompressed, l. c. l., both with carrier's privilege of compressing, from Cairo, Brookport, Gale and Thebes, Ill., to eastern points, for purpose of restoring the relationship with rates from St. Louis, disturbed when the St. Louis rates were increased, but through oversight no similar changes were made in rates from the Illinois points, found not justified. Respondent made no reference to rates under which traffic actually moves to demonstrate reasonableness of the proposed rates, and since the St. Louis rates are paper rates, most of the cotton movement being through Memphis, they have little, if any, probative force in that connection. Cotton, Linters, and Regins to Eastern Cities, 93 I. C. C. 453.

(g) Rates on clean rice from milling points in Arkansas to certain destinations in c. f. a., southern, and western territories, to western termini of trunk-line territory, and to points in Oklahoma, found unreasonable and unduly prejudicial in some instances as compared with corresponding rates from New Orleans, Memphis, and interior Louisiana points. Carriers in making rates have largely ignored distance in an effort to somewhat equalize conditions. Right of complainants to natural advantages of their location can not be taken away by rate adjustments and wide differences in distance between the various fields to common destinations must be recognized. Reasonable and nonprejudicial rates and bases prescribed, Stuttgart Rice Mill Co. v. A. & V., 93 I. C. C. 517.

(h) Proposed increased rates on glass bottles and on fruit jars, fruit-jar tops, jelly glasses, and tumblers in straight or mixed carloads, from Oklahoma points and from Fort Smith and South Fort Smith, Ark., to Mississippi River crossings, Memphis and south, in order to bring about rates between said points no lower than rates between intermediate points within the territory covered by the Memphis-Southwestern Investigation, 77 I. C. C. 473, found not justified. Record fails to show that rates prescribed in 77 I. C. C. 473 are in excess of reasonable maxima for this territory

and proposed rates are the same as or lower than those rates and therefore not in excess of reasonable maxima for local application from and to points concerned. Except for certain unlawful features the order of suspension should be vacated, notwithstanding reiteration of views quoted from Memphis-Southwestern case in respect of the establishment of rates lower than the scale to meet competitive conditions, as therein described provided that the fourth section is observed and no undue prejudice or other unlawful situation results. Glass and Glassware to Interstate Points, 98 I. C. C. 83.

(i) Proposed increases in rates on window glass and rough-rolled glass, in carloads, from Oklahoma and from Fort Smith and South Fort Smith, Ark., to Texas points, found not justified. The proposed adjustment purports to remove fourth-section departures, but has been framed without adequate consideration of its effect. It would remove some departures but cause many others. Glass and Glassware to Interstate Points 98 I. C. C. 83, 90.

(j) Proposed increase in rates on sand and gravel from Barnesville, Downer, and Downer Pit, Minn., to Fargo, N. Dak., in order to again place the rates of respondent on a parity with the Northern Pacific's rate from Muskodo, Minn., to Fargo, found not justified. The evidence offered in connection with the formal docket herein considered was also offered with the proposed increase and it is found that under the scale found reasonable in the formal docket the rate for these distances would be the same as the rate now in effect. Hopeman Material Co. v. N. P. Ry. Co., 98 I. C. C. 361, 371.

(k) Proposed increased proportional commodity rates on chinaware or earthenware plumbers' goods to Oklahoma City, Okla., from upper Mississippi River crossings, on traffic originating at Trenton, N. J., found not justified on ground it would create violations of the long and short haul and aggregate of intermediates provisions of fourth section. Further, proposed proportional rate would exceed local rate on plumbers' earthenware and corresponding rate on similar articles of plumbers' enameled ironware, competitive commodities, resulting in undue prejudice to plumbers' earthenware. Plumbers' Goods from Mississisppi River Crossings to Oklahoma City, Okla., 98 I. C. C. 403.

(l) Upon hearing, rate on silica sand from Ottawa, Ill., to Carrel Street station, Cincinnati in connection with Pennsylvania lines, found not unjust or unreasonable, and proposed rates representing increases to same basis in connection with other lines found justified. Comparison of these rates with rates on sand from Ottawa to other destinations for similar distances shows that rates to Cincinnati are substantially out of line. Moreover, the rate from Ottawa to Cincinnati is more or less of a key rate and the reduction required in original report, 85 I. C. C. 412, jeopardizes the whole fabric of silica-sand rates in offical classification territory. This movement is very heavy and a general reduction in rates would mean a serious reduction in railroad revenues. In large part the general level of eastbound rates from the Ottawa district has been fixed or approved in previous cases cited. Boldt Glass Co. v. C., B. & Q. R. R. Co., 98 I. C. C. 481.

(la) Proposal to cancel l. c. l. commodity rates on clean rice, from, to, and between points in southern territory, designed primarily for purpose of bringing about uniformity and to remove discriminations, leaving in effect higher class rates, found not justified. Rates on basis of those approved in Southern Class Rate Investigation, 100 I. C. C. 513, approved. Rice between Points in Southern Territory, 102 I. C. C. 79.

(lb) Plaster, gypsum rock, and plaster board: Proposed cancellation of excentions to official classification on calcined and wall plaster, gypsum rock, and plaster board from Grand Rapids and other c. f. a. points to Canadian destinations, leaving in effect the full sixth-class basis of rates, found not justified. Purpose of the proposed change is to rectify a condition which would never have existed but for unauthorized action of American carriers publishing the rates in issue without first obtaining consent of the Canadian lines. However, no similar rate change is proposed so far as c. f. a. destinations are concerned, and protestant shows that in selling plaster board in Canada it must equalize its freight rates with those of its competitor at Caledonia, Ont., and that an increase in the present spread would make it im-

possible further to compete in this territory. Classification Exceptions on Plaster Board, 102 I. C. C. 94.

(m) Respondents proposed to cancel joint commodity rates on forest products, including doors, not screened or glazed, door panels, veneered, and kindling wood, carloads, from points in north Pacific coast territory to Michigan City and Gary, Ind., leaving higher combination rates to apply. The proposed cancellations will leave in effect to Michigan City and Gary the same basis of rates as that now accorded to other points in central territory, and, on the articles other than doors, not screened or glazed, and panels, will result either in no increases or in increases only 0.5c. In view of the fact that Michigan City and Gary are the only points in territory east of Chicago at present accorded joint rates lower than the combination on Chicago protestant withdrew his objection. HELD, schedules justified. Forest products from north Pacific coast 102 I. C. C. 319.

(ma) Proposed increased rates on unmanufactured tobacco received from Carolina territory for storage and warehousing at Newport News, designed for purpose of equalizing the warehousemen at Norfolk with those at Newport News, found not justified. The disadvantage under which interior warehousemen at Norfolk operate is due to absence of a storage-in-transit arrangement at that point, while such an arrangement is in effect at Newport News, and to fact that on tobacco exported from Norfolk two separate handling charges are assessed, whereas at Newport News only one such charge is made. Moreover, respondents here do not serve Newport News, and to permit proposed increased rates would be contrary to spirit of decision in 23 I. C. C. 345. Increased Rates on Tobacco, 102 I. C. C. 665.

(mb) Proposed increased rates on lumber and products between Denver and points taking same rates, on one hand, and points on L. & N. and Gulf, Mobile & Northern, on the other, found justified. Existing rates are on a low level and the higher combinations proposed will not result in unreasonable charges. Moreover, proposed changes in rates to points intermediate to Gulf ports place rates to such points on a basis more nearly in harmony with rates to other destinations in same general territory, thereby removing possible discrimination. Forest Products to Southern Points, 102 I. C. C. 717.

(n) Respondents proposed to increase the rates on lumber and lumber products taking arbitraries over lumber rates between Denver, Colo., and points taking same rates, on the one hand, and points on the L. & N., and G. M. & N., on the other hand. No joint through rates are in effect on lumber and lumber products from the Pacific northwest to destinations on the L. N., or G. M. & N., the lowest combinations making on Denver. The rate on certain millwork from Denver to Mobile for Gulf M. & N., delivery and to Mobile, New Orleans and and Pensacola for L. & N., delivery is 55c, and this rate applies as a maximum at intermediate points to which no joint rates are maintained. Under the suspended schedules the proposed increased rates from Denver to the points on the L. & N., New Orleans, Mobile and Pensacola and certain intermediate points, would be effected by cancellation of the present joint rates, in the absence of which the higher sums of intermediate rates, which are higher, would apply. L. & N., stated that the rates from Denver to New Orleans, Mobile and Pensacola are controlled by the western roads which form the direct and short route to New Orleans, and that the New Orleans rate is extended to Mobile and Pensacola because of port competition. The short line distance to New Orleans is 1,330 miles, while over the L. & N., distance is 1,848 miles. The existing rates are on a low level and it does not appear that the combination rates proposed would result in unreasonable charges. The proposed changes in the rates to points on the L. & N., and G. M. & N., intermediate to the Gulf port places the rates to such points on a basis more nearly in harmony with the rates to other destinations in the same general territory, thereby removing possible discriminations. HELD, proposed schedules justified. Forest products to southern points 102 I. C. C. 717.

(o) If a city has the advantage of geographic location it can not be arbitrarily deprived of such advantage by some artificial adjustment which has for its sole purpose the movement of traffic to a competing market. Chicago Board of Trade v. A. T. & S. F. Ry. 107 I. C. C. 319,329.

(p) Respondents proposed to increase their rates on concrete roofing slabs, carloads, from Chicago and points grouped therewith, and from Terre Haute, Ind., to destinations in central territory. The portion of the St. Paul over which the proposed rates would apply was formerly the C. T. H. & S. E., running south from Chicago near the Illinois-Indiana line to Terre Haute and thence southeasterly to Westport, Ind. Average load is nearly 68,000 pounds, claims rate practically negligible, no expedited or special service is necessary. Official classification rating is sixth class, but from Chicago, Cleveland and Detroit and Manistee at some and possibly all of which there is a production the exceptions provide for 75% of the sixth class to central territory destinations. This latter basis has been in effect for some years and has general application from the points named except over the St. Paul and its connections from the Chicago group. From that group and from Terre Haute over these lines to destinations in central territory the brick commodity rates, which are on a much lower basis, have applied since March 30, 1925. This basis was established through error, and respondents here seek to correct the error by proposing restoration of the basis of 75% of sixth class which will put their rates on a parity with those of all the other Chicago lines reaching central territory, and put Chicago on a parity with other producing points in that territory. HELD, proposed schedules justified. Concrete roofing slabs 107 I. C. C. 335.

(q) Respondents proposed increased rates on ore and concentrates, carloads, from producing points in California and Nevada to Utah smelter points and from Nevada, California and Utah to California smelter points. The suspended schedules were published following the issuance of 100 I. C. C. 180. In that case the Commission prescribed reasonable rates on ore and concentrates from Plumas County, Calif., of which Engles and Spring Garden are typical, to Wabuska, Nev., and also required the maintenance between such points of rates related to those from the same origins to the smelters at Garfield and International, Utah. Under this requirement the rates from Spring Garden to Wabuska must not exceed 60% of the Spring Garden-Utah rates. Although the S. P., schedules were apparently proposed to conform with those filed by the W. P., the former did not agree to restore any of the original rates as did the W. P., but stood upon its proposals. The Commission may infer from the testimony of certain of the shipppers that they might not oppose the proposed increases if the Wabaska smelter were in operation, but there is nothing of record to indicate when that plant may resume operations if at all. It is possible, although the record does not so establish, that the present rates on the lower values of ore are in certain instances less than reasonable maxima. Taken as a whole the existing scales of rates for values up to $100 do not appear to be subject to that structure. There is no suggestion of record that the lower value rates are less than reasonable maxima. The present basis has been voluntarily maintained for more than three years. In the present condition of the mining industry the substantial increases proposed ought not to be permitted except upon clear and convincing justification. The evidence wholly fails in that respect. HELD, proposed rates not justified to extent authorized by special permission 74959. Ore and concentrates between Calif., Nev., and Utah 107 I. C. C. 357.

(r) Proposed increase in rates from and to points in Iowa for interstate application on c. l. shipments of butternut, cherry, holly, mahogany, and walnut lumber and articles made therefrom, found justified. The Iowa intrastate distance scale of lumber rates applies also to interstate shipments in absence of specific commodity rates. Proposed schedules would make for a uniform basis of rates on walnut lumber in western trunk-line territory and while protestant has been heretofore favored with a basis of interstate rates on walnut lumber lower than that available to other shippers in western trunk-line territory that fact is no justification for the continuation of this lower basis. Lumber from and to Iowa Points 101 I. C. C. 299.

(s) Proposed increased rates on molding sand from Mount Holly, Hainesport, and Masonville, N. J., to Buffalo and Rochester, N. Y., and points taking same rates, which would result in placing Hainesport on the same rate basis as points in southern New Jersey considerably farther distant from the Buffalo-Rochester group, found not justified. Sand and Gravel from New Jersey, 101 I. C. C. 560.

(t) Proposed increased rates on brick and articles taking same rates from Mason City, Iowa, to destinations on the C., St. P. M. & O., and Soo Line in Wisconsin, designed to restore higher rate previously in effect and meet the rate over the line of a competing carrier, found not justified on ground that such rates compare favorably with rates on like traffic from competing Illinois points to same destinations. Combination rule on Brick and Draintile, 101 I. C. C. 729.

(u) Respondents proposed to increase the rates on brick and related articles taking the same rates, including hollow tile, from Sligo, St. Charles, Climax, and New Bethlehem, Pa., to points in Buffalo and Rochester, N. Y., territory on the Pennsylvania R. R., and connecting lines. The origin points are on the Pennsylvania about 20 miles east of Red Bank Pa. Generally speaking it is proposed to increase the rates from the four points named from $2.05 to $2.50 to Buffalo points and from $2.30 to $2.75 to Rochester rate points. New Bethlehem will be considered as representative of the points of origin. The proposed increased rates are on the same basis as the present rates from Clearfield, Curwensville, and Lock Haven, Pa., designated as the Clearfield group. Respondent stated that in giving consideration to the proposed increased rates on brick it overlooked the fact that there was no production of brick at New Bethlehem and that the hollow tile produced at this point comes into competition with the same commodity manufactured at Brookville and Reynoldsville, the latter about 36 miles east of New Bethlehem. Had this not been overlooked no increases would have been proposed in the rates from the last named point because no such action would have been necessary to correct the situation. There is no competition between New Bethlehem and Climax, St. Charles, or Sligo due to the fact that hollow building tile is not manufactured at the three points last named. HELD, except as to the rates from New Bethlehem, rates found justified. Brick and related articles to New York 109 I. C. C. 10.

ALL OTHER CITATIONS

Sloss-Sheffield Steel & Iron Co. v. Director General, as Agent, 85 I. C. C. 367; Grain from Oklahoma, 85 I. C. C. 602.

§5 (2½) Fourth Section Violations.

See Long and Short Hauls.

(a) Proposed increased rates on petroleum and products from points in Kansas, Missouri, and Oklahoma to Belleville, Ill., and points in Illinois south thereof on the Illinois Central found not justified. Carriers made no attempt to justify fourth-section violations which suspended rates would create, and have not filed a fourth-section application for relief from the long-and-short-haul provision of the fourth section. Petroleum to Belleville, 89 I. C. C. 295.

(b) Proposed revision in short-haul rates, consisting of increases and decreases, on iron and steel articles between points in the Pittsburgh district and adjacent territory in Pennsylvania, New York, Ohio, West Virginia, and Maryland, promulgated primarily for purpose of bringing rates within provisions of the aggregate of intermediates clause of section 4 of the act, found not justified as a whole. Iron and Steel Articles, 89 I. C. C. 606.

(c) Carriers proposed to remove fourth section departures by increases in the rates from South Atlantic and Gulf ports and reductions in the rates from interior points, practically all points of origin in the southeast and Mississippi Valley being placed on a group basis. In 87 I. C. C. 740 the Commission found the proposed revision of rates to Ohio and Mississippi river crossings and points in central, western trunk line and trunk line territories not justified. From the southeast rates from practically all points north of the Jacksonville-River Junction line of the S. A. L., are, in the proposed adjustment blanketed. In 61 I. C. C. 23, the Commission found rates from the Perry branch of the A. C. L. unduly prejudicial to extent they exceed rates from Jacksonville by more than 3c on rosin and 6c on turpentine. From other points in Florida south of the line referred to the respondents proposed to make rates by combination on Jacksonville, using north of that point proportional rates 4.5c on rosin and 9c on turpentine lower than the local rates from Jacksonville. In view of the fact that practically all other points in this general territory were proposed on a blanket basis, the Commission prescribed rates from the Florida points 5c on rosin and 10c on turpentine higher than the rates from Jacksonville. The rates from Jack-

sonville are 1c lower than from New Orleans to Cleveland, O., and Buffalo, N. Y. Although the distance from Jacksonville is less than from New Orleans, from other points in the New Orleans group the distances fairly compare with those from points in the Jacksonville group. On the whole, the distances from the Jacksonville group are slightly less than from the New Orleans group. No urgent necessity appears to exist for precisely the same rates from the two groups to these two destinations. If respondents consider the equalization necessary, this may be accomplished as well by reducing the rate from the New Orleans group as by increasing the rate from the Jacksonville group. To St. Louis, Mo., the rate prescribed from the New Orleans group is 1c less than the rate to Louisville, Ky., and Evansville, Ind., and respondents ask authority to increase this rate to the Louisville basis, inasmuch as over some routes traffic to St. Louis moves through Evansville. The rate prescribed to St. Louis is 1c higher than the suspended rate, and the necessary adjustment may be made by making the rate to Evansville 1c lower than that prescribed. In the suspended schedules the same rates were proposed from the New Orleans and Montgomery subterritory group to Cairo, Ill., as to Louisville, 30c and to Memphis 3c lower. To Memphis they desire to maintain the rate prescribed from New Orleans, Gulfport, Miss., and Mobile, Ala., 25c; but from Pensacola and points in Montgomery subterritory, they desire to maintain the same rate to Memphis as to Nashville, 30c. To Nashville the rate was made higher than it should have been because of the failure to consider the shortest routes from points in the producing territory; and the adjustment with respect to Cairo should be made by establishing to Nashville from Pensacola and points in Montgomery subterritory the lower Cairo rate. A similar adjustment may be made from the remainder of the New Orleans group if the carriers so elect. To Nashville the rate from Pensacola and Montgomery subterritory may well be less than from New Orleans. Just as rates may well obtain to Nashville from Pensacola lower than from New Orleans, so may rates properly obtain to Memphis from New Orleans lower than from Pensacola. If the Pensacola-Nashville rate be reduced to the Cairo basis, it will still be 28c, or 3c higher than the rate from the New Orleans group to Memphis. The findings in the original report will be modified to permit the application from Pensacola and Montgomery subterritory to Memphis of a rate of 28c on rosin and 44c on turpentine. The suspended rates to Milwaukee, Wis., were 3c on rosin and 4c on turpentine higher than the rates to Chicago. As compared with rates prescribed to central territory this difference in rates for an additional 85 miles is not warranted. The original findings will be modified to permit the application of rates to Milwaukee which do not exceed the rates found reasonable to Chicago by more than 2c on rosin and 4c on turpentine. Proposed less carload rates justified. Naval stores from southern points, 89 I. C. C. 634.

(d) Respondents proposed to increase the rates on lumber, car loads, from Missouri, Arkansas, Louisiana, Oklahoma and Texas to Burlington and West Burlington, Iowa. Burlington is on the west bank of the Mississippi on the Burlington. From St. Louis, Mo., Burlington is intermediate to Chicago, but is not on the short or rate making line. Keokuk and Fort Madison, Iowa, are on the same branch between St. Louis and Burlington. These schedules would remove the fourth section violation at Keokuk and Fort Madison by increasing the Burlington rates rather than by decreasing the rates to Keokuk and Fort Madison. The rates from certain points such as Gideon, Mo., to Burlington would, if the proposed schedules become effective, be in excess of the rates to Illinois points such as Galesburg, Peoria, Rockford and Chicago, and would be in violation of the fourth section. As published there is nothing to prevent the application of the rate to Chicago via Burlington. Burlington is considered intermediate and transit arrangements are provided for at that point. Keokuk and Fort Madison both pay equivalent to the full combination, as Burlington will have to do if the schedules are allowed to become effective. A 29.5c rate, which is 3c under the local combination, applies from Gideon to Chicago and Rockford. Peoria takes a rate 2c lower than the combination. HELD, proposed rates justified, but respondents have not justified rates to Burlington and West Burlington which are in excess of rates to more distant points. Lumber from Missouri points to Iowa, 91 I. C. C. 218.

(ef) The reasonableness of an increased rate can not be established by

simply showing that departures from the fourth section are thereby removed. Coal from stations in W. Va., 93 I. C. C. 423, 426.

(g) C. & E. I., proposed to increase the rates on bituminous coal from Group G, Evansville, Ind., to destinations in Illinois on its lines. Destinations are Brewer to Momence, Ill. Most of the destinations are intermediate between Evansville and certain points in Indiana over respondent and connections. On August 1, 1924 respondents published rates to Indiana through these Illinois points lower than to intermediate territory. On September 10, 1924 to remove fourth section violations rates were published to intermediate territory the same as to points beyond. Respondent now proposes to increase these rates to basis in effect prior to that date. Respondents revenue will not be materially affected if the suspended schedules are not allowed to become effective. HELD, suspended schedules not justified. Coal from Evansville group, 95 I. C. C. 607.

(h) Respondents proposed to increase their rates on fencing material, reinforcement steel, and related articles from St. Louis, Mo., and related points north and east thereof to southeastern Kansas. The destinations are in what is known as Kansas group A, and are generally between 400 and 500 miles distant from St. Louis. Wichita is about 479 miles from St. Louis, and is perhaps the principal point. Prior to May 1, 1924 the rates on these commodities were higher from St. Louis to Group A destinations in Kansas than those from the same points of origin to destinations in northeastern Oklahoma, such as Tulsa and Bartlesville, and in many instances represented departures from the long and short haul rule. The carriers decided to bring about conformity with the fourth section by reducing to the northeast Oklahoma basis such of these rates as applied to Group A destinations in Kansas which are intermediate to the destinations in northeastern Oklahoma over what were regarded as the direct routes. The publishing agent filed a tariff in accordance with directions. It being later noticed by respondents that the reductions went beyond their intentions, and resulted in what they regarded as unwarranted disparities against destinations in Kansas groups B, C, and D, they caused the proposed tariff to be filed. If allowed to become effective this tariff would have the effect of limiting the present reduced rates to those destinations in Kansas group A which are intermediate to northeast Oklahoma over what the carriers regard as the direct routes, thus restoring the other Group A rates to the higher or Oklahoma City basis which prevailed before the reduction was made on May 1. Over certain routes respondents are proposing to create departures from the long and short haul rule without authority. HELD, schedules not justified. Fencing material to Kansas, 96 I. C. C. 462.

(i) Proposed cancellation of local and proportional commodity rates on petroleum and products from Pueblo and Walsenburg to destinations on Denver & Rio Grande Western R. R., leaving fifth-class rates in effect, thereby resulting in substantial increases and in certain fourth-section violations, found not justified. Petroleum between Colorado, New Mexico, and Utah, 91 I. C. C. 734.

(j) Respondents proposed a readjustment of rates on live and dressed poultry, butter and eggs from Kentucky, Tennessee, Alabama, and Mississippi to eastern, central and southern points, including increases and reductions. The suspended schedules name joint through commodity rates on live poultry, carloads, and on dressed poultry, butter, and eggs, in carloads and less carloads, to eastern cities and points in the Buffalo-Pittsburgh zone, which are generally higher than the present rates from points having joint commodity rates and lower than the present rates from all other points. It is also proposed to cancel the commodity rates wherever they exist on any or all of these commodities to Chicago, Ill., Ohio and Mississippi river crossings, and certain other destinations, leaving applicable the higher class rates. The principal part of the readjustment is that to the eastern cities, the heaviest movement by far being to New York, N. Y. The present adjustment of the rates to those cities is very uneven and has been the subject of considerable complaint. Although the proposed adjustment is only intended to be temporary, shippers who would benefit by the proposed reductions are anxious to have them made effective as soon as possible, and the removal of the discriminations and fourth section depar-

tures in the present rates should not be delayed unnecessarily. The only way in which the proposed reduction can be made available and the discriminations and fourth section departures removed in this proceeding is by permitting the proposed readjustment to the eastern cities and Buffalo-Pittsburgh zone. The same reasons do not appear to apply to the rates to Chicago, the Ohio and Mississippi river crossings involved. Although some revision of those rates may be justified, the Commission is not convinced that the present class rates should be applied to those destinations, especially since they are now in course of revision. HELD, proposed readjustment to eastern cities and Buffalo-Pittsburgh zone has been justified, but increased rates proposed to Chicago, the Ohio and Mississippi river crossings, not justified. Commodity rates from points on the N. C. & St. L., to junctions with other lines may be increased sufficiently to prevent departures from the aggregate of intermediates rule of the fourth section. No change has been justified in the present practice of transporting caretakers of live poultry. Dairy products from southern points, 100 I. C. C. 754.

(k) Reasonableness of an increased rate can not be established by simply showing that departures from the long-and-short-haul provision of the fourth section are thereby removed. Traffic Bureau of Nashville, 43 I. C. C. 366, 370. Iron and Steel Articles from Philadelphia, 92 I. C. C. 123.

(l) Proposed increased rates on iron and steel articles, from Philadelphia and near-by points to points in Delaware, Maryland, and Virginia, for purpose of removing fourth-section departures and in order to take advantage of proper increases under the Five Per Cent Case, 31 I. C. C. 351, found not justified. Reasonableness of increased rates can not be established by simply showing that fourth-section departures are thereby removed or that carriers by error failed to take advantage of an increase authorized 10 years ago. Moreover, proposed rates would create new fourth-section departures. Iron and Steel Articles from Philadelphia, 92 I. C. C. 123.

(m) Proposed increased rates on cottonseed products from Texas common points, on local traffic to Louisville, Ky., territory, for purpose of removing fourth-section violation in respect of traffic to intermediate St. Louis territory, found not justified. Resulting rates would be on higher basis than rates from Arkansas and Oklahoma points with which Texas common points compete. Cottonseed Cake from Texas, 92 I. C. C. 207.

(n) Proposed increased rates on cotton piece goods and on junk and scrap iron from Texas, Louisiana, and Oklahoma points to St. Louis and other points in defined territories, and on oyster shells from Memphis to Missouri and Kansas points, published for sole purpose of removing fourth-section departures in compliance with commission's fourth-section order No. 8600 issued in connection with decision in Memphis-Southwestern Investigation, 77 I. C. C. 473, found not justified. Commodity Rates from Southwestern Points, 93 I. C. C. 394.

(o) Proposal to eliminate whole or crushed oyster shells from list of fertilizer and fertilizer materials on traffic from Memphis to interior Kansas and Missouri points, result of which would be to increase rates on shells over rates on fertilizer,, found not justified. In 74 I. C. C. 245 and 80 I. C. C. 604, the commission declined to authorize elimination of shells from list of articles taking fertilizer rates, and such a proposal as here contemplated is not justified by mere statement that intermediate points have had a higher basis of rates, particularly when commission has heretofore found that such exclusion was not justified. Commodity Rates from Southwestern Points, 93 I. C. C. 394, 398.

(p) Proposed increased rates on scrap iron and cotton tie clippings from Texas points to St. Louis and points in defined territories, found not justified. Respondents made no attempt to justify proposed increases beyond stating that rates were designed for sole purpose of removing fourth-section violations in compliance with order entered in connection with Memphis-Southwestern Investigation, 77 I. C. C. 473. Such departures, however, could have been removed by establishing the highest rate to St. Louis at the intermediate points. Moreover, evidence was introduced to show that increases proposed would substantially reduce, if not entirely eliminate, shipments of scrap iron and junk between points here involved. Commodity Rates from

Southwestern Points, 93 I. C. C. 394, 397, 398.

(q) Proposed increased rates on coal from farther distant points on the Gauley branch of the C. & O. to level of the New River or intermediate basis of rates, in order to comply with commission's order in 89 I. C. C. 638, denying fourth-section relief, found not justified. No similar increases are proposed from competing mines on the same branch north of Belva, and if advances are allowed it will be necessary for protestants to absorb them in order to continue shipping to western markets. Moreover, respondent made no effort to show that proposed rates are reasonable per se, and its revenue would not be materially affected were departures removed by reducing rates from the intermediate points. Coal from Stations in W. Va., 93 I. C. C. 423.

(r) Reasonableness of an increased rate can not be established by simply showing that departures from the fourth section are thereby removed, Iron and Steel Articles from Philadelphia, 92 I. C. C. 123, or in order not to disturb commercial conditions. Coal from Stations in W. Va., 93 I. C. C. 423, 426.

(s) Proposal to cancel third-class rates plus 3 cents per 100 pounds on common black blasting powder from Fairchance and Evans, Pa., and Rita, W. Va., to stations on the B. & O. in the Pittsburgh, Pa., group and points east thereof, and to apply first-class rates, found not justified. Youngstown, Ohio, and Quaker Falls, Pa., competitive points, object to paying rates relatively higher than from Fairchance, and rather than extend the Fairchance basis carriers propose its cancellation. Proposed basis from Fairchance, however, would place that point at a disadvantage and result in fourth-section departures. Second-class rates from all origin points, satisfactory to all parties concerned, found justified. Rating on Blasting Powder, 93 I. C. C. 451.

(t) Proposed increased rates on lime from points in eastern trunk-line territory to destinations in 60 and 67 per cent territories, published in compliance with decision in Lehigh Lime Co., 85 I. C. C. 341, found not justified. Proposed rates would result in numerous violations of both the long-and-short-haul rule and aggregate-of-intermediates provision of section 4 of the act. In view of the competitive relationship which exists between Mitchell, Ind., and Ohio producing points on the one hand and eastern producing points on the other, findings in cited case modified and an adjustment of rates prescribed for future. Lime from Eastern Trunk Line Points, 93 I. C. C. 617.

(u) Where suspended schedules contain or threaten departures from long-and-short-haul provision of section 4 of the act, such schedules should be ordered cancelled "without considering the intrinsic reasonableness of the proposed rates." Rice Products to Jackson, Miss., 44 I. C. C. 364. Citrus Fruits between Points in Florida, 95 I. C. C. 532, 538.

(v) Proposed increased rates on cement from Ada and Hartshorne, Okla., to points in Texas on the Cisco & Northeastern; Eastland, Wichita Falls & Gulf; Wichita Falls, Ranger & Ft. Worth, and Wichita Falls & Southern, comparatively short-line carriers, found not justified. Purpose of the proposed advances is to bring these rates into proper alignment with rates to other Texas points and remove existing fourth-section departures. However, new fourth-section departures in some instances would result and the proposed rates do not compare favorably with rates prescribed in Iola Cement Mill Traffic Asso., 87 I. C. C. 451, for application from Ada to points in Kansas. Cement from Oklahoma to Texas, 95 I. C. C. 596.

(w) Proposed increased rates on bituminous coal from Evansville, Ind., to Illinois points on the C. & E. I. R. R., to basis in effect prior to reductions established in order to remove fourth-section violations resulting from a decision of the Public Service Commission of Indiana wherein rates were prescribed from mines to consuming points in Indiana, found not justified. Proposed rates would recreate the fourth-section departures and record indicates that carrier's revenue will not be materially affected if suspended schedules are not allowed to become effective. Coal from Evansville Group, 95 I. C. C. 607.

(x) Proposed increased rates on fertilizer from Little Rock, Ark., to El Paso, Tex., and points taking the same rates, designed to eliminate departures from the long-and-short-haul provision of section 4 of the act, found not justified, and such departures should be promptly eliminated. Fertilizers from Little Rock-Fort Smith Territory, 96 I. C. C. 703, 704, 705.

(y) Proposed increases in rates on window glass and rough-rolled glass, in carloads, from Oklahoma and from Fort

Smith and South Fort Smith, Ark., to Texas points, found not justified. The proposed adjustment purports to remove fourth-section departures, but has been framed without adequate consideration of its effect. It would remove some departures but cause many others. Glass and Glassware to Interstate Points, 98 I. C. C. 83, 90.

(z) Proposed increased proportional commodity rate on chinaware or earthenware plumbers' goods to Oklahoma City, Okla., from upper Mississippi River crossings, on traffic originating at Trenton, N. J., found not justified on ground it would create violations of the long-and-short-haul and aggregate-of-intermediates provisions of fourth section. Further, proposed proportional rate would exceed local rate on plumbers' earthenware and corresponding rate on similar articles of plumbers' enameled ironware, competitive commodities, resulting in undue prejudice to plumbers' earthenware. Plumbers' Goods from Mississippi River Crossings to Oklahoma City, Okla., 98 I. C. C. 403.

(za) Proposed cancellation of commodity rates on tanning extract from Norfolk and Newport News to Memphis, Chicago, and other destinations in c. f. a. territory, leaving in effect higher class rates, found not justified. Suspended schedules would create departures from long-and-short-haul provision of fourth section of the act. Tanning Extract from Norfolk and Newport News, 102 I. C. C. 196.

(aa) Respondents proposed to increase the rates on lumber and other forest products, carloads, from Latonia, Newport, and Covington, Ky., to Hamilton, Middletown, Miamisburg and Dayton, O. Points of origin are called the south bank points, are on the Ohio river, directly opposite Cincinnati, O., and within its switching limits. They are reached by the L. & N. The present rates from the south bank points are the same as those from Cincinnati, namely, 7.5c to Hamilton, 8c to Middletown and 9c to Miamisburg and Dayton. The proposed rates are in each instance 2c higher, this being the switching charge from the south bank points to Cincinnati. The suspended schedules would create fourth section departures in that the present rates from the south bank points in some instances also apply to destinations beyond Hamilton, Middletown, Miamisburg and Dayton to which more distant points no increase is proposed. HELD, to extent fourth section departures are created schedules not justified. New schedules to be filed naming the proposed rates provided no fourth section departures would be created thereby. Lumber from Kentucky to Ohio points 104 I. C. C. 387.

(bb) Complainant attacked commodity rates charged on petrolem and its products carloads from Oklahoma, Arkansas, Louisiana and Texas and related rate points, to Florence, Sheffield, Tuscumbia, and also to Russellville, Ala., as unjust, unreasonable, unjustly discriminatory, and unduly prejudicial in favor of Corinth, Tupelo, Miss., Decatur, Athens, and Cullman, Ala., and Columbia, Tenn. Respondents filed schedules purporting to eliminate the fourth section departures at the destination points named by restricting routing through those points, and by increasing the rates in some instances. The points of destination are in northwestern Alabama on or near the Memphis division of the Southern, which extends from Memphis to Chattanooga, Tenn., and the alleged preferred points are located in the surrounding territory. The average distance from Baton Rouge, La., to the Florence group is 462 miles, and the rate on gasoline and kerosene is 41.5c. The average rate to 149 destinations in Alabama, Kentucky and Tennessee for an average distance of 569 miles is 34c. From Shreveport, La., to the Florence group the rate is 43c, while a rate of 29.5c is shown to apply to destinations in Mississippi, Tennessee, Kentucky, and Illinois for distances ranging from 439 to 1,059 miles. A rate of 29.5c applies from Shreveport to Florence, 507 miles, whereas the rate to the Florence group, except Russellville, is 13.5c greater by the distance is 37 miles less. The rate from Shreveport to Russellville, 492 miles, is 46.5c, or 3.5c higher than to Florence, 470 miles. The rate from Shreveport to Louisville, Ky., 951 miles, and to many points in central territory for distances ranging as high as 1,299 miles is 41c. Oil is not shipped from Vicksburg, Miss., but the rates from that point are used as a basis for constructing rates from points west of the Mississippi river. The rate from Vicksburg is the same as from New Orleans and Baton Rouge to the destination points. The rates

from Vicksburg to Corinth and Tupelo are on the Mississippi Valley basis. A rate of 29c applies from Memphis to Florence, Sheffield, and Tuscumbia, while a rate of 17c is in effect from the same point to Corinth. The Florence group is entirely surrounded by points which are accorded much lower rates, although the distance to the Florence group is considerably less than to many of the preferred points. Defendants exhibits abundantly demonstrate that so far as distance is concerned, the rates attacked are not unduly high, and that they conform to the level of numerous rates in the southeastern territory. The issues are not broad enough and the record is not sufficiently comprehensive for the Commission to consider the reasonableness of the southeastern adjustment as a whole in this case. I. S. 2357. The rates on petroleum and its products, carloads, from Gulf ports and lower Mississippi river crossings to various points in the southeast, central territory, and St. Louis, Mo., apply in connection with various carriers participating in the tariff, including the Southern Ry., without restriction of routes. One of the primary objects of the schedules may have been to eliminate wasteful transportation, and instances of the proposed elimination of substantially longer routes are cited, but to most of the destinations many of the proposed routes are longer than some of those it is proposed to close. There may be some justification for the elimination of a few of the longer routes as contemplated by the proposed schedules, but it is impossible upon this record to designate the exact extent to which there may be a justification. HELD, rates attacked in 16684 not unreasonable or unjustly discriminatory, but unduly prejudicial to extent they exceed rates to Decatur or Columbia from Gulf ports; that rates attacked from Memphis, Tenn., to Florence, Sheffield and Tuscumbia unduly prejudicial to extent they exceed the rates to Corinth by more than 8c, or 5.5c less than to Decatur; rates from Memphis to Russellville unduly prejudicial to extent they exceed 11.5c more than from Memphis to Corinth, or 2c less than Memphis to Decatur. Proposed schedules not justified. Florence Chamber of Commerce v A. & V. Ry. 107 I. C. C. 84.

(cc) Proposed readjustment of rates on live and dressed poultry, butter, and eggs from points in Kentucky, Tennessee, Alabama, and Mississippi to eastern cities and Buffalo-Pittsburgh zone, resulting in reduction in rates generally and removal of discriminations and numerous departures from long-and-short-haul rule of fourth section, found justified, but from same points to Chicago Ill., Ohio and Mississippi River crossings and certain other destinations, resulting in heavy increases in rates in practically all cases, found not justified. Dairy Products from Southern Points 100 I. C. C. 756.

(dd) Commodity rates from points on the N., C. & St. L. to junctions with other lines may be increased sufficiently to prevent departures from the aggregate of intermediates rule of the fourth section. Dairy Products from Southern Points, 100 I. C. C. 756, 762.

(ee) Proposal to increase rates on grain and grain products from certain Indiana, Illinois, and Michigan points to Aurora, Garretsville, and Mantua, O., to be effected by transferring these destinations from Cleveland to Youngstown, Ohio, group, found not justified, without prejudice to establishment of rates in conformity with fourth section of the act. Present adjustment is illogical and inconsistent, and its correction is proper, but the application of rates to the three destinations higher than those to Solon, Ohio, which is near Cleveland and just beyond destinations in question over respondents' through routes, would contravene the long-and short-haul provisions of fourth section. Grain and Grain Products from C. F. A. Points, 101 I. C. C. 7.

(ff) Proposed increased rates on lumber and forest products from stations on the Clear Fork, Hog Camp, and Crooked Fork branches of the L. & N. R. R., in Tennessee and Kentucky to Lexington, Ky., found not justified, respondent offering no justification for departures from the long-and-short-haul provision of the fourth section at points intermediate to Lexington. Forest Products between Kentucky and Tennessee, 101 I. C. C., 469.

(gg) Proposed changes in rates on canned goods from Wisconsin points to eastern destinations, designed for purpose of eliminating present exceptions to fifth class rating generally in effect on such commodities in official classification territory, and of curing departures

from the fourth section of the act, found justified in some instances and not justified in others. Canned Goods to Eastern Points, 101 I. C. C. 502.

(hh) Proposed increased rates on grain and grain products from certain points in Kansas on the Union Pacific to St. Joseph, Mo., when routed over Union Pacific to Marysville, Kans., and St. Joseph and Grand Island beyond, found not justified. If suspended schedules became effective departures from the long-and-short haul provision of section 4 would result, also undue prejudice to protestants at Marysville who would not be able to purchase grain at Union Pacific points in competition with St. Joseph competitors. Grain and Products from Kansas, 101 I. C. C. 595.

(ii) Proposal to increase local, proportional, and reshipping rates on grain, grain products and grain by-products from west-bank Lake Michigan ports across lake, upper Mississippi River crossings, St. Louis, Chicago and other Illinois basing points, to northeastern Ohio, to be effected by changing the rate basis of the destination area from the Cleveland to Youngstown, Ohio, group, found not justified, in that such a change would result in an unlawful rate situation and departures from the long-and-short haul provisions of section 4 of the act. Grain and Products Between C. F. A. Points, 101 I. C. C. 662

(jj) Proposal to cancel commodity rates on brick, draintile, and other clay products from Mason City, Des Moines, Acme, and Rockford, Iowa, points on Rock Island, to Ashland, Wis., on So Line, leaving in effect considerably higher class rate and creating many violations of long-and-short-haul provisions of fourth section of the act, found not justified. Combination Rule on Brick and Draintile, 101 I. C. C. 729.

Grain from Oklahoma, 85 I. C. C. 602; Grate Bars to Memphis, 88 I. C. C. 701.

§5 (3). To Preserve Commodity Relationship.

See Classification §17, §22; Comparative Rates; Evidence §12; Relative Rates.

(a) Rates on roofing talc as increased under General Order No. 28 of director general and general increases of 1920, result of which was to widen spread existing between talc and crushed slate, a competitive commodity, found unreasonable to extent they exceeded lower rates subsequently established and which restored same relation as existed prior to such increases. Reparation awarded. Barrett Co. v. St. J. & L. C. R. R. Co., 91 I. C. C. 9.

(b) In reissuing a tariff, carriers unintentionally increased arbitrary on fruit, vegetable, and grape packages over rates on lumber, to a basis higher than that authorized in Increased Rates, 1920, 58 I. C. C. 220. HELD: Burden of proof is upon carriers, and since they failed to justify the rates, as increased, unreasonableness found to extent that arbitraries exceeded those authorized in cited case. Reparation awarded. Package Sales Corp. v. U. P. R. R. Co., 91 I. C. C. 697.

(c) Proposal to increase rates on wheat bran from points in western trunk line territory to points in New Mexico from coarse-grain basis to wheat basis, found not justified. Respondent did not submit any evidence in justification of proposed adjustment. Abilene Flour Mills Co. v. A. & S. Ry., 101 I. C. C. 14.

(d) Proposed change in description of glue stock between points in official territory so as to except from its provisions such articles as are edible ingredients of food for human consumption, making applicable thereon fifth-class instead of present sixth-class rates and rating, found not justified except as to "pork-hide trimmings" or "fresh-frozen or green-salted pig skin," which are used almost exclusively in manufacture of edible gelatin. Glue Stock in Official Classification Territory, 101 I. C. C. 601.

(e) Respondents propose generally to increase their carload rates on brass, bronze, and copper scrap, ingots, residues, and related articles between points in official classification territory. Brass, bronze, and copper scrap, bars, cakes, pigs, slabs, ingots, borings, and turnings are rated fifth class, and brass, bronze, and copper residues, such as ashes, skimmings, mud, sweepings, and washings are rated sixth class in official classification. With three or four exceptions, commodity rates equivalent to full sixth class rates are now in effect on the fifth class articles between points in central territory, and for movements within the same territory the residues, by exceptions to the classification, take 85 per-

cent of sixth class rates. Within trunk line territory and from or to points in that territory to or from points in central and New England territories, specific commodity rates ranging from about 67.3 per cent to over 91 per cent of sixth class rates are applicable on both the higher rated articles and the residues, but only between certain specified points where the traffic moves in heavy volume. Between other points in these territories class rates are applicable. In New England territory the classification basis is generally applied. Except on the residues between points in central territory now taking 85 per cent of sixth class, as to which no change is proposed, the suspended schedules propose generally to increase to the full sixth class basis, where now lower, all commodity rates applicable on these articles between points in the above described territories, both intra and interterritorial. The proposed rates are published as specific commodity rates but in every instance are equivalent to the current sixth class rates. The sixth class rates between points in central territory, on the one hand, and points in trunk line and New England territories, on the other, are about 33 1-3 per cent of first class rates, whereas between points in cenral territory and also in New England territory, they are uniformly 28 per cent of first class. Between points in trunk line territory the relationship of sixth class to first class varies greatly but will average around 34.5 per cent. HELD, proposed schedules have not been justified in their entirety, but the proposed sixth class basis would be reasonable for application on the fifth class articles, subject to the application as maximum of a rate of 40c between New York and Chicago, scaled on the regular percentage basis at other points in c. f. a. territory, and observing the recognized port differentials, and that 85 per cent of the rates on the fifth class articles would be reasonable for application on the residues. The Commission sees no reason why the foregoing basis should not be applied in trunk line territory and between points in that territory and New England or central territory where the present rates are now higher as well as where they are lower than such bases, at least wherever there is a substantial movement. The findings apply to the sixth class rates as a whole and are not to be understood as approving the specific rates from and to every point in the above territories. Brass, bronze and copper articles 109 I. C. C. 351.

§5 (4) Unreasonably Low Prior Rate.

See Evidence §43.

(a) Proposed increased rates on pig iron between Sheffield and Florence, Ala., when for movement by water beyond, found justified. Present rate is very low, is in the nature of a raw-material rate for manufacturing purposes, on the manufactured product of which carriers receive an outbound movement, and was not intended to apply to river landings at Florence or Sheffield. Respondents point out that there is generally no return movement from Sheffield, and if proposed rate should become effective the rail-water-and-rail rate from Florence would still be lower than the all-rail rate to some destinations. Instances were also cited of higher rates on various commodities between these points and between Alabama City, Gadsden and Attalla, Ala. Pig Iron Between Florence and Sheffield, 89 I. C. C. 324.

§5 (6). Erroneous Rate.

See Erroneous Rates.

(a) A rate admittedly low does not become unreasonable merely because other low rates to the same destination are not increased at the same time. Nor is an increase applied through error sufficient in itself to show that the resulting rate is unreasonable. Consolidated Coal Co. v. Director General, 93 I. C. C. 53, 54.

(b) Respondents proposed to cancel joint commodity rates on cement plaster, carloads, from Pyramid and Sweetwater, Tex., to destinations in Arkansas, Louisiana, Missouri and Illinois on the Cotton Belt, leaving in effect higher combinations of intermediate rates. Pyramid is on the T. & P., 199 miles west of Forth Worth, Tex. Sweetwater is 3 miles west of Pyramid on the T. & P., and K. C. M. & O. The joint rates were established contrary to instructions furnished agent Leland by that line, and the proposal to cancel them is made at its request for the purpose of correcting an error in tariff publication. That is the sole justification offered. Even though protestant would be able to reach competitive points at equal rates, it would not enjoy as liberal routing privileges as

its competitors. Protestant is as favorably situated with respect to distance as are its competitors and no reason appears why it should not have the same basis of rates. Schedules not justified. Cement plaster from Pyramid and Sweetwater, Tex., 93 I. C. C. 315.

(c) Complainant asked for reasonable rates for the future because of alleged erroneous methods of defendants in applying general percentages increases and reductions in rates on June 25, 1918, and other dates on stable manure from Jersey City, N. J., on ex water traffic from New York, N. Y., to New Jersey, Pennsylvania, Delaware, Maryland, Virginia and other states. Complainant gathers these shipments in New York and conveys them by scow or car float to Jersey City where they are loaded into cars from the scows or picked up by the railroad from the car float for transportation to destinations. An allowance of 35c per ton is made to complainant for the water ferriage from New York to Jersey City which is not in issue. The general increases mentioned, with one exception, were applied to the gross rate, or rate including the allowance, after which the allowance is deducted. On Nov. 1, 1921 defendants voluntarily canceled the resulting rates and published rates equal to the net rates of August 25, 1920 plus about 15% and the allowance of 35c. These rates were increased in the same manner as all other rates of defendants which reflected allowances. No reason appears for making an exception to that method in this instance. HELD, rates attacked not unreasonable or otherwise unlawful complaint dismissed. New York Stable Manure Co. v. Director General, 93 I. C. C. 349.

(d) Proposed increased rates on lumber from Missouri, Arkansas, Louisiana, Oklahoma, and Texas to Burlington and West Burlington, Iowa, promulgated for purpose of correcting former mistakes in tariff compilation brought about by various general increases and reductions, found justified in instances where they would remove existing fourth-section violations at Keokuk and Ft. Madison, Iowa, intermediate points, but found not justified where new fourth-section departures would be created at Burlington and West Burlington by application of higher rates thereto than to Galesburg, Peoria, Rockford, and Chicago, Ill., farther distant points. Lumber from Missouri Points to Iowa, 91 I. C. C. 218.

(e) In applying percentage increases authorized in Increased Rates, 1920, 58 I. C. C. 220, carriers erroneously applied territorial advances instead of authorized interterritorial increases. HELD: Such rates, as erroneously increased, were unreasonable to extent they exceeded those reflecting proper advances authorized. Reparation awarded. Whiting Plover Paper Co. v. S. Ry., 92 I. C. C. 292.

(f) Carrier erroneously increased rates a greater percentage than authorized by commission in Increased Rates, 1920, 58 I. C. C. 220. Upon contention that failure to advance rates in conformity with case cited is not conclusive that the higher rate is unreasonable, and that whether a specific rate was plussed more or less than percentage authorized has no conclusive bearing upon its reasonableness or unreasonableness, FOUND: While the erroneous and unauthorized increase is not conclusive proof of unreasonableness, it raises a presumption to that effect. Whiting Plover Paper Co. v. S. Ry., 92 I. C. C. 292, 293, 294.

(g) Fact that rates may have been published in error does not necessarily demonstrate unreasonableness. Denver Alfalfa Products Co. v. Director General, 92 I. C. C. 326, 327.

(h) Proposed increased rates on cotton and cotton regins, uncompressed, any quantity, and on cotton linters, uncompressed, l. c. l., both with carrier's privilege of compressing from Cairo, Brookport, Gale and Thebes, Ill., to eastern points, for purpose of restoring relationship with rates from St. Louis, disturbed when the St. Louis rates were increased, but through oversight no similar changes were made in rates from the Illinois points, found not justified. Respondent made no reference to rates, under which traffic actually moves to demonstrate reasonableness of the proposed rates, and since the St. Louis rates are paper rates, most of the cotton movement being through Memphis, they have little, if any, probative force in that connection. Cotton, Linters, and Regins to Eastern Cities, 92 I. C. C. 453.

(i) Rates on coal from Mount Olive and Staunton, Ill., to West Pullman, Ill., during Federal control, increased in error

by director general and subsequently restored to former level, found not unreasonable as compared with rates from other mines not subjected to the increase. Rates from Illinois mines are admittedly low and did not become unreasonable merely because other low rates to same destination were not correspondingly increased; nor was increase applied through error sufficient in itself to show that resulting rate was unreasonable. Consolidated Coal Co. v. Director General, 93 I. C. C. 53.

(j) Proposed cancellation of joint commodity rates on plaster and cement from Pyramid and Sweetwater, Tex., to certain destinations on the St. L. S. W. Ry., leaving in effect higher combinations, found not justified. The joint rates were published contrary to instructions, and sole justification offered is carrier's desire to correct this error. However, no rate change is proposed from competing points at which cement-plaster plants are located, and such a rate disadvantage would exclude protestant from markets at local Cotton Belt points. While protestant would be able to reach competitive points at equal rates, it would not enjoy as liberal routing privileges as its competitors. Moreover, protestant is as favorably situated with respect to distance as are its competitors, and no reason appears why it should not have same basis of rates. Cement Plaster from Pyramid and Sweetwater, 93 I. C. C. 315.

(k) Proposal to correct error in schedules originally published on the Peoria basis, by increasing to the Chicago group basis the proportional rates on grain and grain products from Kansas City, Mo.-Kans., to points in Iowa on the Chicago & North Western, found not justified. Present adjustment is in harmony with rates from Omaha, Nebr., to same points and Peoria basis is that maintained to same territory by other lines for both single and joint line hauls. Moreover, respondents have not shown that the present adjustment is improper or the present rates too low, nor have they offered any justification for a different basis over their lines from Kansas City to destination territory. Grain from Kansas City, 96 I. C. C. 154.

(l) Upon contention that, inasmuch as suspended schedules were designed to correct an error made in publishing schedules which were contrary to the policy of the Chicago & North Western, they cannot be regarded as providing for increases and therefore no burden is upon respondents to justify increases. HELD, Whether suspended schedules were intended to effect increases or not, an increase would result if such schedules became effective and fact that present rates were established through error is not controlling. The burden of justifying increased rates cast upon carrier does not depend upon purpose or intent of carriers in naming increased rates. Grain from Kansas City, 96 I. C. C. 154, 156.

(m) Rate on kerosene from Fort Worth, Tex., to Waterbury, Conn., found unreasonable to extent it exceeded rates contemporaneously applicable from Fort Worth to greater part of New England over route of movement, through Waterbury to more distant points. Due to error on part of tariff compiler the lower rate was not applicable on shipments to any destination in Connecticut, and this omission was subsequently corrected. Reparation awarded. Transcontinental Oil Co. v. D., L. & W., 96 I. C. C. 173.

(n) Proposed increased rates on petroleum and its products from Gates and Port Arthur, Tex., and Ardis, La., and other points in Texas and Louisiana to destinations in Kansas Groups 1, 2, and 3, and to certain destinations in Oklahoma, on the ground that present rates were established erroneously and that present schedules represent an effort merely to eliminate a tariff error, found not justified. Petroleum and Petroleum Products from Southwestern Points to Points in Kansas and Oklahoma, 98 I. C. C. 321.

(o) Upon further hearing, proposal to correct error in schedules originally published on Peoria basis, by increasing to Chicago group basis proportional rates on grain and products from Kansas City to points in Iowa on Chicago and North Western, found justified. While present rates are more in harmony with general adjustment than rates proposed, present rates sought to be increased are on a highly competitive basis and are less than maximum reasonable rates. Finding in former report, 96 I. C. C. 154 reversed. Grain from Kansas City, 102 I. C. C. 475.

(p) Fact that present rates were established in error does not relieve respondents of burden of justifying proposed increase in such rates. Grain from Kansas City, 102 I. C. C. 475, 476.

Brick and Draintile from St. Louis, 85 I. C. C. 353; National Tube Co. v. Director General, as Agent, 85 I. C. C. 689.

§5 (7¼) Low or High State Rate.

See State Rates and Regulations.

(a) Proposed increased rate on sand and gravel from Jedburg, Mo., and other points in same territory, to St. Louis, when for movement to interstate destinations beyond, found justified. Present rate, for substantially same service, on shipments for intrastate points beyond, was established under authority from Missouri Public Service Commission, and it is proposed to advance the interstate rates so that same rate will apply on both intrastate and interstate shipments. Such increased rates will reflect rate in effect on June 25, 1918, plus subsequently authorized advances and reductions. Sand and Gravel from Missouri, 92 I. C. C. 177.

§5 (8). To Prefer Particular Locality.

See Evidence §2, §40½.

(a) Respondents proposed to increase the rates on newsprint paper carloads from Canadian mills in northeast Canada to Nashville and Memphis, Tenn. and to reduce rates on this traffic to Knoxville, Tenn. Present to Knoxville 60c proposed 57c, present to Nashville 47c, proposed 57c, present to Memphis 48c, proposed 58c. For many years the rates from Shawinigian Falls and other mills in northeast Canada to points in Tennessee have been the same or related to those from mills in New England. The proposed rates would apply only from Canadian mills, thus disrupting this blanket of long standing and giving to the New England mills an advantage of 10c over their competitors in Canada. Competition between the Canadian mills and New England mills on newsprint paper to points in Tennessee is keen, and while the average distance from the New England mills to the destinations concerned appears to be somewhat less than that from the Canadian mills accorded the same rate, the record does not warrant a finding that the present adjustment should be disturbed. The establishment of the proposed rates without a similar readjustment of the rates from the New England mills now accorded the same rates as the Canadian mills or rates related thereto, would result in undue preference of the New England mills. HELD, schedules not justified without prejudice to the filing of schedules in conformity with the conclusions herein. Newsprint paper from eastern Canada 109 I. C. C. 701.

§6. Right to Earn.

(6) All Traffic Will Bear.

See Evidence §6.

(a) Increased prosperity of an industry may not be made excuse for advancing rates on commodity it produces. Rates and Charges on Grain and Products, 91 I. C. C. 105, 143.

III. EVIDENCE.

See Evidence.

§6½. In General.

ALL CITATIONS

Louisville Fire Brick Works v. Director General, as Agent, 85 I. C. C. 457; California Grain Co. v. Director General, as Agent, 85 I. C. C. 680; National Tube Co. v. Director General, as Agent, 85 I. C. C. 689; Royall & Borden Mfg. Co. v. A. C. L. R. R. Co., 85 I. C. C. 715.

§7. Change in Conditions.

(6) Disputes Concerning Divisions.

See Divisions §4.

(a) Dissatisfaction on the part of carriers over divisions is a circumstance not recognized as adequate to justify increased rates to be borne by shippers. Increased Rates on Ice from Wisconsin, 74 I. C. C. 662; Crushed Stone from Thornton, 87 I. C. C. 759. Paper Stock from St. Louis, 89 I. C. C. 267, 269.

(b) The Commission has frequently found that disputes as to divisions between carriers afford no justification for increased rates. Peaches from Alabama, Georgia and Tennessee, 93 I. C. C. 534, 538.

(c) Respondents proposed to increase certain of the rates on crude and refined petroleum oils, carloads, from points on the Smackover El Dorado, Ark., field on the Rock Island to points in Louisiana on the Y. & M. V. Complainant, V. S. & P. Ry., intermediate carrier, alleged that the divisions accruing to it under the present rates are unjust, unreasonable and inequitable. The Smackover-El Dorado field extends about

9 miles north of El Dorado, Ark. The M. P., passes through the Smackover portion and the Rock Island is about 7 miles from its center. To meet competition the M. P., reduced its rates on oil from the Smackover field to those points. To meet this competition similar rates were also established by the Rock Island in conjunction with the V. S. & P., and Y. & M. V., through Ruston, La., and Vicksburg, Miss., to Baton Rouge, New Orleans, and stations on the Y. & M. V. between those two points. While the Rock Island has other connections with other carriers south of Ruston over available routes which would afford the Rock Island a longer haul, the route just described is the only route over which the reduced rates apply from stations on the Rock Island. The haul of the Rock Island to Raton is from Marrow Spur 63.4 miles, and from El Dorado 54.5 miles. The effect of the proposed schedules is to reestablish the higher rates in effect prior to the establishment of the 14c and 15c rates. HELD, proposed schedules not justified. HELD, further, just division of 14c rate on crude oil and 15c on petroleum oil other than crude to Rock Island 4.5c and 4 2-3c, V. S. & P., 4c and 4½c, Y. & M. V., 5.5c and 6c, respectively. Petroleum oil from Arkansas to Louisiana, 95 I. C. C. 55.

(d) Increases in rates may not be justified solely by a showing that the earnings received in division by certain of the carriers participating in the through transportation are inadequate. Grain to Pacific coast, 98 I. C. C. 158, 161.

(e) A dispute among carriers over divisions is no justification for increased rates. Transit Privileges on Grain, 92 I. C. C. 161.

(f) Proposed cancellation of transit privileges by M.-K.-T. R. R. of Texas on grain originating on or moving via Rock Island lines, found not justified. Sole justification offered by respondent is demand of the Rock Island for a proportion of the rate from origin to transit station, instead of division from origin to ultimate destination, but disputes among carriers over divisions is no justification for increased rates. The Rock Island is a party to joint through rates under which transit is accorded and is not concerned with transit privileges accorded by respondent, as transit privileges are local to carrier according them. Transit Privileges on Grain, 92 I. C. C. 161.

(g) Dissatisfaction between carriers over divisions is no justification for increased rates. Concentration of Cotton at New Orleans, 83 I. C. C. 18. Transit Privileges on Lumber at Buffalo, 92 I. C. C. 181, 182.

(h) Proposal to restrict territory of origin in rules governing stop-off in transit of lumber westbound at Black Rock, Buffalo, and North Tonawanda, N. Y., while no similar restriction is proposed at Falconer and Jamestown, N. Y., and Corry, Pa., competing points, found not justified. Proposal is induced by fear of unsatisfactory divisional arrangements with connecting carriers, but this is not recognized as a sufficient justification for increased rates. Moreover, there is no warrant for extending to Buffalo, Black Rock, and North Tonawanda different treatment from that accorded Falconer, Jamestown, and Corry. Transit Privileges on Lumber at Buffalo, 92 I. C. C. 181.

(i) Fact that carrier has been operating at deficit does not of itself prove that it is fairly entitled to increased divisions. Federal Valley R. R. case 68 I. C. C. 499, 502. Salina Northern R. R. Co. v. A., T. & S. F., 92 I. C. C. 475, 481.

(jk) Proposed increase in rate on sand from Eau Claire, Wis., to Detroit, Mich., via Manitowoc, which would result in increased divisions beyond junction point, found not justified. Present rate is a joint commodity rate and is equivalent in amount and divisions to joint rates in effect from certain other points of origin in Wisconsin to Detroit via other junctions. No justification of the proposed increase is offered except the contention that division to eastern carriers is unsatisfactory. Suspended schedules ordered canceled and proceeding discontinued. Sand from Eau Claire to Michigan, 100 I. C. C. 213.

(l) Fact that carriers are in disagreement as to proportions of through revenue they should receive is not sufficient justification for increased rates. See 33 I. C. C. 601, 605; 53 I. C. C. 369. Such disagreements or controversies will not be permitted to work injury to shippers and if carriers propose to obtain a greater proportion of through revenue charges, they should be sought by nego-

tiation with connections or by proper proceeding before the commission. Switching at Hagerstown, 102 I. C. C. 14, 18.

ALL OTHER CITATIONS

Sisal from Gulf Ports, 85 I. C. C. 467; Sisal From Gulf Ports, 88 I. C. C. 704.

§7 (8) Percentage Increases.

See Advanced Rates §5 (6) (c) (f), §7 (9) (a); Evidence §43¼ (a); Percentage Rates.

(a) The percentage of an increase is not controlling if the resulting rates are not unreasonable. Endicott-Johnson Corp. 73 I. C. C. 562, 565. Virginia Can Co. v. A. & V. Ry. Co., 89 I. C. C. 558, 562.

(b) Carriers proposed increased carload rates on glucose products from Chicago and Iowa to South Dakota east of the Missouri river and west of Sioux Falls, S. D. All commodities are rated fifth class. The rates to Minneapolis, Sioux City, Omaha, Kansas City and Sioux Falls are about 85% of the fifth class rates, and present rates to destinations here considered range from 69 to 84%. The purpose of the proposed schedules is to make the commodity rates to these destinations about 85% of fifth class, thereby making that basis applicable to all destinations between St. Paul and Missouri river. The present record does not disclose that the class rates afford a proper basis upon which to construct the commodity rates proposed to all of these destinations. HELD, proposed schedules not justified. Glucose products to South Dakota, 96 I. C. C. 579.

(c) Rates on stable manure from Jersey City, on ex-water traffic originating in New York, increased following general rate advances, by applying percentage increases to gross rate, including allowance for water ferriage, instead of first deducting such allowance and applying increases to net rates, found not unreasonable or unduly prejudicial. Reasonableness of rates charged, and not strict conformity with prescribed method of making percentage increases in their predecessors, is the controlling consideration. See 57 I. C. C. 723 and other cited cases. Moreover, rates complained of were increased in same manner as all other rates which reflected allowances, and no reason appears for making an exception to that method in this instance. N. Y. Stable Manure Co. v. Director General, 93 I. C. C. 349.

(d) Reasonableness of rates charged, and not strict conformity with prescribed method of making percentage increases in their predecessors, is the controlling consideration. Anaconda Copper Mining Co., 57 I. C. C. 723, and other cited cases. N. Y. Stable Manure Co. v. Director General, 93 I. C. C. 349, 351.

(e) Upon contention that application of a flat increase greater than the percentage increase authorized by General Order No. 28 of the director general resulted in unreasonable rates. HELD, an increase of more than 25 per cent under the general order can not be condemned unless the resulting rate is unreasonable. Omaha Chamber of Commerce v. A., T. & S. F., 95 I. C. C. 713, 717.

ALL OTHER CITATIONS

Louisville Fire Brick Works v. Director General, as Agent, 85 I. C. C. 457; Royall & Borden Mfg. Co. v. A. C. L. R. R. Co., 85 I. C. C. 715; Mason City Brick & Tile Co. v. Director General, as Agent, 88 I. C. C. 37.

§7 (9). Government Orders or Advances.

(a) Upon contention that application of a flat increase greater than the percentage increase authorized by General Order No. 28 of the director general resulted in unreasonable rates. HELD, an increase of more than 25 per cent under the general order can not be condemned unless the resulting rate is unreasonable. Omaha Chamber of Commerce v. A., T. & S. F., 95 I. C. C. 713, 717.

(b) Mere departure from the terms of General Order No. 28 of the director general can not be regarded as proof that the resulting rates were unreasonable. Lincoln Chamber of Commerce v. A. C. R. R. 101 I. C. C. 759, 762.

§8½. Comparisons.

See Comparative Rates; Evidence §12, §13.

(a) Proposed increased rates on fencing material, reinforced steel, and related articles from St. Louis, Mo., and related points north and east thereof to destinations in southeastern Kansas, found not justified. Proposal would have the effect of limiting the present reduced rates to those destinations in Kansas Group A which are intermediate to northeast Okla-

homa over what are regarded as the direct routes and restoring the other Kansas Group A rates to a higher basis and create unauthorized fourth-section departures. Fencing Material to Kansas, 96 I. C. C. 462.

(b) Proposed increased commodity rates on glucose products from Chicago, Ill., and certain points in Iowa to South Dakota destinations north and west of Sioux Falls and east of the Missouri River, designed to make such rates approximately the same percentage of the contemporaneous fifth-class rates as obtains to Sioux Falls, Sioux City, Iowa, Minneapolis, Minn., and other destinations in the same general territory, found not justified, in view of the fact that the record does not disclose that the class rates afford a proper basis upon which to construct the commodity rates proposed to all of these destinations. Glucose Products to South Dakota, 96 I. C. C. 579.

(c) Proposed increased rates on fertilizer, from Little Rock, Ark., to El Paso, Tex., and points taking the same rates, found not justified as compared with rates on the same commodity from Memphis, New Orleans, Kansas City, St. Louis, and Chicago to El Paso. Fertilizers from Little Rock-Fort Smith Territory, 96 I. C. C. 703.

(d) Rate comparisons, based upon distance alone, have but slight probative value in determining the reasonableness of rates, and do not overcome the burden of proof imposed upon carriers by the act to justify increases in rates. International Harvester Co. v. N. Y. C. R. R. Co., 88 I. C. C. 368, 371.

ALL OTHER CITATIONS

Tripoli from Kansas and Missouri, 85 I. C. C. 35; Strawboard and other Paper Articles, 85 I. C. C. 470.

§8½a. Combination Rule.

See Infra §9½.

(a) The so-called combination rule was adopted by the director general as a temporary expedient whereby combination rates on certain commodities each factor of which had been increased under his General Order No. 28 by specific amounts, should thereafter reflect only the increase which they would have received had they been published in the form of joint rates. It provided that where no specific through rates are in effect between points of origin and destination and two or more factors, increased under the general order, are used to construct the through rate, a specific amount shall be deducted from each factor and a specific amount added to the sum of the reduced factors thus obtained. Combination Rule on Box Shooks, 89 I. C. C. 219, 220.

(b) Complainant attacked combination commodity rates charged on 75 bales of cotton shipped Nov. 13, 1919 from Blythe, Calif., to Galveston, Tex., and compressed in transit at Ballinger, Tex., as unreasonable and inapplicable. Shipment moved over California Southern to Rice, Santa Fe beyond, charged commodity rate of 40c to Rice and $1.20 beyond. The second component was published in Countiss I. C. C. 1065 and was subject to the combination rule in Morris I. C. C. U. S. 1. At the time of shipment Supplement 3 to the latter carried a provision that each component of combination rates subject to the rule should be reduced by a specific amount, and that to the sum of the remainders thus obtained a specific amount dependent upon the commodity, should be added. Under that supplement the two foregoing components should have been reduced by 15c each and 15c representing the increase authorized under G O 28 should have been added to the sum of the remainders, making a through rate of $1.45. HELD, rate attacked inapplicable reparation awarded on basis of $1.45. California Cotton & Factorage Co. v. Director General, 93 I. C. C. 260.

(c) Shipments moved under combination rates each factor of which was increased under General Order No. 28 of director general. Tariff governing one factor carried so-called combination rule which provided for application of but a single increase to through rates made on combination but such tariff made no reference to and was in no way connected up with tariff governing other factor. HELD: Following Standard Oil Co., 81 I. C. C. 193, there was a holding out to shipper of rates constructed in accordance with combination rule which publishing carriers must protect. Shipments found overcharged and reparation awarded against carriers publishing the rule. Sloan & Zook Co. v. M. V. R. R. Co., 91 I. C. C. 693.

(d) While the combination rule as applied on certain commodities may be

objectionable, that fact alone does not justify its cancellation and application of resulting higher rates. Combination Rule on Cotton and Linters, 92 I. C. C. 165, 167.

(e) Proposed cancellation of combination rule in connection with rates on cotton and linters from the South and Southwest to the North and East, without first providing joint through rates for application in absence of that rule, found not justified. Innumerable rate increases would result in absence of such rule on traffic moving through New Orleans, Memphis, and other gateways, which carriers made no attempt to justify. While combination rule, as applied to cotton and linters, may be objectionable, that fact alone does not justify its cancellation and application of resulting higher rates. Combination Rule on Cotton and Linters, 92 I. C. C. 165.

(f) The so-called combination rule was adopted by director general as a temporary expedient whereby combination rates, each factor of which had been increased under General Order No. 28 by specific amounts, should thereafter reflect only the increase which they would have received had they been published in the form of joint rates. It provided that where no specific through rates are in effect between points of origin and destination and where two or more factors, increased under the general order, are used to construct the through rate, a specific amount shall be deducted from each factor and a specific amount added to sum of the reduced factors thus obtained. Combination Rule on Cotton and Linters, 92 I. C. C. 165, 166.

(g) Proposed cancellation of combination rule in connection with shipments of livestock from Washington, Idaho, Montana, and North Dakota to primary markets, found not justified. To many destinations present rates would be protected under decision in Sligo case, 62 I. C. C. 643, because most tariffs of eastern lines carry the combination rule, but to points on roads which do not publish the rule increases would result. While commission has approved efforts of carriers to eliminate this rule by publication of joint through or proportional rates to take care of traffic which would move under the rule, it has refused to allow its cancellation where increases would result. Combination Rule on Livestock, 92 I. C. C. 205.

(h) Proposed cancellation of combination rule on common brick between points on lines of Great Northern and Northern Pacific in Iowa, Wisconsin, Minnesota, the Dakotas, Montana, Idaho, Oregon, and Washington, found not justified. Proposal to cancel application of the rule in connection with common brick only would result in many instances in rates higher than those approved in the General Brick case, 68 I. C. C. 213, 80 I. C. C. 179. Moreover, confusion would result from application of full combination of locals as certain lines serving many destinations in above territory carry reference to the rule in their tariffs and have not joined in proposal to cancel the same. Combination Rule on Common Brick, 92 I. C. C. 289.

(i) Proposal to restrict application of the combination rule so that it will apply only where all issues publishing factors used in arriving at through rates from origin to destination carry reference to the rule and authorize an affirmative application thereof, found not justified. Carriers made no effort to justify increased rates which would result in instances where the rule is published in a separate combination tariff and no reference is made thereto in connection with one factor of a combination, although such reference is made in connection with other factors. While commission has repeatedly sanctioned efforts to eliminate the rule by publication in its stead of joint or proportional rates, it has denied authority to cancel it where unjustified increased rates would result. Combination Rule on Lumber, 93 I. C. C. 279.

(j) Carriers stress fact that in several reports the commission has commented upon undesirability of the combination rule from a tariff standpoint, and refer to cooperation and suggestions of the Bureau of Traffic looking to ultimate elimination of the combination tariff. FOUND, suggestions did not contemplate increases in rates, for which no sound justification is offered, by cancellation of the rule. Combination Rule on Lumber, 93 I. C. C. 279, 281.

(k) Proposal of carriers in c. f. a. territory to restrict application of combination rule on livestock so that it will only apply where all factors used in ar-

riving at through rates from origin to ultimate destination carry reference thereto and authorize an affirmative application thereof, found not justified. Such restriction would not merely relieve respondents of assumption of deductions from western lines' separately established rates, but also from their own, since the rule would not apply where any carrier in the through route did not make appropriate reference thereto. This would result in increased charges, the burden of justifying which rests upon respondents. Moreover, from some origin points tariffs of western carriers still refer to the rule, and an inadmissible result of the restriction would be to make rates to be applied by respondent eastern lines depend upon separate tariffs of western lines. This would not accord with requirements of section 6 of the act. Combination Rule on Livestock, 93 I. C. C. 458.

(l) The combination rule originated with the Director General of Railroads and was adopted as a corrective expedient whereby combination through rates on certain commodities, each factor of which had theretofore received a flat increase under General Order No. 28, were so amended as to reflect the same single increases as were applied to equivalent joint rates. Combination Rule on Livestock, 93 I. C. C. 458, 459.

(m) Mere desire to eliminate the combination rule is not a justification for increased rates. Cancellation Rule for Combination Rates, 93 I. C. C. 614, 615.

(n) Tariffs of originating lines neither carried nor made reference to the so-called combination rule, which provided a method for constructing through rates made on combination. Tariffs of other participating carriers either carried the rule or made specific reference thereto. The rule, however, restricted its use to lines under Federal control and since originating carriers were nonfederally controlled, the rule laid down in the Sligo case, 62 I. C. C. 643; 73 I. C. C. 551, that there is a holding out to shipper of the rate constructed in conformity with the rule which publishing carrier must protect, is not controlling. Combinations, both factors of which were increased under General Order No. 28 of the director general, found to have been legally assessed. Pendleton & Gilkey v. Director General, 95 I. C. C. 699.

(o) Shipments moved under combination rates, each factor of which was increased under General Order No. 28 of director general. Tariff of one participating carrier contained the combination rule which provided a method for constructing through rates made on combination, which rule was not published in tariff of other participating carrier until after shipments moved. HELD, where one tariff used in making combination rates on through shipments contains a rule that such rates will be subject to a single increase, there is a holding out to shipper of rate so constructed which publishing carrier must protect. Sligo Iron Store Co., 62 I. C. C. 643, 73 I. C. C. 551. Shipments found overcharged and reparation awarded. Southwestern Shipbuilding Co. v. Director General, 93 I. C. C. 337.

(p) On shipments moving during Federal control charges were collected on basis of a combination rate both factors of which had been increased under General Order No. 28 of director general. Tariff carrying one factor contained a provision that where charges on through continuous movements were based on combinations of separately established rates increases authorized by the general order should be applied to combination in effect on June 24, 1918. HELD, following Sligo Iron Store Co., 62 I. C. C. 643; 73 I. C. C. 551, a through combination plus a single increase was applicable on the shipments and they were accordingly overcharged. Delta Beet Sugar Corp. v. Director General, 93 I. C. C. 547.

(q) Traffic of originating lines neither carried nor made reference to the so-called combination rule, which provided a method for constructing through rates made on combination. Tariffs of other participating carriers either carried the rule or made specific reference thereto. Contention that specific reference to the rule must be made in each tariff naming a factor of a combination, found untenable following Armour Fertilizer Works, 93 I. C. C. 186. The rule laid down in the Sligo case, 62 I. C. C. 643; 73 I. C. C. 551, that there is a holding out to shipper of the rate constructed in conformity with the rule which must be protected by the publishing carrier, is controlling. Pendleton & Gilkey v. Director General, 95 I. C. C. 699.

(r) Shipments moved under combination rates both factors of which were increased under General Order No. 28 of the director general. Tariff of initial line did not contain the so-called com-

bination rule, which provided a method for constructing through rates made on combination, nor did either of the tariffs naming the separate factors refer one to the other. The combination rule, however, was contained in a supplement governing one of the factors. HELD, principle laid down in the Sligo case, 62 I. C. C. 643; 73 I. C. C. 551, applied and but a single increase should have been added to the through rate. Reparation awarded. M'Fadden & Bros. Agency v. Director General, 95 I. C. C. 734.

(s) Shipment moved under combination rate, both factors of which were increased under General Order No. 28 of director general. Tariff of one participating carrier contained the so-called combination rule providing for application of but single increase to rates made on combination. Other participating carrier neither published similar rule nor made reference thereto. HELD, following Sligo case, 62 I. C. C. 643; 73 I. C. C. 551, there was a holding out to shipper of rate so constructed in conformity with the rule which publishing carrier must protect. Omaha Chamber of Commerce v. Director General, 96 I. C. C. 234.

(t) No joint rate was in effect and shipment moved under a two-factor combination, both of which were increased under General Order No. 28 of the director general. Tariff of neither participating carrier contained the combination rule which provided a method for constructing through rates made on combination. However, both carriers were issuing lines for an agency tariff which contained such a rule. HELD, following 81 I. C. C. 298 and 83 I. C. C. 369, applicable rates were the sum of the combinations plus a single increase as authorized under the rule. Omaha Chamber of Commerce v. Director General, 96 I. C. C. 234, 235, 236.

(u) Shipments of compressed cotton from Brownsville, Tenn., to Seattle and Tacoma, Wash., for export, found to have been overcharged to extent that rate charged exceeded that constructed on combination basis in effect on June 24, 1918, plus the authorized increase on this commodity. Tariff naming the combination from Humboldt, Tenn., via which shipments moved, carried the rule providing for application of but a single increase to through rates made on combination, while tariff naming the factor from Brownsville to Humboldt contained no similar rule nor reference to a tariff which did. See 73 I. C. C. 551. Reparation awarded. Southern Products Co. v. Director General 98 I. C. C. 462.

(v) Shipments of gasoline and other petroleum products moved from Sugar Creek, Mo., and El Segundo, Calif., to Blythe, Calif., during Federal control, the originating carrier having been under such control but the delivering carrier was not. The tariff of originating carrier provided that the combination rates applicable would be subject to one increase of 4.5 cents authorized by Director General, but the tariff of delivering carrier did not carry a similar rule nor did the tariffs of that carrier and of the originating carrier carry reference to each other. FOUND: Following 74 I. C. C. 188, shipments overcharged to extent such charges exceeded those accruing at rates constructed on basis held out by originating carrier. Reparation awarded. Standard Oil Co., (Calif.) v. Director General 98 I. C. C. 587.

(w) Complainant attacked combination rates charged on forest products, carloads, from Washington, Oregon and British Columbia to destinations in United States and Canada over routes composed of lines not under federal control, and specified lines under federal control as unjust, illegal and unreasonable in violation of section 6 of the act to extent they exceeded by more than 5c the rates in effect on these commodities on June 24, 1918. Rates assessed were full combinations on the junctions of short lines with the trunk lines. Complaints are predicated on the failure to apply the so called combination rule which, in effect provided for the application of only one increase under G. O. 28 when rates on through shipments were made by combination of separately established rates. Prior to Feb. 15, 1919 the combination rule was published in individual tariffs. Effective on that date these individual provisions generally were canceled and the rule was published in Morris I. C. C. U. S. 1. The shipments fall into two major groups: (1) those made when the rule was contained in one or more of the individual tariffs; and (2) those made when it was contained in Morris tariff. When the shipments moved the short lines did not publish or refer to the combination rule and none of them was named in I. C. C. 1. The trunk lines were so named. HELD, on shipments made on and after Feb.

15, 1919 the rates applicable were the combinations of the rates to and from the junctions of the short lines and trunk lines because the short lines were not named in circular 5 US 1, and did not publish or refer to the combination rule. On shipments made between June 25, 1918 and Feb., 14, 1919, both inclusive the rates applicable were those made by applying the combination rule in effect on date of shipment to the rates to and from the junctions of the short lines and the trunk lines if one or more of the individual tariffs naming the rate applicable to the shipment contained or made appropriate reference to that rule, and were the combinations on those junctions if none of the individual tariffs naming a rate applicable to the shipment contained or made appropriate reference to such a rule, reparation awarded. Pacific Coast Shippers Asso., v. Director General 109 I. C. C. 166.

(x) Complainant attacked rates on cotton, in bales, in carloads, between Feb. 1, 1919 and Jan., 30, 1920 from Blythe, Calif., to Memphis Tenn., Oakland, Calif., South Providence, R. I., and New Bedford and Watuppa, Mass., as unjust, unreasonable and in violation of section 6 of the act. All the shipments originated at Blythe on the California Southern and moved over that road to its junction with the Santa Fe at Rice, Calif., 42 miles. No joint rates were in effect and a combination rate was assessed in each instance on the basis of the local rate of 25c, increased by 15c on June 25, 1918 under G. O. 28 to Rice, plus the factors, likewise increased by 15c under the same order, to the respective destinations beyond. The tariffs in which the rates from Rice were published referred to a so-called combination rule in a tariff of Agent Morris. HELD, rate charged prior to Feb., 15 and subsequent to Sept. 9, 1919 unreasonable, reparation awarded to basis of combination using the combination rule. California Cotton & Factorage Co. v. Director General 109 I. C. C. 293.

(y) Eastern lines proposed to amend their tariffs by canceling reference to the Kelly rule in so far as such tariffs were applicable in traffic originating at points on the lines of carriers whose rates were no longer subject thereto. Schedules found not justified in 93 I. C. C. 458. Respondents again propose to cancel the application of the Kelly rule on traffic originating on the North Western and Milwaukee in South Dakota and stations intermediate thereto in adjacent states, and in lieu thereof to publish proportional rates from Chicago which purport to reflect their proper proportion of the general order increase when applied to through traffic and which they understand meet the suggestions made by the Commission. The proposed proportional rates range from about 2.5 to 4.5c lower than the corresponding local rates from Chicago, and in combination with the rates of the western lines result in increased through charges of about the same amounts. It must not be lost sight of that the decision in the Sligo case merely enunciated a tariff interpretation, and should not in any way be construed as passing upon the reasonableness of the charges resulting therefrom. Certain it is that when the Kelly rule was first established it was never intended that one carrier alone should bear the burden of adjusting its rates so as to take care of the entire increase under G. O. 28 in connection with traffic moving under combination rates. At that time all participating carriers bore their proportionate share. To now require the equalization to be made by a single line smacks not only of inequity and unreasonableness, but would saddle upon respondents a shrinkage of their earnings which, so far as this record is concerned, they should not be called upon to bear. HELD suspended schedules justified. Proportional rates on livestock 109 I. C. C. 417.

(z) Burlington, respondent, proposed to increase the rates on sand, gravel, and crushed stone, carloads, from eastern Nebraska to Iowa and Missouri by cancellation of the combination rule. The protest was against the increase in rates from Meadow, Neb., on the Rock Island to destinations on the A. N., and other railroads in western Iowa. Rock Island at the hearing agreed to continue the present rates in effect. The Burlington points are from 28 to 65 miles southwest of Council Bluffs, Ia. Louisville, Neb., about 40 miles from Council Bluffs may be taken as representative. The destinations are on connecting lines. The traffic does not generally move to points more than 60 miles beyond Council Bluffs. Present rates are based on respondents proportional of 3c, to Council Bluffs plus connecting lines proportional beyond, treated by the combination

rule. It seems clear that the proposed rates to Iowa points are too high, but it is also clear that the present rates are on a rather low basis and therefore could well be increased to some extent. If the Nebraska-Iowa scale is proper for single line hauls between points in Nebraska and points in Iowa, the rates for joint line hauls should be made on the same scale plus the differential of 20c per ton. HELD, schedules not justified, but without prejudice to establishment from Nebraska on the Burlington to Iowa rates in substantial conformity with those prescribed in 88 I. C. C. 1 and 98 I. C. C. 361. Combination rule on sand, gravel and stone 112 I. C. C. 231.

§9½. Double Advances.

See Supra §8½a.

(a) The so-called combination rule was adopted by the director general as a temporary expedient whereby combination rates on certain commodities, each factor of which had been increased under his General Order No. 28 by specific amounts, should thereafter reflect only the increase which they would have received had they been published in the form of joint rates. It provided that where no specific through rates are in effect between points of origin and destination and two or more factors, increased under the general order, are used to construct the through rate, a specific amount shall be deducted from each factor and a specific amount added to the sum of the reduced factors thus obtained. Combination Rule on Box Shooks, 89 I. C. C. 219, 220.

(b) Three factor proportional rates charged on vegetables from points in Florida to Chicago, Ill., to each of which was applied the interterritorial increase of 33 1-3 per cent under Increased Rates, 1920, 58 I. C. C. 220, in lieu of the territorial increases, found applicable and not unreasonable. While rates involved were published in three factors, from both a technical and practical standpoint they were joint through rates. Factors could not be used on local business and under decision cited were properly increased 33 1-3 per cent. Moreover, defendants show that a like increase was applied to separate factors of rates on other commodities. Ahern Brokerage Co., v. A. C. L. R. R. Co., 89 I. C. C. 274.

(c) Where carriers under Federal control publish the so-called combination rule, which provides a method for constructing through rates made by use of combinations, and tariffs do not restrict its application to Federally controlled lines, there is a holding out to shippers of the rate so constructed which publishing carriers must protect, and principle laid down in the Sligo case, 62 I. C. C. 643, 73 I. C. C. 555, applies. This situation is applicable to shipments moving to points on nonfederally controlled lines, even though such carriers do not concur in the rule or carry a similar rule in their tariffs, and is equally applicable to intrastate shipments moving during Federal control. McCloud River Lumber Co. v. Director General, as Agent, 89 I. C. C. 645, 647.

(d) Upon rehearing, prior report, 58 I. C. C. 442, modified and shipments of lumber from Hopkins, Fla., to Baltimore, Md., and other points, during Federal control, found overcharged. None of the applicable tariffs specifically referred to tariff which provided a rule for the construction of through rates made on combinations under which but a single increase was to be added to sum of the separate factors, nor did the latter make specific reference to applicable tariffs. Following Acme Cement Plaster Co., 81 I. C. C. 298, the combinations to and from Jacksonville, Fla., each increased 5 cents under General Order No. 28 of director general, were applicable. Reparation awarded. Union Cypress Co. v. F. E. C. Ry. Co., 89 I. C. C. 679.

(e) Complainant attacked commodity rate of 71.5 c charged on 27 cars of lumber between June 25 and August 6, 1918, from Tiger, Ione and Spokane, Wash., to Barberton, O., as unreasonable to extent it exceeded by more than 5c the rate in effect prior to June 25, 1918. Under G. O. 28 rates on lumber increased 25% subject to maximum of 5c. Subsequently, tariffs were generally amended to provide that combination rates on through movements would be constructed by adding a single increase to the through combination in effect June 24, 1918. Following Sligo case, 62 I. C. C. 643 and 73 I. C. C. 551, rates attacked illegal, combination on June 24, 1918, plus a single increase of 5c applicable, reparation awarded. Diamond Match Co. v. Director General, 91 I. C. C. 43.

(f) Complainant attacked commodity rates charged on 41 cars of smithing coal and coke from West Virginia, Pennsylvania and Indiana to destinations in

the Northwest between Februarv 1919 and February 1920, as unlawful, in violation of section 6. The rates charged were combination commodity rates, each factor of which had been increased by the specific amounts authorized in G. O. 28. HELD, applicable rates were those determined by application of the combination rule by increasing the through combination by the specific rates named, overcharges to be refunded. Romann & Bush Pig Iron & Coke Co. v. Director General 92 I. C. C. 605.

(g) Complainant attacked commodity rates charged on 11 cars of hard coal, 7 cars of soft coal, and 2 cars of coke shipped from Virginia, Pennsylvania, Kentucky, Indiana and Colorado to Nebraska, Kansas and Iowa between Oct. 2, 1918 and January 1920, as unjust and unreasonable. Charged combinations had been increased by the specific amounts authorized in G. O. 28. One of the applicable tariffs in each instance of commodity rates each factor of which contained a combination rule to the effect that increases under G. O. 28 would be applied but once to the sum of the factors going to make up a combination of commodity rates on coal and coke. HELD, applicable rates were those determined in accordance with the combination rule published in connection with one or more factors of the separately commodity rates, shipments overcharged, reparation awarded. National Supply Co. v. Director General 92 I. C. C. 610.

(h) Where one of the tariffs used in making combination rates on through shipments contains a rule that such rates will be subject to a single increase, there is a holding out to the shipper of the rate so constructed which the carrier publishing the rule must protect. Southwestern Shipbuilding Co. v. Director General, 93 I. C. C. 337, 338.

(i) Complainant attacked commodity rate of $1.60 charged on carloads of cotton between Oct. 4, 1918 and Jan. 29, 1920 from Blythe, Calif., to Galveston, Tex., and compressed in transit as illegal. Shipments originated at Blythe, a local point on the California Southern, 42 miles south of Blythe Junction, thence Santa Fe, rate charged combination on Blythe Junction. Complainant contended rate was $1.45, and the issue is whether the aggregate increase in charges authorized, effective on and after June 25, 1918 was 15 or 30c per 100 pounds. HELD, following Sligo rule, 73 I. C. C. 551, applicable rate was $1.45, reparation awarded. M'Fadden & Bros. Agency v. Director General, 95 I. C. C. 734.

(j) Complainant attacked combination rates charged on a car of posts in Sept. 1918 from Branson, Mo., to Colome, S. D., and on a car of cedar piling from Arrington, Tenn., to Smithland, Iowa, as unreasonable and illegal. Posts moved over M. P., to Omaha thence C. & N. W. Cedar piling moved L. & N., to East St. Louis, Ill., I. C., beyond. Piling charged 20c to East St. Louis and 21.5c beyond. On June 24, 1918 the rate on posts from Branson to Omaha was 17c and from Omaha to Colome 18.5c and on cedar piling from Arrington to East St. Louis 16c beyond 17c, each of the factors being increased on June 25, 1918. The tariffs provided for a single increase under the combination rule. HELD, rates attacked on posts illegal to extent it exceeded 40.5c on the piling 38c, reparation awarded. Omaha Chamber of Commerce v. Director General, 96 I. C. C. 234.

(k) Combination rate charged on lumber from Tiger, Ione, and Spokane, Wash., to Barberton, Ohio, both factors of which were increased under General Order No. 28 of director general found illegal to extent it exceeded aggregate rate plus a single increase. Applicable tariff of originating line carried combination rule which provides for application of but a single increase to rates constructed on combinations and rule laid down in Sligo Iron Store case, 62 I. C. C. 643 and 73 I. C. C. 551, is controlling. Reparation awarded. Diamond Match Co. v. Director General, 91 I. C. C. 43.

(l) Shipments moved under combination rates, either factor of which was increased under General Order No. 28 of director general. Tariff governing one factor carried so-called combination rule which provided for application of but a single increase to through rates made on combination, but such tariff made no reference to and was in no way connected with tariff governing other factor. HELD: Following Standard Oil Co., 81 I. C. C. 193, there was a holding out to shipper of rates constructed in accordance with combination rule which publishing carriers must protect. Shipments found overcharged and reparation awarded against carriers publishing rule.

Solan & Zook Co. v. M. V. R. R. Co., 91 I. C. C. 693.

(m) Shipments moved under combination rates, both factors of which were increased under General Order No. 28 of director general. Tariffs publishing one factor carried the combination rule which provided for application of but a single increase to through rates made on combination. Tariffs of carriers publishing other factors contained no similar rule. HELD: Following Sligo case, 62 I. C. C. 643, 73 I. C. C. 551, where one tariff used in making combination rates on through shipments contains the combination rule there is a holding out to shipper of the rate so constructed which should be protected. Shipments found overcharged and reparation awarded. Romann & Bush Pig Iron & Coke Co. v. Director General, 92 I. C. C. 605; National Supply Co. v. Director General, 92 I. C. C. 619.

(no) Shipments moved under combination rates, each factor of which was increased under General Order No. 28 of director general. Tariff of one participating carrier contained the combination rule which provided a method for constructing through rates made on combination, which rule was not published in tariff of other participating carrier until after shipments moved. HELD, where one tariff used in making combination rates on through shipments contains a rule that such rates will be subject to a single increase, there is a holding out to shipper of rate so constructed which publishing carrier must protect. Sligo Iron Store Co., 62 I. C. C. 643; 73 I. C. C. 551. Shipments found overcharged and reparation awarded. Southwestern Shipbuilding Co. v. Director General, 93 I. C. C. 337.

(p) On shipments moving during Federal control charges were collected on basis of a combination rate both factors of which had been increased under General Order No. 28 of director general. Tariff carrying one factor contained a provision that where charges on through continuous movements were based on combinations of separately established rates the increases authorized by the general order should be applied to the combination in effect on June 24, 1918. HELD, following Sligo Iron Store Co., 62 I. C. C. 643; 73 I. C. C. 551, a through combination plus a single increase was applicable on the shipments, and they were accordingly overcharged. Delta Beet Sugar Corp. v. Director General, 93 I. C. C. 547.

(pa) Shipments of petroleum products moved locally to junctions with narrow-gauge lines there unloaded into permanent storage tanks, and subsequently reloaded into narrow-gauge equipment for movement beyond. Plan of storage at the junctions was agreed upon between complainant and carrier in interest of efficiency and mutual convenience. An equality existing between the locals and the through rates was disrupted by director general who applied a flat increase of 4.5 cents to each of the locals but only one increase to the through rate. Subsequently equality was restored. FOUND: Considering conditions leading to use of permanent storage tanks, agreement between parties, prior and subsequent continued maintenance of equal rates, and fact that transfer through medium of storage tanks relieved carriers of expense which they would have incurred had shipments been made on lower through rates, combinations assessed, embodying the double increase, were excessive for service performed. Reparation awarded. Continental Oil Co. v. Director General, 102 I. C. C. 338.

(pb) Governing tariff specifically provided that through rates made on combination were to be subjected to single increase under General Order No. 28 of Director General. Shipments moved under combination rates to each factor of which increase was added. HELD: Following Acme Cement Plaster Co., 81 I. C. C. 298, shipments were overcharged to extent that charges exceeded those which would have accrued by application of single increase to sum of factors. Reparation awarded. Lehigh Portland Cement Co. v. Director General, 102 I. C. C. 617.

(q) Where one of the tariffs used in making combination rates on through shipments contains a rule that such rates will be subject to the increase but once, there is a holding out to the shipper of the rate so constructed which the carrier should protect. Continental Oil Co. v. Director General 109 I. C. C. 289, 291.

(r) When one of the tariffs used in making combination rates on through shipments contains a rule that such

rates will be subject to a single increase, there is a holding out to the shipper of the rate so constructed which the carrier publishing the rule must protect. Phosphate Products Corp. v. C. & O. Ry., 112 I. C. C. 161.

(s) Fact that combination rates were subjected to double increase under General Order No. 28 of director general is not in itself proof of unreasonableness. Pacific Coast Shippers Asso. v. Director General, as Agent, 85 I. C. C. 386, 387.

Nebraska Bridge Supply & Lumber Co. v. Director General, as Agent, 85 I. C. C. 327; Sloss-Sheffield Steel & Iron Co. v. Director General, as Agent, 85 I. C. C. 367; Sperry Flour Co. v. Director General, as Agent, 85 I. C. C. 675; Mason City Brick & Tile Co. v. Director General, as Agent, 88 I. C. C. 37.

§11½. Differentials or Rate Relationship

See Differentials; Relative Rates.

(a) In comparative rate adjustments consideration may and should be given to economic conditions surrounding traffic, so that adjustment may result which will reflect as high a degree of uniformity as is practicable and at the same time accord to all interested the fair opportunity to which the law entitles them. Southwestern Coal Operators' Asso. v. A. & W. Ry. Co., 89 I. C. C. 73, 82.

(b) Relationship of rates on potatoes and lettuce from Divide, Canon City, Villa Grove, and Antonito, Colo., to destinations in Texas, Oklahoma, Kansas, and States east thereof, found unduly prejudicial to Divide and its traffic and unduly preferential of Canon City, Villa Grove, and Antonito and their traffic. From standpoint of transportation conditions there is no reason why relationship of Divide to Colorado common-point group should be different from that of Canon City, Villa Grove, and Antonito. Pikes Peak Cooperative Asso. v. M. T. Ry. Co., 89 I. C. C. 379.

(c) Proposed readjustment, involving increases and reductions on fresh fruits and vegetables between north Pacific coast points, prompted by the filing with the commission of complaints seeking rates to Portland, Oreg., and Spokane, Wash., on same basis as Seattle and Tacoma, Wash., found not justified. Fresh Fruits and Vegetables, 89 I. C. C. 473.

(d) Proposed increased rates on, egg-carrier fillers, egg cases and egg box material from Coffeyville, Kans., to points in Arkansas on the M. & N. A., for purpose of lessening differences between rates from Coffeyville and rates from Quincy, Ill., competing points in destination territory involved, found not justified. Rates from both Coffeyville and Quincy are blanketed to destinations on the M. & N. A., and division accruing to that road under present rates from Coffeyville is greater than under the rate from Quincy. Suspended schedules ordered cancelled. Egg Case Fillers from Kansas Points, 101 I. C. C. 1.

(e) Proposed increased rates on brick and articles taking same rates from Mason City, Iowa, to destinations on the C., St. P., M. & O. and Soo Line in Wisconsin, designed to restore higher rate previously in effect and meet the rate over the line of a competing carrier, found not justified on ground that such rates compare favorably with rates on like traffic from competing Illinois points to same destinations. Combination Rule on Brick and Draintile, 101 I. C. C. 729.

(f) Proposed increased rates on canned goods from Group J points in Colorado, New Mexico, Texas, and Wyoming to Arizona, California, and New Mexico, under which Colorado canneries will be placed on a rate parity with Utah and California canneries on traffic to destination territory here involved, found justified provided present grouping of destinations is maintained. Relative reasonableness as compared with rates from near-by producing territories, rather than intrinsic reasonableness, is the important consideration of this case. Weighted-average haul to Arizona destinations from Colorado is considerably in excess of that from California, yet California is paying higher rates, and the proposed adjustment will correct this situation by placing them on a parity. Canned Goods from Colorado, New Mexico, Texas, and Wyoming, 102 I. C. C. 156.

ALL OTHER CITATIONS

Cotton and Cotton Linters to Louisiana and Texas Ports, 85 I. C. C. 5; Coal from Tennessee R. R. Stations, 85 I. C. C. 25; Wood Pulp from International Falls, Minn., 85 I. C. C. 95; Louisville Fire Brick Works v. Director General, as

Agent, 85 I. C. C. 457; Cement to New England, 88 I. C. C. 605.

§12. Branch Lines.

(1) Operation.

See Branch Lines.

(a) Proposed increased rates on grain and grain products between points in Idaho and Washington and Pacific coast points found justified as to destinations in Washington and Oregon, but not justified as to destinations in California, no evidence having been offered in justification of proposed rates to points in latter State. These increases are primarily designed to raise the rates from points on branch lines, on which traffic is relatively light, to the level of rates from main-line points for approximately same distances, thus preventing the anticipated necessity of eventually reducing the rates from all points of origin here considered found reasonable in the Inland Empire case, 59 I. C. C. 321. Grain Between Pacific Coast Points, 98 I. C. C., 601.

§13. Detriment to Shipper.

See Blanket Rates §10½ (xx); Evidence §45.

(a) Considerable evidence was introduced to show that the increased ratings will curtail complainants existing markets and reduce their profits. But these considerations do not control in determining the reasonableness of transportation rates. Indiana Public Service Commission v. A. A. R. R., 92 I. C. C. 83, 86.

(b) Increased prosperity of an industry may not be made excuse for advancing rates on commodity it produces. Rates and Charges on Grain and Products, 91 I. C. C. 105, 143.

(c) Proposed increased class and commodity rates from various interstate points to Mesa, Ariz., for purpose of removing undue prejudice against points on Globe division of Arizona Eastern R. R. found to exist in Graham & Gila Counties Traffic Asso., 81 I. C. C. 134, found not justified. Mesa and Phoenix have been on same rate basis for many years and a higher basis of rates to Mesa than to Phoenix would compel the removal of jobbing establishments to Phoenix thereby resulting in considerable financial sacrifices, would enable Phoenix to take over much of the trade territory now enjoyed by Mesa, and would not benefit points on the Globe division to any appreciable extent. Class and Commodity Rates to Mesa, 92 I. C. C. 512.

§14¾. Previous Decision of Commission.

See Previous Decisions of Commission.

(a) Respondents proposed to increase rates on fertilizers, carloads, from Little Rock, Ark., to El Paso, Tex., and points taking same rates. Respondents explanation that the proposed adjustment is in harmony with the findings in 92 I. C. C. 504 is not correct. HELD, proposed rates not justified. Fertilizers from Little Rock-Fort Smith territory, 96 I. C. C. 703.

(b) Respondents proposed to increase the rates on glass bottles, carloads, and on glass fruit jars, fruit jar tops, jelly glasses, and tumblers, in straight or mixed carloads from Oklahoma and Fort Smith and South Fort Smith, Ark., to Mississippi river crossings, Memphis, Tenn., and south and on window glass and rough rolled glass, carloads, from Oklahoma and Arkansas to Texas. **Glass Bottles & Fruit Jars, etc.** Respondents state the suspended rates were filed in order to bring about rates from Oklahoma and Fort Smith to Mississippi river points no lower than rates between intermediate points within the territory covered by 77 I. C. C. 473. The respondents are willing to allow the present rates to remain in effect provided fourth section relief is granted to permit the application of higher rates to intermediate points in Arkansas, Louisiana and Texas. There is no evidence of record warranting the granting of fourth section relief such as that sought or now in effect under the applications assigned for hearing. There is nothing of record to show that the rates prescribed in 77 I. C. C. 473 are in excess of reasonable maxima for this territory. The proposed rates are the same as or lower than those rates and therefore not in excess of reasonable maxima for local application from and to the points concerned. HELD, proposed rates not justified, fourth section denied but carriers may establish rates observing maxima as shown in 77 I. C. C. 473. **Window Glass and Rough Rolled Glass.** Respondents sole justification for the proposed

changes is the removal of fourth section departures. HELD, proposed rates not justified. Glass and glassware to interstate points, 98 I. C. C. 83.

(c) Proposed increased rates on bottles, glass, from Chattanooga to Memphis, via interstate route, for purpose of restoring previously existing relationship between Chattanooga and St. Louis, found justified. Relationship was disrupted following Fourth Section Violations in the Southeast, 32 I. C. C. 61, when rates from St. Louis were increased and no change was made in rates from Chattanooga, work on a readjustment being interrupted by intervention of Federal control. Glass Bottles from Chattanooga to Memphis, 93 I. C. C. 317.

(d) Proposed increased rates on coal from farther distant points on the Gauley branch of the C. & O. to level of the New River or intermediate basis of rates, in order to comply with commission's order in 89 I. C. C. 638, denying fourth-section relief, found not justified. No similar increases are proposed from competing mines on the same branch north of Belva, and if advances are allowed it will be necessary for protestants to absorb them in order to continue shipping to western markets. Moreover, respondent made no effort to show that proposed rates are reasonable per se, and its revenue would not be materially affected were departures removed by reducing rates from the intermediate points. Coal from Stations in W. Va., 93 I. C. C. 423.

(e) Proposed increased rates on iron and steel articles between Newark, and points grouped therewith, and New England points, found not justified. Carriers rely entirely upon fact that proposed rates will restore the spread between Newark and Philadelphia groups established following the decision in Pardee Works, 39 I. C. C. 162. For over seven years that spread has been treated as one varying with rates and not as a fixed differential. Moreover, there is no evidence that rates from Newark group are subnormal as compared with rates from other groups, and former relationship, if desired by carriers, could be readily restored by reducing rates from Philadelphia group instead of increasing those from Newark group. Iron and Steel between New Jersey and New England Points, 93 I. C. C. 499.

(f) Proposed increased rates on lime from points in eastern trunk-line territory to destinations in 60 and 67 per cent territories, published in compliance with decision in Lehigh Lime Co., 85 I. C. C. 341, found not justified. Proposed rates would result in numerous violations of both long-and-short-haul rule and aggregate-of-intermediates provision of section 4 of the act. In view of the competitive relationship which exists between Mitchell, Ind., and Ohio producing points on the one hand and eastern producing points on the other, findings in cited case modified and an adjustment of rates prescribed for future. Lime from Eastern Trunk Line Points, 93 I. C. C. 617.

(g) It does not follow from fact that commission has approved increases in handling charges at certain ports that a lower basis of charges would have been unlawful. Carriers may, subject to certain restrictions, initiate rates lower than commission may prescribe. The question is as to whether or not they are proposing to go to such lengths in attempting to meet competition and attract business that resulting charges will be so low as to create a burden upon other traffic. Handling Charges on Cement, Fertilizer, and Salt, 93 I. C. C. 640, 644.

(h) Proposed increased rates on bituminous coal from Evansville, Ind., to Illinois points on the C. & E. I. R. R., to basis in effect prior to reductions established in order to remove fourth-section violations resulting from a decision of the Public Service Commission of Indiana, wherein rates were prescribed from mines to consuming points in Indiana, found not justified. Proposed rates would recreate the fourth-section departures and record indicates that carrier's revenues will not be materially affected if the suspended schedules are not allowed to become effective. Coal from Evansville Group, 95 I. C. C. 607.

(i) Proposed increased commodity rates and increased minimum weight on tin cans from points in Illinois to points in Michigan, Minnesota, and Wisconsin, and proposed cancellation of the two-for-one rule wherever in effect under commodity rates, found not justified. In Wisconsin Dairy Products Co., 68 I. C. 307, and Armour & Co., 74 I. C. C. 709, the commission found that the commodity rate from Chicago to Stoughton, Wis., and the fourth class rate from Chicago to Bloomer, Wis., applicable on tin cans were unreasonable to extent they exceeded the basis of commodity

rates subsequently established and these rates as modified only by general changes in rate levels are now in effect. Tin Cans from C. F. A. Points to Michigan, Minnesota and Wisconsin, 100 I. C. C. 208.

(j) Proposed increased class rates from Virginia cities and points taking same rates, or rates made differentially higher, to destinations on the Charleston division of the Baltimore & Ohio found not justfied. First class rate from Lynchburg to Grafton on the main line of the B. & O. is lower than the present first-class and the proposed rate to points on the Charleston division, and, since no restrictions upon the routing are made in the tariff, this rate is applicable over the Charleston division. Following Zelnicker Supply Co., 80 I. C. C. 651, and Dixie Portland Cement Co., 96 I. C. C. 47, respondents contention that no increase in discrimination against intermediate points under the fourth section results because no arrangements for divisions are in effect over these routes to Grafton, and routing over this line would not be observed, can not be sustained. Class Rates from Eastern Points to Points in West Virginia, 100 I. C. C. 215.

(k) Proposed increased basing rates on paving brick from Jacksonville, Fla., to points in Florida, on traffic originating at Robbins, Tenn., resulting in rates higher than rates between same points on shipments originating at other southern producing points; higher than rates for corresponding distances from Jacksonville to points in Florida on lines of Florida East Coast Ry., and higher than rates on other articles included in uniform brick list, in violation of the order in National Paving Brick Mfrs. Asso., 68 I. C. C. 213, found not justified. Basing Rates on Paving Brick, 100 I. C. C. 390.

(l) Proposed increased rate on brick and clay products from Nashville, Tenn., to Paducah, Ky., to the basis approved by the commission in Brick and Clay products in the South, 88 I. C. C. 543, found justified except to the extent that the rate proposed on common brick exceeds a certain amount over the route specified via Hopkinsville, Ky. Schedules ordered canceled without prejudice to the filing of other schedules in which respondents may apply the rate herein found reasonable on common brick over the more circuitous routes between Paducah and Nashville. Brick from Nashville to Paducah, Ky., 101 I. C. C. 11.

(m) Proposed revision of distance commodity rates on commodities other than those treated in Memphis-Southwestern Investigation, 77 I. C. C. 473, for application between points in southwestern territory, between points in such territory, on the one hand, and defined territorities in c. f. a., western trunk-line, and southern territories and related points, on the other, designed for the purpose of complying with the commission's orders in the above cited case, found justified with respect to certain commodities and not justified with respect to others. Reasonable rates in specific instances prescribed for the future and fourth section relief granted. Commodity Rates in Southwestern Territory, 101 I. C. C. 308.

(n) Proposed increased class rates between Memphis, Tenn., and Cairo, Ill., on the one hand, and points in Kansas, Missouri, Nebraska, and Colorado on the other hand, found not justified. The percentages of classes under the proposed rates, although substantially the same as those prescribed in 55 I. C. C. 515, are materially different from those prescribed in 100 I. C. C. 274, and other cases. The Topeka rates, if fairly related to Kansas City rates, would be higher than the latter, but the proposed differences are excessive. Moreover, if the proposed rates to and from Topeka and points grouped therewith are permitted to become effective without change in the present rates to and from various other points in Kansas, the Topeka rates on certain classes would be higher than the corresponding rates to and from Wichita and other more distant points grouped therewith. Class Rates between Memphis and W. T. L. Points, 102 I. C. C. 207.

(o) Following 102 I. C. C. 79, in which commission quoted its statement in Southern Class Rate Investigation, 100 I. C. C. 513, that with a reasonable level of class rates, there would appear to be little if any justification for requiring l. c. l. commodity rates in southern territory, proposed cancellation of l. c. l. commodity rates on clean rice between points in southern territory, which would result in increases, found not justified. Rice between Points in Southern Territory, 102 I. C. C. 2, 317.

ALL OTHER CITATIONS

General Fire Extinguisher Co. v. Director General, as Agent, 88 I. C. C. 521.

§15. Standard for Judging Advance.

See Evidence §55, §56; Relative Rates.

(a) A rate admittedly low does not become unreasonable if increased merely because other rates to same destination are not increased at same time; nor is an increase applied through error sufficient in itself to show that the resulting rate is unreasonable. Consolidated Coal Co. v. Director General, 93 I. C. C. 53, 54.

(b) Proposal to increase rating on jute packing in rope form, l. c. l., in official, southern and western classifications, designed to provide same ratings as those applicable on oakum and to prevent shippers from obtaining lower rates by billing this commodity as rope, found not justified. Jute packing in rope form is not, in fact, oakum or rope, and it is not evident how the proposed specific classification rating would serve to stop the practice of shipping this commodity as rope. Classification of Jute Packing 98 I. C. C. 287.

(c) Proposed increase in l. c. l. ratings on rags, "having value for purposes other than conversion into fiber," in official classification, found not justified. Under proposed schedules shippers and carriers would be required to determine in first instance, as at present, whether a given lot of material was in fact rags, and following that it would be necessary before the legal rate could be known, to relate the rags to some standard of value or usefulness which the record here shows is quite indefinite and intermediate if it exists at all. Classification of Rags, 98 I. C. C. 591.

ALL OTHER CITATIONS

California Grain Co. v. Director General, as Agent, 85 I. C. C. 680.

§16½. Widespread Rate Adjustment.

See Evidence §66.

(a) Proposed readjustment, involving increases and reductions on, fruit and vegetables between north Pacific coast points, prompted by the filing with the commission of complaints seeking rates to Portland, Oreg., and Spokane, Wash., on same basis as Seattle and Tacoma, Wash., found not justified as to proposed increases only. Fresh Fruits and Vegetables, 89 I. C. C. 473.

(b) Rates on roofing talc as increased under General Order No. 28 of director general and general increases of 1920, result of which was to widen spread existing between talc and crushed slate, a competitive commodity, found unreasonable to extent they exceeded lower rates subsequently established and which restored same relation as existed prior to such increases. Reparation awarded. Barrett Co. v. St. J. & L. C. R. R. Co., 91 I. C. C. 9.

(c) Rates on bituminous coal from Kanawha district, Group 3, W. Va., to New Boston (Yorktown), Ohio, found unreasonable as compared with rates to Ironton, Ohio, and East Ashland and Ashland, Ky., competing points. Lack of uniformity in applying certain increases in rates to these destinations resulted in widening spread formerly existing between rates to these points, to disadvantage of New Boston and to advantage of competing points. Reparation awarded. Whitaker-Glessner Co. v. C. & O. Ry. Co., 91 I. C. C. 339.

(d) Respondents proposed increased rates for the transportation of canned fruits and vegetables and condensed and evaporated milk, carloads, from various Wisconsin and Minnesota points to eastern trunk line, New England and Canadian territories. Complainant attacked class rates on condensed milk from Northfield, Minn., to points in c. f. a. territory and eastern trunk line as unduly prejudicial. Respondents proposed certain changes in proportional rates for the transportation of canned and preserved fruits, vegetables and milk. c. l., from Twin Cities and Minnesota Transfer, Minn., to eastern destinations. In official classification territory the commodities named are generally rated fifth class or higher, in carloads, minimum weight 36,000 pounds. The record indicates that the only important exceptions to this rating in all the territory north of the Potomac and Ohio rivers and east of the Mississippi river are the commodity rates applicable from Wisconsin points to eastern destinations. These commodity rates, lower than the class rates otherwise applicable from Wisconsin, were first established by the car ferry routes operated across Lake

Michigan, and are not to be confused with similar, but lower, rail lake and rail rates. The rates before the Commission are substantially the same as were in effect prior to the World war, increased and decreased only by the percentages authorized. The percentage increases authorized in 1920 resulted in advances of 40% on, south, and east of a line running through Beloit, Madison and Watertown, Wis., and of 33⅓% north of that line. It is true that no prospective right arises by reason of the long continuance of a rate; nevertheless, the rates here sought to be increased were established voluntarily by respondents for the purposes of building up the industries of Wisconsin and thereby obtaining more tonnage; and now, after these industries have grown, and readjustment of the rates should be accomplished with as few sharp breaks as possible. Present rates on canned goods and canned milk from Beloit, Janesville and Watertown, Wis., to New York are 63c, proposed 64.5c, present from Madison 63c, proposed 66.5c. HELD, respondents have justified rates not exceeding 64.5c from these points. Among the many rates embraced in the suspended schedules are about 31, mainly from points close to the west shore of Lake Michigan adjacent to Manitowoc, Milwaukee, and other Lake Michigan ports, that show an increase or change from those now in effect. No further notice will be given these rates. From North Prairie present rate 63c, proposed 60c. From points on and south of the C. M. & St. P., Oconomowoc, Watertown and Waterloo to Madison, rates should not exceed 64.5c; and 64.5c should not be exceeded from points on and east of the C. & N. W., from Madison through Evansville and Footville to Beloit. Rate of 66.5c proper to New York from the Oshkosh-Fon du lac group. Rates proposed from Monticello, Monroe and Albany, all reductions, 66c, are just and reasonable; rates from Middleton and De Forest, now 66c, proposed 70.5c should not exceed 66c; and rates from Waunakee should be the same as from Middleton and DeForest. Rates from Prairie du Chein and Richland Center are proposed which are reductions from the class basis, 78c to 70.5c. These rates appear to be properly adjusted, and the proposed increase in rates from Lancaster, from 66c to 70.5c will be permitted; but rates from Spring Green and Sauk City should not exceed 68c. From Winano, Galesville, Onalaska, La Crosse, West Sales, Sparta, Bangor Black River Falls, Neilsville and Cashton, Wis., present 66c proposed 73.5c, found justified. From Wausau and points in that vicinity rates proposed 70.5c found justified, including Marshfield. From points north and west of the groups already considered proposed rates 75c, found justified, and rate of 78c found justified from Bayfield Ashland group. HELD, schedules not justified, and carriers will cancel the schedules without prejudice to filing new tariffs to conform to the opinions herein expressed. Northfield, Minn., is on the M. N. & S. Ry., 45 miles south of Minneapolis. It is served also by the C. G. W., the C. M. & St. P., and Rock Island. There are no commodity rates applicable to the transportation of canned or condensed milk, carloads from Northfield to points east, but are fifth class, constructed substantially upon the rate to Chicago plus the rates beyond, no provision having been made for export. Complainant by reason of geographical location is less favorably situated than the Wisconsin points named. Northfield has rates no higher than from St. Paul and the disadvantage and prejudice to which it is subjected is no more than all other producing points west and east of the Mississippi river suffer by reason of commodity rates lower than the full fifth class from Wisconsin. The measure of the disadvantage of Northfield is 3c. A finding of undue prejudice and preference should take into account all circumstances and conditions which affect the particular traffic and bear upon a proper adjustment of rates, in which particulars the record is deficient. HELD, rates attacked not unreasonable or unduly prejudicial, complaint dismissed. Canned goods to eastern points, 101 I. C. C. 502.

(e) Proposed increased rates on glass bottles from Chattanooga to Memphis, via interstate route, for purpose of restoring previously existing relationship between Chattanooga and St. Louis, found justified. This relationship was disrupted following Fourth Section Violations in the Southeast, 32 I. C. C. 61, when rates from St. Louis were increased and no change was made in the rates from Chattanooga, work on a readjustment being interrupted by intervention of Federal control. Glass Bottles from Chattanooga to Memphis, 93 I. C. C. 317.

(f) Proposed revision of rates on paper boxes between points in the Southeast, found justified in part. Complaint against maintenance of commodity rates from Nashville to interior southern points, while class rates apply from Chattanooga, Atlanta, and Birmingham, and in order to satisfy insistent demands for an immediate adjustment on a more consistent and relative basis, and at same time correct existing fourth-section departures, is given as reason for the revision. Proposed rates are intended only as a temporary measure to take care of the situation until such time as all rates on paper and paper articles between points in the Southeast may be revised on a more comprehensive scale. Paper Boxes between Southeastern Points, 93 I. C. C. 559.

(g) Proposed increased rates on coke from points in southwestern Virginia, Benham, Ky., LaFollette and Chattanooga, Tenn., to Cincinnati and certain points in the vicinity thereof, and to Maysville, Ky., designed for purpose of restoring a parity of rates from these coke-producing points, disrupted following the general increases authorized in Increased Rates, 1920, 58 I. C. C. 220, found not justified. Although record does not indicate that proposed rate to Cincinnati would be unreasonable, it would result in undue prejudice at that point and in undue preference of other Ohio River crossings where a similar situation exists and where a similar increase is not made. Coke to Cincinnati Group, 93 I. C. C. 572.

(h) Proposed increased rates on cattle and calves from points in New Mexico, Oklahoma, and Texas, to Omaha, for purpose of establishing from points of origin to Omaha and Kansas City, a reasonable rate relationship, disrupted by application of the general increases and reductions, found not justified. Such increases would make permanent the highest differential brought about by the general percentage changes and would throw rates in issue out of line with rates from other points in the Southwest. Moreover, differences in distance to Omaha and Kansas City are generally ignored on cattle from the West and Northwest and to take mileage into consideration from one section and not from another would be unfair. Livestock from Southwest to Omaha, 95 I. C. C. 405.

(i) Fact that proposed increased rates are made in accordance with a basis of long standing, while entitled to due weight, does not of itself constitute sufficient justification. Cotton Linters to Indiana Points, 95 I. C. C. 514, 516.

(j) Where a general readjustment of rates, involving increases as well as reductions, is required to be established by the commission, retroactive effect to such rates as a basis for an award of reparation will be declined. Texas Co. v. K. C. S., 96 I. C. C. 81, 85.

IV. REASONABLENESS OF ADVANCED RATES.

See Across Lake Rates (b); Basing Points and Lines §3 (p); Blanket Rates §10½ (s), §18; Branch Lines §1 (x); Class Rates §2 (4r), (6e); Classification §5 (rr), §16 (a) (b) (v) §22 (3w) (3x); Compress Companies and Charges II (d); Import Traffic §2 (ff); Live Stock Shipments (q); Long and Short Hauls §4 (3e), §4½ (n), §6⅞ (r) (s); Minimums §7 (j) (k) (l) (q) (dd) (ff), §8 (b); Percentage Rates (l); Proportional Rates II (k) (l) (s) (x) (kk) (mm); Routing and Misrouting §6 (pp) (qqa); State Rates and Regulations (n) (tt) (3i); Switch Tracks and Switching §6 (c); Through Routes and Joint Rates §13 (3b), VI.

§17. In General.

(ab) Proposed increased rates on limestone from Krause and Columbia Quarry No. 2, Illinois, via Vulcan,, Ill., and the Missouri Pacific to industries on latter-named carrier in the St. Louis, Mo., switching district, found not justified. Rates proposed exceed the combinations applicable over more circuitous three-line route through East St. Louis, would be prohibitive of any movement from protestant's quarries due to competition of other quarries and shippers of gravel located within or near the St. Louis district, and while respondents disclaim any purpose other than the establishment of reasonable rates for the service performed, the proposed increases are largely the outgrowth of a disagreement concerning divisions. Limestone from Illinois Points, 89 I. C. C. 11.

(c) Proposed increased rates on manufactured iron and steel articles from St. Louis, Mo., and Chicago, Ill., groups, and

from Fort Wayne, Ind., to various destinations in Indiana and Illinois, and on cast-iron pipe and fittings from Chicago group to destinations in Indiana designed to correct a maladjustment of rates and remove fourth-section departures over routes through Terre Haute, Ind., and Decatur, Ill., to Paris, Ill., found not justified. If proposed rates should become effective a maladjustment would still exist, and only fourth-section departures corrected would be at points on circuitous routes. Iron and Steel Articles, 89 I. C. C. 17.

(d) Proposal to cancel application of the Deming, N. Mex., rates as maxima on grain and products from points in Illinois, Minnesota, South Dakota, Iowa, Missouri, Kansas, Nebraska, Wyoming, Colorado, and New Mexico, to certain points in South Texas, found not justified. Respondents made no serious attempt to justify reasonableness per se of the proposed increases, relying upon fact that destinations which it is proposed to eliminate from application of the rule are not intermediate to Deming, but application of rates higher than the transcontinental rates on grain moving to points in differential territory can not be justified by simply showing that such points in differential territory can not Grain and Products to Texas, 89 I. C. C. 141.

(e) Proposed increased rates on paper stock and scrap paper from St. Louis, Mo., to Alton, Edwardsville Junction, and Federal, Ill., found not justified. Apparent moving cause of proposed increases is dissatisfaction on part of line-haul carriers with revenue received after provision is made for the switching lines, a circumstance not recognized as adequate justification for increased charges to be borne by shippers. Moreover, present commodity rates, distance considered compares favorably with rates on same article from St. Louis and Chicago to other destinations and with rates on various other commodities applying principally between points in Illinois. Paper Stock from St. Louis, 89 I. C. C. 267.

(f) Proposed increased rates on petroleum and products from points in Kansas, Missouri, and Oklahoma to Belleville, Ill., and points in Illinois south thereof on the Illinois Central found not justified. Carriers made no attempt to justify fourth-section violations which suspended rates would create, and have not filed a fourth-section application for relief from long-and-short-haul provision of the fourth section. Petroleum to Belleville, 89 I. C. C. 295.

(g) Proposed increased rates on pig iron between Sheffield and Florence, Ala., when for movement by water beyond, found justified. Present rate is very low, is in the nature of a raw-material rate for manufacturing purposes, on the manufactured product of which carriers receive an outbound movement, and was not intended to apply to river landings at Florence or Sheffield. Respondents point out that there is generally no return movement from Sheffield, and if proposed rate should become effective the rail-water-and-rail rate from Florence would still be lower than the all-rail rate to same destinations. Instances were also cited of higher rates on various commodities between these points and between Alabama City, Gadsden, and Attalla, Ala. Pig Iron Between Florence and Sheffield, 89 I. C. C. 324.

(h) Proposal to restrict joint rates on lumber from Pacific coast points to stations on Cooper Range R. R. to shipments handled via C. M. & St. P. Ry. via McKeever, Mich., or delivered to that carrier at Missouri River gateways, found not justified. In justification respondents urge that Copper Range has divisional arrangements with the Milwaukee but none with the Duluth, South Shore & Atlantic, with which it connects at Houghton, Mich., and that the Copper Range receives a shorter haul frequently involving the participation of an additional carrier when the traffic moves through Houghton. However, under proposed restriction, traffic to the Twin Cities could not be forwarded under joint rates to points on Copper Range because the Milwaukee would not receive shipments at Missouri gateways. Routing on Lumber, 89 I. C. C. 351.

(i) Combination rates on cottonseed cake and meal from Texas common points to points in eastern trunk-line and New England territories intermediate to, and ordinarily grouped with, New York, N. Y., Boston, Mass., and other eastern basing points, found unreasonable to extent they exceeded joint rates from Texas common points to such basing points. Originally joint rates reflected lowest combinations, but carriers failed to revise them so as to reflect changes brought about following Increased Rates, 1920, 58 I. C. C. 220. Moreover, it has been the custom of defendants to publish joint

commodity rates lower than combinations on all commodities moving in large volume. Reasonable basis of rates prescribed and reparation awarded. Larrowe Milling Co. v. A., T. & S. F. Ry. Co., 89 I. C. C. 439.

(j) Respondents proposed to readjust the rates on fresh fruits and vegetables between certain stations in Washington, Oregon, Idaho and British Columbia. Points of origin are in the Yakima Valley, Wenatchee district, Lewiston and Joseph, Idaho, and The Dalles, Ore., destinations being Seattle, Tacoma, Everett, Bellingham, Chehalis, Aberdeen, and South Bend, Wash., Vancouver, B. C. Some of the proposed increases in the rates on fruit amount to as much at 11.5c and on vegetables 13c. The proposed reduced rates to Spokane from points in southeastern Washington and northeastern Oregon are based upon 68% of the fifth class rates, plus 2c to compensate for the additional empty haul of refrigerator cars. It is not proposed to change the rate on fruit to Vancouver, from Yakima proper, but from other points in that valley increases are proposed. The effect of this is to break up the present grouping of all points in the valley so far as rates to Vancouver are concerned, the distances from the affected points ranging from 329 to 417 miles. HELD, proposed rates not justified. Fresh Fruits and Vegetables, 89 I. C. C. 473.

(k) Proposed increased rates on egg-case materials from points in Iowa to destination in southeastern South Dakota, found not justified. Southeastern South Dakota is in active competition with Sioux City, Iowa, and Sioux Falls, S. Dak., in the distribution of egg-case materials in South Dakota, but no change in the rates to either Sioux City or Sioux Falls. Moreover, earnings under present rates to southeastern South Dakota compare favorably with earnings under rates to Sioux City and Sioux Falls. Egg Cases and Carriers to South Dakota, 89 I. C. C. 479.

(l) The commission is not justified in denying the establishment of reasonable rates from a specific territory simply because to do so happens to increase the existing differences between the rates from that territory and the rates from another territory. Cancellation of Coal Rates to Minnesota, 89 I. C. C. 573, 586.

(m) Respondents proposed to increase the rates on egg cases and egg carriers and commodities grouped therewith, carloads, from points in Iowa to certain destinations on the C. M. & St. P. and C. St. P. M. O. Ry. in South Dakota. The schedules under suspension are part of a revision of the rates on egg case materials from Illinois and Iowa to South Dakota. This revision, as proposed, included reductions in the rates from Chicago, Peoria and Quincy, Ill., and in some instances from certain Iowa points. These commodities are rated fifth class in the western classification. Mitchell, S. D., is in active competition with Sioux City, Iowa, and Sioux Falls, S. D., in the distribution of egg case materials in South Dakota. No change was made or proposed in the rates from Tama to either Sioux City or Sioux Falls and shippers at Mitchell fear that if the proposed rates to Mitchell become effective the trade in these commodities which hey have built up in southeastern South Dakota will be greatly jeopardized. HELD, schedules not justified. Egg ases and carriers to South Dakota, 89 . C. C. 479.

(n) Where a short line's compensation has not kept pace with the general increases in rates of trunk lines, although ts operating expenses have increased in common with theirs, such short line should be accorded the benefit of a proportionate share of the rate increases. See Ohio & Kentucky Ry. Co., 77 I. C. C. 636, 643. New York Dock Ry. v. B. & O. R. R. Co., 89 I. C. C. 695, 706.

(o) Respondents proposed to cancel the existing commodity rates on stoves, ranges, gas water heaters and furnaces, applying from Detroit, Mich., and from Battle Creek, Coldwater, Kalamazoo, Holland and other intermediate points in Michigan to Chicago, Ill., Milwaukee, Wis., St. Louis, Mo., and upper Mississippi river crossings, leaving in effect higher class rates. HELD, proposed schedules have been justified except in so far as they relate to present commodity rates on warm air furnaces. Stoves, ranges and furnaces from Michigan, 91 I. C. C. 554.

(p) Carriers operating in central territory, proposed to cancel all local and proportional commodity rates on furniture, in carloads and less carloads, between points in central territory. Respondents proposed concurrently to amend the existing exceptions to the classification, to include all points in central territory, which provide for third class rates, mini-

mum 12,000 pounds, or 126 per cent of fourth class, minimum 20,000 pounds, on furniture, in carloads, rated third class or higher from various points in central territory east of the Illinois-Indiana state line to Chicago, Ill., east bank Mississippi river crossings and other points in Illinois, Wisconsin and Michigan. They further proposed to cancel commodity rates maintained on furniture, carloads, from Port Washington and Sheboygan, Wis., and exception basis from Chicago and Milwaukee and points taking same rates to Indianapolis, Ind., and the Ohio river crossings leaving second class rates generally applicable. Furniture in carloads generally is rated second class in the official classification and third class in the western and southern. The suspended schedules would result in both increases and reductions, the latter being due to the proposed broadening of the application of the exception basis of rates to apply from certain points where class rates are now in effect. Little evidence was introduced relative to the proposed cancellation of less carload commodity rates on furinture in central territory. Under the proposed adjustment, exceptions to the classification will permit furniture, carloads, to move to certain points in Illinois, such as Chicago, Peoria, and Springfield, and to Mississippi river crossings at rates lower than the classification basis, it is to be noted that on all other traffic in central territory the class basis would apply. The proposed cancellation of the commodity rates from central territory and continuance of commodity rates from producing points in adjoining territories on a relatively lower basis will seriously disturb long standing and important relationships, and create undue prejudice against southern Indiana manufacturers. HELD, respondents have not justified cancellation of local and proportional commodity rates and rates provided in exceptions to the official classification on furniture, carloads, from and to points in central territory, but the cancellation of less carload commodity rates has been justified. Furniture from c. f. a. territory, 92 I. C. C. 97.

(q) Pennslyvania R. R., proposed increased rates on iron and steel articles, carloads from Philadelphia, Pa., and points in the vicinity of that city to points in Delaware, Maryland and Virginia. Present rates 25.5c and 17.5c, proposed rates 27 and 18.5c. The 25.5c rate applies from Philadelphia and beginning at Moore, Pa., to Chester, Pa., a rate of 27c applies, these points being intermediate to the points taking the 25.5c rate. HELD, proposed rates not justified. Iron and Steel Articles from Phliadelphia, Pa., 92 I. C. C. 123.

(r) M. P., respondent, proposed increased rates on sand and gravel, carloads, from Drake and Jedburg, Mo., to St. Louis, Mo., when for beyond, to interstate destinations. Jedburg is 25 miles west of St. Louis and other producing points in that vicinity, the average distance to St. Louis being 12 to 47 miles. Prior to June 25, 1918 the rate was 25c for local and for interstate points beyond, increased on that date to 50c, increased in August 1920 to 67.5c when for interstate points, but the 50c rate for local deliveries in St. Louis, or when for intrastate points was maintained. Following 64 I. C. C. 233 the rate for local deliveries and for intrastate points beyond also was made 67.5c and on March 9, 1922 respondent voluntarily restored the 50c rate on both intrastate and interstate shipments. Effective Jan. 20, 1924 a rate of 61c was established via M. P. and Frisco from these points to St. Louis, when for intrastate rates beyond, the rate of 50c for local delivery and for interstate points beyond continuing in effect. The respondent now proposes to increase its interstate rate, so that a 61c rate will apply on interstate as well as intrastate shipments when for points beyond St. Louis, but a similar increase for the interstate rate is not proposed by the Frisco. The proposed rate of 61c to St. Louis on interstate shipments does not exceed the rate in effect June 25, 1918, by more than the subsequently authorized increases and reductions. HELD, schedules have been justified. Sand and Gravel from Missouri, 92 I. C. C. 177.

(s) Respondents proposed to increase from 42 to 50c the rates on cottonseed cake and meal and other articles taking same rates, in straight or mixed carloads, from Texas common points on local traffic to Louisville, Ky., and on proportional traffic to points in said territory other than Louisville. The 42c rate now applies on both local and proportional traffic to Louisville territory. The proposal to increase the rate on proportional traffic was in error, and the suspended schedules will be discussed only as proposing increases in the rates on local traffic. The existing rate on local traffic

to Louisville territory is less than the rate of 45.5c applicable on local traffic to the intermediate St. Louis territory and permission to continue this fourth section departure was denied, effective May 24, 1924. The suspended schedules represent respondent's effort to comply with order 8852. HELD, proposed schedules not justified. Cottonseed cake from Texas, 92 I. C. C. 207.

(t) Respondents proposed to increase the rates on sugar, carloads, from Macon, Ga., territory to points in Arkansas, points in Louisiana, except western portion of that state, and to a few points in Missouri, Texas and Oklahoma. Respondents state the suspended schedules were filed as a result of 77 I. C. C. 473. Prior to G. O. 28 the sugar rates to Little Rock, a typical point, were 22c from New Orleans and 28c from Savannah. At present, the rates are 52c from New Orleans and 54c from Savannah and proposed rate is 71.6 from Savannah. The record establishes that, generally speaking, the present rates from Savannah are unduly low compared with corresponding rates from New Orleans. The rates which would become effective under the blanket adjustment proposed would not be unreasonable and would properly reflect the additional service from Savannah as compared with New Orleans. HELD, suspended schedules not justified but a rate not in excess of 70c justified. Sugar from Macon Territory, 92 I. C. C. 275.

(u) Complainant attacked commodity rate of 58c charged on 10 cars of wood pulp between Sept. 7 and Nov. 10, 1920, from Bristol, Va., to Stevens Point, Wis., as unjust in that it was published through error and exceeded 55.5c. Shipments moved Southern, C. N. O. & T. P., and Southern, C. I. & L., E. J. & E., and Soo Line, distance 989 miles Prior to August 26, 1920 a through rate of 41.5c was maintained, increased on that date 40% instead of 33⅓% authorized in 58 I. C. C. 220. On May 28, 1921 the 58 c rate was reduced to 47.5c, on July 1, 1922 to 43c, and on March 8, 1923 to 42.5c the present rate. HELD, rate attacked unreasonable to extent it exceeded 55.5c, reparation awarded. Whiting Plover Paper Company v. Southern Ry., 92 I. C. C. 292.

(v) Respondents proposed to increase their rate on glass bottles, carloads, from Chattanooga, Tenn., to Memphis, Tenn. The present rate is 35c and it is proposed to increase this rate to 40.5c the same as the rate from St. Louis, Mo., to Memphis. Short line distance from Chattanooga to Memphis is 313 miles, from St. Louis the short line distance is 305 miles and from Evansville 312 miles. For many years rates were maintained to that point from St. Louis, the Ohio river crossings and related points on a low basis, in order to meet water competition on the Ohio and Mississippi rivers. The rates to interior points were on a somewhat higher level, being made generally arbitraries over the river points. Under 32 I. C. C. 61, rates on glass bottles from St. Louis and Evansville to Memphis were increased to 23 and 21c, no change being made in the rates from Chattanooga to Memphis, the original relationship becoming disrupted. HELD, proposed schedules justified. Glass bottles from Chattanooga to Memphis, 93 I. C. C. 317.

(w) Respondents proposed certain increases in their rates on iron and steel articles in carloads and less carloads between Newark, N. J., and points grouped therewith, and points in New England. The rates under suspension would result in increasing the rates on bar iron, carloads 0.5c, bar iron, less carloads, 2c, and scrap iron, carloads, 5c. There is no evidence that the rates from the Newark group are subnormal as compared with the rates from other groups, and the former relationship, if desired by respondents, could be readily restored by reducing the rates from the Philadelphia group instead of increasing the rates from the Newark group. HELD, suspended schedules not justified. Iron and steel between New Jersey and New England points, 93 I. C. C. 499.

(x) Respondents proposed to increase to $2.90 the present rate of $2.59 on coke carloads, applying from points of production in Southwestern Virginia served by the L. & N., and Interstate R. R., from Benham, Ky., and La Follette, Tenn., on the L. & N., and Chattanooga on C. N. O. & T. P., to Cincinnati, Covington and other points in Kentucky, and from L. & N., and Interstate R. R. points to Maysville, Ky. It is proposed to increase the $2.90 rate of $2.48 from La Follette to Erlanger, Ky., near Cincinnati. The proposed rate is the same as that now in effect to Cincinnati from the New River district in West Virginia, served by the C. & O., and from ovens in West Virginia served by the

N. & W. The record shows that the proposed increase was published at the instance of the C. & O., which threatened to reduce its rates to the Cincinnati district if the increase were not made. The rate of the C. & O., from West Virginia points to Louisville is $2.65 as compared with $2.37 served by the L. & N., and Interstate R. R. The rates from both producing territories were formerly the same and in this case also the present disparity resulted from the increase made on August 26, 1920. HELD, proposed schedules not justified. Coke to Cincinnati, O., group 93 I. C. C. 572.

(y) Respondents proposed to increase the interstate commodity rates on lime, carloads, from Pennsylvania, West Virginia, Maryland, Virginia, New Jersey, New York, and Vermont to destinations in Pennsylvania, Ohio and West Virginia in socalled 60 and 67% territories. The suspended schedules were published following 85 I. C. C. 341 in which the Commission found rates on lime from Mitchell, Ind., to these destinations unreasonable and unduly prejudicial and prescribed a distance scale of reasonable maximum rates from Mitchell and also required that the undue prejudice should be removed by the establishment of rates from the eastern points which should bear the same relationship to the rates from Mitchell as that which would obtain on basis of the distance scale from Mitchell on the one hand and of certain specified rates from the eastern points on the other. The proposed rates would result in numerous violations of both the long and short haul rule and aggregate of intermediate provision of the fourth section, in that the rates from a number of Virginia lime producing points in which no change is proposed would be lower than the proposed rate from certain of the eastern points through which traffic from the Virginia points could and probably does move to destinations in 60 and 67% territory. There is no uniformity or consistency in the present rates on lime in trunk lime territory or between that territory and points in 60 and 67% territory. HELD, suspended schedules not justified. Rates from Buckeystown, Frederic Grove, and Lime Kiln, Md., Bakerton and Engle, Va., Stephens City and Strasburg, Va., and York, Pa., are unduly preferential to extent that the rates from those points to destinations in central territory in Pennsylvania, Ohio and West Virginia in the percentage groups known as 60 and 67% territories fail to bear the following relationship to the rates from Mitchell, Ind., to the same destinations: from Buckeystown, Frederick Grove, Lime Kiln, Bakerton, Engle, Stephens City, Strasburg and York, 16.5c to Pittsburgh and points in the Pittsburgh district; 18c to Youngstown, Sharon, Steubenville, Wheeling and Erie; and rates to other points in said destination territory that will be in harmony with the rates above specifically named; from Mitchell on the basis prescribed as reasonable in 85 I. C. C. 341. No finding is made as to the reasonableness of the present rates on socalled agricultural or fluxing lime which has no generally recognized commercial value for chemical or building purposes. Lime from eastern trunk line points. 93 I. C. C. 617.

(z) Respondents proposed to increase the rates on cement, carloads, from Ada and Hartshorne, Okla., to points on the C. & N. E., E. W. F. & G., W. F. R. & Ft. W., W. F. & S. The four lines have a common terminus at Breckenridge, Tex. The short line distance from Ada is 295 miles. The shortest reasonable route is over the Santa Fe to Chickasha, Rock Island to Graham and W. F. & S., beyond, 316.4 miles. HELD, suspended schedules not justified. Cement from Oklahoma to Texas, 95 I. C. C. 596.

(aa) Respondents proposed to increase generally rates on soapstone, or talc, crude or ground, carloads, from North Carolina to points located principally in central territory. This commodity is rated sixth class in official and southern classifications. North Carolina producing points are divided into Groups 1, 2 and 3, of which Hemp, Hewitts, and Marshall, are representative points. Hemp is served by the Norfolk Southern and Hewitts and Marshall by the Southern. The rates on talc from Hemp and Marshall to central territory are 45c higher and lower, respectively, than the rates from Hewitts. The present rates are joint rates. They were established on June 15, 1923 and are based on proportional rates maintained on this traffic to the Ohio river, plus proportional rates maintained beyond on clay originating in Georgia. The proposed rates are based on the same proportionals to the Ohio river crossings and 80% of sixth class be-

yond. HELD, schedules not justified. Soapstone or talc from North Carolina, 96 I. C. C. 191.

(bb) Respondent, C. & N. W. Ry., proposed certain increases and reductions in the local rates on sand and gravel, carloads, from points in the so-called inner and outer zones, in Illinois and Wisconsin to destinations in the Chicago switching district. Waukesha and Janesville, Wis., and Rockford, Ill., will be considered as outer zone points and Waukegan and Elgin, Ill., of the inner zone. The destinations extend from Peterson Avenue to Greenwood Boulevard on the Mayfair cutoff of respondent and from Evanston to Ravenswood on its Lake Shore division. In 64 I. C. C. 37 the Commission found that the interstate rate on sand and gravel from the outer zone to points in the district should be 3.75c per 100 pounds and that the intrastate rates from the outer zone should be increased to the same amount to remove undue prejudice to interstate traffic. Also that the rates on sand and gravel from the inner zone to the district should be maintained on a differential of 0.25 under the rates from outer zone points. The rates prescribed, modified by the subsequent general reduction of 10%, would be 3.5c from the outer zone and 3.25c from the inner zone, or the same as those which respondent proposes to establish to the Rogers Park district. No justification has been shown for maintaining rates on sand and gravel to stations in the Rogers Park district different from those maintained from the same points of origin to other stations in the district. Respondent should publish rates from the outer zone, including Waukesha, which are the same to all destinations in the district, at the same time preserving the differential of 0.25c as between the inner and outer zones and observing as a maximum a rate of 3.5c from the outer zone, including Waukesha. HELD, suspended schedules not justified, respondent to file new schedules in conformity with the views herein expressed. Sand and gravel between Illinois and Wisconsin, 96 I. C. C. 325.

(cc) Respondents proposed to increase the rates on grain and grain products, carloads, between certain points in Idaho and Washington and Pacific coast points, Vancouver, B. C., to San Diego, Calif., inclusive. The present and proposed rates are published for application in both directions between the various points, but the points of origin in which protestant is particularly interested, and from which the proposed increased rates would apply, are, with the exception of Bradken Spur, Wash., in northern Idaho on the N. P., C. M. & St. P. Spokane International, C. & P. O., and S. & E. Ry. & P. Co., or served by the Red Collar Steamboat Company which operates on Lake Coer d'Alene and the destinations are in Washington, Oregon and California. Most of the evidence related to the rates from points on the branch line of the N. P., extending 13.5 miles from Hauser Junction, Idaho, to Couer d'Alene, Idaho. The present and proposed rates to Portland and Seattle are 25.5c and 28c respectively. The rate from Port Falls, Idaho a branch line point on the C. M. & St. P., and N. P., to Seattle, 334 miles, is 25.5c and proposed 28c. HELD, no evidence was offered in justification of the proposed rates to points in California. Rates to that state not justified but to other destinations justified. Grain between Pacific coast points, 98 I. C. C. 601.

(dd) Respondents proposed to increase rates on molding sand carloads from Mount Holly, Hainesport and Masonville, N. J., to Buffalo and Rochester, N. Y., and points taking same rates. Molding sand is a heavy loading low grade commodity valued at $1.50 per ton. Prior to August 5, 1924 a carload rate of $3 was in effect from Hainesport, a representative point. The rate from Smithville a representative contiguous point was $3.40. On that date the Pennsylvania increased its local rate from Hainesport to $3.40. In the suspended schedules respondents proposed to increase the rate applicable from Hainesport over the two line routes to $3.40. HELD, proposed rate not justified. Sand and gravel from New Jersey, 101 I. C. C. 560.

(ee) Proposed cancellation of commodity rates on furniture, c. l. and l. c. l., from and to points in c. f. a. territory, and substitution therefor of classification basis and in certain instances exception basis, which would result in both advances and reductions, found not justified except as to l. c. l. traffic. Proposed cancellation while at same time continuing relatively lower commodity basis from producing points in adjoining territories would seriously disturb

long-standing and important relationships, and create undue prejudice against southern Indiana manufacturers. Furniture from C. F. A. Territory, 92 I. C. C. 97.

(ff) Proposed cancellation of special commodity rates on woven-wire cloth, from points in defined territories to points in Arkansas, leaving higher class rates in effect, found justified as to copper, brass, and bronze woven-wire cloth, but not justified as to iron woven-wire cloth. In many instances proposed schedules would increase rates on iron woven-wire cloth over 100 per cent, result of which would be to materially affect continuance of the manufacture of screen doors and windows at points in Arkansas where plants are now located and which have built up and fostered the industry under present rates. Woven-Wire Cloth to Arkansas, 92 I. C. C. 120.

(gg) Proposed changes in tariff description of beets, carrots, and parsnips, from Texas points to eastern destinations, by adding to description "with tops" the words "or clipped tops" found not justified. The clipped variety consists of those with only leaves removed, from 3 to 6 inches of stems being retained to permit tying in bundles. The trade considers commodities so shipped as being "without tops" and on them lower rates apply under present tariff description. To permit proposed change would effect increases and unauthorized departures from aggregate-of-intermediates provision of section 4 of the act, which carriers made no attempt to justify. Beets and Carrots from Texas, 92 I. C. C. 141.

(hh) Proposed increased rates on South American and Australian imported wool in the grease, in machine-compressed bales, from Boston, Lowell, New London, and New York, to La Porte and Mishawaka Ind., found justified. Wool in the grease in bales of the same density as South American and Australian wool, move under higher rates from Boston and New York to all points of consumption in official territory. Present rate to La Porte, although fixed by commission, is low and gives undue preference to South American and Australian wool as against wool imported from other foreign countries, and as against domestic wool, and unduly prefers La Porte as against other consuming points in official territory. Imported Wool from Boston and New York, 93 I. C. C. 26.

(ii) First class rate on cotton shirt forms, l. c. l., from Baltimore to Washington, N. C., found not reasonable as compared with lower commodity rate formerly in effect, or with rate on finished shirts in opposite direction. Commodity rate was cancelled because other manufacturers of shirt forms in North Carolina requested establishment of similar rates lower than first class and defendants urged that it would be unduly prejudicial to charge first-class rates from other points while maintaining lower commodity rates from Washington. The finished shirt rate in the opposite direction was also subsequently cancelled because considered subnormal, and first-class rates now apply in both directions. Moreover, defendants instanced first-class rates for similar and greater distances which are higher than rates charged. Flowers & Stell v. N. S. R. R., 93 I. C. C. 388.

(jj) Proposed increased rates on iron and steel articles between Newark, N. J., and points grouped therewith, and New England points, found not justified. Carriers rely entirely upon fact that proposed rates will restore the spread between the Newark and Philadelphia groups established following decision in Pardee Works, 39 I. C. C. 162. For over seven years that spread has been treated as one varying with the rates and not as a fixed differential. Moreover, there is no evidence that rates from the Newark group are subnormal as compared with rates from other groups, and former relationship, if desired by carriers, could be readily restored by reducing rates from Philadelphia group instead of increasing those from Newark group. Iron and Steel between New Jersey and New England Points, 93 I. C. C. 499.

(kk) Proposed increased rating on acid carboys, returned empty, from and to points in western trunk-line territory, found justified. Acid carboys are not desirable freight and can not be handled as expeditiously or cheaply as other empty returned containers which can be tiered. There is considerable danger involved in their handling, and many restrictions not operative with respect to mineral-water and other empty returned containers increase cost of their transportation. Moreover, rating proposed is the same as that now applicable from in-

termediate points and will have effect of removing fourth-section departures, is the same as that generally applicable in western trunk-line territory east of Missouri River, does not appear unreasonable, and it is not shown that it will result in undue prejudice or preference. Carboys, Returned Empty, in Western Territory, 93 I. C. C. 672.

(ll) Proposal to cancel rates and minimum weights on wooden hoops, from Group C points to western destinations and establish higher rates based upon lower minima, in compliance with carriers' interpretation of the commission's order in 91 I. C. C. 329 found not justified. Reasonableness of the rate was not in issue in case cited and in pointing out that carriers should not protect themselves from unduly lower charges per car by prescribing minimum weights which can not be loaded in ordinary equipment available the commission merely intended to dispose of a contention that minimum assailed was justified because earnings under rate applicable in connection therewith were less than reasonable. The commission did not intend to sanction an increase in rates. Carriers do not contend here that present rates are unreasonable and offered no justification of the proposed rates which reflect substantial increases. Wooden Hoops to Western Destinations, 95 I. C. C. 519.

(mm) Proposed increases and changes in method of assessing gathering charges, or proportional rates, on citrus fruits from interior Florida points to Florida basing points to be used as factors of through rates to certain transcontinental and intermountain territory found not justified. Carriers attempted to justify the increases merely by explaining the change in method of determining freight charges. However, instead of promoting uniformity, the proposed method of stating charges up to the basing points would further confuse a situation already so complex and disordered that shippers and carriers have difficulty in applying and understanding, or even explaining, the adjustment. Citrus Fruits between Points in Florida, 95 I. C. C. 532.

(nn) Proposal to increase interstate rates on ashes and cinders between points on Indiana Harbor Belt R. R., designed primarily for purpose of preventing the industries from disposing of them other than to respondent as a gift for use on its roadbed, found not justified. Proposed schedules would result in a substantial increase in revenue on local traffic over that accruing under the present rate. Ashes and Cinders, 98 I. C. C. 163.

(oo) Proposed increased rates on petroleum and petroleum products from Gates and Port Arthur, Tex., and Ardis, La., and other points in Texas and Louisiana to destinations in Kansas groups 1, 2 and 3, and to certain destinations in Oklahoma, on the ground that present rates were established erroneously and that present schedules represent an effort merely to eliminate a tariff error, found not justified. Proposed schedules ordered canceled without prejudice to the establishment, from and to the points involved, of reasonable rates properly related to the rate adjustment on these articles in this territory. Petroleum and Petroleum Products from Southwestern Points to Points in Kansas and Oklahoma, 98 I. C. C. 321.

(pp) Upon rehearing, rates on silica sand from Ottawa, Ill., to Carrel Street Station, Cincinnati, Ohio, in connection with Pennsylvania lines, found not unjust or unreasonable, and proposed rates representing increases to same basis in connection with other lines found justified. Comparison of these rates with rates on sand from Ottawa to other destinations for similar distances shows that rates to Cincinnati are substantially out of line. Moreover, the rate from Ottawa to Cincinnati is more or less of a key rate and the reduction required in original report. 85 I. C. C. 412, jeopardizes the whole fabric of silica-sand rates in official classification territory. This movement is very heavy and a general reduction in rates would mean a serious reduction in railroad revenues. In large part the general level of eastbound rates from the Ottawa district has been fixed or approved in previous cases cited. Boldt Glass Co. v. C., B. & Q. R. R. Co., 98 I. C. C. 481.

(qq) Rates on plaster, cement from Plasterco, Plasterco Junction, and Hamlin, Tex., to destinations in Alabama, Florida, Georgia, Kentucky, Mississippi, and Tennessee, from and after July 1, 1922, found unreasonable to extent they exceeded by more than 20 per cent rates in effect August 25, 1920. Reparation awarded. Texas Cement-Plaster Co. v. A. & M. R. R. Co., 98 I. C. C. 519.

(rr) Proposed increase in l. c. l. ratings on rags, "having value for purposes other than conversion into fiber." in official classification, found not justified. Under proposed schedules shippers and carriers would be required to determine in first instance, as at present, whether a given lot of material was in fact rags, and following that it would be necessary, before the legal rate could be known, to relate the rags to some standard of value or usefulness which the record here shows is quite indefinite and indeterminate, if it exists at all. Classification of Rags, 98 I. C. C. 591.

(ss) Respondents proposed increased rates on canned goods, carloads, from Colorado, New Mexico, Texas and Wyoming to Arizona, southeastern California, and western New Mexico. Longmont, Colo., about 37 miles north of Denver, may be taken as a representative origin point. Present rate is 81c, proposed 95c. A rate of $1 is also maintained minimum 40,000 pounds as to which no change is proposed. Under the circumstances of this case relative reasonableness as compared with rates from the nearby competing producing territories, rather than intrinsic reasonableness, is the mort important consideration; to this all parties of record seem to agree. HELD, respondents have justified their proposal to place Colorado canneries on a parity with Utah and California canneries on traffic to the destination territory here considered, as long as they maintain present grouping of the destinations. Schedules justified. Canned goods from Colo., N. M., Tex., and Wyo. 102 I. C. C. 156.

(tt) Rock Island, M. P., Frisco, and connections proposed to increase class rates applying between Memphis, Tenn., and Cairo, Ill., on the one hand, and points in Kansas, Missouri, Nebraska, and Colorado, on the other hand. The proposed increased rates between Memphis and points in Missouri, Nebraska, and Colorado are incidental to the main changes, which are in the rates to and from Kansas points. Rates between Cairo and the same Kansas points have been and are on a parity with the rates between Memphis and those points except in instance where to or from Cairo the combinations on the Missouri river are lower and the specific rates have been held down accordingly. No change in this relationship is proposed. The Rock Island is the moving factor in the proposed increases. Its single line route to the Kansas points and to Kansas City, Mo., runs west from Memphis to El Reno, Okla., thence north through Enid, Okla., and Wichita to Herington, and thence northeasterly through Topeka to Kansas City. Salina is the terminus of a branch line from Herington. Hutchinson is southwest of Herington on the main line to Tucumcari, N. M. Rock Island limits its single line participation in this traffic to Herington and points south and west thereof. To and from such stations as Topcka on its lines east of Herington to and including Kansas City it handles the traffic under joint rates with its connections at S. Louis, Mo., Kansas City, or other junction points in eastern Kansas. Respondents base these increases on fourth section considerations. The present first class rate between Memphis and Wichita over all lines is 182c. The short line distance over the Frisco direct is 551 miles. The distances over the single line routes of the M. P., and Rock Island are 613 and 672 miles. The corresponding rate between Memphis and Enid over the Rock Isand is 197.5c. It seeks to comply with the fourth section by increasing the present rates to and from the Kansas points. The Frisco and M. P., have no reason drawn from the fourth section for increasing their rates. It will thus be seen that the proposed basis to and from central Kansas points, of which Wichita is typical would result in the paradox that the fourth section problems of the circuitous line would dictate the rates for the more direct lines. The short line distance Memphis to Omaha, Neb., is 672 miles. No change in present rates is proposed which range from 4c on class E to 18.5c first class over Kansas City rates. The rates proposed for Topeka are in each instance the same as the Omaha rates because of fourth section requirements, Topeka being intermediate to Omaha over several routes. The proposed Topeka rates are nearly 13% greater than the Kansas City rates although the distance to Topeka is only 14% greater than to Kansas City. The proposed differences are excessive. HELD, proposed schedules not justified. Rates between Memphis and W. T. L. points 102 I. C. C. 207.

(uu) Respondents proposed to cancel the commodity rate applicable on salt cake from Pacific coast and related

points to certain destinations in Wisconsin. Salt cake is crude sodium sulphate and is mined from natural deposits in California, Arizona and Saskatchewan, Can. It is also manufactured at Grasselli, Ind., and at Hegewisch, Ill., within the switching limits of Chicago. The record in this proceeding deals mainly with salt cake used by paper mills in Wisconsin north of the east and west line of the Milwaukee from Milwaukee through Madison to Prairie du Chein; and the rates are those in natural salt cake from Clarkdale, Ariz., to these Wisconsin paper mills as compared with the rates from Grasselli and Hegewisch to the same destinations. In western territory, in the absence of commodity rates, salt cake moves in car loads on the fifth class rates. For many years respondents have maintained a commodity rate of 60c on salt cake, carloads, from McKittrick and Niland, Calif., and from Clarkdale to many destinations east thereof known as Group D points, including all points in Wisconsin and many points in the northern peninsula of Michigan. The schedule under suspension proposes to cancel this rate to points in Wisconsin north of the line of the Milwaukee, leaving the rate applicable to the other points in group D. The hearing disclosed that what these respondents had attempted to accomplish by the schedules proposed would not result therefrom. Respondents intended to increase the 60c rate to 72c to mills in the Fox River group and 75.5c to mills north of that group, equal to the combinations of 60c to Milwaukee plus the rates of 12 and 15.5c respectively beyond. The division accorded respondents out of the rate of 60c for the haul east of Kansas City, Mo., or Omaha, Neb., is 11c. HELD, schedules not justified without prejudice to the filing of new schedues in conformity with the intentions proposed. Salt Cake from Pacific coast, 102 I.C.C. 261.

(vv) B. & O., respondent, and connections, proposed to increase the present joint commodity rates on common black powder, carloads and less carloads, from Fairchance, Pa., to Delaware River Pier (Wilmington), Del., and Carneys Point and Thompsons Point, N. J., to full class basis and increase the minimum to 20,000 pounds. The Reading Company is the delivering carrier. Under its tariffs the rates are the same to these points as to Wimihgton. Present joint rates are 75c in lots of 10,000 pounds or over and 151c in lots under 10,000 pounds. It is proposed to cancel these rates and publish a carload commodity rate of 79c representing the full classification rating of first class, with minimum of 20,000 pounds and less carload apply double first class, or 158c. Prior to July 16, 1917 the commodity rate on black powder was the same as the first class rate. Fairchance is on a branch of respondents line 19 miles south of Connellsville, Pa. Short line distance 349 miles over respondent, joint line routes ranging from 391 to 404 miles. HELD, proposed increase in rate in carloads not justified but increase in carload minimum weight and less carload rate justified. Black Powder from Fairchance, Pa., 104 I. C. C. 45.

(ww) Respondents proposed to increase the commodity rates on iron and steel wagon parts, including wagon skeins, carloads, from Chattanooga, Tenn., to Charleston, S. C., Hopkinsville, Ky., and Laurel and Meridian, Miss.; also to establish a commodity rate from Chattanooga to Montgomery, Ala., lower than the class rate now in effect. Chattanooga is the only point of manufacture of iron and steel wagon parts south of the Ohio river, and the destinations named are the only points to which wagon skeins are shipped in carload quantities. Wagon skeins carloads, normally take the sixth class rating in southern classification. The proposed rate from Chattanooga to Charleston is 91.1% of the current sixth class rate of 56c whereas the present rate from Louisville to Charleston is 95.8% of the sixth class rate of 72c. There is no specific commodity rate on wagon skeins, carloads, from Chattanooga to Montgomery. It is proposed to establish a commodity rate 1c lower than the present sixth class rate. The 21.5c rate to Charleston is low but iron and steel wagon material has long been included with other manufactured iron and steel articles. HELD, with the exception of the rate of 43c from Chattanooga to Montgomery, proposed schedules not justified. Wagon parts to southern destinations 104 I. C. C. 179.

(xx) Respondents proposed to cancel the rates on anthracite coal from Erie, Pa., and Brocton, Buffalo and Buffalo Jct., N. Y., to Sparland, Ill., on the Rock Island, thereby making applic-

able higher combination rates based on Chicago. Protestant is a dealer at Henry, Ill., a point 7 miles north of and intermediate to Sparland. The mines to Sparland are made by the use of proportional rates of $2.96 from the mines to Lake Erie and Niagara frontier junction points plus rates of $2.96 beyond. Only the factor from the junction points is in question here. HELD, proposed schedules justified. Coal from Erie, Pa., to Sparland, Ill., 104 I. C. C. 188.

(yy) Respondents proposed to increase the present domestic rate of 14c on crude petroleum and fuel oil in tank cars from the so-called El-Dorado-Smackover field in Arkansas to the New Orleans-Baton Rouge district in Louisiana to 16c and to reduce the present domestic rates on crude petroleum of 22.5c and 23c to Texas ports to 16c. They further propose to increase the present coastwise and export rate of 14c on crude petroleum and fuel oil from the same district to the New Orleans-Baton Rouge district and to Texas ports to 16c and to increase the present rates of 15c on refined gas and road oils to the New Orleans-Baton Rouge district and of 16.5c on gas oil to Texas ports to 17c. The El Dorado-Smackover field is in the south central part of Arkansas, and is served by a branch line of the M. P., the Rock Island and El D. & W. R. R. The movement of petroleum oil to Louisiana and Texas points from the El Dorado-Smackover field prior to July 1924 was relatively light. Following the establishment of the present 14c rate, except to Texas points on domestic traffic, the oil began to move in great volume, and although fluctuating greatly from month to month, continued to do so up to the date of the hearing in this proceeding. There is little if any, movement of crude oil to Texas ports under the present domestic rates of 22.5c and 23c, which it is here proposed to reduce and the carriers would sustain no reduction in revenues of consequence if the reduced rates become effective. The record is lacking in detailed information as to the degree in which the oil traffic moving under the present rates yields a profit to the respondents. All of the facts of record, however, tend to support the conclusion that the circumstances and conditions surrounding the movement are so unusually favorable to economical handling of the traffic as to be almost unique. HELD, proposed increases not justified, but reductions to Texas points, justified. Petroleum from Arkansas 104 I. C. C. 651.

(zz) Proposed to increase from 28.5c to 31c rates on petroleum and its products, carloads, from points on the B. & O., between Charleston and Gassaway, W. Va., to Buffalo, N. Y., and points taking same rates. The principal destinations are on the Pennsylvania and the B. R. & P., in New York and Pennsylvania, intermediate to Buffalo The rates apply on petroleum and its products generally, but protestants interest in the suspended schedules apparently confined to proposed increased rates on wax distillate from Falling Rock, W. Va., to Warren, Pa. Wax distillate moves in tank cars. Falling Rock is 17 miles from Charleston. Cabin Creek Jct., W. Va., a point on the C. & O., about 15 miles southeast of Charleston is representative of a number of petroleum producing points on that line in the same general territory. In an agency tariff, in which respondent B. & O., concurs, a rate of 31c is named from Cabin Creek Jct., and Falling Rock districts to these destinations, whereas in a separate tariff of the B. & O., a rate of 28.5c is named from the Falling Rock district to the same destinations. The distances from Falling Rock over short line routes through Charleston as shown by respondents are, to Buffalo 494 miles and to Warren 455 miles, which closely approximate the distances from the Cabin Creek district. HELD, schedules justified. Petroleum from West Virginia 104 I. C. C. 676.

(3a) Respondents proposed to increase the rates on salt from Pomeroy, O., and Hartford and Mason City, W. Va., to Cincinnati, O., from 9.5c to 12c and from Dickinson, Malden and Witcher, W. Va., to same destinations from 11.5c to 12c; also to increase the rates from Hartford and Mason City to stations on the C. & O., Fernald, O., to Bath, Ind., from 9.5c to 17.5c. The Ohio mines of the Hartford group are reached by the Hocking Valley and the New York Central both of which connect with the B. & O., in reaching Cincinnati. The remaining mines of this group are on the B. & O., which has a short line route in connection with the C. & O., to Cincinnati. The B. & O., also reaches Cincinnati by a circuitous route over its own rails. The West Virginia group

is on the NYC which connects with the C. & O., in reaching Cincinnati. In 1902 the carriers reduced the then existing rate of 7c from the Ohio river plants to Cincinnati in order to compete with the rate in effect by water, and the present rate of 9.5c is the direct outgrowth of this rate, subject only to the general increases and reduction since then. The rate from Malden, Witcher and Dickinson to Cincinnati is 11.5c, and the average distance from these points to Cincinnati is somewhat greater than that from the Hartford group. HELD, respondents have not justified the increased rates to stations on the C. & O., Fernald, O., to Bath, Ind., that, when used as a local rate to Cincinnati and points within the switching district, the proposed rate of 12c has been justified, and that, when used as a proportional rate on shipments moving beyond, it has not been justified. Salt from Ohio and West Virginia points 104 I. C. C. 730.

(3b) Respondents proposed an increase from 11.5c to 15.5c in rate on barley, corn, oats, rye and wheat and screenings thereof in carloads from Mt. Vernon, Ind., to Louisville, Ky., and Jeffersonville, Madison and New Albany, Ind., over the C. & E. I., and connections. Mount Vernon is in a grain producing territory at the end of a branch line of respondent, extending 37 miles in a southerly direction from Mount Vernon Junction, Ind., 21 miles north of Evansville, Ind. Respondents traffic to these four destinations moves north from both Mount Vernon and Evansville through Mt. Vernon Junction to Princeton, Ind., thence Southern, or north to Vincennes, Ind., and thence over B. & O., or Pennsylvania. A rate of 15.5c applied from Mt. Vernon and Evansville to these destinations for several years prior to June 20, 1925 when respondent established the present rate of 11.5c from both points. Apparently respondent now meets the competition of other lines at Evansville, a point from which the L. H. & St. L., and the Southern, the short lines, maintain an 11.5c rate to Louisville, and seeks to maintain from Mt. Vernon the same rate as the L. & N., which is its only competitor at that point. Louisville is 155 and 139 miles from Mt. Vernon and Evansville, respectively, over the lines of respondent and the Southern via Princeton, and 245 and 227 miles over respondents line in connection with the B. & O., via Vincennes. Louisville is 175 miles from Mt. Vernon over the L. & N., and L. H. & St. L., via Evansville, and 291 miles over the L. & N., as a single line haul. As the L. & N. is the only carrier except respondent which reaches Mt. Vernon, the competition at that point is not the same as that met at Evansville. HELD, schedules justified. Grain and grain products to Ohio river crossings 104 I. C. C. 764.

(3c) Respondents proposed increases and reductions in the rates and minimum weights on lumber and related articles of wood, in carloads, from Arizona, California, Nevada, New Mexico, Oregon and Utah to destinations in eastern Canada. The territory of origin comprises generally four groups, designated Coast, Truckee, Hawley and Arizona. Rates from the last three groups are the same. From the Coast group, which embraces most of California, the rates are somewhat higher. From a number of points on San Francisco Bay proportional or transshipment rates apply on shipments received from ocean carriers or accorded certain transit services, such as storing or manufacturing, before delivery to mail carriers at the bay points. They have been maintained with a view to equalizing conditions and competitive requirements between mills not served by rail-lines and those so served. The proposed increases are part of a general adjustment whereby respondents seek to equalize the rates applying from the Coast group and from north Pacific coast points, Portland, Ore., for example. Respondents attempted no justification of the proposed changes from the Hawley, Truckee, and Arizona groups and the consideration of the proposal will be confined to the changes from California. The proposed adjustment would result in cancellation of the proportional or transshipment rates from the bay points, application of local rates in lieu thereof, and a shortening of the list of lumber articles upon which the proposed rates would apply. Rates from the north Pacific coast were reduced effective October 1, 1924 but no change was made in the rates from California; the proposed rates would place the origin territories on a parity as to the various kinds of lumber, whereas the parity has not heretofore included cedar and redwood lumber. The proposed cancellation of the transshipment or proportional rates would result in increasing the rates on redwood lumber from Bay

points to Toronto and Montreal by 16.5c and 19.5c, respectively. Practically no evidence was offered by respondents in justification of the proposed schedules. Respondents have long maintained the same rates on redwood lumber as on pine and various other kinds from this general territory. Sufficient reason does not appear why any different basis should now obtain. Whatever circumstances warrant the maintenance from north Pacific coast points to Canadian destinations of rates higher on one kind of lumber than on other kinds are not necessarily controlling as to traffic from the origin territory here considered. On the other hand the proposed reduced rates under suspension on pine lumber and various other kinds restore an equalization, long maintained prior to October 1, 1924 from California and north Pacific coast points. No reason appears why the disparity created on that date, and which respondents appear willing to remove, should be continued. The evidence does not support a finding that the change proposed in the minima, the restriction proposed in the lumber list, or the cancellation of the transshipment or proportional rates is warranted. HELD, schedules not justified without prejudice to the filing of new schedules in conformity with the views herein expressed. Lumber and related articles 107 I. C. C. 57.

(3d) Respondents proposed to increase from 16c to 19c the interstate rates on soda products other than caustic soda, carloads, from Syracuse and Solvay, N. Y., to New York, N. Y., lighterage points. Syracuse is on the Lackawanna, N. Y. C., and West Shore. Both points now ship to New York Harbor lighterage points all water by way of the barge canal as they did formerly by way of the Erie Canal. The commodities load heavily, soda ash predominating in the movement. The present rate of 16c represents the 8.5c water compelled rate as modified by general increases and decreases. The present rate on all soda products over the lines of carriers other than the respondents is 19c and respondents also maintain this rate on 19c on caustic soda following 83 I. C. C. 196. Generally soda products, including caustic soda, are grouped on a common basis throughout central and trunk line territories. In central territory by exception to the official classification 85% of sixth class rates generally applies. HELD, respondents have justified the schedules. Soda products to New York Lighterage points 107 I. C. C. 171.

(3e) Respondents proposed increased class rates between points in Iowa, Illinois, Wisconsin and Minnesota, included within the so-called Burlington group, and Fargo, N. D. These schedules also proposed increased and reduced class rates between the Burlington group and Jamestown, Jamestown Junction, State Hospital, and Wahpeton, N. D., Breckenridge and Moorhead, Minn., and other points in Minnesota and North Dakota on the Ortonville-Fargo branch of the C. M. & St. P. Ry. and Midland Continental. The Burlington group, as constituted for about 50 years prior to the present adjustment, lay within a line drawn, roughly, from Burlington, Iowa through Des Moines and Denison, Iowa, thence northwest and north to the Minnesota state line, thence east along the state line, taking in a small portion of Minnesota, across the Mississippi river into Wisconsin, thence paralleling the river south, and across to Burlington. Within this group were the river crossings of Burlington, Davenport, Clinton and Dubuque, Iowa, and Rock Island and Moline, Ill., and such interior Iowa cities as Des Moines, Cedar Rapids, Waterloo, Mason City, Fort Dodge and Ottumwa. In 98 I. C. C. 691 the Commission prescribed first class rate to Fargo from Omaha, Neb., 155c, Chicago 165c, and proportional from Chicago 149c. Rates in compliance with the decision became effective from Omaha and Chicago to Fargo on September 11, 1925. At the same time respondents increased the fourth class and class A rates from Fargo to Chicago from 82 to 64c to 81 and 71c, the rates which were prescribed westbound. These rates to Chicago are blanketed over the greater portion of Wisconsin, Illinois as far south as Lincoln and Clinton, and small portions of northwestern Indiana and northwestern Missouri. Attention was directed to the existence of a lower scale between the Burlington group and Fargo than was in effect between the Chicago group and Fargo, and the carriers then stated it would be their purpose to increase it. They first contemplated publishing the Chicago scale from the Burlington group and Fargo, but found that because the greater portion of the group was intermediate between Fargo and Omaha, the provisions of the fourth section necessitated publication

of west bound rates no higher than those in effect under the $1.55 scale from the latter point. Such a scale became effective on westbound traffic Sept. 11, 1925. This intermediate territory, hereinafter called interior Iowa, lies west and north of a line paralleling the rails of the C. G. W. from the Iowa-Minnesota state line to Nelda, Iowa, thence south to Cedar Rapids, thence west and southwest to Des Moines, both the latter city and Cedar Rapids falling in interior Iowa. From the remainder of the Burlington group, the Chicago $1.65 scale was published to Fargo. No fourth section obstacles were encountered in the publication of rates eastbound, and the Chicago $1.78 scale, with the increased fourth class and class A rates was accordingly published to the entire Burlington group. This scale and the $1.65 scale from the crossings to Fargo were suspended. Competition in the sale and distribution of numerous articles moving on class rates is unusually keen in the territory lying north of St. Louis, Mo., and Kansas City, east of Omaha, west of Chicago and south of the Twin Cities. The Burlington group is an important part of this territory. Transportation conditions between the crossings and Fargo, on the one hand, and between Chicago and Fargo on the other, are not materially different and the difference of 93 miles between the distance of 640 miles from Chicago and the average distance of 547 miles from the crossings cannot be ignored. HELD, schedules not justified. Reasonable maximum class rates between the crossings on the one hand and Fargo and Moorhead on the other are 151 first class 27c class E; reasonable maximum class rates from the crossings to Fargo for application on traffic from points east of Chicago in central, trunkline, and New England territories will be 136c first class and 24c class E. Rates from upper Mississippi crossings 107 I. C. C. 256.

(3f) Respondents proposed increased rates on apples, carloads and less carloads, from Virginia on the Washington division and in the Manassas-Harrisburg division to but not including Strasburg, Va., on the Southern, and from all points on the Washington and Old Dominion Ry., and Virginia Blue Ridge Ry., to certain destinations in trunkline and New England territories. In official classification apples take fifth class rates carloads and third class less carloads and in southern sixth class carloads and fourth class less carloads. As to general traffic the Virginia lines, with the exception of the Southern Ry, operate under the official classification. The Southern asserts that the rates from this territory are controlled by its trunk line competitors. In 31 I. C. C. 145 the Commission considered rates on apples from points in the producing territory of Virginia on the N. & W., C. & O., B. & O., and Southern to eastern cities, and found that the application of the fifth class rates, carloads, which were on the level of the official classification basis was not unreasonable. HELD, proposed schedules justified except in those instances in which the proposed rates exceed the existing fifth class rates in carloads, and third class rates on less carloads, between the same points. Apples from Virginia points 107 I. C. C. 349.

(3g) Respondents proposed to cancel the present commodity rates on coal tar and pitch based on a minimum of 60,000 pounds from Birmingham, Ala., and points grouped therewith, to certain points in North Carolina and South Carolina, leaving applicable higher commodity rates based on a minimum of 40,000 pounds. They do not propose to increase the rate on hard carbon pitch from Birmingham to Badin and Whitney, and the extension of this rate to cover coal tar and pitch, in carloads, minimum 60,000 pounds, and, under rule 77, to intermediate points, seems proper. HELD, suspended schedules not justified. Coal tar and pitch from Birmingham 109 I. C. C. 73.

(3h) Respondents proposed to increase the rates on plaster board, wall plaster, and stucco, in straight or mixed carloads, from Los Angeles, Calif., and on plaster board and plaster blocks, in straight or mixed carloads, from Seattle Wash., to Utah common points. The rate on plaster board, carloads, from Los Angeles to Utah common points prior to Nov. 25, 1923 was 49.5c, minimum 60,000 pounds. On that date a number of rates between California and Utah common points were voluntarily reduced to the basis of 75 per cent of the rates between the Missouri river and Utah common points, and among them the rate of 49.5c was reduced to 32.5c and made applicable to plaster board, wall plaster and stucco, in straight or mixed carloads. On Jan. 20, 1925 the

32.5c rate was canceled and the rate of 49.5c was restored on plaster board, making class rates applicable to wall plaster and stucco. The basis was restored on the other commodities April 20, 1925. Respondents proposed to increase the present rates of 32.5c and 40c from Los Angeles and Seattle to 42 and 47c, principally on the ground that the present rates are too low, but also for the purpose of placing Los Angeles and Seattle on a more nearly equal basis. HELD, rates attacked not justified. Plaster board to Utah common points 112 I. C. C. 3.

§18. Circumstances and Conditions.

(½). In General.

See Evidence II.

(a) Respondents proposed to increase the rates on brick and clay products, carloads, from Nashville, Tenn., to Paducah, Ky. In Glenns tariff I. C. C. A-481 a rate of 10.5c is published on standard and common brick. In Speidens tariff I. C. C. 841 rates of 7.5c and 9.5c on common and standard brick, respectively. Proposed to increase the latter to 10.5c. The routes ordinarily used in handling traffic between Nashville and Paducah are the N. C. & St. L., direct, 181 miles and T. C., to Hopkinsville, Ky., and I. C., beyond, 162 miles. There is also an available route of 150 miles over the L. & N., to Hopkinsville and I. C. beyond. HELD, proposed schedules justified except to extent rate proposed on common brick exceeds 8.5c, L. & N., and I. C., via Hopkinsville, Ky. Brick from Nashville, 101 I. C. C. 11.

V. DISCRIMINATION THROUGH ADVANCE.

§19. In General.

See Discrimination.

(a) The Commission must decline to sanction and not look with favor upon a general increase in rates made under the pretext of satisfying a complaint of discrimination against one point, when such discrimination can be otherwise removed and the general increase is of far reaching effect, unless the justification therefore is more clear and convincing. Boots and Shoes from New York Points, 91 I. C. C. 591, 596.

(b) Respondents proposed to increase their proportional rates on canned goods, and iron, and steel articles, carloads, from Gulf ports to Ohio river crossings, and points north thereof, applicable on traffic from the Pacific coast through the Panama Canal. Canned goods is the only commodity involved. About two years ago the southern lines entered upon a policy of publishing from the south Atlantic and Gulf ports to the destination territory under consideration on various commodities moving from the Pacific coast through the Panama Canal, proportional rates made with relation to the local rates from New York to Chicago on such traffic, and to thus substantially equalize all these ports, particularly in so far as the inland haul was concerned. The rates of the eastern lines from New York to Chicago were reproduced in section 1 of each tariff to apply as proportionals from the south Atlantic and Gulf ports to most of the destinations involved. In section 2 of each tariff the local rates of the southern lines from the south Atlantic and Gulf ports were reproduced, and provision made for their application if lower than the proportionals named in section 1. On July 1, 1923, there was a general revision of the local canned goods rates in the considerable portion of the south and the local rates from Gulf ports to points on and north of the Ohio river were increased, the rate to Chicago becoming 68c. No change, however, was made in section 2 of the tariff and the 47.5c rate still applies to Chicago. It is proposed in the present case to correct section 2 of the tariff so that the rates

named in that section will correspond with those named in the regular local tariff that went into effect July 1, 1923. Now that their locals have been increased they here desire to amend their proportional tariff to the extent necessary to eliminate from it their former local rates, and generally observe the New York-Chicago rate except where their present locals are lower. From a competitive standpoint no good reason appears for respondents generally maintaining lower rates from the Gulf ports than apply from New York, HELD, proposed rates unduly prejudicial and not justified. Canned Goods and Iron and Steel Articles, 91 I. C. C. 623.

(c) Rates on bedroom furniture from Nashville, Tenn., to eastern and Virginia cities found not unreasonable, but unduly prejudicial to complainant and unduly preferential of competitors at Chattanooga, Tenn., to extent that percentage relationship of the rates to first-class rates from Nashville exceeds percentage relationship of contemporaneous rates to first-class rates from Chattanooga. Standard Furniture Co. v. N., C. & St. L. Ry., 91 I. C. C. 27.

(d) While it may be conceded that burden of proof is on carriers to show propriety of proposed charges under section 3 as well as under section 1 of the act, it does not follow that undue prejudice is to be presumed from mere fact that compensatory charges at one point will differ from charges in effect at other points, particularly as to protestant shippers who have not contended or made any effort to show that they will be handicapped by establishment of such charges in meeting competition from other points. Nashville Switching, 40 I. C. C. 474. Increased Switching Charges at Detroit, 91 I. C. C. 82, 96, 97.

(e) Rates on rosin from southeastern points to Kalamazoo and Grand Rapids, Mich., found not unreasonable or unjustly discriminatory as compared with rates from same points to Chicago, Ill., Milwaukee, Wis., and Detroit, Mich. At time this case was submitted defendants had in course of preparation a general readjustment of rates and in Naval Stores from Southern Points, 87 I. C. C. 740, commission fixed reasonable rates for the future. New adjustment will result generally in removal of existing fourth-section departures and any undue prejudice to complainants. Western Paper Makers Asso. v. Director General, 91 I. C. C. 223.

(fg) Proposed increased class and commodity rates from various interstate points to Mesa, Ariz., for purpose of removing undue prejudice against points on Globe division of Arizona Eastern R. R., found to exist in Graham & Gila Counties Traffic Asso., 81 I. C. C. 134, found not justified. Mesa and Phoenix, Ariz., have been on same rate basis for many years and a higher basis of rates to Mesa than to Phoenix would compel removal of jobbing establishments to Phoenix thereby resulting in considerable financial sacrifices, would enable Phoenix to take over much of the trade territory now enjoyed by Mesa, and would not benefit points on the Globe division to any appreciable extent. Class and Commodity Rates to Mesa, 92 I. C. C. 512.

(h) Proposed increased rates on coke from points in southwestern Virginia, Benham, Ky., LaFollette and Chattanooga, Tenn., to Cincinnati and certain points in the vicinity thereof, and to Maysville, Ky., designed for purpose of restoring a parity of rates from these coke-producing points disrupted following general increases authorized in Increased Rates, 1920, 58 I. C. C. 220, found not justified. Although record does not indicate that proposed rate to Cincinnati would be unreasonable, it would result in undue prejudice at that point and in undue preference of other Ohio River crossings where a similar situation exists and where a similar increase is not made. Coke to Cincinnati Group, 93 I. C. C. 572.

(i) Proposal to increase rates on grain and grain products from certain Indiana, Illinois, and Michigan points to Aurora, Garrettsville, and Mantua, Ohio, to be effected by transferring these destinations from Cleveland to Youngstown, Ohio, group, found not justified, without prejudice to establishment of rates in conformity with the fourth section of the act. Present adjustment is illogical and inconsistent, and its correction is proper, but the application of rates to the three destinations higher than those to Solon, Ohio, which is near Cleveland and just beyond destinations in question over respondents' through routes, would contravene the long and short haul provisions of the fourth section. Grain and

Grain Products from C. F. A. Points, 101 I. C. C. 7.

(j) Proposed increased rates on grain and products from certain points in Kansas on the Union Pacific to St. Joseph, Mo., when routed over Union Pacific to Marysville, Kans. and St. Joseph and Grand Island beyond, found not justified. If suspended schedules become effective undue prejudice would result to protestants at Marysville who would not be able to purchase grain at Union Pacific points in competition with St. Joseph competitors. Grain and Products from Kansas, 101 I. C. C. 595.

§19¼ Legal rate.

See Demurrage §20; Legal Rates; Through Routes and Joint Rates.

(a) Three factor proportional rates charged on vegetables from points in Florida to Chicago, Ill., to each of which was applied the interterritorial increase of 33⅓ per cent under Increased Rates, 1920, 58 I. C. C. 220, in lieu of the territorial increases, found applicable and not published in three factors, from both a unreasonable. While rates involved were technical and practical standpoint they were joint through rates. Factors could not be used on local business and under decision cited were properly increased 33⅓ per cent. Moreover, defendants show that a like increase was applied to separate factors of rates on other commodities. Ahern Brokerage Co. v. A. C. L. R. R. Co., 89 I. C. C. 274.

(b) Upon rehearing, prior report, 58 I. C. C. 442, modified and shipments of lumber from Hopkins, Fla., to Baltimore, Md., and other points, during Federal control, found overcharged. None of the applicable tariffs specifically referred to tariff which provided a rule for the construction of through rates made on combination under which but a single increase was to be added to the sum of the separate factors, nor did latter make specific reference to applicable tariffs. Following Acme Cement Plaster Co., 81 I. C. C. 298, the combinations to and from Jacksonville, Fla., each increased 5 cents under General Order No. 28 of the director general, were applicable. Reparation awarded. Union Cypress Co. v. F. E. C. Ry. Co., 89 I. C. C. 679.

(c) Contention that increased rates were in violation of section 6 of the act and not lawfully published because tariff reissue publishing such increases failed to indicate that a change had been made in rate; HELD: Such omission did not render published rate unlawful. National Preservers & Fruit Products Asso., 74 I. C. C. 179, 182. Package Sales Corp. v. U. P. R. R. Co., 91 I. C. C. 697, 698.

(d) Upon contention of complainants that during Federal control the rule under section 2 (e) of General Order No. 28 of director general must govern all tariffs, and that as it limits the power to increase rates, the legality of the rates depends upon the observance of this condition, HELD: Legal rates must be determined by the words of the published tariffs themselves, rules or provision of that order to the contrary notwithstanding. Nash Spokane Co. v. Director General, 100 I. C. C. 223, 226.

VII. REPARATION.

§22. In General.

See Absorption of Charges §6 (a); Claims; Reparation.

(a) Upon contention that burden of proof to justify rates increased since January 1, 1910, was not met by defendants due to their nonappearance at the hearing, and that complainant is, therefore, entitled to an award of reparation on shipments moving under rates as increased. HELD, before commission can find that a shipper is entitled to reparation, it must find that the rate is unreasonable, and fact that no evidence was offered on behalf of carriers does not preclude commission from determining whether or not the rate was in fact unreasonable. Nebraska Bridge Supply & Lbr. Co. v. A., T. & S. F., 93 I. C. C. 301, 303.

ADVERTISING MATTER

See Clayton Act (a).

AGENCY.

See Crimes §15; Passenger Fares and Facilities §15; Reparation §6 (ii); Tariffs §3 (2); Terminal Facilities §3½.

(a) Carrier engaged in interstate commerce could not, in view of Interstate Commerce Act, §6, subsec. 7 (U. S. Comp. St. §8569), waive terms of published tariff requiring prepayment of freight and agree that terminal carrier, as its agent, appropriate and apply money collected by it in liquidation of freight charges due by other persons to payment of freight for which original consignee became initially liable and to substitute undertaking of terminal carrier so to make collections and apply them to consignee's obligation. Monongahela Ry. Co. v. Read, (Md., 1925) 127 Atl. 739.

(b) A carrier delivering shipments to industries on its line, for which service its charges are absorbed by initial carrier, may be looked upon as an agent of latter, in that it is completing a service which initial carrier has taken upon itself to perform. Peoria & Pekin Union, 93 I. C. C. 3, 16.

(c) Contention that a warehouse company can not lawfully be agent of shipper and carrier in respect of same transaction at the same time not sustained, Diffenbaugh Case, 222 U. S. 42, where agency for the railroad includes unloading, sending of notices, collection of freight charges, etc.; and that for the shipper storage after free time, separation of traffic, etc. McCormick Warehouse Co. v. P. R. R., 95 I. C. C. 301, 306.

(d) It would be an extension of carrier's duty beyond reasonable limits to require it to be responsible for failure of its agent to make inquiry as to whether a lower combination rate could be figured on some relatively obscure point beyond the recognized gateways in the absence of specific routing instructions from shipper and where the files of its agent do not contain tariff showing a lower rate than that existing over route of movement. See 19 I. C. C. 448 and Conference Ruling 214 (g). Alabama Chemical Co. v. Illinois Traction, Inc., 98 I. C. C. 451 452.

§8 (4⅞). Loading and Unloading.

See Loading and Unloading, Transportation §10.

(a) Defendants under tariff authority, written contracts, or verbal agreements, pay to certain warehouses located in Baltimore 35c per ton for services rendered in connection with the loading and unloading of carload package freight, except that on flour, the measure of the charge varies. Complainant attacked failure and refusal of defendants to afford equal treatment to complainant in respect of like service in transportation of like kind of traffic under substantially similar circumstances which might be done either by making an allowance to complainant similar to that made to the warehouses referred

to or by withdrawing the allowance to the latter, resulted in unjust discrimination and undue prejudice. The services for which the allowance is made include loading, unloading, second notices of arrival of shipments to the consignees, holding and insuring the freight for not exceeding 48 hours free time, collecting freight charges, taking receipts from consignees for shipments, and handling incidental matters pertaining to claims. All shippers using the contract warehouses are treated identically in this respect and no shipper who uses complainants warehouses has complained that any other shipper using the contract warehouses is accorded free time in excess of that authorized by the tariff, nor has any such instance been shown to exist. If allowances are made to the contract warehouses for unloading shipments of which they are the consignees or for loading shipments of which they are the consignors, such allowances must be published and filed with the Commission and made available to all shippers furnishing a like facility or performing a like service of transportation in connection with their traffic. When consideration is given to the assertion of complainant that it is not a shipper or receiver of freight, the conclusion must be reached that it has no relation with a common carrier which could result in a discrimination against it in violation of the act. The discrimination there forbidden is in respect of transportation. HELD, complaint dismissed. McCormick Warehouse Company v. Pennsylvania R. R., 95 I. C. C. 301.

(b) Complainant sought an allowance of 45c per ton for unloading carloads of cottonseed cake, in bulk, at Port Arthur, Tex., between Oct. 18, 1920 and April 21, 1922 and alleged that the failure of defendants to make the allowance was unjustly discriminatory and unduly prejudicial. Most of the cake originated in Texas and Oklahoma, all arriving over the T. & F. S., and are unloaded by complainant at the wharf of the Port Arthur Canal & Dock Co. Complainant was the owner of the cake and performed the unloading upon request of defendants. The applicable tariffs provided for an unloading charge at Port Arthur of 12.5c on cottonseed cake, in bulk, which charge was absorbed by the line haul carriers. Effective June 2, 1921 the charge became 45c which was also absorbed. Prior to Jan. 20, 1922 the tariffs did not authorize payment to the shipper of the cost of unloading. Effective on that date they were amended to provide that the Port Arthur Canal & Dock Co. would make the same allowance to the consignee as it received from the line haul carriers. Tariffs in effect at Galveston named an unloading charge of 45c on cottonseed cake in bulk at the S. P. piers, absorbed by the line haul carriers. HELD, allowance requested appears to be no more than reasonable for the service performed, and an order will be entered authorizing its payment to complainant on the shipments which moved prior to Jan. 20, 1922. Galveston Export Co. v. T. & F. S. Ry., 96 I. C. C. 141.

(c) Shippers have a right to load their own freight, if they so prefer, but where an industry has installed labor-saving apparatus at corresponding expense because of inducements held out by carriers to perform loading for shippers such service should not lightly be taken away. Loading of L. C. L. Freight, 91 I. C. C. 394, 397.

(d) Practice of carriers in employing certain warehouse companies to perform terminal services in connection with loading and unloading of c. l. package freight at Baltimore, for which allowances are paid, while refusing to employ other warehouse companies to perform similar services, found not to result in discrimination, preference, or prejudice. Complainant's primary business is that of a public storage warehouse, and its sole purpose in bringing its complaint is to make more profit out of its warehouse business. Moreover, complainant is not a shipper or receiver of freight and has no relation with a common carrier which could result in a discrimination against it in violation of the act, the discrimination forbidden therein being in respect of transportation. See 51 I. C. C. 535. McCormick Warehouse Co. v. P. R. R., 95 I. C. C. 301.

(e) Defendants authorized to pay complainant an allowance for unloading shipment of cottonseed cake, in bulk, at Port Arthur, Tex. Section 15 authorizes carriers subject to its provisions to pay to the owner of property transported reasonable allowances for services rendered by him in connection with common carrier transportation. Galveston Export Co. v. T. & F. S., 96 I. C. C. 141.

(f) Contention that movement of ex-lake iron ore within the yards of Carnegie Steel Company's plant at Youngstown, Ohio, to its incline tracks, where it is received and handled by an unloading mechanism operated by the company, does not constitute the placing of cars for unloading within the meaning of the tariffs, not sustained. Carnegie Steel Co. v. Director General, 96 I. C. C. 527, 533.

§8. (4⅞a). Motor Truck or Wagon Transfer.

See Motor Truck Service.

(a) Motor-truck or wagon transfer can be, and is, employed by owners of property transported under arrangements whereby such owners render a service connected with transportation which carriers otherwise would be under obligation to perform. The act contemplates that carriers may make just and reasonable allowances to such owners for rendering service, and commission is given authority to determine what is a reasonable charge and allowance as maximum to be paid by carrier and to fix same by appropriate order. Commission has required that such charges or allowances be duly published in carriers' tariffs and be made available to all owners of property transported furnishing like instrumentalities or performing like services. Motor-Truck or Wagon Transfer Service, 91 I. C. C. 539, 540.

§8 (5). Spotting and Delivering Cars.

See Facilities and Privileges §12½; Spotting.

(a) In 77 I. C. C. 110, it was found that defendants failure to perform a spotting service at the complainants plant at Jackson, O., or to make complainant an allowance for its own performance of the service, although respectively performing such services at certain other named plants in the same general territory, had not been shown to violate the act. In 1909 carrier agreed to pay complainant as an allowance for the service 85c for each loaded car, empty cars and cars containing slag not shipper commercially having been excluded. A tariff providing for this allowance was published, and payments were made thereunder until cancellation of the tariff in April, 1914, following 29 I. C. C. 212. No allowance has since been made by that carrier, nor has it performed the service except for limited periods of time during strikes or for other unusual reasons at the request of complainant, and then has been paid therefor at the tariff rate. The interchange tracks are owned by the B. & O., but are upon property of complainant. That carrier never has made any allowance to complainant or performed the spotting service. To establish the fact of a general custom and usage the spotting services performed by the respective defendants at Wellston, Lawrence and Ironton are pointed out and relied upon. The furnaces at Wellston and Ironton are in competition with complainant. The practice of the trunk line carriers in the region in question is to place cars for loading or unloading at the blast furnaces without charge in addition to the line haul rates, except in the case of ore, but this practice apparently does not involve complicated movements within the plant after one placement has been made. In no event is there any obligation on a carriers part to undertake such service after delivery has been made by placing the cars within the plant, although the carrier may not perform such extra service for one shipper and refuse it to another shipper where conditions are similar. There likewise is no burden upon the carrier to absorb the cost of the spotting service when performed by the shipper if for his own convenience the latter excludes the carrier from performing the final placement by a single movement, but the service performed for competing shippers where the conditions are substantially similar must be approximately equal. HELD, failure of defendants to perform spotting service at complainants plant or to make an allowance not unreasonable, but unduly prejudicial, reparation denied. Jackson Iron and Steel Co. v. Director General, 91 I. C. C. 201.

(b) Carriers now signify their willingness and preference, as an alternative duty, to perform the spotting service at complainants plant, provided it may be done at their reasonable convenience. While a carrier may not be required to perform such services at the convenience of the shipper, the service that it does perform must be adequate, reasonable, and nonprejudicial. This does not require placing of cars more than once or include spotting or reswitching, unless the carrier performs reswitching or spotting services for competitors under substantially similar conditions. Jackson Iron & Steel Co. v. Director General, 91 I. C. C. 201, 210.

(c) Complainant alleged it suffered damage due to failure of defendant to allow spotting charges. Original report found in 57 I. C. C. 745. Complainant asked for damages resulting from the undue prejudice which has been found to exist, based upon the actual cost to it of performing the interchange switching at its Buffalo and North Tonawanda plants, for the entire period between January 1916 and January 1921, the date upon which an allowance to complainant was established by defendants for performing the interchange switching in order to remove the undue prejudice. HELD, complainant has not established the fact that it has been damaged because of the undue prejudice the existence of which was found in the original report, reparation denied. Donner Steel Co. v. D. L. & W. Ry., 92 I. C. C. 595.

(d) Complainant attacked rates charged on inbound shipments of iron, steel, coal, lumber, machinery, and other commodities and outbound new and repair cars, car trucks, car parts and miscellaneous commodities from and to complainants plants since Feb. 15, 1918, as unjust, unreasonable, unduly preferential and unduly prejudicial to the extent they exceeded rates to and from the Pittsburgh district. Complainants plants are located at McKees Rocks and Allegheny, Pa., on opposite sides of the Ohio river, the former about 2.5 miles from the P. & L. E., station in Pittsburgh, Pa., and the latter 3 or 4 miles from the Pennsylvania station and within the city limits of Pittsburgh. Complainants plants are served by the P. A. & McK. R. Ry. a terminal and switching carrier owned by complainant and held to be a common carrier engaged in interstate commerce, 57 I. C. C. 1. Following that case, the P. A. & McK., failed to agree with the trunk lines upon a division of through rates or an absorption of switching charges, and in a supplement complaint, the Commission found that there were no joint rates to divide and that the Commission could not properly require defendants to absorb increased portions of the P. A. & McK., switching charges, complaint dismissed, 69 I. C. C. 223. From the history of the rates of the P. A. & McK., and the absorptions by the trunk lines it is apparent that the charges in excess of the flat Pittsburgh rates, namely 5.73c per ton except on new and repair cars, paid by the complainant were due principally to the increase by the P. A. & McK., of those rates from $2.50 per car to 10c per ton effective Feb. 15, 1918. The main issue presented is whether the line haul rates include switching service to points of loading and unloading in complainants plants. The record does not show that industries generally within the Pittsburgh district, without regard to their size or the complexity of their plant tracks, received the benefit of the flat Pittsburgh rates on all commodities regardless of their origin or destination. It does appear that a considerable number of large industries performed their own spotting service. Some of these received allowances from the trunk lines and others did not. HELD, charges paid not unreasonable, complaint dismissed. Pressed Steel Car Co. v. Director General, 93 I. C. C. 224.

(e) Whether the line haul rates include terminal services to points of loading and unloading in large industrial plants is a question which must be determined upon the facts and circumstance of each particular case. The question is so closely related to the industrial railway problem that it has seldom been considered apart from the question of whether an industrial railway serving a particular industry was or was not a common carrier. Pressed Steel Car Co. v. Director General, 93 I. C. C. 224, 229.

(f) At large industrial plants the obligation of the carriers in connection with the line haul rates extended only to the receipt and delivery of cars at some reasonably convenient points of interchange. Pressed Steel Car Co. v. Director General, 93 I. C. C. 224, 229.

(g) It has long been the custom of carriers in this country to receive and deliver carload freight upon spur tracks leading to private industries at convenient points for loading and unloading without imposing any charge for that service in addition to the line haul rate, and in 18 I. C. C. 310, the Commission held that where this service is merely a substitute for team track receipt and delivery of carload freight the line haul rate covers the service for the reason that rates generally in this country have been constructed upon that basis. The order of the Commission in that case was upheld by the Supreme Court. 234 U. S. 294. The mere size and complexity of the industry is not controlling

in determining whether or not the line haul rate covers the receipt of delivery at the door of the plant. The service involved in the placement of cars for loading or unloading at an isolated industry to which a single spur leads may be as great as that rendered in the placement of cars for loading and unloading in a large plant having an intricate system of interior tracks. Indeed, there is testimony tending to show that by reason of greater density of traffic and greater tonnage the cost of spotting at the larger industries is less per car than at the smaller industries. There may be cases in which the spots in which cars are placed for loading and unloading in request for the receipt and delivery of complex industries are so located that the carload freight at such spots could not, in view of general usage, be regarded as reasonable, and where a charge for the spotting service in addition to the line haul rate might therefore be justified, but the mere fact that an industry is complex, or that it requires an interplant service in addition to the receipt and delivery of carload freight, is not sufficient to justify an additional charge for the placing of cars at the door of the industrial plant for the receipt or delivery of carload freight. Pressed Steel Car Co. v. Director General, 93 I. C. C. 224, 230.

(h) Wherever a particular delivery service-spotting at some place of unloading within a plant-properly may be construed as the equivalent of either of these two services (typical team track delivery or shunting of a car upon a siding of a shipper clear of the main track) and the rendition of such service practical, the Commission may compel a carrier to perform such service with its own equipment as part of its legal obligation as to delivery of carload track. As the magnitude becomes greater than the equivalent of team track delivery or simple switching delivery, the demand on the carrier for its performance tends to exceed what may be regarded as a proper delivery service under transportation rates. Pressed Steel Car Co. v. Director General, 93 I. C. C. 224, 230.

(i) The placement of cars on the tracks within the plant inclosures constituted delivery by the trunk lines under the line haul rates, and any allowance by the trunk lines for the service of spotting cars after such placement would be improper. Pressed Steel Car Co. v. Director General, 93 I. C. C. 224, 230.

(j) Upon rehearing, prior report 77 I. C. C. 110, failure or refusal of defendants to perform spotting service at complainant's plant at Jackson, Ohio, or to make complainant an allowance for its own performance of service, while performing such service at Wellston, Lawrence, and Ironton, Ohio, competing points, without charge therefor in addition to line-haul rates, found not unreasonable but unduly prejudicial to complainant and unduly preferential of complainant's competitors. Reparation denied. Jackson Iron & Steel Co. v. Director General, 91 I. C. C. 201.

(k) Finding in original report, 57 I. C. C. 745, that complainant has not shown damage due to practice of defendants in spotting cars or making allowances therefor at plants of competitors in the Buffalo rate district, while refusing to spot cars or make allowances at complainant's plants, affirmed on further hearing. It was not shown that competitors controlled the market, that complainant was forced to meet prices fixed by them, or that undue prejudice had any definite influence on market conditions. Prices on steel and products were fixed by the Government and complainant's position would not have been altered had there been no switching services performed or allowances paid competitors. Fact that competitors were in a more favorable position than complainant does not, in and of itself, establish that complainant was damaged. Donner Steel Co. v. D., L. & W., 92 I. C. C. 595.

(l) Charge for spotting cars in loading of iron ore from stock piles on iron-ore ranges in Minnesota, Michigan, and Wisconsin, and rates thence to vessels at the Lake ports, found not unreasonable or otherwise unlawful. In stock-pile spotting, operating conditions are unfavorable, delays frequent, and service in connection therewith is in excess of what may be required of carriers in connection with their road hauls. Moreover, a reasonable charge for the service is not inappropriate, and it was not shown that those assessed for the service unduly preferred shippers from shaft or open-pit mines, or that they were included in line-haul rates. Jones & Laughlin Ore Co., v. Director General, 92 I. C. C. 683.

(m) Contention that admissions on part of carriers, by their offer to perform spotting service, their subsequent absorption of charges for that service, and payment of reparation, and admission on part of director general, by offer of settlement, establishes fact that line-haul rates included spotting service at points of loading and unloading, or at point of final placement within plants. HELD, these admissions, although entitled to consideration, are not conclusive. Director general is not chargeable with concessions which may have been made by corporations which succeeded him. His offer was in nature of a compromise, and in accordance with familiar rules of law is not to be held against him. Pressed Steel Car Co. v. Director General, 93 I. C. C. 224, 232.

(n) As to the question whether the service performed by complainant at its plant at Gulf and between that plant and Gulf Hill, Tex., or any of it, is a service of transportation covered by the line-haul rates. FOUND, that one movement of inbound and outbound cars between Gulf Hill and complainant's plant, substantially similar to the service performed by the Santa Fe prior to a certain date, is the only transportation service which the Santa Fe may lawfully be required to perform under the line-haul rates. Allowances or Divisions Received by Texas Gulf Sulphur Co., 96 I. C. C. 371, 376.

(o) Line-haul rates prescribed in 41 I. C. C. 181 and 44 I. C. C. 368, did not include the dock service and the service of placing carload shipments of ore at the point of unloading on private industry tracks at destination, for which service separate charges were ordered established. Carnegie Steel Co. v. Director General, 96 I. C. C. 527.

ALL OTHER CITATIONS

Terminal Allowances to St. Louis Coke & Iron Co., 85 I. C. C. 591.

§8 (6). Staking and Bulk Heads.

(a) Complainant attacked charges collected on a double carload of piles, shipped October 6, 1918 from Hadley, Ala., to St. George, N. Y. as unjust, unreasonable and illegal in violation of sections 1 and 6 of the act. Shipment moved in two cars over the G. F. & A., a non-federal controlled line, at Atmore, Ala., and beyond over federal controlled lines. The destination to which it actually moved appears to have been West New Brighton, N. Y., to which point the same rate applied as to St. George. Delivery was made by the Staten Island Rapid Transit Co., but otherwise the federal controlled lines participating in the movement are not definitely disclosed. The delivering line collected charges based on a billed weight of 120,000 pounds, and a rate of 38c. The rate ordinarily applicable from and to these points was 37c. The shipment was track scaled enroute and found to weigh 88,400 pounds and the weight basis employed in the assessment of freight charges was improper to the extent that it exceeded such actual weight. However, the tariffs did not authorize a weight allowance for stakes used in the transportation of piles or piling and there is an outstanding overcharge of $128.92. HELD, charges illegal to extent of $327.08, reparation awarded. Bowers Co. v. Director General 107 I. C. C. 305.

§8 (7) Transfer.

See Transfer.

(a) Commission instituted an investigation on its own motion concerning the legality of schedules contained in all tariffs not including express tariffs, filed wherein motor trucks or wagon transfers are employed to perform any portion of the transportation service either within or between defined terminal districts, between defined terminal districts and interior points, or between interior points, in connection with carriers by rail, water, or rail and water routes, subject to the act. Motor truck or wagon transfer can be, and is, employed either by the owner of property transported for rendering a service connected with such transportation, which the carrier otherwise would be under obligation to perform, or by the carrier itself. Under the former arrangement the act contemplates that the carrier may make an allowance to the owner of the property transported for rendering such service, or for furnishing any instrumentality used therein, and requires that the allowance shall be no more than is just and reasonable. The Commission is given authority to determine what is a reasonable charge and allowance as the maximum to be paid by the carrier and to fix the same by appropriate order. The Commission has required that such damages or allowances be duly published by the carrier in its tariffs and be made available to all own-

ers of property transported furnishing like instrumentalities or performing like services in connection with the transportation of their traffic. This inquiry is concerned particularly with the tariff features connected with the use of wagon or truck transfer by the carriers, first, in connection with terminal services within terminal districts: second, in connection with transfer in transit between rail carriers at an intermediate point; third, in connection with hauls extending beyond terminal districts commonly designated as lone hauls. The provisions of the act are applicable to service by motor truck or drayage transfer only when they can be regarded as terminal facilities. This construction would place under the jurisdiction of the Commission the first two classes of truck service, but would exclude from its jurisdiction the third class. The hauls by motor truck from the inland points to the docks at New Haven can not be said to be transportation over which the Commission has jurisdiction or a service that can be required of a common carrier. The trucking company can not be acting as an agent for a common carrier. The law, however, does not prohibit either a rail or water carrier subject to the act from interchanging business with motor trucks and entering into proper arrangements to acquaint the shipping public with the total charges for the full movement. But such arrangements are not required by law and the fact that they may be entered into does not extend the terms of the act to include the motor truck service. Section 6 of the act requires that the charges for the service subject to the act be filed with the Commission, which requirement the Commission has always construed as making necessary the statement in the tariffs of such charges separately from other charges not subject to the act. In view of the circumstances, carriers may, if desired, include in their tariffs naming rates to or from New Haven the charges of motor trucks for the service from such inland points to New Haven, provided such charges are separate from the charges subject to the act. They may also include the combined charges for the two services from such inland points to ultimate destinations, but the motor truck charges and the combined charges must both be clearly shown as published for information only. Motor truck lines may not be shown as participating carriers in tariffs filed with the Commission. Nothing here said should be construed as general authority to carriers subject to the act to include in their tariffs charges for service not subject to the act, as generally it is undesirable to complicate tariffs by including therein foreign matter, and each case should be determined by the circumstances. Publication by the Starin-New Haven of proportional rates from New Haven lower than the local rates and applicable on traffic originating at the inland points named will therefore be lawful, provided that the application of such rates is not confined to traffic moved from these inland points to New Haven by certain designated truck companies. Discrimination of this character in the application of the proportional rates would be unlawful. If proportional rates of this kind are published by carriers subject to the act they will be held to strict accountability for properly policing such rates by definite and unmistakable regulations, practices and tariff provisions. Proper evidence of the required movement from the designated inland points must be demanded before any shipper is accorded rates contingent upon such movement. Certain carriers are handling short haul package freight between points on their lines via motor trucks instead of via local trains. As this situation is not before the Commission on this record, it expresses no opinion at this time as to its jurisdiction over such service and the manner in which the rates therefor are published. Tariffs embracing motor truck or wagon transfer service, 91 I. C. C. 539.

(b) Complainant attacked commodity rates charged on coal, carloads, from Kentucky and Alabama to New Orleans, between May 1921 and January 1923 as unjust and unreasonable in that an allowance of only 11c per ton was made by defendants for the transfer of this coal into vessels while a reasonable allowance would have been 25c per ton. L. & N., is willing to make the retroactive allowance requested. HELD, 25c per ton was a reasonable maximum allowance for services rendered and instrumentalities furnished by complainant in transferring coal to barges, boats, or other vessels at New Orleans, reparation awarded. New Orleans Coal & Bisso Towboat Co. v. I. C. C. R. R., 92 I. C. C. 333.

§8 (8). Yardage and Wharfage.

See Drayage; Wharfage; Yardage.

(a) Commission instituted an investi-

gation to determine the reasonableness and propriety of the charges of common carriers subject to the act and applicable to interstate or foreign commerce for wharfage, handling, storage and other accessorial service at the south Atlantic and Gulf ports at and south of Hampton Roads; and also as to the propriety of including in the rates to and from the ports the cost of or charges for the above services. The record presents numerous instances of the overlapping conditions affecting traffic handled through the north and south Atlantic ports, which raise questions that can not satisfactorily be disposed of in a proceeding limited to the south Atlantic and Gulf ports. This proceeding should be reopened on this account. HELD, combined wharfage and handling charges on kerosene, in cases, at New Orleans is unreasonable to extent it exceeds 3.5 per 100 pounds. Wharfage Charges at South Atlantic Ports and Gulf Port, 93 I. C. C. 600.

§8 (10) Icing.

See Refrigeration §3½.

(a) Refusal of carriers to pay shippers allowances specifically provided for in tariffs to cover cost on initial icing performed by them at carriers' request on shipments of butter, eggs, dressed poultry, and cheese, found to have resulted in the collection of illegal charges. Reparation awarded. Swift & Co. v. Director General, 92 I. C. C. 263.

(b) Defendant's failure and refusal to ice, when necessary, interstate l. c. l. shipments of milk and other dairy products from various points in New York and Connecticut to destinations in those States, while exacting rates including such service, found to constitute an unreasonable and unlawful practice. Rates prescribed by commission in Milk and Cream Rates to New York City, 45 I. C. C. 412, included icing when necessary, but carriers have never performed service required under such rates, have never provided necessary facilities with which they might perform the service, and have not been and are not in a position to do that which they were and are legally bound to do. Reparation denied for lack of proof of amount of damages sustained. Borden's Farm Products Co. v. N. Y., N. H. & H., 92 I. C. C. 270.

(c) In 92 I. C. C. 270, the Commission found the defendants failure and inability, which amounted to a refusal, to ice, when necessary, as provided by tariff, complainants interstate less than carload shipments of dairy products from New York and Connecticut to destinations in those states had constituted an unreasonable and unlawful practice; and that complainant had been damaged to the extent of the reasonable cost of icing such shipments. Defendants herein intimate that if requested they might have hired local ice dealers to perform the service or might have shipped in a carload of ice for this purpose. But they do not assert that any preparations were in fact made to place themselves in a position to comply with their tariffs. The facts indicate that a demand by complainant that they comply with their tariff would not have prevented their failure to do so. For even after this complaint was filed defendants did not do the icing but instead made an allowance to complainant under tariff authority; and when approached by complainant earlier defendants agreed on Nov. 6, 1922 to pay an allowance, but did not keep the agreement. From April, 1919 to March 1923 they gave other shippers an allowance in lieu of performing the service provided by their tariffs. Moreover, the general practice of all carriers in that territory was to make allowance in lieu of such service. HELD, original findings affirmed. Bordens Farm Products Co. v. N. Y. N. H. & H. R. R. 102 I. C. C. 497.

(d) Complainant alleged that from March 1, 1920 at the present time, except between March 5 and Nov. 4, 1923, the legal charge for reicing shipments of fresh meats, packing house products, and produce, in straight or mixed carloads, at Howell, Ind., was $4 per ton; that $4.50 was collected and illegal. The applicable tariff provided for $4.50 at Evansville, Jeffersonville and New Albany, Ind. and $4 at all other Indiana points. The icing station at which the charges attacked were assessed is on the L. & N. A witness for that defendent explains that Howell is shown as a station for passenger and accounting purposes, that there is a passenger station known as Howell which issued mostly by employees working in the break up yards, but that the L. & N., does not recognize any freight station by that name; that no rates are carried in any freight tariffs to or from Howell; that if a bill of lading designat-

ed Howell as the destination the rate to Evansville would apply, plus any switching charge applicable under the terminal switching tariff at Evansville. The town of Howell surrendered its charter and became a part of Evansville in 1915, and the icing plant was and is located within the municipal as well as the switching limits of that city. HELD, $4.50 applicable, complaint dismissed. Swift & Company v. A. & R. R. R. 102 I. C. C. 499.

IV. LEGALITY OF ALLOWANCES.

See Common Carrier; Legality of Rates; Tap Lines §9, §10.

§9. In General.

(a) Proposed new rules, regulations, and practices, restricting application of certain transit, terminal, and other privileges and allowances on transcontinental traffic, found not justified. Proposed schedules attempt to restrict rights of individual carriers to extend to shippers such privileges at points on their own lines, as they may see fit, and is in effect tantamount to an attempt to say that carriers may not grant privileges to shippers without consent of the transcontinental bureau, unless such carriers are willing to subject shippers to the application of combination rates. Terminal Charge on Transcontinental Traffic, 89 I. C. C. 332.

(b) Section 15 of the act authorizes carriers subject to its provisions to pay to the owner of property transported reasonable allowances for services rendered by him in connection with common carrier transportation. Galveston Export Co. v. T. & F. S. Ry., 96 I. C. C. 141, 142.

(ba) An allowance to a shipper or receiver of freight for services rendered in connection with transportation is not unlawful provided the allowance is not more than just and reasonable. McCormick Warehouse Co. v. P. R. R., 95 I. C. C. 301, 308.

(c) Allowance made to complainant was made wholly without consideration of the cost of the service to complainant but solely to place complainant more nearly on a parity with its competitor, which at that time had a lower rate on the same commodity to Sabine, Tex., from Brimstone Junction, La., but this rate has since been canceled and the same rate now applies from Sulphur Mine, La., to Sabine and other Gulf ports as that from Gulf Hill to other Gulf ports. A commercial allowance such as the $9 per car received by complainant, made wholly without regard to the cost of the service, may defeat one of the main purposes for which the act to regulate commerce was passed. Allowances or Divisions Received by Texas Gulf Sulphur Co., 96 I. C. C., 371, 376.

(d) Texas Gulf Sulphur Co. found not entitled to allowances from the Santa Fe for switching service performed by it between Gulf Hill, Tex., and its plant. A carrier has the right to itself perform any transportation service which it may lawfully be required to perform. Atchison Railway Co. v. United States, 232 U. S. 199. When, as here, it is prevented from performing the service by the election of the industry to itself perform it, and when the service of the carrier would not meet the needs and convenience of or be satisfactory to the industry, as is also here the case, the carrier's duty to perform the service is discharged, and consequently there is no obligation resting upon the Santa Fe to make an allowance to the sulphur company for performing the service. Allowances or Divisions Received by Texas Gulf Sulphur Co., 96 I. C. C. 371, 376.

ALL OTHER CITATIONS

Colorado & Utah Coal Co. v. D. & S. L. R. R. Co., 85 I. C. C. 545; Terminal Allowances to St. Louis Coke & Iron Co., 85 I. C. C. 591.

§10. Transportation service performed by shipper.

See Transportation §1, §11.

(a) Where a carrier, in lieu of its own performance of a transportation service within its duty, while standing ready to perform it, assents to a shipper voluntary assumption of the service, whether or not it makes him an allowance therefor, the Commission may prescribe merely the allowable maximum. Very different is the case in which a carrier unlawfully refuses or omits to perform the service included in the tariff publication, and the shipper is thereby forced to assume it to make shipment possible, to protect his property in transit or the like, in which circumstance, the reasonable cost to the shipper represents, not a desired allowance, in any sense, but the measure of damages imposed upon him by the carrier's violation of the act.

Bordens Farm Products Co. v. N. Y. N. H. & H. R. R., 92 I. C. C. 270, 273.

(b) An allowance to a shipper or receiver of freight for services rendered in connection with the transportation is not unlawful provided the allowance therefor is not more than just and reasonable. McCormick Warehouse Company v. Pennsylvania R. R., 95 I. C. C. 301, 308.

(c) The act does not require common carriers to hire any instrumentality for the performance of a transportation service. Walsh Fire Clay Products Co. v. Director General, 95 I. C. C. 439, 443.

(d) Complainant attacked as unjust, unreasonable and unduly prejudicial the carload rates on sulphur from Gulf Hill, Tex., to all points in the United States and alleged that the practice of defendants in refusing to make a reasonable allowance to complainant for handling carload shipments of sulphur between Gulf and Gulf Hill as unreasonable. The general issues are: whether the service performed by complainant at its plant at Gulf and between that plant and Gulf Hill, or any of it, is a service of transportation covered by the line haul rates; and, if so, whether complainant is entitled to an allowance therefor from the Santa Fe, its trunk line connection; and, if so, the maximum reasonable allowance which it should receive. The spur from Gulf Hill, together with the various switch connections serving the plant, are owned by complainant. Complainant switches all loaded and empty cars between Gulf Hill and its plant and performs all necessary switching at its plant, but does not transport passengers, mail or express and does not publish tariffs. Practically all the traffic handled is its own. Complainant does not profess to be a common carrier. From April 1919 to April 1921 the switching at the plant was done partly by the Santa Fe and partly by complainant, each operating a switch engine and doing with it the same character of service. It does not appear that either was paid anything by the other for its share of that service. Neither of these switching engines was used in the service tween Gulf Hill and the plant. That was performed by the Santa Fe with its road locomotives which received loaded cars and delivered empties at the plant storage plants. Eventually complainant elected to perform all switching at the plant as well as between Gulf Hill and the plant, and so advised the Santa Fe in April 1921. As a result the Santa Fe switch engine was withdrawn from the plant and complainant has performed all of the switching beyond Gulf Hill since that time. This necessitated the building by the Santa Fe of storage tracks at Gulf Hill to accommodate the outbound loads of sulphur and the inbound empties and loads of oil. The record clearly indicates that when complainant elected to perform the switching beyond Gulf Hill there was no agreement or understanding between it and the Santa Fe that it would be compensated by the Santa Fe. There is nothing of record to indicate that the Santa Fe was not willing to continue to perform the service or that complainant has since that time ever requested the Santa Fe again to perform such service. Since May 1923 the Santa Fe has made an allowance of $9 per car on cars of sulphur to Galveston, Houston and Texas City for export or coastwise movement. No allowance has been made on sulphur moving all rail nor on inbound shipments of fuel oil, although substantially the same service has been and is performed on them by complainant as on the shipments of sulphur to the ports named. The record clearly indicates that complainant does not desire Santa Fe to perform any of the switching at the plant or between the plant and Gulf Hill, but only desires to receive an allowance for performing the service that this switching must be done to meet the needs and convenience of the plant; and that it would not be satisfactory to complainant for the Santa Fe to perform all or a part of the switching. HELD, the one movement of inbound and outbound cars between Gulf Hill and complainants plant, substantially similar to the service performed by the Santa Fe's road locomotives prior to April 1921 is the only transportation service which the Santa Fe may lawfully be required to perform under the line haul rates. A commercial allowance such as the $9 per car received by complainant, made wholly without regard to the cost of the service, may defeat one of the main purposes for which the act was passed. HELD, rates attacked not unreasonable or unduly prejudicial. Complainant not entitled to any allowance from G. C. & S. F., for services in respect of shipments under those rates, complaints dismissed. Allowances to Texas Gulf Sulphur Co., 96 I. C. C. 371.

(e) Texas Gulf Sulphur Co. found not entitled to allowances from the Santa Fe for switching service performed by it between Gulf Hill, Tex., and its plant. A carrier has the right to itself perform any transportation service which it may lawfully be required to perform. Atchison Railway Co. v. United States, 232 U. S. 199. When, as here, it is prevented from performing the service by the election of the industry to itself perform it, and when the service of the carrier would not meet the needs and convenience of or be satisfactory to the industry, as is also here the case, the carrier's duty to perform the service is discharged, and consequently there is no obligation resting upon the Santa Fe to make an allowance to the sulphur company for performing the service. Allowances or Divisions Received by the Texas Gulf Sulphur Co., 96 I. C. C. 371.

§11. Transportation Facility.

See Supra §10; Tap Lines §3 (1), §4; Transportation §1.

(a) A carrier has the right to itself perform any transportation service which it may lawfully be required to perform. When it is prevented from performing the service by the election of the industry to itself perform it, and when the service of the carrier would not meet the needs and convenience of or be satisfactory to the industry, the carriers duty to perform the service is discharged, and consequently there is no obligation resting upon the carrier to make an allowance to the industry for performing the service. Allowances to Texas Gulf Sulphur Co., 96 I. C. C. 371, 376.

(b) As to the question whether the service performed by complainant at its plant at Gulf and between that plant and Gulf Hill, Tex., or any of it, as a service of transportation covered by the line-haul rates, FOUND, that one movement of inbound and outbound cars between Gulf Hill and complainant's plant, substantially similar to the service performed by the Santa Fe prior to a certain date, is the only transportation service which the Santa Fe may lawfully be required to perform under the line-haul rates. Allowances or Divisions Received by Texas Gulf Sulphur Co., 96 I. C. C. 371, 376.

V. REASONABLENESS OF ALLOWANCES.

See Common Carrier §9; Tap Lines.

§13. In General.

(a) Conceding that the line haul rates cover ordinary terminal services within switching limits, including receipt and delivery of shipments upon carrier or private sidings or spurs conveniently adjacent to industrial plants, the tracks laid within the confines of such plants, placed for the furtherance of industrial operations, used largely or principally for intraplant switching, and usually within the exclusive control of the industries, are not, ordinarily at least, to be considered in any fair sense as parts of the line haul carriers terminal facilities. While a carrier may by its own practices have assumed a general obligation to render such an extended service, the fact should satisfactorily appear, in the absence of other appropriate evidence, in order to justify a finding that a failure or refusal to perform the service in a particular case is violative of section 1 of the act. Jackson Iron & Steel Co. v. Director General, 91 I. C. C. 201, 205.

(b) Southern, A. C. L., N. S., and S. A. L., proposed to amend their tariff so as to require shippers in Norfolk Harbor to load outbound less carload shipments on carriers barges. Cottrells I. C. C. No. 301 provides that outbound less carload shipments aggregating 20,000 pounds will be received at private wharves or warehouses on the water front in Norfolk Harbor when such freight is assembled by the shipper on the apron of the wharf adjacent to the berth of the barge. Proposed, shipper will be required to load less carload freight on carriers barges. There is probably a merit in the contention of respondents that conditions are materially changed since the inauguration of the present practice of loading less carload freight, and that at the present time there is not sufficient of this business to warrant the employment of men solely for this purpose, but the fact remains that the rates on less carload freight from Norfolk were made while this service was provided for in respondents tariffs. In the absence of proof to the contrary it must be presumed that the rates so made include this service. HELD, respondents have failed to justify the increased rate which will result from the decrease in carrier service performed for that rate, suspended schedule not

justified. Loading of less than carload freight, 91 I. C. C. 394.

(c) Respondents proposed to reduce the charges for handling fertilizer and fertilizer materials, cement, and salt between ship side and cars, ship side and storage, and storage and cars, at south Atlantic ports and Gulf ports in Louisiana and east thereof, except Gulfport, Miss., from 50c to 30c per ton. The handling charges under consideration are in issue in 93 I. C. C. 609. While it is true that the Congress has expressed a policy of looking to the development of public terminals at port cities, it has not delegated to the Commission authority to enforce that policy. The scope of the activities of the Commission is limited by the terms of the act. It follows that unless the proposed charges are found to be in contravention of some provision of that act it is beyond the power of the Commission to condemn them. The proposed charge is not unreasonably high. Neither does the Commission find any warrant for holding that it is unduly prejudicial. It is published for uniform application upon the commodities in question and no shipper is complaining. The fact that reductions are proposed on only three commodities does not establish undue prejudice. Whether the proposed reduction will result in a sufficient increase in business to more than offset the loss in revenue which it would entail on the amount of business which would be handled whether the reduction is made or not is of course a question to which only actual operation under the reduced charge can furnish a satisfactory answer. HELD, schedules justified. Handling charges on cement, fertilizer and salt, 93 I. C. C. 640.

(d) Allowance by C. & N. W. Ry. Co., to Laona & Northern Ry. Co., of a maximum absorption of $3 per car out of switching charges on interstate traffic moving between Laona and Snyders, Wis., found not inadequate or otherwise unreasonable. In dealing with similar short lines not parties to The Tap Line Case, 31, I. C. C. 490, the commission has found that they should not receive from connecting carriers more than $3 per car, the maximum therein fixed, for distances of 1 mile or less. While the Laona has operated at a deficit, to sanction increased absorption sought would result in according that line a preferred position over other lines operated under similar circumstances and conditions. Laona & Northern Ry. Co. v. C. & N. W., 92 I. C. C. 23.

(e) Based upon study showing out-of-pocket cost of performing the service, 25 cents per ton found to be a reasonable maximum allowance for services rendered and instrumentalities furnished by complainant in transferring coal to barges, boats, or other vessels at New Orleans. Defendant authorized to make retroactive allowance of that amount, the commission having in several similar cases approved allowances of this character for retroactive application. See 49 I. C. C. 85 and 50 I. C. C. 543. New Orleans Coal & Bisso Towboat Co. v. L. & N., 92 I. C. C. 333.

(f) Allowance made to complainant was made wholly without consideration of the cost of the service to complainant, but solely to place complainant more nearly on a parity with its competitor which at that time had a lower rate on the same commodity to Sabine, Tex., from Brimstone Junction, La., but this rate has since been canceled and the same rate now applies from Sulphur Mine, La., to Sabine and other Gulf ports as that from Gulf Hill to other Gulf ports. A commercial allowance such as the $9 per car received by complainant, made wholly without regard to the cost of the service, may defeat one of the main purposes for which the act to regulate commerce was passed. Allowances or Divisions Received by the Texas Gulf Sulphur Co., 96 I. C. C. 371, 376.

ALL OTHER CITATIONS

Terminal Allowances to St. Louis Coke & Iron Co., 85 I. C. C. 591.

§13½. Retroactive application.

(a) Commission is without jurisdiction to compel carriers to make a retroactive increase in allowance. Buckeye Steel Castings Co., 58 I. C. C. 500. Rutherford-Brede Co., 61 I. C. C. 515; Cambria Steel Co., 64 I. C. C. 737. New Orleans Coal & Bisso Towboat Co. v. L. & N., 92 I. C. C. 333, 334.

(b) Defendants authorized to make retroactively an allowance to complainant for unloading shipment of cottonseed cake, in bulk, at Port Arthur, Tex., Section 15 authorizes carriers subject to its provisions to pay to the owner of property transported reasonable allowances for services rendered by him in connec-

tion with common-carrier transportation, and an allowance for similar services was contemporaneously made at Galveston. Galveston Export Co. v. T. & F. S., 96 I. C. C. 141.

VI. DAMAGE AND REPARATION.

See Claims; Reparation.

§14. In general.

(a) Finding in original report, 57 I. C. C. 745, that complainant has not shown damage due to practice of defendants in spotting cars or making allowances therefor at plants of competitors in the Buffalo rate district, while refusing to spot cars or make allowances at complainant's plants, affirmed on further hearing. It was not shown that competitors controlled the market, that complainant was forced to meet prices fixed by them, or that undue prejudice had any definite influence on market conditions. Prices on steel and products were fixed by the Government and complainant's position would not have been altered had there been no switching services performed or allowances paid competitors. Fact that competitors were in a more favorable position than complainant does not, in and of itself, establish that complainant was damaged. Donner Steel Co. v. D., L. & W., 92 I. C. C. 595.

ALTERNATIVE RATES.

I. ESTABLISHMENT AND REASONABLENESS.

See Released Rates.

(ab) Carriers have frequently established alternative commodity rates, based on different c. l. minima, and commission has approved such rates, Strawboard and Other Paper Articles, 85 I. C. C. 470, but they have consistently declined to introduce into the classification the principle of alternative ratings and minima, and commission has never heretofore prescribed such ratings. Aluminum Goods Mfg. Co. v. A. & V. Ry., 92 I. C. C. 346, 351.

(c) Rates on China-wood oil from Pacific coast points to Cleveland, Ohio, found not unreasonable or in violation of the aggregate-of-intermediates clause of section 4 of the act. Applicable import tariff provided for alternative application of domestic tariff if lower, and domestic tariff, in turn, provided for aggregate-of-intermediate rates whereever found lower than joint rates. Under these double alternatives no fourth-section violation existed, but lower combinations applied on two of the shipments involved, resulting in overcharges. Refund of such overcharges directed and complaint dismissed. Glidden Co. v. E. R. R. Co., 100 I. C. C. 331.

(d) To avoid certain undesirable and unlawful results which would follow uniform application of a system of through interterritorial rates governed by southern classification, particularly in southern border territory provision should also be made for the alternative application of rates made by combining local rates in official territory to gateway points with certain differential rates south thereof. Southern Class Rate Investigation, 100 I. C. C. 513, 666.

(e) It is not the commission's policy or that of carriers ordinarily to make alternative rates based on different minima but a few instances may be found where carriers have departed from the rule. Lafayette Box Board & Paper Co. v. A., C. & Y., 101 I. C. C. 273, 274.

ANALOGOUS COMMODITIES

See Classification §17.

ANTI-TRUST ACT

See Evidence §10.

(a) Statement in decree, rendered in contempt proceedings for violation of decree under Sherman Anti-Trust Act (Comp. St. §§8820, 8823, 8827, 8830), that terminal railway association and its subsidiaries are not acting in good faith as the impartial agents of the various proprietary lines, HELD too general and vague, when considered by itself to constitute specification of facts amounting to contempt of court. Terminal R. Ass'n of St. Louis v. United States, 45 Sup. Ct. 5.

(b) Anti-Trust Act July 2, 1890 (Comp. St. §§8820, 8823, 8827, 8830), HELD inapplicable to contract negotiated in certain state for sugar to be delivered from a refinery in such state and shipped to other point in state; such contract pertaining only to intrastate commerce. A. B. Small Co. v. Lamborn & Co., 45 Sup. Ct., 300.

(c) Carriers affected by any order made by the commission pursuant to section 5 (2) of the act are under the provisions of paragraph (8) of that section relieved from operation of antitrust laws, and of other State or Federal laws, in so far as may be necessary to enable them to do anything authorized or required by such order. The relief is not granted for the benefit of any railroad, particular industry, or community, and benefits to be derived or injury which may be suffered because of a proposed acquisition of control of one carrier by another, may be considered only in so far as it relates to general public interest. Clinchfield Ry. Lease, 90 I. C. C. 113, 120, 121.

(d) Monopolies are odious, alike by common law and under Federal statute. The commission can not consider with favor a proposition to create of an unregulated favored class of already favorably circumstanced producers, a complete monopoly by compelling carriers to violate principle of equality of treatment which it is the right of every citizen to demand. Rules Governing Ratings of Coal Mines, 95 I. C. C. 309, 333.

(e) Industrial despotism is contrary to American ideals, and forbidden by the law which the commission is under obligation to obey. Rules Governing Ratings of Coal Mines, 95 I. C. C. 309, 333.

(f) The commission doubts if it would be in the public interest to give to the high-grade, favorably circumstanced coal fields and mines a monopoly of production, even if lower costs to consumers would follow. Such a course would result in first completely exhausting the best portion of a natural resource and weaken our national position by compelling utilization in even greater degree of the poorer, less economical raw products, until in the end the country would have nothing left but the lowest grade, most costly, bituminous coal, with none of the higher grades for any of the special purposes which are so dependent upon such fuel. Widest possible equable use of coal of all qualities, rather than forced use of most readily accessible highest grades, is that which is consonant with public good. Rules Governing Ratings of Coal Mines, 95 I. C. C. 309, 334.

(g) Railroads are monopolistic in many respects, and because of that fact are subject to public regulation. In this public regulation cost of service and hence distance are factors which must be taken into consideration. But railroads are also subject to competition with respect to much of their traffic, and it has been and is the policy of public regulation to allow them considerable latitude in meeting this competition. This accounts for many inconsistencies in the rate structure and also for many instances where distances are disregarded. Maritime Asso., Boston Chamber of Commerce v. A. A. R. R., 95 I. C. C. 539, 566, 567.

ANY QUANTITY RATES

I. REASONABLENESS AND APPLICATION.

See Advanced Rates §3 (q); Blanket Rates §6 (a); Class Rates §2 (3k); Express Companies §10 (i).

(a) In the past the maintenance of any-quantity rates on cotton has been almost universally considered as being so well adapted to the peculiar manner in which this commodity is handled and marketed as not to warrant its being superseded by c. l. and l. c. l. rates. Mississippi Railroad Commission v. A. & V. Ry. Co., 89 I. C. C. 47, 52.

(b) It is necessary, in determining whether c. l. rates to supersede any-quantity rates on cotton, should be established, to consider commercial and economic aspects of the question and determine whether the arrangement, if established, would be in the public interest. Taylor Dry Goods Co., 28 I. C. C. 205. Mississippi Railroad Commission v. A. & V. Ry. Co., 89 I. C. C. 47, 54, 55.

(c) Present any-quantity system of rates on cotton from points in Mississippi to eastern, northern, and southeastern destinations, found not unreasonable or otherwise unlawful, and establishment of c. l. and l. c. l. rates on such traffic found not justified on the record. Mississippi Railroad Commission v. A. & V. Ry. Co., 89 I. C. C. 47, 60.

(d) Complainant attacked any-quantity rates on unmanufactured tobacco, in hogsheads, from Ohio River cities and points in central and western Kentucky and central northwestern Tennessee to Charleston, S. C., and Savannah, Ga., for export as unreasonable and unduly prejudicial in favor of Norfolk and New-

port News, Va., and New Orleans, La., Mobile, Ala., and Pensacola, Fla., and attacked transit arrangement of L. & N. at Nashville, Tenn., as unreasonable. The origin territory is served by the I. C., L. & N., N. C. & St. L., and T. C. The two lines first mentioned extend directly to the Gulf ports, while the other two do not reach any port, but they can secure a much longer haul on traffic to the south Atlantic ports than to the Gulf ports. The export tobacco is generally shipped to prizing points in the interior where it is prized into hogsheads and then shipped to the ports. Only the rates for the latter movement are an issue. The present adjustment of rates is based on a rate of 54.5c from Louisville, which is applied to all of the ports from Baltimore to New Orleans. This is the rate from Cincinnati to Baltimore, which the eastern carriers extended to Louisville, although that point usually takes higher rates; and it is met by the lines serving the south Atlantic and Gulf ports. The same rate is applied from Owensboro and Henderson to the Gulf ports, while a rate of 47.5c applies from Paducah to those ports; but the rate from those points to the Virginia and south Atlantic ports is 66c, except that a rate of 54.5c applied from Paducah to the south Atlantic ports over the N. C. & St. L., and its connections. The rates from the river cities are generally observed as a maximum at intermediate points on traffic to the Gulf ports, also on traffic to the south Atlantic ports over the Southern or N. C. & St. L., and connections; but the rates from interior points on the I. C., and L. & N., to Atlantic ports are generally combination rates. The rates from most of the origin points range from 7 to 49c higher to the south Atlantic ports than to the Gulf ports. The rates to the south Atlantic ports and Virginia ports are the same from many points, while from some points they are higher to the south Atlantic ports, and from other points lower; but on the whole there does not appear to be much difference in the general level of the rates to these ports. The present adjustment gives the Gulf ports an undue advantage over the south Atlantic ports, but the Commission is not convinced that the latter are entitled to a parity with the former. It would be impracticable to prescribe a uniform differential from all points, because points in the extreme western part of Kentucky, which take the lowest rate to the Gulf ports, are the most distant from the south Atlantic ports. The transit arrangement at Nashville allows shipments originating on the L. & N., to be warehoused at that point for not exceeding 12 months and reshipped over the same line to Gulf or north Atlantic ports but not to south Atlantic ports, at the through rate plus a transit charge. Similar arrangements of the N. C. & St. L., and T. C., include the south Atlantic ports. No reason is shown which justified the L. & N., discrimination against those ports. HELD, rates unreasonable and unduly prejudicial to extent rates to Charleston, Savannah and Jacksonville exceed rates to New Orleans, Mobile and Pensacola, by more than 3c for differences not over 75 miles, 5c over 75 miles and not over 150 miles, 7c over 150 miles and not over 200 miles and 9c over 200 miles; the transit arrangement unduly prejudicial to south Atlantic ports to extent it applies to Gulf ports and not to south Atlantic ports. Charleston Traffic Bureau v. A. G. S. R. R., 89 I. C. C. 501.

(e) Complainant attacked any quantity rates on two shipments of denims Dec. 15 and 17, 1919, from Little Rock, Ark., to Beloit, Wis., as unreasonable and in violation of the fourth section. Shipments moved via M. P., to St. Louis., thence Wabash to Chicago and C. & N. W., charged first class, any quantity. Combination rate was 50c from Little Rock to Cairo, Ill., and class rate of 54.5c beyond, but the shipments did not move through Cairo. Combination of 98c was in effect from Little Rock to St. Louis, and third class 41.5c beyond. HELD, rate attacked unreasonable to extent it exceeded 98c, reparation awarded. Rosenblatt & Sons v. Director General, 91 I. C. C. 18.

(f) Complainant attacked combination any quantity and class rates on less carloads of cotton piece goods between Jan. and Oct., 1918, from New York, N. Y., Boston, Mass., to Kansas City, Mo., as unreasonable, unduly prejudicial and in violation of section 4. Shipments moved rail and water through south Atlantic ports and Memphis, Tenn., charged any quantity rates of $1.07 from Boston and $1.04 from New York between Jan. and May, 1918, and $1.105 between June 1 and 24, 1918, and $1.38 between June 25 and Oct. 4, 1918 from Boston and New York rate points, the bases of these rates were the official classification R 25 rates to Chicago, Ill., or the Mississippi river

crossings, including Memphis, and commodity rates or third class rates provided by exceptions to the western classification beyond. Over the route of movement there was contemporaneously in effect intermediate rates aggregating $1.00, between January and June 1918, consisting of fourth class of 50c to Memphis and 50c beyond. On Oct. 10, 1919, the joint rates on shipments through Memphis were reduced to basis of the rates to and beyond that gateway. HELD, rates attacked unreasonable to extent they exceeded $1 prior to June 25, 1918 and $1.25 subsequent thereto, reparation awarded. Lee Mercantile Co. v. Director General, 91 I. C. C. 618.

(g) Complainant attacked official and western classification ratings on harness and harness parts, halters and halter ties, leather and steel collars, bridles, and saddlery in their application to shipments tendered in carload quantities as unreasonable and unjustly discriminatory. Ratings charged any quantity. Effective August 30, 1923 a rating was established of second class on horse collars, n. o. i. b. n and harness and saddlery, n. o. i. b. n., carloads, minimum 24,000 pounds and a rating of first class in less carloads. The departure from the any quantity ratings on harness and saddlery appears to have resulted from the application of a single southern manufacturer for a carload rating. Little evidence was introduced by complainant which merits discussion. HELD, rates attacked prior to August 30, 1922, as unreasonable or otherwise unlawful, complaint dismissed. United States Farm Sale Company v. A. T. & S. F. Ry., 92 I. C. C. 19.

(h) Complainant attacked rates charged any quantity, on cotton in bales between August 26, 1920 and April 23, 1921 from Texas and Oklahoma to Galveston, Tex., for export, as unreasonable, the prayer being for reparation only. The evidence was limited to cotton and cotton linters compressed in transit at carriers expense and only those rates will be considered. The rates on cotton from Texas to Galveston are generally on a mileage basis up to 210 miles. The maximum rate reached at that distance is blanketed from all points in Texas common point territory. About two thirds of the cotton produced in Texas originates at points taking the maximum rate and substantially the remainder is produced at points generally less than 210 miles from Galveston, taking rates less than the maximum rate. Prior to August 26, 1920, the maximum or common point rates were 66c for city delivery and 71c for export. The wharfage charge, separately published in the tariffs of the wharf company as collectible from vessels making use of the wharf facilities, was merely added to the domestic rate, not applicable to ship side, and the whole published as a through export rate. It is and was the practice of shippers, including complainants members, to pay the wharfage charge to the agent of the vessel upon which the cotton is loaded and the remainder of the ship side rate to the line haul carriers. The rates from Texas points were and for many years have been made with relation to the domestic rates. That is, the export rates were constructed by adding to the domestic rates an amount equal to the cost of moving cotton from city warehouses to ship side, which covered drayage or switching, unloading and wharfage charges. This amounted to 5c during the period covered by the complaint and included 2c wharfage and 3c for the other services. HELD, rates attacked unreasonable to extent they exceeded 95c from Texas common points and exceeded an increase of 35 per cent in the rates less the wharfage charge from other points in Texas and Oklahoma to Galveston for export, reparation awarded. Houston Cotton Exchange v. A. & S. Ry., 92 I. C. C. 365.

(i) Complainant attacked any quantity rates charged on cotton from Phoenix, Ariz., and other Arizona points to Columbus, Eatonton, Macon and Thomaston, Ga., and other points in Alabama, Georgia, North Carolina and South Carolina as unreasonable, unjustly discriminatory, unduly prejudicial and in violation of the fourth section. Phoenix and the other points of origin are grouped with California producing points in publishing rates on cotton to points in Georgia and other states east of the Mississippi river. Generally, speaking, these rates, as to destinations, are graded according to distance. But to the Georgia points here considered the rates are higher than to more distant points north and east thereof. The minima on compressed and uncompressed cotton are 37,500 pounds and 20,000 lbs., respectively. The light loading of uncompressed cotton justifies somewhat higher rates than those applicable on compressed cotton. HELD, rates attacked to points of des-

tination are unreasonable to extent they exceeded prior to July 1, 1922 on compressed cotton $1.735, subsequently $1.56, on uncompressed cotton, with privilege to carrier of compression prior to July 1, 1922, $1.935 subsequently $1.74, on uncompressed cotton prior to July 1, 1922, $2.235, subsequently $2.01, reparation awarded. Southwest Cotton Co. v. A. E. R. R., 92 I. C. C. 563.

(j) Any quantity rates are both carload and less carload rates. Southwest Cotton Co. v. A. E. R. R., 92 I. C. C. 563, 565.

(k) Complainant attacked any quantity rate prior to July 1, 1922 of $1.745 and $1.57 on and after that date on unfinished cotton hosiery in compressed bales, from Rockford, Ill., to Philadelphia and Germantown, Pa., as unreasonable and unjustly discriminatory to extent it exceeded 92.5 carloads and $1.30 less carloads prior to July 1, 1922 and 84c carloads and $1.175 less carload on and after that date. The official classification rating on hosiery, in bales or boxes, is first class, and no distinction is made between finished and unfinished hosiery. In 39 I. C. C. 494, the Commission found that the first class any quantity rate of 85c then in effect on undyed and unfinished cotton hosiery from Rockford to Philadelphia was not unreasonable. HELD, rates attacked not unreasonable or unjustly discriminatory, complaint dismissed. Burson Knitting Co. v. B. & O. R. R., 92 I. C. C. 607.

(lm) A narrow spread between the carload and less car load rates tends to the waste of transportation facilities without adequate compensating advantages to the general public and is not to be encouraged. In any quantity rates the spread is reduced to nothing. Booth Fisheries Co. v. Amer. Ry. Express Co., 92 I. C. C. 653, 657.

(n) Complainant attacked any quantity rate charged of $1.15 on cotton goods cut into shirt forms, less carloads, from Baltimore, Md., to Washington, D. C., since Oct. 31, 1922 as unreasonable to extent it exceeded 65c. On Oct. 31, 1922 commodity rate of 65c was canceled and an any quantity first class rate of $1.15 was established. Defendants admit that the rate on shirt forms from Baltimore to Washington should not exceed the rate on finished shirts in the opposite direction, but urge the 60c rate on the finished shirts was subnormal. This rate was canceled Oct. 15, 1924 and the first class rate now applies in both directions. HELD, rate charged not unreasonable, complaint dismissed. Flowers & Stell v. Norfolk Southern R. R. 93 I. C. C. 388.

(o) Respondents proposed to increase the rates on cotton piece goods, any quantity, and on scrap iron and junk, carloads, from Texas, Louisiana, and Oklahoma to St. Louis, Mo., and other points in defined territories, and on oyster shells, in carloads, from Memphis, Tenn., to Kansas and Missouri. **Cotton piece goods.** While cotton piece goods, any quantity, are rated first class in western classification, by exception a third class rating is applicable from Texas and Oklahoma points. Specific commodity rates substantially lower than third class are in effect from Texas and Oklahoma points to points in defined territories, but respondents proposed to cancel these commodity rates, allowing third class rates to apply. To certain parts of the destination territory no joint class rates are in effect, and combinations of class rates would become applicable. Respondents made no attempt to justify the proposed increased rates, and state they were forced to make the revision to comply with fourth section order denying them relief in their rates from Texas and Oklahoma. **Junk.** It is proposed to increase the rates on scrap iron and cotton tie clippings, carloads, from Texas to defined territories. The rates on both scrap iron and cotton tie clippings from Texas points are upon a group basis and the average distance from Texas common points to St. Louis, is said to be about 800 miles, present rate on scrap iron 32.5c, proposed 38c. **Oyster Shells.** Respondent proposed to eliminate whole or crushed oyster shells from the list of fertilizer or materials on traffic from Memphis to Kansas and Missouri. They would represent an increase of 7.5c on shells over rates on fertilizer. Suspended schedules not justified. Commodity rates from southwestern points, 93 I. C. C. 394.

(p) Complainant attacked any quantity rates charged on cotton goods in the original piece between Philadelphia and Bridgeton, N. J., as unreasonable and unduly prejudical in that they exceeded rates between Philadelphia and Millville and Mays Landing, N. J. Rates to

Bridgeton from Walnut Street Wharf and Oakford Street prior to July 1, 1922 were 25c and from Washington Avenue Wharf 25.5c. These rates applied in the reverse direction. They were reduced 10c on July 1, 1922. The rates to Millville and Mays Landing were 12.5c and 25.5c. On June 7, 1923 the rate from Walnut Street Wharf to Bridgeton was reduced and that to Millville was increased, each becoming 17.5c. The rate to Mays Landing remained unchanged. In June 15, 1923 the rate of 17.5c was made applicable from Bridgeton and Millville to Walnut Street Wharf, distance 67 miles. HELD, rate attacked not unreasonable or otherwise unlawful, complaint dismissed. Berkman v. Pennsylvania R. R. 95 I. C. C. 685.

(q) Complainant attacked any quantity rate charged on cotton, uncompressed, from Pine Bluff, Ark., to Galveston, Tex., as unjust and unreasonable. Cars moved over St. L. S. W., to Tyler, Texas, via Texarkana, Tex., and I. G. N., beyond, 542 miles. Charged combination on Texarkana. At this time the rate on cotton, with carriers privilege of compression in transit, from Pine Bluff to Galveston was 91.5c reduced on May 31, 1923 to 90c. In 46 I. C. C. 451 rates generally throughout the Southwest on uncompressed cotton were made 10c higher than on cotton to be compressed in transit. HELD, rate attacked not unreasonable, complaint dismissed. McFadden v. St. L. S. W. Ry., 96 I. C. C. 267.

(r) The fact that the rate attacked is an any quantity rate does not in itself prove that it is unreasonable as applied to carload shipments. Viscose Company v. Penn. R. R., 98 I. C. C. 97, 100.

(s) Complainant attacked first class rating on cigars in any quantity prior to April 2, 1924 as unjust and unreasonable in the official, southern and western classifications. Defendants introduced no evidence. HELD, carload rating on cigars maintained by defendants unreasonable to extent it is higher than second class, minimum 30,000 pounds. Tobacco Merchants Asso. v. Pennsylvania R. R. 98 I. C. C. 319.

(t) Complainant attacked any quantity rates charged on flat cotton shipped between May 2, 1919 and Jan. 9, 1920 to Galveston, Tex., from Fouke, Womble, Amity and Gurdon, Ark., as unreasonable and unduly preferential and that rates from Fouke to Galveston between Oct. 8, 1918 and Jan. 23, 1919 unreasonable and in violation of the fourth section. Charged first class of $1.55 from Gurdon, Womble and Amity and $1.375 from Fouke. Effective Dec. 30, 1919 a commodity rate of 75c was established from Fouke to Galveston, to which basis reparation is sought on the shipments from that point. There were in effect to both Galveston and New Orleans, at time of movement rates of 80c from Womble and Amity and 75c from Gurdon on cotton compressed in transit at carriers option. The contemporaneous rate on uncompressed cotton from Gurdon to New Orleans, 437 miles, was 85c and from Womble and Amity, 497 and 476 miles, 90c. HELD, rates charged unreasonable to extent they exceeded 90c from Womble and Amity, 85c from Gurdon and 75c from Fouke, reparation awarded. Moody Cotton Co. v. Director General, 98 I. C. C. 643.

(u) Complainant attacked class rates charged on two cars of barrack bags, Dec. 1922 and Jan. 1923 from Jeffersonville, Ind., to New York City, as unreasonable. Barrack bags are made of coarse cotton fabrics. The bales were new and were shipped in machine pressed bales. When these shipments were made there was no specific description or rating in the classification for barrack bags. The first class any quantity rating then applicable in all three territories on bags, bedding, blanket or clothing, in boxes applied. Under rule 5, section 3c which provides penalties for failure to comply with the packing requirements, the rating on such bags, when shipped in machine pressed bales, was one and one fourth times first class. A rate of $1.775 was assessed computed at first class rate of $1.42. Effective March 22, 1923 the classification description in the above item was charged to cover shipments in bales or boxes, which represented a reduction as applied to shipments in bales. HELD, rating for future unreasonable to extent it exceeded second class, any quantity, reparation withheld until submission of proof as to paying and bearing of freight charges. Triad Corp. v. Erie R. R., 100 I. C. C. 402.

(v) Official and western classification any-quantity ratings on harness and saddlery articles found not unreasonable

as compared with ratings on other commodities of higher value. Evidence submitted is too conflicting to indicate fair average values of harness and saddlery or of the other commodities, and no showing was made as to other classification or transportation characteristics of such commodities as compared with harness and saddlery. U. S. Farm Sales Co. v. A. T. & S. F., 92 I. C. C. 19.

(w) Fact that rates assailed are any-quantity rates applicable to l. c. l. as well as c. l. traffic does not prove that such rates are unjustly discriminatory when applied to carloads. Burson Knitting Co. v. B. & O., 92 I. C. C. 607, 609.

(x) Following Burson Knitting Co., 39 I. C. C. 494, any-quantity rate on unfinished cotton hosiery, in compressed bales, found not unreasonable or unjustly discriminatory. No distinction is made between finished and unfinished hosiery, but complainant contended that unfinished product should take a rate lower than the finished for reasons that it occupies smaller space in the car, is less valuable, and not as subject to damage as the finished product. However, volume of movement is insufficient to warrant establishment of c. l. commodity rates, class rates, as such, were not shown to be too high, and fact that rates assailed are any-quantity rates applicable to l. c. l. as well as c. l. does not prove that they are unjustly discriminatory when applied to carloads. Burson Knitting Co. v. B. & O., 92 I. C. C. 607.

(y) Any-quantity express rates on oysters, in cans, in iced boxes or barrels, c. l., from Atlantic seaboard points to western destinations, found not unreasonable, discriminatory, or unduly preferential of shippers in l. c. l. quantities. Under present rates small and large shippers alike have same privileges. No compensating advantages would result from lower c. l. rates, under which boxing would be done at origin instead of distributing points on traffic intended for reshipment, thus imposing an additional burden and expense on both c. l. shipper and carrier due to necessity of hauling containers for entire carload from source of supply to distribution points, where none are now hauled in c. l. movements. Moreover, such lower rates would restrict markets of l. c. l. shippers, without apparent benefit to anyone. Booth Fisheries Co. v. Am. Ry. Exp. Co., 92 I. C. C. 653.

(z) On certain classes of traffic, where normal transportation unit is small, any-quantity rates rest upon sound public policy. They counteract a tendency toward monopoly by enabling small shippers to compete on fairly equal terms with powerful competitors. This is particularly desirable where source of supply is confined to limited areas of the country. Booth Fisheries Co. v. Am. Ry. Exp. Co., 92 I. C. C. 653, 660, 661.

(aa) Proposed increased rates on cotton piece goods, any quantity, from Texas and Oklahoma points to St. Louis and points in defined territories, published to comply with order entered in connection with Memphis-Southwestern Investigation, 77 I. C. C. 473, denying fourth-section relief, found not justified. Respondents made no attempt to justify the increases but merely stated that they were forced to make the revision to comply with the fourth-section order. However, such compliance does not require substantial increases proposed, and respondents' revenues would not be reduced to any extent by application from intermediate points of present rate from Texas producing points. Commodity Rates from Southwestern Points, 93 I. C. C. 394, 396.

(bb) Proposed increased rates on cotton and cotton regins, uncompressed, any quantity, and on cotton linters, uncompressed, l. c. l., both with carrier's privilege of compressing, from Cairo, Brookport, Gale, and Thebes, Ill., to eastern points, for purpose of restoring the relationship with rates from St. Louis, disturbed when the St. Louis rates were increased but through oversight no similar changes were made in rates from the Illinois points, found not justified. Respondent made no reference to rates under which traffic actually moves to demonstrate reasonableness of the proposed rates, and since the St. Louis rates are paper rates, most of the cotton movement being through Memphis, they have little, if any, probative force in that connection. Cotton, Linters, and Regins to Eastern Cities, 93 I. C. C. 453.

(cc) On artificial silk, in carloads, from Roanoke, Va., to Marcus Hook, Pa.; complainant seeks a commodity rate which is the same as that applicable on artificial-silk waste, based on released

value, in lieu of the first-class rate, any quantity based on released value. FOUND: That the first-class rate assailed is not unreasonable and that there is no justification for requiring the same rate on artificial silk as on artificial-silk waste. Artificial silks is a high grade article and the freight charges bear a small ratio to its value and the present rates are not shown to discourage the movement or to impose an undue burden on traffic, which is of a special character between two of complainant's plants. The fact that the rate assailed is an any-quantity rate does not in itself prove that it is unreasonable as applied to carload shipments. U. S. Farm Sales Co., 92 I. C. C. 19. Viscose Co. v. P. R. R. Co., 98 I. C. C. 97.

(dd) First-class any-quantity ratings on cigars in official, southern and western classifications, found unreasonable on carloads to extent it is higher than second class with a carload minimum of 30,000 pounds, which is prescribed as reasonable for future. Tobacco Merchants Asso. of U. S. v. P. R. R. Co., 98 I. C. C. 319.

(ee) Following 73 I. C. C. 396, and other cases cited, proposed cancellation of numerous l. c. l. and any-quantity commodity rates from points in southeastern and Carolina territories to destinations in Mississippi Valley, leaving effective generally higher class rates, found justified, except as to such rates on marble, granite, and stone. This adjustment will place l. c. l. shippers on an equality and at same time correct fourth section departures. Commodity Rates Between Points in Southern Territory, 98 I. C. C. 627.

(ff) First-class rating on barrack bags in official classification found unreasonable to extent it exceeded or exceeds second-class, any quantity, which is prescribed as reasonable rating for future. Charges collected on such shipments from Jeffersonville, Ind., to New York, N. Y., at first-class rate found unreasonable to extent they exceeded those which would have accrued at second-class rate. Opportunity afforded complainant to prove its right to reparation. Triad Corp. v. E. R. R. Co., 100 I. C. C. 402.

(gg) There are probably few, if any, circumstances under which commission would be justified in requiring maintenance or establishment of any-quantity ratings in southern territory. But in eliminating them carriers will err if they proceed on the assumption that in all cases the change should be accomplished by assigning a higher rating to the article when it moves in l. c. l. quantities, allowing the present any-quantity rating to stand as the carload rating without reduction. Southern Class Rate Investigation, 100 I. C. C. 513, 642.

(hh) Any-quantity commodity rate on cotton fabrics or cotton piece goods, in the original piece, from certain points in Maine, New Hampshire, Massachusetts, Rhode Island, and Connecticut to Lynchburg, Va., found unreasonable to extent it exceeded the fourth-class rate contemporaneously in effect and subsequently made applicable from and to the same points. Reparation awarded. Traffic Bureau-Chamber of Commerce v. M. & M. T. Co., 101 I. C. C. 424.

(ii) Complainant attacked any quantity rates charged from Providence, Md., and Wilmington, Del., to Richmond, Va., on printing paper, carloads, as unjust and unreasonable to extent they exceeded 19c. Providence is local to the B. & O. Shipments moved B. & O. to Potomac Yard, Va., and R. F. & P., beyond, 212 miles. Distance from Wilmington to Richmond is 227 miles. Charged 28.5c and 40.5c, any quantity, on shipments in bundles and boxes, respectively. A sixth class rate of 30c was in effect from Wilmington. Sixth class rates apply generally on printing paper from trunk line producing points to Richmond. The class rates from Wilmington to Richmond are the same as those in effect from Philadelphia and represent a group adjustment. Defendants expressed their willingness to cancel the any quantity rates in effect from Providence and to publish in lieu thereof a commodity rate of 30c. HELD, rates attacked unreasonable to extent they exceeded 28.5c reparation awarded. Jessup & Moore Paper Co. v. B. & O. R. R., 112 I. C. C. 174.

(jj) Respondents proposed to increase their all rail rates on cotton fabrics, any quantity, from Monticello, Ark., to Boston, Mass., New York and Philadelphia by cancelling the present joint rates making applicable combinations on Memphis. Monticello is apparently the only point in the southwest from which there are joint all rail rates on cotton fabrics to the Atlantic seaboard cities.

They were established to meet the rail and ocean rates through the Gulf ports from Texas and Oklahoma points to the same destinations. In view of the rates available by rail and ocean routes the proposed rates are practically prohibitive and virtually mean that the all rail lines desire to abandon the traffic to the rail and ocean lines. HELD, proposed schedules justified. Cotton fabrics to Atlantic ports 112 I. C. C. 280.

(kk) Complainant attacked charges on cotton, any quantity, moving interstate during two years prior to Nov. 12, 1924 from stations on the L. & N., south of Montgomery, Ala., concentrated at Montgomery and reshipped to Mobile, Ala., Pensacola, Fla., and New Orleans, La., as unreasonable. L. & N., proposed to increase the rates on cotton, cotton linters and regins from stations south of Montgomery to and including Sanford and Evergreen, Ala., and stations on its Camden branch, concentrated at Montgomery and Selma and reshipped to the ports. No. 16744. Cotton originates on defendants lines south of Montgomery, moving to that point under a concentration and after compression at that point is reshipped to the ports over all or a portion of the rails traversed on the inbound movement. Almost all of this cotton is intended for movement beyond the ports by water in connection with which high density compression is desirable. Under a carriers privilege provision defendant absorbs the charge of 15c for standard compression at Montgomery and for high density compression the shippers pay an additional charge of 7c. The arrangement here considered was voluntarily established for the benefit of Montgomery and is of marked advantage to that point. It is noteworthy that it represents one of the few exceptions to the general practice of defendant to decline to permit transit on cotton where back hauls are necessitated. Under these circumstances any attempt to obtain a lower basis of rates than that ostensibly provided for application in connection with the transit arrangement should be closely scrutinized, and the Commission should not permit such a result unless it is clearly necessitated under a reasonable construction of the terms of the tariff. Such necessity does not exist here. The Commission is of the opinion that the transit tariff sufficiently specified the basis for charges to be used in connection with the transit arrangement and that that specification had the effect of excluding the application of the combination rule. HELD, rates attacked not unreasonable, complaint dismissed. I. & S. docket 2535. Montgomery cotton dealers may go south on defendants line, toward the ports, and buy cotton, which is shipped through the ports via Montgomery with transit at that point under carriers privilege rates, in connection with which defendant absorbs the expense of standard compression at Montgomery. Dealers at the ports may go north on defendants line toward Montgomery and buy cotton, which moves direct to ports uncompressed at the local rates, the compression of which at the ports has no connection with the transportation and is at the shippers expense. The result is that notwithstanding the considerably greater distance via Montgomery than via the direct movement, and the additional service and expense incident to the transit arrangement at Montgomery, dealers can buy cotton at stations south of that point and deliver it compressed at the ports at charges which are actually less in some instances, and only slightly higher in others, than the rates for direct movement from the same points to the ports plus the charge for compression there. While the necessity for back hauls may be regarded as a disability due to the location of these points and may properly be reflected in some difference in rate as compared with points from which no back hauls are necessary, the Commission is of the opinion that disturbance of relations to the extent that would be produced by the proposed rate is not warranted and would result in undue prejudice to points from which the increases are proposed. HELD, suspended schedules not justified. Montgomery Cotton Exchange v. L. & N. R. R. 112 I. C. C. 325.

APPLICATION OF RATES

See Absorption of Charges I; Accounting II, §5; Basing Points and Lines I; Bills of Lading III; Class Rates I; Classification §3½, V; Commodity Rates I, II; Differentials II; Long and Short Hauls III; Minimums I; Proportional Rates I; Released Rates II; Through Routes and Joint Rates §18.

ARBITRATION

(a) A receiver of freight and a carrier submitted a dispute concerning demurrage charges to arbitration by the Interstate Commerce Commission. The Commission ruled against the railroad, which refused to abide by the award. HELD, it was bound and the courts would enforce the agreement. Pennsylvania R. R. v. Tozzi, 207 N. Y. S. 16.

(b) It was no defense to action on arbitration award, made by Interstate Commerce Commission in voluntary proceedings, that oath was not taken by arbitrators or waived, since every security given by arbitrator's oath was afforded by constitutional oaths of individual members of Commission, required by U. S. Comp. St. §3218. Davis v. Rochester Can Co. (Dec. 1924) 207 N. Y. S. 33.

ASSIGNMENTS

See Loss and Damage §5¾; Overcharges (b); Reparation §6 (gg).

ASSOCIATION

See Reparation §6 (hh).

(a) Defendants argue that complaints, filed by traffic bureaus, should be dismissed because of lack of interest on part of complainants, since freight charges are not paid by them or their members. HELD, Such complainants found to have legitimate interest in securing an adjustment of rates that will not prefer other ports over their own. Moreover, section 13 of the act provides that no complaint shall be dismissed because of absence of direct damage to complainant. Charleston Traffic Bureau v. A. G. S. R. R. Co., 89 I. C. C. 501, 502.

(b) Pending a decision on merits of case, members of complainant association did not offer detailed evidence as to particular shipments and payment and bearing of freight charges thereon. Upon further hearing, such details and proof having been submitted by claimant members of association on whose behalf complaint was filed, reparation awarded to basis found reasonable in original report. National Preservers & Fruit Products Asso. v. Director General, 91 I. C. C. 221.

(c) Complaint was filed by associations on behalf of their members, but no evidence was introduced with respect to any shipments made for or in their behalf. Such members, in event shipments were made by them, authorized to file reparation statements under Rule V of Rules of Practice, accompanied by proof in the form of affidavits that shipments were made and unreasonable charges were paid and borne by them, with understanding that if defendants object to proof in affidavit form such shippers may request further hearing with respect to subject of reparation. Houston Cotton Exchange v. A. & R. R. R., 92 I. C. C. 220, 222, 223.

(d) Informal complaint filed within statutory period showed an association as claimant. Formal complaint subsequently filed named a corporation as complainant. Upon contention that informal filing was not on behalf of the corporation, and that claim of latter is barred because first presented in the formal complaint filed after the statutory period had elapsed. FOUND, failure of the association to comply with Rule III (e) of the Rules of Practice which provides that informal complaint contain a statement of the capacity or authority in or by which complaint is made, if recovery is sought on behalf of others than complainant, was not fatal to the corporation's claim, since filing by the association was, in fact, on behalf of the corporation, and for express purpose of tolling the statute. Thaxter & Co. v. Director General, 95 I. C. C. 693, 694, 695.

(e) Complainants and their shipments were identified by reason of the fact that none but members of the Chicago Live Stock Exchange were permitted to do business through the stockyards, participant in the transportation, where all such members were known

and where their shipments were matters of record. Chicago Live Stock Exchange v. A. T. & S. F., 100 I. C. C. 266, 267.

(f) Claimant organization made no shipments in its own name, failed to name as cocomplainants any of its members, and complaint filed by it does not state definitely on whose behalf reparation is sought. None of its members intervened at the hearing, although several manufacturers and dealers offered testimony, general in character, with respect to sources of their competition and their business methods in payment of freight charges. Their evidence, however in view of defects in pleadings, can not be regarded as constituting valid claims for damages or reparation. Northeast Mississippi Traffic Bureau v. A. & V., 102 I. C. C. 611, 616.

ASSORTING PACKAGES

See Additional Charges and Services; Proportional Rates IV.

AUTOMATIC TRAIN CONTROL

(a) Following investigation made under section 26 of the act, automatic train-stop system of the Miller Train Control Corporation installed on Chicago Division of C. & E. I. Ry., and as a result of inspection and test thereof, the installation found to meet requirements of commission's specifications and order in original case, Automatic Train-Control Devices, 69 I. C. C. 258, and is therefore approved, with certain exceptions which have been called to carrier's attention with instructions as to corrections to be made in certain specific respects. In the Matter of Automatic Train-Control Devices, 96 I. C. C. 345.

(b) This report is made after inspection and test of the automatic train control system of the Union Switch & Signal Company on the Shenandoah division of the Norfolk & Western Ry. The installation inspected and tested was completed on Nov. 10, 1924 and placed in service Feb. 15, 1925. It extends from the south end of Shenandoah passenger station to the northward two arm interlocker signal at the Hagerstown Junction interlocker, a distance of 106.1 miles. This portion of the division is single track. There are 41 locomotives equipped with the device. HELD, it was found that the installation meets the requirements of the specifications of the Commission with certain exceptions to which the attention of the officials of the N. & W., was called. Automatic train control devices 107 I. C. C. 65.

(c) This report is made after inspection and test of the automatic train stop system of the Sprague Safety Control & Signal Corporation on the Creston division of the Burlington in Dec. 1924. The installation inspected and tested was completed on July 14, 1925. It extends from Creston, Iowa, to Pacific Junction, Iowa, a distance of 82.1 miles, of which 24.4 miles is single track and 57.7 miles double track. HELD, with a few exceptions the device was approved. Automatic Train Control devices 107 I. C. C. 367.

(d) O. W. R. R. & N., and D. L. & W., petitioned to reopen Automatic Train Control Devices, 101 I. C. C. 487, 496, L. & N., and N. & W. and Atlantic City R. R., intervened, question being that whether "provision must be made requiring enginemen to acknowledge at succeeding stop signals" is in accordance with 69 I. C. C. 258, 280. This requirement was made so that in no case would it be possible for an engineman to pass a stop indication point without taking action to show that he was alert by forestalling an automatic brake application, or, in other words, acknowledging that he knew that he had received a stop indication. The devices under consideration give a continuous visual indication of danger condition, and if the locomotive is permitted to exceed the low speed maximum, the device will cause an automatic application of the brakes, which will bring the train to a stop. HELD, provision eliminated. Automatic Train control devices 109 I. C. C. 66.

(e) The report is made after inspection and test of the two speed continuous induction train control system of the Union Switch & Signal Co. on the fourth subdivision of the Wyoming division of the Union Pacific. The installation inspected and tested was completed on June 1, 1925. It extends from Sidney to Cheyenne, Neb., a distance of 102 miles of double track. HELD, with certain suggestions the apparatus meets the requirements of 69 I. C. C. 258. Automatic Train Control Devices 109 I. C. C. 147.

(f) This report is made after inspection and test of the automatic train stop system of the National Safety Appliance Co. on the Central Kansas division of the Missouri Pacific. This device was first placed in service for test purposes on the M. P., in August 1923 at the grade crossing of the Frisco and K. C. S., at Hytex with five equipped locomotives in regular service. In August 1924 a 20 mile single track test section was completed between Leeds, Mo., and Stillwell, Kas. The installation now inspected and tested was completed on July 3, 1925. It extends from Leeds, Mo., to Osawatomie, Kas., distance 50 miles, single track. HELD, M. P., is expected promptly and currently to inform the Commission as to the progress made in conforming to the requirements prescribed. Automatic Train Control devices 109 I. C. C. 199.

(g) This report is made after inspection and test of the automatic train control system of the Union Switch & Signal Co. on the Atlantic City Railroad of the Reading Company. The installation inspected and tested was completed on Dec. 31, 1924 and placed in regular service April 1, 1925. It extends from Camden, N. J., to Atlantic City a distance of 55.5 miles of which 52.6 miles is double track and 2.6 miles three track. There are 52 locomotives equipped with the device. HELD, except for certain recommendations the device is approved. Automatic train control devices 109 I. C. C. 667.

(h) This report is made after inspection and test of the automatic train control system of the Union Switch & Signal Co. on the New Jersey Southern division of the Jersey Central. The installation inspected and tested was completed on Oct. 28, 1925. It extends from Red Bank, N. J., to Winslow Junction, N. J., a distance of 65.5 miles single track. There are 30 locomotives equipped. HELD, except for certain recommendations device approved. Automatic Train Control devices 109 I. C. C. 680.

AUTOMOBILES

See Act to Regulate Commerce I (g).

(a) Laws 1923, c. 154, regulating passenger traffic by automobiles, of which section 10 provides that the act shall not apply to commerce among the states, except as permitted by the Constitution of the United States and the acts of Congress, applies to interstate commerce so far as the Constitution and the acts of Congress permit. Interstate Transit Co. v. Derr Co. (Mont. 1924), 228 Pac. 624.

(b) A motor truck, owned by a resident of Wisconsin, and used in commercial freighting on a time schedule and over a regular route between points in Wisconsin and points in Minnesota, is subject to the motor vehicle tax imposed by chapter 418, L. 1923. State v. Oligney (Minn. 1925), 202 N. W. 893.

(c) Motor vehicle tax, imposed by Laws 1923, 418, on motor trucks used in interstate commerce, is not contrary to Const. U. S. art. 1, §8, giving Congress power to regulate interstate commerce. State v. Oligney (Minn. 1925), 202 N. W. 893.

(d) Motor vehicle tax, imposed by Laws 1923, c. 418, on motor trucks used in interstate commerce, does not violate Const. U. S. art. 1, §8, giving Congress power to establish post offices and post roads. State v. Oligney (Minn. 1925) 202 N. W. 893.

(e) Motor vehicle tax, imposed by Laws 1923, c. 418, on motor trucks used in interstate commerce, is not unconstitutional as denying due process of law, or equal protection of laws or abridging privileges or immunities of citizens of United States, contrary to Fourteenth Amendment. State v. Oligney (Minn. 1925), 202 N. W. 893.

(f) Motor vehicle Tax Law does not, in attempting to impose tax on foreign motor vehicles, violate Constitutions of either United States or state of Minnesota. State v. Oligney (Minn. 1925), 202 N. W. 893.

(g) That proposed compulsory motor vehicle insurance act did not exempt from its operation motor vehicles or trailers, engaged wholly or in part in interstate commerce, HELD insufficient to render it unconstitutional, if enacted. In Re Opinion of the Justices (Mass. 1925) 147 N. E. 681.

(h) Contention that attempt to require operator of auto stage in interstate commerce, to obtain certificate of convenience, under St. 1917, p. 333, § 5, would constitute the imposition of a burden on interstate commerce, is a question arising under federal Constitution

and laws as to which the decisions of the Supreme Court of the United States is the ultimate authority. People v. Yahne (Calif. 1925) 235 Pac. 50.

BAGGAGE SERVICE

See Distance Rates §3 (4q); Express Companies §10 (t); Mails (n); Passenger Fares and Facilities §10 (c) (d) (e).

BARGE SERVICE.

See Water Carriers §6½.

(a) Proposed rule requiring shippers on water front in Norfolk, Va., harbor, to load l. c. l. freight on carriers' barges for outbound movement found not justified. Present rates on l. c. l. freight from Norfolk were made to include this service, and it would be unfair to shippers to require them to assume entire burden and still pay carriers for doing work. Loading of L. C. L. Freight, 91 I. C. C. 394.

(b) Carriers compare barge service on water front in Norfolk, Va., harbor with trap-car service on belt lines at that point and insist that the two services are similar. In trap-car service shippers are required to perform initial loading and it is carriers' contention that there is no reason why shippers on water front should be accorded special privilege of having their freight loaded for them onto carriers' barges. HELD: This contention is not convincing. Shippers accorded trap-car service can not use barge service and those accorded barge service can not use trap cars. There can be no discrimination since services rendered are dissimilar. Loading of L. C. L. Freight, 91 I. C. C. 394, 396.

(c) Upon further hearing, original report 77 I. C. C. 317, basis of just, reasonable, and equitable divisions of joint rail-barge-rail-rates on sugar from points in Louisiana to northern destinations prescribed. U. S. War Dept. v. A. & S. Ry., 92 I. C. C. 528.

(d) Upon further hearing, original report 77 I. C. C. 317, FOUND: That establishment of additional through routes and joint rail-barge-rail rates on sugar from points in Louisiana to points in c. f. a. territory east of Indiana-Illinois line, Kentucky, Tennessee, northern Arkansas, northern Kansas, Missouri, Nebraska, and the Dakotas, is desirable in the public interest. Rates and basis of divisions prescribed. U. S. War Dept. v. A. & S. Ry., 92 I. C. C. 528,

(e) No rail-barge-rail route should be established where portion of such route exceeds two-thirds of distance from point of origin to destination over most direct all-rail route, nor where all-rail distance via two ports of interchange exceeds by more than one-third the most direct all-rail route. U. S. War Dept. v. A. S. Ry., 92 I. C. C. 528, 551.

(f) Where connecting rail lines participate in all-rail through routes and joint rates in which intermediate rail carriers operating between a barge line's ports also participate, the commission has power to require establishment of a through route in connection with the barge line and to prescribe a joint rail-barge-rail rate which is differentially lower than the corresponding all-rail rate, provided the differential fairly reflects the lower cost and value of the barge line's service. U. S. War Dept. v. A. & S. Ry., 92 I. C. C. 528, 547.

(g) The Mississippi-Warrior River barge line is owned and operated by the Government "not necessarily as a permanent governmental undertaking, but to test possibilities of transportation by barge upon inland waterways." In view of this experimental status factor of financial weakness ought not to be given weight in fixing divisions. The barge line is not, as yet, an established part of the National transportation system upon which communities are dependent, and it furnishes no service where means of transportation would otherwise not exist. It is rather a supplement to the rail service, which, it is hoped, will add to and render more nearly adequate the sum total of transportation facilities. According weight to factor of financial weakness, under such circumstances, would end to cloud results of the experi-

ment. U. S. War Dept. v. A. & S. Ry., 92 I. C. C. 528, 536.

(h) Upon complaint, the N. Y. C. ordered to furnish transportation service between the Erie Basin barge-canal public terminals, Buffalo, and points located on its line and lines of its connections, and perform upon terminal tracks the operating service necessary to an interchange of traffic with barge-canal lines at the terminal, all with motive power and other equipment of the N. Y. C., the services to embrace all traffic, interstate and intrastate, that may be transported to or from the terminal over that rail carrier's line. State of N. Y. v. N. Y. C., 95 I. C. C. 119.

(i) Rates from New Albany to other points in Indiana on bituminous coal originating in Kentucky and West Virginia and barged to New Albany down the Ohio River, found unreasonable as compared with rates from Cincinnati, a competing point shipping to the same destinations and to which traffic moves under similar transportation conditions. Moreover, rates for the short intrastate movement are on too high a level as compared with intrastate rates on bituminous coal prescribed by the commission in 66 I. C. C. 338, and numerous other cases. Reasonable distance scale of rates prescribed for the future. Slider v. B. & O., 96 I. C. C. 65.

(j) On further consideration, reasonable divisions of joint barge-and-rail rates on traffic handled jointly by Warrior River Barge Line and L. & N., including transit arrangements and terminal service, between New Orleans, La., and Mobile, Ala., on one hand, and inland points on L. & N., on other hand, interchanged with the latter at Mobile, Tuscaloosa, or Birmingham, Ala., prescribed. U. S. War Dept. v. A. & S. Ry. Co., 100 I. C. C. 491.

(k) Special proposal of Warrior River Service Barge Line, which is fully outlined, for division of joint class rates on traffic through the port of Birmingport, Ala., interchanged with L. & N. at Birmingham, Ala., believed to be fair, and will result in just, reasonable, and equitable divisions to the barge line and its intermediate rail connections, on one hand, and to L. & N. on other. U. S. War Dept., v. A. & S. Ry. Co., 100 I. C. C. 491, 506, 507.

(l) Basis for divisions found reasonable is predicated on the understanding that joint barge-and-rail rates are to be made differentially under the all-rail rates in an amount, generally speaking, not to exceed 20 per cent of the port-to-port rates. U. S. War Dept., v. A. & S. Ry. Co., 100 I. C. C. 491, 510.

I. APPLICATION.

See Application of Rates.

§1. In General.

(a) A locality has no inherent right to demand that rates break thereon. Helena Traffic Bureau v. M. P. R. R., 89 I. C. C. 405, 415.

(b) When an article is produced in two separate classification territories and there is competitive interterritorial distribution of the article, the base rates should be the same in opposite directions. See Houston Packing Co., 37 I. C. 584. Salt Cases of 1923, 92 I. C. C. 388, 422, 423.

(c) At many points sugar is sold on basis of lowest rate from nearest cane refinery, and to meet this competition other refineries must absorb the difference in freight rates. Sugar from Macon Territory, 92 I. C. C. 275, 276.

(d) The present method of making rates on the Jacksonville combination to and from the Florida peninsula is merely an arbitrary device for enhancing revenue. Commission is of the opinion that rates to and from points in Florida pen-

insula for the present may well be on a somewhat higher level than in other parts of southern territory. Southern Class Rate Investigation, 100 I. C. C. 513, 624, 625.

II. ESTABLISHMENT

§2. In General.

(a) Memphis, Tenn., is a rate-breaking point because it is connected with the important grain regions of the country by numerous powerful trunk lines. Helena Traffic Bureau v. M. P. R. R. Co., 89 I. C. C. 405, 415.

(b) Complainant attacked commodity rates charged on iron pipe and oil well supplies from Pittsburgh, Pa., to Drumright and Oilton, Okla., between May 25, 1920 and May 22, 1922, as unreasonable and unduly prejudicial. Oilton is 5.5 miles north of Frey. Drumright is 2.6 miles south of Frey on a spur. Shipments all moved through Cushing. The rates to that point, except from Memphis, were the same as to Jennings. The rates charged were made by adding to commodity rates to Jennings class A differentials on the shipment of gas engines and fifth class differentials on the other shipments. When the Santa Fe took over the line it provided that all traffic to or from points thereon should be routed through Cushing in order to secure to it a longer haul than if routed through Jennings. The rates were made differentials over Jennings because on much traffic the rates to Jennings were lower than to Cushing. Rates to Jennings and Cushing from Pittsburgh and other northern points were applicable to a large rate group, including southern Kansas, most of Oklahoma, and northern Texas; Drumright and Oilton, are within these group areas. To destination on other branch lines within these groups having much lighter traffic density than this branch no differentials were added to the main line rates. HELD, rates attacked unreasonable to extent they exceeded rates to Cushing, reparation awarded. Prairie Oil & Gas Co. v. A. T. & S. F. Ry. 91 I. C. C. 37.

(c) Complainant attacked commodity rates charged on lumber, carloads from Flinn, Va., to destinations in central trunk line and New England territories as unreasonable and unduly prejudicial. Flinn is on the branch of the C. & O., extending in a northeasterly direction from Covington, Va., the junction with the main line, to Virginia Hot Springs, Va. Complainants contention is that rates from Flinn as compared with rates from Potts Creek branch and Greenbrier division as unreasonable and unduly prejudicial. Stations on the Flinn branch 24.7 miles long are grouped for rate making purposes, and are accorded rates somewhat higher than those from Covington. Stations on the Potts Creek branch generally take higher commodity rates on lumber than Covington, but the difference in rates are generally less. From the Greenbrier division commodity rates on lumber to the east are made 1c higher than rates from the main line junction, and rates to the west are made the same as those from the main line junction. On classes and commodities generally Greenbrier division points take rates the same as those applying at the junction with the main line. HELD, rates attacked not unreasonable but are unduly prejudicial to extent they exceeded rates applicable from points on the Greenbrier division, reparation denied as complainant has not shown it has been damaged. Freehold Lumber Co. v. C. & O. Ry., 92 I. C. C. 699.

(de) When practical rates through important grain markets should break into definitely known inbound and outbound components. Grain from western trunk lines, 100 I. C. C. 745, 748.

(f) Joplin, Mo., originally the key point for spelter rates, has ceased to be a smelter point. Spelter from this territory is sold on the East St. Louis basis; that is, regardless of destination purchaser deducts from invoice price freight charges on basis of the rate from origin to East St. Louis. Spelter from Arkansas, 92 I. C. C. 136, 137.

(g) The commission has consistently refused to extend the rate-breaking system to communities which alleged that they were unduly prejudiced because of rate breaks at other points with which they competed. Sioux City Terminal Elevator Co., 23 I. C. C. 98, 27 I. C. C. 457, and other cited cases. Mississippi R. R. Comm. v. A. & V., 93 I. C. C. 435, 444.

(h) The Commission has in several recent rate cases condemned, expressly or in effect, the practice of basing interterritorial rates upon the combination of local rates to and from border points. Caruso & Co. v. C. & E. I. Ry. 102 I. C. C. 619, 621.

(i) Complainant attacked class rates charged on eight cars of automobiles shipped between Jan. 17 and Nov. 19, 1922 from Omaha, Neb., to Roswell, N. M., as unreasonable. Roswell is on the Santa Fe 108.5 miles south of Clovis, N. M., the junction with the main line of that carrier. Shipments moved to Kansas City over either the Rock Island, M. P., and beyond that point over Santa Fe, charged first class rate of $3.335 prior to July 1, 1922 and $3 thereafter applicable from Omaha to Deming, N. M. The fair and reasonable conclusion to be drawn from the tariff is that branch line points, including Roswell, were placed upon the main line basis only in connection with the alternate application of the rates to Deming. HELD, rates attacked applicable and not unreasonable, complaint dismissed. Roswell Auto Co. v. A. T. & S. F. Ry. 107 I. C. C. 555.

(j) Respondents proposed to change their rates on fresh meats and packing house products from western trunk line territory to points in Arkansas, western Louisiana and southern Missouri. In many instances the proposed rates reflect the present differentials over Kansas City or St. Louis, but in others the differentials would be increased. It is this disturbance of relationships as among the packing centers in western trunk line territory that is the principal ground for protest. From Omaha the differentials proposed are 14c on fresh meats and 9c on packing house products over the rates from Kansas City. From Mason City, a northern Iowa point, the present differential on fresh meats is generally 26c, although in a few instances it is 32.5c over St. Louis, whereas the differential on packing house products is generally 14.5c, a differential of 15.5c applying to a few points in Louisiana. No change is proposed in the differentials on fresh meats, but on packing house products a uniform differential of 16c is proposed. This appears excessive and should not exceed 14.5c. HELD, proposed schedules justified, except from Mason City. Fresh meat and packing house products 109 I. C. C. 95.

(k) Respondents proposed transcontinental rates on lumber, carloads, from western producing points to Manchester and Ripley, O., 5c higher than the group bases applicable to Trinity and South Ripley, Ky. Territory of origin comprises groups in California, Nevada, Oregon, Washington and other western states. One of these is reflected in connection with the present and proposed rates from the group which embraces most of California, south coast. Other rate situation is reflected in connection with rates from north coast. Ripley and Manchester are situated on the north bank of the Ohio river. They are not on the rails of any carrier. Both points are named in the C. & O., list of stations. C. & O., operates ferries between South Ripley, Ky., and Ripley and between Trinity, Ky., and Manchester. The schedules under suspension provide that the proposed rates shall apply only via Trinity, Ky. Applicable rate is 88.5c, proposed basis would make rate of 93.5c to Ripley and Manchester from south coast. At present a joint rate is not named from the north coast to Ripley and Manchester, and combination of 95c based on East St. Louis applies to those points. Rate of 88.5c is applicable from north coast to South Ripley and Trinity. Proposed basis would make a through rate of 93.5c to Ripley and Manchester, or increase of 5c from south coast to Ripley and Manchester and reduction of 1.5c in the rate from the north coast to those points. HELD, proposed rates not justified, rates to Ripley and Manchester unduly prejudicial to extent they exceed rates on basis of rate basis 12 from north coast. Lumber from Pacific coast points 109 I. C. C. 140.

ALL OTHER CITATIONS

North Carolina Pine Asso. v. A. C. L. R. R. Co., 85 I. C. C. 270; Grate Bars to Memphis, 88 I. C. C. 701.

III. REASONABLENESS.

See Blanket Rates §13 (b); Discrimination; Reasonableness of Rates.

§3. In General.

(a) Complainant attacked commodity and class rates charged on carbon black, carloads, since April 1, 1921 from Lem, Ky., to Akron, O., as unjust and unreasonable and unduly preferential of Elk View, Turner, W. Va., and Akron, O. Lem is on the C. & O., 9.4 miles from Beaver Creek Junction and 93.6 miles from Catlettsburg. Usual route of movement from Lem to Akron is over the C. & O., to Columbus, O., and Pennsylvania beyond, 353 miles. Carbon black, carloads, is rated fourth class.

Prior to August 1, 1922 there was no commodity rate and fourth class rates were paid. On that date a commodity rate of 54.5c was established by the Pennsylvania was not shown as a party until May 10, 1923. The rate from St. Paul, a point beyond Lem was 60c which applies as a maximum from Lem. The establishment of a commodity rate from Lem to Akron was considered by the carriers prior to July 1, 1922 and it was agreed that the rate should be made by adding to the Elk View rate the difference between the fourth class rates to Akron from Elk View and Lem, subject to any reduction the Commission might order, which would make 60.5c. HELD, rates attacked unreasonable to extent they exceeded 60.5c prior to July 1, 1922 and 54.5c thereafter to August 1, 1922, reparation awarded. Goodyear Tire & Rubber Company v. A. C. & Y. Ry., 89 I. C. C. 401.

(b) Combination rates on cottonseed cake and meal from Texas common points to points in eastern trunk-line and New England territories intermediate to and ordinarily grouped with New York, N. Y., Boston, Mass., and other eastern basing points, found unreasonable to the extent they exceeded joint rates from Texas common points to such basing points. Originally joint rates reflect lowest combinations, but carriers failed to revise them so as to reflect changes brought about following Increased Rates, 1920, 58 I. C. C. 220. Moreover, it has been the custom of defendants to publish joint commodity rates lower than combinations on all commodities moving in large volume. Reparation awarded. Larrowe Milling Co. v. A., T. & S. F. Ry. Co., 89 I. C. C. 439.

(c) Complainant attacked commodity rates charged on various materials used less carloads, shipped from points in mine construction, in carloads and the Pittsburgh, Pa., district to Lynch, Ky., between May 1918 and August 1, 1919, as unreasonable, unjustly discriminatory and unduly prejudicial to extent they exceeded rates to Benham, Ky., subsequently established to Lynch. Up to May, 1918, Benham was the end of a branch of the L. & N. At that time complainant built an extension of the track 1.25 miles beyond Benham to a point called Lynch, opened a coal mine there, the L. & N., operating over the extension. Benham rates were seasonably made applicable to Lynch. HELD, rates attacked unreasonable to extent it exceeded rates to Benham, reparation awarded. U. S. Coal & Coke Company v. Director General 91 I. C. C. 6.

(d) Complainant attacked commodity rates on cypress lumber, carloads, from Hebardville, Hopkins, and Waycross, Ga., to southeast and northwest as unreasonable and unduly prejudicial. The Waycross & Southern extends 20 miles from Hopkins north to Hebardville, connecting at Waycross 2 miles from Hebardville with the A. B. & A., and A. C. L. With few exceptions through routes and joint rates are maintained from Hebardville and Hopkins to the same extent as from Waycross. Rates from Hopkinsville and Hebardville are equal, and are ordinarily from 1 to 2c higher than from Waycross. Complainant ships under a milling in transit arrangement under which the logs are transported from Hopkinsville to Hebardville and the lumber beyond at the through rates. So radical change as desired by complainants in a distance tariff would not properly be adopted upon a record of this limited and comparatively narrow scope. This record affords no basis for disturbing the conclusions reached in 85 I. C. C. 270. Rates between particular points or sections in the southeast have been established from time to time under the influence of competitive conditions existing between producers and markets, between rail lines, and between rail and water lines, and of relatively low bases required by State authorities on intrastate traffic, without especial regard to the maintenance of a generally harmonious and consistent rate structure. To central territory Waycross is grouped with main line stations, embracing the entire Georgia territory south of Macon and including Jacksonville. Rates from Hebardville and Hopkinsville are from 1 to 1.5c higher than from Waycross. The Commission is unable to approve a wholesale disruption of the present group adjustment upon the present record. The record contains no satisfactory justification for the extensive blanketing of the rates from the points of origin here under consideration to the Virginia cities back over substantially the entire state of North Carolina, nor for the material spread between rates to points on either side of the North Carolina-South Carolina state line; nor for the

spread between the rates from these points and Varnville to the Virginia cities; nor for the existing difference in the level between the rates from these points to destinations in South Carolina and Florida on the one hand and the intrastate rates on the other. The Carolinas and Florida, the carriers have expressed willingness to work out a more consistent adjustment and they will be permitted to do so. Hebard Cypress Co. v. A. & R. R. R. 91 I. C. C. 343.

(e) Respondents proposed to increase the class and commodity rates from El Paso, Tex., points in eastern transcontinental groups, and points in California, Oregon, Washington, Nevada and Utah to Mesa, Ariz. Respondents proposed the suspended rates to comply with the order in 81 I. C. C. 134. Prior to this decision most of the rates to points on the Globe division were made by combination on Bowie, Ariz., the junction of the Arizona Eastern with the main line of the S. P., or by adding arbitraries somewhat lower than the local rates from Bowie to the rates to that point, while, generally speaking, the rates to Mesa and Phoenix were and are the same as those to Maricopa, Ariz., the junction of the Phoenix division of the A. E., with the S. P. The junction points rates were likewise applied at Nogales in numerous instances, but not to the same extent as at Phoenix or Mesa. Mesa. The rates to Mesa and Phoenix were originally made by adding arbitraries, or local rates from Maricopa, to the rates to that point. As early as 1904 the arbitraries or local rates to Mesa were in most instances practically the same as those to Phoenix, and since 1904 the rates to both points have been reduced to the Maricopa basis. Thus Mesa and Phoenix have had practically the same rates for at least 20 years. Rates to points on the Globe division have always been relatively higher than those to Mesa and Phoenix. Nogales, 66 miles south of Tuscon, Ariz., is located on the international border between the United States and Mexico and is served by a line of the S. P., extending south from Tuscon and the S. P., of Mexico. The rates to Nogales under the adjustment resulting from the findings in 13139, supra, became effective Dec. 11, 1923. If the Commission should modify its findings affecting rates to Nogales, the carriers propose to continue the reduced rates to that point resulting from the adjustment of Dec. 11, 1923 and to reduce the increased rates which became effective on that date to their former basis. The record on further hearing now shows that the circumstances and conditions surrounding the transportation to Mesa and Nogales are not wholly comparable with those in connection with the transportation to points on the Globe division and are so different as to warrant the finding that relatively lower rates to Mesa and Nogales than to points on the Globe division does not cause undue prejudice or preference. HELD, suspended schedules not justified. HELD, further, maintenance of class and commodity rates from points in California, Oregon, Washington and eastern transcontinental groups to Mesa and Nogales, Ariz., relatively lower than those to points on the Globe division of the Arizona Eastern does not unduly prefer Mesa and Nogales or result in undue prejudice to points on the Globe division. Class and commodity rates to Mesa, 92 I. C. C. 512.

(f) Complainant attacked commodity rates charged on yellow pine timber, lumber, and other forest products, carloads from Frost and Verdun, La., to New England, trunk line, central, and western trunk line territories, and in Oklahoma, Texas, Kentucky, and Tennessee as unreasonable, unjustly discriminatory and unduly prejudicial. Frost and Verdun are local points on the Garyville Northern, 7 and 11 miles, south of Livingston, La. The G. N., extends 35 miles from Livingston, its northern terminus and junction with the Y. & M. V., south through Frost and Verdun to Garyville, La., its southern terminus and junction with the Y. & M. V., and L. R. & N. The joint rates attacked are constructed by adding certain differentials to the rates from Livingston. On Jan. 5, 1922, subsequent to the hearing, the differentials from Frost & Verdun were made the same and reduced to 2.5c where the rates from Livingston exceeded 32c and to 3.5c where the rate was 32c or less. The lumber rates from Garyville are the same as those from Livingston to Ohio river crossings and beyond, being the group rates applicable on yellow pine lumber from certain short line points and all trunk line points east of the Mississippi river and south of Vicksburg, Jackson and Meridian, Miss. The M. & O., and certain other carriers

extend the group rates to mills on their independent short line connections. The practice of the trunk lines of applying practically the same rate from the vast majority of southern milling points has the effect of making a blanket of this southern territory. The I. C., does not extend the group basis to its seven short line connections other than the Garyville Northern. The differentials over the junction point rates, applicable to shipments from points on those short lines, vary from 1 to 3c. The G. N., participates in the joint group rates from Garyville. HELD, rates attacked from Frost unreasonable to extent they exceeded the rates from Livingston: to Tennessee and Kentucky other than Ohio river crossings, 2.5c; to other destination 2c, reparation awarded. HELD, further, rates attacked from Frost and Verdun to destinations covered by complaint to which the rates are blanketed from points producing yellow pine on the I. C., south of Jackson and Vicksburg and on the L. R. & N., east of the Mississippi river, unduly prejudicial to extent they exceeded the blanket rates maintained from Livingston and Garyville. Fleming Bros. v. G. N. Ry., 92 I. C. C. 582.

(g) Complainant attacked class and commodity rates from all territories to Virginia, Minn., as unreasonable, unjust, unjustly discriminatory and unduly prejudicial as compared with rates to Duluth, Minn. Virginia is served by four railroads each of which also serve Duluth, distances from Duluth being via D. M. & N., 73 miles, via D. W. & P., 78 miles, via D. & I. R., 92 miles, via G. N. 111 miles. Class and commodity rates from all points in western trunk line, central and trunk line territories are made by using the aggregate of intermediates through Duluth. The rates to Duluth are either class or commodity rates and the rates from Duluth to Virginia are the Minnesota intrastate class rates for a distance of 73 miles. The Commission is asked in this case to order a readjustment of the entire rate structure to Virginia which would necessarily entail a similar readjustment at Hibbing and perhaps other points in the iron range territory. Complainants evidence consists largely of a showing of percentages of rates, distances, and ton mile earnings as between Duluth and Virginia. The results shown are more or less inherent in any basis of rates constructed on a combination basis. The only undue preference complained of is that alleged in favor of Duluth. The location of Duluth at the head of the lakes, as the principal gateway of lake and rail traffic has brought about a competitive rate situation at that point which is not applicable to Virginia. HELD, class and commodity rates, except those from California not unreasonable or unduly prejudicial. HELD, further, rates attacked from California, class and commodity, to Virginia are unreasonable and unduly prejudicial to extent they exceed rates to Duluth. Virginia Chamber of Commerce v. A. T. & S. F. Ry., 92 I. C. C. 722.

(h) Complainant attacked class rates charged on solvent naptha between January and December 1922 from Minnequa, Colo., to Johannesburg, Calif., as unreasonable, unjustly discriminatory and unduly prejudicial. Applicable third class which prior to July 1, 1922 was $2.97 and thereafter $2.675. Distance 1,225 miles. Johannesburg, the terminus of a branch line, is 29 miles from Kramer, Calif., the junction with the Santa Fe. Complainant sought benefit of carload rate on petroleum naphtha to Kramer, the junction point. An arbitrary is also applied to the rates on petroleum naphtha. HELD, rates attacked not unreasonable or otherwise unlawful, complaint dismissed. California Rand Silver v. C. & W. Ry., 93 I. C. C. 197.

(i) Complainant attacked commodity rates charged on agricultural implement, sleigh, and vehicle material, from Fort Smith, Ark., after March 18, 1922 to Boise, Ida., and other points in Idaho, Oregon and Montana as unreasonable and unduly prejudicial. The basis of the complaint is defendants failure to accord Fort Smith the Group 1, Mississippi river, basis of rates which applies from Alton East St. Louis and Quincy, Ill., Burlington, Fort Madison, Keokuk and Montrose, Iowa, and Canton, Hannibal, Louisiana and St. Louis, Mo. To Boise the present commodity rate from these points is 91.5c, representing a rate of $1.015 reduced by the general reduction of 1922. HELD, rate attacked unreasonable to extent it exceeded the rate from St. Louis, reparation awarded. Fort Smith Rim & Bow Co. v. K. C. S. Ry., 95 I. C. C. 1.

(j) Complainant attacked combina-

tion rates charged on lumber in carloads from Knoxo and Kokomo, Miss., to Illinois, Indiana, Michigan, Kentucky, Ohio and Missouri as unjust and unreasonable to extent they exceeded rates from Fernwood, Tylerton and Foxworth, Miss. Knoxo and Kokomo are small lumber producing points on the F. C. & G., and east and west short line in south central Mississippi connecting with the north and south lines of the I. C., at Fernwood, the N. O. G. N., at Tylertown and Foxworth and the G. & S. I., at Columbia, Miss. The present rates from Knoxo and Kokomo are and since Feb. 1, 1924 have been the same as the rates from the junctions. Prior to that time the rates from these points were arbitraries over the junctions. HELD, rates attacked not unreasonable, complaint dismissed. Stanley Lumber Co. v. A. & V. Ry., 100 I. C. C. 249.

(k) Complainant attacked combination commodity rates charged on coal, carloads, from mines on the Indian Creek Valley Ry., which connects with the B. & O., at Indian Creek, Pa., to eastern and New England destinations as unduly prejudicial. Rates not in excess of those maintained from mines in the Meyersdale region are asked. In 30 I. C. C. 32 the Commission approved rates from points on the Valley Ry. to eastern destinations, based on a differential of 10c over the Meyersdale group rates. In 81 I. C. C. 251 the Commission found that the rates from Melcroft to Baltimore, Philadelphia and other points on the B. & O., taking the same rates, for local track delivery, and to Baltimore for transshipment to barges for local harbor delivery as unduly prejudicial to extent they exceeded rates on like traffic from the Meyersdale region of that carrier to the same destinations. In complying with the order the Valley Ry. and B. & O., the only defendants, established the Meyersdale basis from all points on the initial line referred to and the rates herein attacked are uniformly 10c higher than the Meyersdale group rate, except where such group rate is observed on traffic delivered on B. & O., rails. The record establishes that the rates from the Cumberland-Piedmont and Meyersdale regions to the destinations here considered are depressed to meet the rates applying over the Pennsylvania and its connection from the Clearfield region; also that while coal operations on the Valley Ry. are of comparatively recent origin the present rate relationships are between the various regions are of long standing. HELD, adjustment attacked not unduly prejudicial and complaint will be dismissed. Indian Creek Coal & Coke Co. v. A. C. R. R., 100 I. C. C. 375.

(l) The commission has consistently refused to extend the rate-breaking system to communities which alleged that they were unduly prejudiced because of rate breaks at other points with which they competed. Sioux City Terminal Elevator Co., 23 I. C. C. 98, 27 I. C. C. 457, and other cited cases. Mississippi R. R. Comm. v. A. & V., 93 I. C. C. 435, 444.

(m) Contention of defendants that basis of making rates upon combination should in no event be disturbed not sustained. Indiana State Chamber of Commerce v. A., T. & S. F., 96 I. C. C. 485, 495.

(n) Complainant attacked rates on bar iron, including angle and channel bar, carloads and less carloads, from Knoxville, Tenn., to destinations on the L. & N., in Louisville and Kentucky, and to Ohio and Mississippi river crossings and points in central territory as unreasonable, unjustly discriminatory, unduly prejudicial and in violation of the fourth section. Complainant attacked as unreasonable, unjustly discriminatory and unduly prejudicial rates on bar iron, carloads, from Knoxville to points on the Ohio & Kentucky Ry. in Kentucky. The bar iron that complainant manufactures is unfinished or semifinished and is used mostly in the manufacture of wagons, agricultural implements and the like. It moves in carloads at commodity rates applying on special iron, which includes a large variety of rough semifinished articles. The separation and rerating of articles included in the special iron list, if it properly should be done at all, presents many intricate and difficult problems which deserve much more adequate study and consideration than is possible upon present record. Less carloads ordinarily move at sixth class rates. Class rates from and to the points under consideration will be determined in 100 I. C. C. 513 and when they become effective will adequately dispose of the present controversy in so far as less carload rates are concerned. On July 1, 1923 there was a general readjustment of rates on manufactured iron and steel

articles between points in the south to bring about an adjustment on fourth section principles. Prior to that time the rates reflected the well known basing point system under which radical departures from the long and short-haul provisions of the fourth section obtained. Prior to July 1, 1923 the Knoxville rates were 17c on bar iron and 21.5c on angle and channel bars to Louisville and Cincinnati. The rates to local and junction points south of the river were much higher in nearly all instances. Under the readjustment of that date the 29c rate established to Louisville and Cincinnati were blanketed back along the L. & N., main line, and on various branches, to within about 100 miles of Knoxville, and then graded down. It is this situation which gives rise to complainants dissatisfaction with the carload rates to the L. & N., local points. L. & N., now proposed a new adjustment grading up northbound from Knoxville so as to reach the 29c rate at a distance of about 200 miles, which rate is blanketed the balance of the way to the river, with corresponding readjustment of branch line rates. HELD, rates attacked, when modified in accordance with defendants proposals, will not be unreasonable, unjustly discriminatory or unduly prejudical. Shipments in 16247 moved over L. & N., to O. & K. Jct., Ky., and O. & K. Ry. beyond, charged 65.5c made up of 29c to Winchester, Ky., and 36.5c beyond. The O. & K., is a so called short line road operating in the eastern mountains of Kentucky. Most of its traffic consists of coal and forest products which it originates. It publishes no interstate rates from O. & K. Jct., but maintains a local intrastate scale from that point under which bar iron, in carloads, may move to Vancleave and Wilhurst on a rate of 14.5c. Vanclave is 8 miles from the Junction and Wilhurst 1 mile farther. The haul from Knoxville to the junction is 250 miles. Winchester is 196 miles from Knoxville. On Feb. 5, 1925 after this complaint was filed, reductions were made to O. & K., stations of which the rate to two points which these shipments moved is typical. This rate is 46.5c based on a scale proposed by the fourth section committee of the southern carriers, which would produce a rate of 32c for the haul to O. & K. Jct., plus the O. & K., local intrastate rate of 14.5c beyond HELD, present rates not unreasonable but rates charged unreasonable to extent they exceed 46.5c reparation awarded. Knoxville Iron Co. v. L. & N. R. R., 107 I. C. C. 627.

(o) The policy of the southwestern carriers serving New Orleans, La., has been generally speaking, to apply the Galveston, Tex., rates to New Orleans on traffic moving from or to all points west of the Mississippi River, except points in Texas south of a certain line. Such an adjustment necessarily disregards distance and commercial instead of natural advantages control. The commission has consistently refused to condemn such an adjustment where it is shown to serve the best interests of the public, but where, as here, it builds up one port at the expense of another equally favored by natural advantages from the origin territory here considered, line must be found beyond which distance may not be disregarded. Galveston Commercial Asso. v. G. H. & S. A. Ry. Co., 100 I. C. C. 110, 121, 122.

(p) Proposed increased basing rates on paving brick from Jacksonville, Fla., to points in Florida, on traffic originating at Robbins, Tenn., resulting in rates higher than rates between same points on shipments originating at other southern producing points, higher than rates for corresponding distances from Jacksonville to points in Florida on lines of Florida East Coast Ry., and higher than rates on other articles included in uniform brick list, in violation of the order in National Paving Brick Mfrs. Asso., 68 I. C. C. 213, found not justified. Basing Rates on Paving Brick, 100 I. C. C. 390.

(q) Contention that basing rates to and from Jacksonville, Fla., on traffic to Florida are, in effect, through rates which must be considered in their entirety, and that, so considered reduction in the rate north of Jacksonville, coupled with proposed increase in rates south of that point, results in no change in the through rates, not sustained, only the rates south of Jacksonville being in issue. Commission is continually dealing with proportional rates without reference to other factors used in constructing through rates. Basing Rates on Paving Brick, 100 I. C. C. 390, 392.

(r) It is significant that many of the commission's early cases originated in the South, and that they resulted in a series of Supreme Court decisions with respect to the provision of the fourth

section which prohibits, with certain qualifications, a higher charge for a shorter than for a longer distance over same line or route in same direction. These cases made it clear that the commission could not deal effectively with the basing-point system so long as the words "under substantially similar circumstances and conditions" remained in that section. Southern Class Rate Investigation, 100 I. C. C. 513, 521.

(s) The commission has condemned, expressly or in effect, in several recent important rate cases cited, the practice of basing interterritorial rates upon the combination of local rates to and from border points. Southern Class Rate Investigation, 100 I. C. C. 513, 661.

(t) Rates on grain, grain products, hay and straw, and related articles taking same rates or rates basing thereon between Oklahoma, on one hand, and Kansas and Missouri, on the other hand, found unreasonable, to extent they exceeded rates made by applying distance scales set forth herein to short-route distances. Reasonable maximum rates prescribed for future. Oklahoma Corp. Comm. v. A. & S. Ry., 101 I. C. C. 116.

(u) Rates on grain, grain products, hay and straw, and related articles taking same rates, or rates basing thereon, from Oklahoma to specifically designated Texas territory, found unreasonable to extent they exceeded distance scale of rates set forth herein, with the application of certain differentials to that portion of Texas not herein otherwise provided for, including a designated section of Texas Panhandle. This distance scale of rates and differentials is prescribed as reasonable for future. Oklahoma Corp. Comm. v. A. & S. Ry., 101 I. C. C. 116.

(ua) It is more desirable to operate under a rate break than under transit; but rate breaks do not necessarily constitute undue preference of the market enjoying such an adjustment nor subject transit points to undue prejudice. See 78 I. C. C. 209 and cases cited at page 213 thereof. Kansas City Board of Trade v. A. & W. Ry., 102 I. C. C. 285, 301.

(v) Complainant attacked combination rates charged on fish scrap, carloads, from Port St. Joe, Fla., to southern, central and trunk line territories as unreasonable, unjustly discriminatory and unduly prejudicial. The report will deal only with unjust discrimination and undue prejudice. Commodity is shipped in bags and moves generally in carloads, and is used principally as an ingredient in the manufacture of commercial fertilizer. Port St. Joe is served by the A. N. This line connects, at River Junction, Fla., with the L. & N., S. A. L., and A. C. L. Rates complained of are constructed by adding to the rates from River Junction an arbitrary or the local rate of the A. N., to that point. To southern territory the rates are about on the scale prescribed in 50 I. C. C. 34. HELD, rates attacked not unjustly discriminatory or unduly prejudicial complaint dismissed. Southern Menhaden Corp. v. A. N. R. R. 112 I. C. C. 108.

I. CONTROL AND REGULATION.

See Control and Regulation.

§2. Recommendation of Certain Forms.

(a) Failure of carriers to have a provision in bill of lading whereby all freight and other charges were to be collected from consignee without recourse to consignor, found not an unreasonable practice in violation of section 1 of the act. Carriers are obliged to collect and shippers to pay the legally published charges, and it is not within commission's purview to pass upon question of liability of consignors or consignees therefor. See Conf. Ruling 314; Wilson case, 50 I. C. C. 571, and American Smelting & Refining Co., 62 I. C. C. 583, 589. Wuille & Co. v. M. H. R. R., 92 I. C. C. 299.

II. DUTY OF CARRIER TO ISSUE.

§2½. In General.

See Through Routes and Joint Rates §12.

(a) The obligation lawfully rests upon the carrier's agent to refrain from executing a bill of lading which contains provisions that can not lawfully be complied with or provisions which are contradictory and therefore impossible of execution. Clark Lbr. Co. v. A., B. & A., 102 I. C. C. 252, 254.

(b) The freight rule as filed with the Interstate Commerce Commission, offered in evidence by the plaintiff carrier in connection with the lawful posted rates, provided that "when freight is loaded in a car by shipper and such car is not fully loaded but is tendered as a carload shipment, and the car is forwarded without other freight therein, the shipment will be charged for as a carload." The consignee testified that the car contained only his goods. The bill of lading described the goods shipped as "Car H. H. goods—shippers load & count—weight (subject to correction) 12,000." While it does not thus necessarily appear from the bill of lading itself that the goods were tendered and shipped as a carload lot at the rate applicable thereto, and parol evidence by the carrier and the shipper was admissible to establish the actual agreement with reference to the class of shipment and the actual weight of the goods shipped, nevertheless the carrier's evidence was such as to establish its case as laid by the petition, and it was error to direct a verdict for the defendant. The issue raised by the plaintiff carrier's evidence on the one hand, and the defendant's evidence on the other hand to effect that the defendant had asked for the "cheapest rate" as between the carload lot and the less than carload lot, taken with his rather indefinite evidence to support his contention that the actual weight of the shipment was only 4,200 pounds, should have been submitted to the jury. Western & A. R. R. v. Legg (Ga., 1924), 123 S. E. 31.

III. CONSTRUCTION.

§6. In general.

See Loss and Damage §2¼.

(a) To ascertain what contract was entered into, bill of lading must be examined, bearing in mind that it serves both as a receipt and as a contract. Louisville & N. R. Co. v. Central Iron & Coal Co., 44 Sup. Ct. 441.

(b) Shipment of lumber from Picayune, Miss., to the Thirty-seventh Street Station of the Pennsylvania New York City, was diverted under authority of the commission's service order No. 1, to the Twenty-seventh Street station of the Lehigh Valley. Delivering carrier endeavored unsuccessfully to notify shipper and finally shipment was sold to pay accrued charges. Under all the circumstances, the Twenty-seventh Street station was the practical point of delivery and changes were made in routing rather than destination, the real difficulty arising from failure of shipper to receive notice, due primarily to the fact that he was shown as both consignor and consignee and could not be reached by mail at origin or destination. National Lumber Co. v. N. O. & N. E. R. R. Co., 100 I. C. C. 334, 336.

(c) Shipment of scrap iron, originally billed as such but assessed the iron bar rate due to change in bills of lading made by inspector of the Southern Weighing & Inspection Bureau, found overcharged. Burden of proof to justify change in billing rested upon defend-

ants and vague evidence of inspector as to condition of material found insufficient to justify change in billing. Refund directed. Knight Iron & Metal Co. v. G. M. & N., 101 I. C. C., 623.

(d) Where a bill of lading is accepted and signed by the representative of complainant on latter's behalf it is binding on the parties. See Unrep. Op. 2224; 52 I. C. C. 671, 681; and 82 Fed. 681. Crown Cork & Seal Co. v. S. P. Co., 102 I. C. C. 331, 332.

ALL OTHER CITATIONS

Mifflin Hood Brick Co. v. Director General, as Agent, 88 I. C. C. 205.

§9. Conflicting Provisions.

(1) Between Rate and Route.

(a) Following its usual practice, initial carrier forwarded shipments upon receipt of instructions by telephone from shipper, confirmed by written instructions before shipments left its possession, without issuance of bills of lading. Instructions called for certain routing with specific rate not available over such routes; carrier forwarding as routed and assessing higher rate applicable. HELD: In view of practice to initial line, principle of Conf. Ruling 474 (c) as to duty of initial carrier when rate and routing inconsistent with each other are inserted by shipper in bill of lading, is equally applicable here. Shipments found misrouted, and reparation awarded to basis of rate applicable over route specified by shipper. Brownell Improvement Co. v. B. & O. C. T. R. R. Co., 85 I. C. C. 461.

ALL OTHER CITATIONS

Howe v. C. & N. W. Ry. Co., 85 I. C. C. 760.

§10. Route Designated by Shipper.

See Routing and Misrouting §7.

(a) Complainant attacked commodity rate charged of $1 on a car of potatoes shipped Nov. 15, 1921 from Sears, Mich., to Norton, Va., as unreasonable and unduly prejudicial to extent it exceeded 75.5c, the applicable rate over route specified in the bill of lading. Bill of lading showed routing N. & W., which carried the lower rate. It actually moved via Cumberland Gap, Tenn., and L. & N. Defendant claimed he was orally instructed by complainant to route car via route it moved but complainant denied it. This is essentially a question of fact as to what instructions actually were given the railroad agent. In view of the conflicting statements, which are irreconcilable, the specifications on the bill of lading must control. HELD, shipment misrouted, reparation awarded. McClintick & Company v. P. M. Ry., 93 I. C. C. 69.

(b) Bill of lading was written, at request of complainant's agent, by station agent of originating line, and showed routing via "N. & W." Carrier's agent asserted that complainant's agent orally requested routing via a higher-rated route, that routing "N. & W." was erroneously inserted by him on bill of lading, and that car was waybilled according to oral instructions. Complainant's agent denies specifying any other routing than that shown on bill of lading. HELD, in view of conflicting statements, which are irreconcilable, specifications on bill of lading must control. Shipment found misrouted and reparation awarded. McClintick & Co. v. P. M., 93 I. C. C. 69.

(c) Consignors specified certain carriers in bills of lading without stating that such specification was with reference merely to delivery. In connection with originating lines, carriers so named formed a through route to destination. Contention that initial carrier should have sent shipments over cheaper intrastate routes. HELD, where consignor specifies routing by naming a carrier which, in connection with originating line, forms a through route to destination, initial carrier can not be charged with misrouting if it bills shipment over that route instead of selecting a cheaper route in which those carriers participate but with a third carrier intervening. It was customary to use interstate rather than intrastate routes necessitating use of a third carrier, and carriers were justified in assuming movement over usual route was desired. Shipments found not misrouted. Wright & Wimmer v. C., T. H. & S. E., 93 I. C. C. 183.

IV. LIMITATION OF LIABILITY.

See Limitation of Liability.

§11. In General.

(a) Complainant attacked the failure of defendant to have a provision in the bill of lading whereby complainant, as consignor could have absolved itself from liability for the transportation

charges on four cars of boxed apples shipped between Nov. 1921 and January 1922 from Oregon and Washington to Laredo, Tex., as an unreasonable practice in violation of section 1. Complainant specified routing, shipments being consigned to complainant, order notify Morris Novich, and there was stamped on the bills of lading "Deliver only upon surrender of shippers written order without surrender bill of lading". On the dates on which the respective cars were shipped complainant wrote the destination carrier as follows: "Upon payment of all freight and other charges this is your authority to deliver car containing apples to Morris Novich Company without surrender of original bill of lading." Freight charges were collected from Morris Novich based upon rate of $1.50, but subsequently discovered that the applicable rates were $1.645 from Hood River and White Salmon and $1.725 from Odell. Norvich referred defendants to complainants, which was billed for outstanding undercharges amounting to $280.18. By a subsequent rule carriers consented in certain instances to forego their common law right to hold the consignor primarily liable for the payment of freight charges. No good reason appears of record why this specific provision should be made retroactive. HELD, complaint dismissed. Wuille & Company v. M. H. R. R., 92 I. C. C. 299.

§11½. Miscellaneous Provisions.

(a) Stipulation indorsed on bill of lading covering cotton shipment, in words "to be compressed in transit," HELD void as to intrastate shipment, in view of Code 1907, §5531, and void as to interstate shipment, in view of U. S. Comp. St. §8597, as attempted discrimination in favor of particular shipper. Louisville & N. R. Co. v. A. H. Cleaver & Co. (Ala., 1924) 101 So. 597 (State Shipment).

V. ORDER—NOTIFY SHIPMENTS.

I. CONTROL AND REGULATION.

See Control and Regulation.

§1. Jurisdiction of Commission.

See Jurisdiction of Commission.

(a) An expressed desire of shippers and carriers for the continuance of a group adjustment does not relieve commission of duty of considering whether its continuance would result in unjust and unreasonable rates or in undue prejudice. C., H. & D. Ry. Co. v. I. C. C., 206 U. S. 142. Lime from Eastern Trunk Line Points, 93 I. C. C. 617, 632.

II. LEGALITY OF GROUP RATES.

See Legality of Rates.

§2. In General.

(a) Where a commodity moves in considerable volume and carriers prefer to move them on class rates instead of providing commodity rates, they must provide an application of class rates that is reasonable and non-prejudicial in view of all circumstances and conditions surrounding the traffic. The class-rate basis can not be justified by a mere showing that rates are group rates, when the group is extensive and the particular commodity considered moves from only one point in the group, compensation being with a point a few miles away and outside of that group. Virginia Can Co. v. A. & V. Ry. Co., 89 I. C. C. 558, 564.

(b) The Commission has approved the group or blanket system of rate making, particularly when applied to limited areas containing natural resources. Hebard Cypress Co. v. A. & R. R. R., 91 I. C. C. 343, 348.

(c) The expressed desire of the eastern producers and of the respondents for the continuance of a grouping does not relieve the Commission of the duty of considering whether its continuance would result in unjust and unreasonable rates or in undue prejudice. Lime from eastern trunk line points, 93 I. C. C. 617, 632.

(de) The Commission has consistently refused to condemn a group adjustment where it is shown to serve the best interests of the public but where it builds up one port at the expense of another equally favored by natural advantages from origin territory, a line must be found beyond which distance may not be disregarded. Galveston Commercial Asso. v. G. H. & S. A. Ry., 100 I. C. C. 110, 121.

(f) Grouping is generally more justifiable and has been more extensively employed in making rates on export and import traffic than on domestic traffic. Galveston Commercial Asso. v. G. H. & S. A. Ry., 100 I. C. C. 110, 122.

(gh) The Commission has often approved blanket or group adjustments especially where all industries in the district are included with the group. Somerville Iron Works v. C. R. R. of N. J., 101 I. C. C. 683, 686.

(i) Reasons for the original establishment of the Texas common-point blanket are well known, and in the days of unlimited carrier competition may have been entirely sufficient to warrant its establishment; but under the minimum and maximum rate powers which have since been lodged with the commission, and in the absence of forceful water competition through the Gulf ports, affecting many of the commodities as to which the blanket still prevails, the continuance of the Texas common-point grouping is no longer warranted. Oklahoma Corp. Commission v. A. & S. Ry. Co., 98 I. C. C. 183, 213.

(j) The commission has repeatedly approved blanketing of rates at both origin and destination points where such plan met requirements of commercial conditions and did not result in undue prejudice, but the extensive grouping of rates in the Southwest under the plan proposed in instant case would result in prejudice at both origin and destination points because of severe rate jumps from one group to another, particularly for the shorter hauls, and can not be approved. However, points in destination territory beyond the Southwest may be grouped in lieu of publishing rates based strictly upon distance scales herein prescribed, provided that rates are published in such manner as to produce sub-

stantially same revenue as would result from strict application of the scales. Furthermore, if shippers and carriers can agree upon a plan of grouping points of origin in the Southwest, the commission will interpose no objection to publication of rates subject to last-mentioned condition. Oklahoma Corp. Commission v. A. & S. Ry. Co., 98 I. C. C. 183, 251.

(k) Respondents proposed to increase the rates on salt, carloads, from Ohio producing points to Kansas, Minnesota, southern Missouri, Nebraska, other than Missouri river points, North Dakota, South Dakota, Colorado, Montana, New Mexico and Wyoming in the amount of 2c over the rates from Detroit, Mich. Effective May 23, 1925 respondents published certain rates on salt from Ohio and Michigan points to points in western trunk line territory purporting to be in compliance with 92 I. C. C. 388. Before the tariffs became effective respondents discovered that the rates from Ohio points had been made the same as those from eastern Michigan to all destinations, whereas it was not intended to make the rates the same to destinations west of the Missouri river. Considering the wide area of salt production and the influence which keen competition has had upon the rate structure, it is reasonably certain that reductions in the rates from Ohio producing points to the territory in question would give rise to demands for readjustments elsewhere. Respondents do not here propose a new adjustment of rates, but simply to restore the relationship which existed prior to May 23, 1925. The present record does not establish the impropriety of the proposal. HELD, schedules justified. Salt to western trunk line territory 104 I. C. C. 101.

(l) Group rates are largely the result of voluntary action on the part of the carriers serving the group points in disregarding, for competitive reasons, the element of distance. The Commission can not compel them to disregard distance unless in their rate adjustments they commit some violation of the act. Louisville Cement Co. v. Southern Ry. 104 I. C. C. 455, 458.

(m) There are limits of reasonableness in making rates which admit of a certain degree of flexibility, and blanket rates or groups are not unlawful provided they are well balanced and the advantages and disadvantages fairly distributed. Presumably a group long maintained is fair and should not be disrupted unless there is some very good reasons for doing so. Missouri Portland Cement Co. v. A., T. & S. F., 101 I. C. C. 454, 463.

(n) Where rates are blanketed over large areas there must be some hauls which are materially longer than others, or which are attended by more difficult and more costly operating conditions. Group rates must be judged by average conditions. Lumber from Pacific coast points, 109 I. C. C. 140, 142.

ALL OTHER CITATIONS

Cotton Mfgrs. Association of S. C. v. C. C. & O. Ry., 85 I. C. C. 131.

§3. Justification.

(a) There is no hard and fast rule by which points of origin or destination are grouped, and each case must be considered in the light of its particular circumstances. The Commission has recognized some groups as defensible or even advisable; in fact, in some instances the Commission has prescribed grouping of points. Measured merely by the relative transportation services rendered, it is obvious that as between the nearest and the farthest points in a group an equality of rates may present an aspect of prejudice and preference in some degree, but to fall within the ban of the act the prejudice and preference must be found to be undue. St. Louis Chamber of Commerce v. A. & V. Ry., 98 I. C. C. 29, 32.

(b) The grouping of rates over extensive areas is particularly adapted to the lumber industry, and so long as this method of constructing rates on lumber from points in the southeastern yellow pine belt is adhered to the Commission shall not, without convincing proof therefor, disturb or disrupt one group by taking the near points out of it and making them the far points in another lower rated group. Northeast Mississippi Traffic Bureau v. A. & V. Ry. 102 I. C. C. 611, 616.

§4. Public Benefit.

See Evidence §44½.

(a) The benefits derived by the public from extensive grouping of coal mines are well known and are generally much greater than benefits derived from des-

tination grouping. Southwestern Interstate Coal Operators' Asso. v. A. W. Ry. Co. 89 I. C. C. 73, 85.

(b) Blanket or group rates are often of great advantage to the public, without serious injustice to any interest, although there is of necessity more or less disregard of distance and varying degrees of any equality. The Commission has frequently approved the blanketing of rates at both origin and destination points where the group plan has met the requirements of commercial conditions and has not resulted in undue prejudice. Where there is a limited producing area and a large consuming territory, group rates promote competition and the freedom of commerce. Oklahoma Corporation Commission v. A. & S. Ry., 98 I. C. C. 183, 251.

(c) Where a group adjustment is one of long standing, and is generally satisfactory to great majority of shippers of same commodity in same general territory, it may not be lightly set aside at behest of an individual shipper. Hebard Cypress Co. v. A. & R. R. R. Co., 91 I. C. C. 343, 351, 352.

(d) An expressed desire of shippers and carriers for continuance of a group adjustment does not relieve commission of duty of considering whether its continuance would result in unjust and unreasonable rates or in undue prejudice. C., H. & D. Ry. Co. v. I. C. C., 206 U. S. 142. Lime from Eastern Trunk Line Points, 93 I. C. C. 617, 632.

(e) There is no hard and fast rule by which points of origin or destination are grouped, and each case must be considered in the light of its particular circumstances. The commission has recognized some groups as defensible or even advisable; in some cases it has prescribed grouping of points. Measured merely by the relative transportation services rendered, it is obvious that as between the nearest and the farthest points in a group an equality of rates may present an aspect of preference and prejudice in some degree, but to fall within the ban of the act, the preference and prejudice must be found to be undue. St. Louis Chamber of Commerce v. A. & V. Ry. Co., 98 I. C. C. 29, 32.

III. EXTENSION OF ZONE.

§6. In General.

(a) Respondents proposed to increase their interstate rates on boots and shoes from various New York points to trunk line and New England territories. At present the Erie publishes any quantity commodity rates on boots and shoes from the Binghamton district to various points in trunk line territory, and both the Erie and D. L. & W., publish carload commodity rates to Boston, Mass., and Providence, R. I. It is not proposed to cancel these any quantity commodity rates and to apply class rates in lieu thereof to all points except, to New York City for export, and to West End for storage, to which points it is proposed to continue in effect the present carload commodity rates only. Under the proposed adjustment the first class rates will become generally applicable on less carload traffic, and the second class rates on carload traffic, resulting substantially increases to all points. The principal reason for the cancellation is that the New England lines, as far back as 1922, requested that this be done, while the cancellation of the commodity rate to such points as Philadelphia, Richmond and Norfolk is proposed in order to satisfy the Baltimore complaint and remove the discrimination complained of, and no effort was otherwise made to justify the proposed rates. The fact that rates have been so long in effect, and have evidently been satisfactory to carriers, and because their cancellation will affect manufacturers whose production is of a known magnitude the cancellation of the commodity rates, and the application of class rates in lieu thereof, can not be justified by the reasons shown, in view of the admittedly heavy movement under them. HELD, schedules not justified. Boots and shoes from New York points, 91 I. C. C. 591.

(b) Complainant attacked commodity rates of 59.5c charged between August 10 and Sept. 22, 1921 on numerous tank carloads of crude and fuel oils shipped from Gainesville, Tex., to Miami, Ariz., as unreasonable. Miami is on the A. E., 1,013 miles from Gainesville via the short line route of the G. C. & S. F., to Fort Worth, Tex., the T. & P., to El Paso, Tex., S. P., to Bowie, Tex., and A. E., beyond, charged commodity rate of 59.5c. Effective Nov. 15, 1921 that rate was reduced to 50c. The primary reason actuating complainant in filing this complaint appears to be the fact that the 50c rate was established on August 10,

1921 from 23 south Texas points to Miami and was not extended to north Texas producing points until Nov. 15. HELD, rate attacked not unreasonable, complaint dismissed. Miami Copper Co. v. A. E. R. R., 93 I. C. C. 221.

(c) Complainant attacked fifth class rates charged on gasoline, in tank cars, from Hubball, W. Va., and Alkol, W. Va., to Point Breeze, Philadelphia, between Oct. 1921 and July 1923 as unreasonable. Hubball is on the C. & O., 24 miles south of Barboursville, W. Va., and Alkol 30.8 miles south of St. Albans, W. Va. Charged from Hubball fifth class 61c prior to July 1, 1922 and 54.5c thereafter. Charged from Alkol commodity rates of 49c prior to Jan. 1, 1922, 48c from that date to July 1, 1922 and 47c thereafter. Complainant requested the establishment of commodity rates from Hubball and Alkol prior to the movement and apparently these rates would have been established at a much earlier date except for the congestion in defendants general offices. HELD, rate attacked unreasonable to extent they exceeded 45c and 43.5c, reparation awarded. Atlantic Refining Co. v. C. & O. Ry., 95 I. C. C. 629.

(d) D. & R. G. W., respondent, and other carriers proposed changes in the rates on potatoes and onions, carloads, from western Colorado, Utah, and Wyoming to destinations in California. Respondents justification of the proposed rates rests largely upon its general practice of grouping points on its main and branch lines in western Colorado in making rates on products of the soil and products of the orchard. Respondent states that the proposed rates are compensatory, and while it does not admit that the present rates are unreasonably high, it states that there can be no substantial movement under them. It feels that in the circumstances the rates proposed are fair and would correct what it considers to be an unduly prejudicial adjustment against western Colorado producers as compared with the rates enjoyed by producers in Oregon and Idaho. HELD, schedules justified. Potatoes and onions to California, 100 I. C. C. 49.

(e) Relative distances alone are not controlling. Commercial competition and the interests of consumers are also pertinent considerations. Carriers may not disregard all differences in distances. Groups can not be extended indefinitely, and the discrimination inherent in all group adjustments must not be undue. Groups long maintained, however, are presumably fair and are not to be disrupted unless substantial justice clearly requires it. Dissatisfied products deprived of the benefit of their proximity to common markets must show that they are actually injured and by an unjust and unlawful discrimination. Oakland Chamber of Commerce v. S. P. Co., 100 I. C. C. 55, 62.

§8. Proximity to Established Group.

(a) Fifth-class rates assessed on fresh apples from Fort Sumner, N. Mex., to Omaha, Nebr., found unreasonable to extent they exceeded lower commodity rate contemporaneously in effect from the Roswell group, which lower rate was subsequently extended to Fort Sumner. Reparation awarded. Gilinsky Fruit Co. v. Director General, 92 I. C. C. 242.

(b) The relatively wide disparity, distance considered, between the rates from or to the farthest distant point in one group or zone, on the one hand, and the rates from or to the nearest point in the zone or group just beyond, on the other, is a typical feature of a zone or group adjustment. There is no showing that the zone or group adjustments are improper in the instant case. Prince & Co. v. S. P. Co., 98 I. C. C. 615, 617.

§9. Grading Rates.

See Distance Rates.

(a) Complainant attacked commodity rates charged on potatoes, carloads, from Naples and Lily, S. D., to points in Iowa as excessive, unjust and unreasonable to extent they exceed 39c. A rate of 34c applies from the extreme eastern part including a few stations in South Dakota. Just west of this 34c group there is a narrow blanket which a rate of 36c applies. Then by a graduation of 37, 38, 39, and 40c the origin territory is graded as far west as a line running north and south through Mitchell, Redfield and Aberdeen, S. D. Lily and Naples are within the 39c group. It is customary to apply specific commodity rates on potatoes in carloads, from this territory somewhat lower than the prevailing class C rates. The question of a reduction in the rates had previously been taken up with the St. Paul line, and, as a result the 39c rate was established

to Cedar Rapids. At the time of movement as at present the St. Paul participated in other joint rates from South Dakota with other socalled short lines and such rates were the same as in effect to and from points on its own line in the same territory. Two shipments were consigned to points on the St. Paul and one to a point on the Cedar Rapids and Iowa City. This latter point, under the ordinary basis of class rates, takes the same rates from South Dakota as do points on the St. Paul in the same vicinity. Because of the fact, however, that the destinations involved are not strictly intermediate with Illinois points taking the Chicago group rate, the Chicago rate does not apply as maximum at these points, but the higher class C rate applies. HELD, rate to Cedar Rapids, DeWitt and Coralville, are for future unreasonable to extent they exceed 39c, reparation awarded. Naples Potato Growers Asso. v. C. M. & St. P. Ry., 102 I. C. C. 649.

§10. Differentials.

See Differentials.

(a) Complainant attacked as unreasonable and unduly prejudicial rates on grain and grain products from Kansas City, Mo., and Missouri to Helena, Ark. Original report 89 I. C. C. 405. Upon petition of defendant order modified. HELD, that the maintenance of or participation in by the M. P., over its west side route of rates on grain and grain products from Kansas City, Mo., from points in Kansas from which the rates make on Kansas City Combination, and from points in Missouri from which rates are made with relation to Kansas City to Helena more than 2.5c on wheat and 1.5c on coarse grains higher, and from points in Nebraska and Iowa, and Missouri except St. Louis, from which rates base on St. Louis, to Helena more than 6c on wheat and 4.5c on coarse grains higher, than the rates to Memphis are unduly prejudicial to Helena. Helena Traffic Bureau v. M. P. R. R., 93 I. C. C. 456.

(b) Complainant attacked commodity rates charged on chatts, from Joplin-Galena mining district in Jasper County, Mo., and Cherokee County, Kas., to destinations in Crawford County, Kas., as unreasonable. The Frisco and Joplin and Pittsburgh published rates on the basis of the existing Kansas intrastate rates. The M. P., declined to do so. Chatts is a cheap commodity and necessarily can move only on low rates. HELD, rates attacked from Joplin, Webb City and Oronogo to Crawford County on M. P., from 48 to 69 miles distant from Joplin over the M. P., are unreasonable to extent they exceeded 4c to those destinations not over 60 miles distant from Joplin over defendants line and 5c to those destinations over 60 miles but not over 70 miles distant from Joplin over defendants line. Reparation denied. Crawford County Commissioners v. St. L. S. F. Ry., 93 I. C. C. 502.

(c) Complainant attacked commodity rates on canned goods, from Wisconsin points and St. Paul, Minn., to Mississippi Valley, as unjust, unreasonable, unjustly discriminatory, unduly prejudicial and preferential. Memphis, Tenn., Helena, Ark., Greenville, Vicksburg and Natchez, Miss., New Orleans, La., Mobile, Ala., and Pensacola, Fla., are representative destinations. Joint rates from Milwaukee territory are about 10c under the lowest combinations and 2 to 3c higher than the rates from Chicago. North and west of this group the joint rates published are based substantially on the lowest combinations with the St. Paul rates as maxima. From points in Wisconsin still farther north no joint rates are published and the lowest combinations apply. Middleton is 6.6 miles west of Madison on the C. M. & St. P., present rates being from 8 to 12c higher than from Madison. HELD, rates from Middleton unreasonable to extent they exceed rates from Madison by more than 2c per 100; that the rates from St. Paul and from points basing on St. Paul are unreasonable to extent they exceed rates which are 5c less than present rate, that rates throughout the balance of the territory not unreasonable or otherwise unlawful, except that where existing joint rates exceed those based upon the lowest combination, using St. Louis, Mo., Milwaukee, Wis., and Chicago and Cairo, Ill., as basing points, are unreasonable to the extent of their excess over such combinations. Carnation Milk Products Co. v. A. & W. Ry. 96 I. C. C. 208.

(d) In 87 I. C. C. 740, the Commission found not justified the proposed revision of rates on naval stores from all producing points in the southeast and Mississippi valley territory to destinations on and beyond the Ohio and Mississippi rivers and to Nashville, Tenn.; and prescribed reasonable rates to representa-

tive destinations from the Jacksonville and New Orleans groups therein described. The A. T. & N., seeks authority to establish on naval stores, carloads, rates from Calvert, Ala., on the trunk line basis, and from local stations on its line between Calvert and York, Ala., rates differentially higher than the trunk line basis in the same amounts as permitted to other short lines in the original report. The line of the A. T. & N., is in the direction of the movement from Calvert to these destinations. Its financial condition is such that it can ill afford either to abandon the revenues from divisions on any traffic it may originate at Calvert, or to sustain the loss in revenues which would result if it met the trunk line basis and maintained no higher rates from intermediate points. HELD, rates on naval stores from points on the A. T. & N., will be reason not exceeding the rates in effect from junction points of that line with the trunk lines by more than 3c on rosin and 6c on turpentine, higher rates to be maintained from local points on its line subject to lowest combinations as maxima. Naval stores from southern points, 96 I. C. C. 417.

(e) Rates on printing paper from Hamilton, Ohio, in Cincinnati, Ohio, rate group, and on strawboard from Peoria, Ill., in Chicago, Ill., rate group, to San Antonio, Tex., found unduly prejudicial as compared with rates from Fox River, Wis., group, and unreasonable to extent they exceeded lower rates subsequently established. Rates from these groups to Texas common points have always been based upon differentials under Fox River rates. Reparation awarded. San Antonio Paper Co. v. C. & A. R. R. Co., 91 I. C. C. 589.

(f) Following Swift Lumber Co., 61 I. C. C. 485, rates on lumber, timber, and other forest products from Frost, Ala., a local point on the Garyville Northern R. R., to destinations in official and western trunk-line territories, and in Oklahoma, Texas, Kentucky, and Tennessee, found unreasonable to extent they exceeded by more than certain differentials the corresponding blanket rates contemporaneously maintained from Livingston and Garyville, La. Reparation awarded. Fleming Bros. v. G. N. R. R., 92 I. C. C. 582.

(g) The commission has repeatedly held that joint-line arbitraries are inconsistent with group or blanket rates, and that even if a two-line haul were more expensive than a one-line haul, the additional expense, if slight, should not be reflected in the rate in a general group adjustment. Orange Chamber of Commerce v. A. & W. Ry. Co., 98 I. C. C. 101, 107.

(h) Through rates on coal from complainants' mines on Kanawha Central in the socalled Kanawha district of West Virginia to interstate destinations on the lines of other defendants between June 24, 1922, and July 13, 1923, found unreasonable to extent they exceed the intrastate rate to Brouland, W. Va., the junction point, plus the district rates contemporaneously applicable beyond. Reparation awarded. Kanawha Black Band Coal Co. v. K. C. Ry. Co., 98 I. C. C. 431.

(i) Complainant attacked commodity rates on paving and roofing materials, carloads, from New Orleans, La., to points in Tex., as unreasonable, unjustly discriminatory, unduly prejudicial and in violation of the fourth section. Group rates apply to such points as Beaumont, Houston and Galveston, the port group. Group rates also apply to Corpus Christi, Devine, San Antonio, San Angelo Big Springs, Fullerville, Acme and most of the other points located between these points and the port group. Rates to points in the territory beyond the common point group, differential territory, are generally made by adding differentials, varying in amounts, to the common point group rates. The rates in issue are those from New Orleans to the common point group and points in differential territory. Paving and roofing materials, carloads, are rated fifth class in western territory, but under exceptions to the western classification these commodities from and to the points under consideration are subject to class C rates. The class C rates from New Orleans to the common point group were and are 79c. Subsequent to the filing of the complaint commodity rates a trifle lower than the class C group rates were established to a few points. The rates from New Orleans to some of the points in the common point group are in excess of the aggregate of intermediate rates to and from the port group. HELD, rates attacked to common point group unreasonable to extent they exceed 50.5c and to differential territory unreasonable to extent they exceed class E differ-

entials beyond, reparation awarded. Cameron Co. v. A. & S. Ry. 102 I. C. C. 31.

(j) Complainant attacked rates charged on pulpwood and cordwood from Virginia, West Virginia, Maryland and District of Columbia to Tyrone and Williamsburg, Pa., Piedmont, W. Va., and Luke, Md., Philadelphia, Wilmington, Del., Elkton, Md., Lock Haven, Roaring Spring and Spring Grove, Pa., and from Ravensford, N. C., to Parsons, W. Va., as unjust and unreasonable. Generally speaking the rates from this origin territory apply from and to specific points. The Pennsylvania by schedules filed to become effective May 24, 1924 proposed to restrict the application of its rate of 12.5c on pulpwood, carloads, from Washington, D. C., to Tyrone, Williamsburg, Lock Haven and Roaring Spring to shipments reaching Washington by water, leaving higher rates in effect on such traffic originating at Washington. Pulpwood, one of the lowest grades of forest products, is the principal raw material used in manufacturing wood pulp, which in turn is converted into paper of various kinds. Approximately 3.5 tons of pulpwood are required to produce a ton of pulp. Pulpwood is not liable to damage and ooes not require expedited movement. Any kind of equipment except flat cars may be used in its transportation, and it is not essential that cars be in first class condition. The various mills when originally established were located, as has been the custom, in close proximity to their pulpwood supply. The continued repletion of that supply in contiguous territory has made it necessary for complainants to look to more remote sources for an adequate supply of wood, the nearest and most practicable, it is claimed, being in the territory from which the rates are herein attacked as unreasonable and from which they now secure a considerable portion of their requirements. The mills at Tyrone, Williamsburg, Lock Haven, Elkton, Roaring Spring, and Philadelphia are served by the Pennsylvania; Luke by the Western Maryland and B. & O.; Spring Grove by the Western Maryland and Pennsylvania; Parsons by the Western Maryland, and Wilmington by the Pennsylvania and the Reading. Under reciprocal switching arrangements the Reading makes delivery for the B. & O., at the flat Wilmington rates. HELD, rates attacked for joint line hauls on pulpwood from points on the Southern, C. & O., N. & W., and R. F. & P., and for single line hauls from points on the B. & O., W. M., and Pennsylvania to destinations here involved, are for future unreasonable to extent they exceed rates ranging from 5c single line for 20 miles and under to 12.5c for 300 miles, for joint line ranging from 9c for 120 miles to 21c for 675 miles. This scale, plus an arbitrary of 1 c will be reasonable to apply from Ela, N. C., to Parsons, W. Va., on this traffic originating at Ravensford, S. C., and that for the haul over the Appalachian Ry. to Ela, an arbitrary of 2.5c may be added to the rates prescribed from that point. HELD, further, for hauls from points on the W. & O. D., the M. & P., and W. B. & P. L., an arbitrary of 1.5c may be added to the single line rates under the above scale; while from points on the W. C., N. & A., the P. F. & P., and V. B. R., an arbitrary of 2c may be added to the joint line rates under the above scale. HELD, further, Roaring Spring, Tyrone, Williamsburg and Lock Haven may form a destination group with equalized rates under the scale from long haul points of origin. Proposed schedules not justified. West Virginia Pulp & Paper Co. v. B. & O. R. R. 104 I. C. C. 495.

(k) Complainant attacked interstate rates on lime, in carloads, from Maryland, Pennsylvania, Virginia and West Virginia to destinations in central territory and in West Virginia, and from Ohio to destinations in central territory as unreasonable. Lime is shipped in paper bags, wooden and steel barrels and in bulk. Water tight equipment is required. The record indicates that loss and damage claims are negligible. Generally speaking the points of origin in Pennsylvania, West Virginia and Maryland and those in Virginia on the B. & O., are now in the Williamsport, Baltimore or Scranton class rate groups. The Ohio producing points are also grouped. COMMODITY DESCRIPTION. The Commission is convinced that a segregation of the high grade and low grade lime could be made, but that it should follow the line of value rather than that of physical appearance. The Commission regards lime suitable for chemical and building purposes and lime having no value for such purposes, such as agricultural and fluxing lime, as different commodities. Lime is a substantial source of revenue for the carriers, which

in many instances enjoy inbound hauls of coal or coke to the kilns, as well as the outbound movement of lime. The Commission is here called upon to fix only maximum reasonable rates from producing points, whose distance from Pittsburgh ranges from 120 to 311 miles. In fixing such rates due account must be taken of transportation differences. RATES AND CARLOAD MINIMA. Present rates on building and chemical lime to the 60 and 67 per cent groups, and on all kinds of lime to other points in central territory from the eastern producing points generally exceed rates for similar distances under the Mitchell scale, 85 I. C. C. 341. Rates from Ohio points to interstate destinations in central territory are with a few exceptions the same as, or from 0.5c to 4.5c higher than, the rates for corresponding distances under that scale. Common lime, carloads, is rated sixth class in official classification and 83.33 per cent of sixth class by exceptions to the classification applicable between certain points in central territory. HELD, interstate rates on common lime, hydrated, quick or slaked, except agricultural and fluxing lime having no commercial value for building or chemical purposes, carloads, minimum 30,000 pounds, from points in Groups 1, 2 and 3 and from points in other groups to destinations in 60 and 67 per cent groups unreasonable to extent they exceed to Pittsburgh from group 1, 13.5c, Youngstown 15c; Group 2, 14.5c and 16c; Group 3, 15.5c and 17c; Bloomsburg group 16c and 17.5c; Bainbridge group 16c and 17.5c; Riverton group 16.5c and 18c; Scranton group 17c and 18.5c; Cedar Hollow group 17.5 and 19c; Trexlertown group 17.5c and 19c. Rates to other destinations in the 60 and 67 per cent groups should be revised to correspond with the rates prescribed to the destinations specified above. Interstate rates on agricultural and fluxing lime unreasonable to extent they exceed 80 per cent of the rates on higher grades. Eastern Lime Mfrs. Asso. v. A. & B. B. R. R. 112 I. C. C. 7.

IV. REASONABLENESS.

§10½. In General.

See Class Rates §2 (tt) (3b) (3k); Percentage Rates; Reasonableness of Rates.

(a) It was contended that cotton rates to New Orleans, La., from points in Mississippi do not reflect proper differences under rates from Memphis, Tenn., based upon fact that the Memphis rate is applied from Greenwood, Miss., although the distance from Memphis to New Orleans is greater. This situation, however, results from fact that rates from northern half of Mississippi are grouped to New Orleans, and in prescribing the rate from Memphis in 69 I. C. C. 318, consideration was given to average distance of points within this group. The prescribed rate was made to fit that situation and rate for average distance compares favorably with cotton rates generally in the South. Moreover, there are many advantages to this grouping, the producer within the group being given the benefit of several markets. No warrant found on the record for condemning this grouping. Mississippi R. R. Commission v. A. & V. Ry. Co., 89 I. C. C. 47, 70.

(b) Complainant attacked relationship existing between rates on potatoes and lettuce, in straight carloads, from Divide, Canon City, Villa Grove, and Antonito, Colo., to destinations in various states. Divide is on the Midland Terminal, 27 miles west of Colorado Springs; Canon City on the D. & R. G. W., and Santa Fe 41 miles west of Pueblo; Villa Grove on a narrow gauge line of the D. & R. G. W., 126 miles west of Pueblo; and Antonito on the same carrier, 105 miles west of Walsenburg, Colo., and 156 miles west of Pueblo. On potatoes to Texas common points and on both potatoes and lettuce to the Mississippi river and points east thereof the rates from these points are the same as from Colorado common points. On lettuce to Texas common points the rate from these points is 5c higher than from Colorado common points. From Divide to Texas common points the rate on potatoes is 14c and on lettuce 25c higher than from Colorado common points. To the Mississippi river and to points east thereof the rates are 3c higher on potatoes and 5c higher on lettuce from Divide than from Colorado common points. Divide is 27 miles west of the Colorado common point line, compared with distances of 41 to 156 miles different from that of Canon City, Villa Grove and Antonito. Defendants concede that from the standpoint of transportation conditions there is no reason why the relationship of Divide to the Colorado common point group should be different from that of Canon City, Villa

Grove and Antonito. HELD, rates attacked from Divide unduly prejudicial compared with rates from Canon City, Villa Grove and Antonito. Pikes Peak Co-Operative Lettuce & Produce Growers Asso. v. Midland Terminal, 89 I. C. C. 379.

(c) Obviously in rate blankets the earnings under rates from points not taking group rates will in every instance show higher. But that is by no means an indication that the rates are in themselves unreasonable. Dufur Orchard Co-Owners Co., v. A. & R. R. R. 89 I. C. C. 419, 424.

(d) Complainant attacked commodity rates charged on animal manure carloads, from Perth and Lovelock, Nev., to points in eastbound transcontinental groups A, to M, inclusive, since Jan. 2, 1921, as unreasonable. Present rates are to Group A, 85c; Group B 80c; Group C. 75c; Groups K. L. and M., 90c; Groups D, E and F, 70c, Group G and H 78c; and Group J, 73.5c. The present movement from Nevada to Group G. H. and J is negligible. There is little movement at present by rail to any of the other transcontinental groups due in part to the fact that the all rail rates are higher than the combination of rail rates from Nevada points to San Francisco, Calif., and water rates thence through the canal to the Atlantic seaboard. HELD, rates attacked to Groups A to F and K to M not unreasonable; rates attacked to Groups G, H and J unreasonable to extent they exceeded 72c to Group G prior to July 1, 1922 and 65c thereafter; 78c to Group H prior to July 1, 1922 and 70c thereafter; and to Group J, 66.5c prior to July 1, 1922 and 60c thereafter, reparation awarded. Pacific Manure & Fertilizer Co., v. A. & R. R. R. Co., 89 I. C. C. 508.

(e) In 80 I. C. C. 383, the Commission considered rates on coal from mines in the Castle Gate district in Utah and in the Rock Springs-Kemmerer districts in southern Wyoming to destinations in Idaho, Montana, Washington and Oregon. At that time the rates from Castle Gate were 22c per ton higher than those from Rock Springs. The Commission prescribed a differential of not less than 50c per ton from the Castle Gate district over the Rock Springs district. The relationships between the west bound rates from Castle Gate and Thompson, Utah and from the Cameo-Palisade district in western Colorado to western destinations were also considered. The effect of the findings with respect to rates from Thompson was to increase the former differentials of 10 and 12c per ton from Thompson over the Castle Gate district to 40c and to reduce the spread in rates between Thompson and the Cameo Palisade district. EXTENT OF ROCK SPRINGS KEMMERER GROUP. The mines in the Rock Springs district are on the U. P., in the vicinity of Rock Springs. The nearest mine is 1.25 miles from Rock Springs. The mines in the Kemmerer district are on the O. S. L., a part of the U. P., system, 85 miles west of Rock Springs. The average distance from the Rock Springs mines to McCammon, where the Utah and southern Wyoming coals meet, is shown to be 246.1 miles and from the Castle Gate mines 271.7 miles, or a difference of 25.6 miles. The separation of the group on westbound traffic would naturally result in like act on as to eastbound traffic, and would seriously disturb the relationship that has existed without complaint for a long period of years. HELD, the inclusion of the Rock Springs-Kemmerer mines in one rate group is not unduly prejudicial to the operators in Utah. As a rule the grades in the Castle Gate district are substantially greater than those in the Rock Springs-Kemmer district. HELD, former decision affirmed. The majority of the Wyoming mines are not on the main line, and this is likewise true in the Castle Gate district. The record shows that, except during 1916 and 1917, when the demand exceeded the supply in both the Utah and Wyoming districts and except during periods of strikes, there has always been a surplus of coal in Wyoming which could have been disposed of in the Northwest if purchasers could have been found. HELD, in view of the fact that the conditions of operation in the southern Wyoming district do not differ as greatly from those in Utah as the Commission had been led to believe, and that the difference between the average distances is somewhat less than was originally stated, the Commission has reached the conclusion that a differential in excess of 40c, Castle Gate over Rock Springs, is unduly prejudicial. THE THOMPSON CASTLE GATE DIFFERENTIAL. Sego is on the Ballard & Thompson, extending from Thompson 5.5 miles. There are no joint

rates from Sego. Thompson lines midway between the Castle Gate district on the west and Cameo-Palisade district of Colorado on the east. From the standpoint of distance alone, considering the similarity of transportation conditions over the 94 miles east and west of Thompson, the differential relationships which were prescribed would seem proper. HELD, The relationship of these rates are retained to be considered in a pending complaint, American Fuel Co. v. A. T. & S. F. Ry. No. 13509. ADDITIONAL JOINT RATES FROM UTAH. Complainants requested the establishment of joint rates to points on the N. P., G. N., C. M. & St. P., and S. P. & S. joint rates to points reached directly by the U. P., have been in effect for some years. HELD, no evidence was introduced tending to show the existence of any real public need for the extension of joint rates. Western Coal rates, 89 I. C. C. 666.

(f) Commission instituted an investigation into the rates, rules, regulations and practices covering the transportation of wool and mohair from the Pacific coast and intermediate territory to eastern destinations, and from said intermediate territory to and via the Pacific ports, with which are consolidated other proceedings involving some of the same questions. Under the amended applications the through rates from intermediate points adjacent to the Pacific coast would be considerably lower than the present rates, which would have the effect of reducing the disparities as between the coast cities and nearby interior points, but, on the other hand, would result in increasing the disparities as between these points and farther inland points which take considerably higher rates and in which no charge is proposed. The rail carriers secure a share of the revenues derived from the haul to eastern destinations by transporting the wool to the ports, and the steamship lines participate in the movement beyond, thus fostering and preserving both rail and water transportation. Moreover, it is not understood why the western carriers prefer to move this wool traffic eastbound all rail. The record is far from convincing that granting the applications would accomplish the results desired by the rail carriers. One of the witnesses testifying on behalf of the carriers serving the north Pacific coast points stated that they expect to secure very little additional wool tonnage under the proposed rates. Even if it be assumed that the rates proposed under fourth section relief would secure to the rail lines a substantial portion of the tonnage now moving by water, the ultimate effect, would be a further reduction in the water rates to avert loss of tonnage to the water lines, and decreased earnings for both the rail and water carriers. The record conclusively shows that, except for the financial plight which confronts the woolgrowers as the aftermath of the 1920-21 slump, the sheep industry under the prevailing conditions and prices would be on a sound basis. **History of Eastbound Rates.** The evidence with respect to the eastbound rates is confined very largely to those applicable to Boston 90% of the wool shipped from this western territory is destined to the territory north of the Potomac and east of the Buffalo-Pittsburgh line, and principally to the Boston market. The present rates on wool in the grease from this western producing territory to the north Atlantic ports, generally speaking, are on the basis of those established in conformity with 25 I. C. C. 188, as modified by the subsequent general increases and reductions. In the schedules under suspension the respondents proposed to continue rates which grade up westwardly from the Mississippi river on the present basis until a rate of $2.70 on sacked wool to Boston is reached and to blanket this rate to the Pacific coast, covering a territory of approximately 800 miles in width. A rate of $2.35 is proposed on baled wool. Substantial increases would result from the Pacific coast and interior territory from which rates at present are maintained on a low basis under fourth section relief, but material reductions would be made from a large territory of heavy production east thereof. In the interest of tariff simplification it is the opinion of the Commission that joint rates on wool be published from all wool producing points covered by this investigation to eastern destinations if practicable in one or a very few consolidated tariffs. Possibly it may also be desirable to include in such tariff or tariffs naming the joint rates all transit rules, regulations, and practices appertaining to the movement of wool. Distance usually is an element to be considered in the fixing of rates, but on the long haul traffic from

this western territory of origin under consideration, the difference in distance between the north Atlantic ports is inconsiderable, and the rates hereinafter found reasonable for the future to Boston should be published as joint rates and should not be exceeded to other north Atlantic ports south of Boston. Wool generally loads much in excess of the carload minimum, does not require special service, and claims for loss and damage are negligible. HELD, present and proposed departures from the fourth section not justified, present and proposed rates unreasonable to Boston and other north Atlantic ports all rail unreasonable to extent they exceed rates ranging from 140c for 1,500 miles to 270c for over 3,000 miles. **Scoured Wool and Pulled Wool.** No scoured wool now moves from interior points and this is also true of pulled wool, both being shipped in bales, and only from Pacific coast terminals or contiguous points. Wool is sorted at the time it is pulled from the pelts. It generally moves in small quantities, any quantity rates would be required. Pulled wool contains less dirt and grease than sheared wool and is more valuable. Practically no pulled wool is moved all rail under the present rates. The lines serving the California terminals propose to cancel these any quantity rates on both pulled and scoured wool, leaving in effect the applicable class rates which on pulled wool, are $4.43 to Chicago and $4.80 to Boston, second class. HELD, it is apparent that the class rates applicable on scoured and pulled wool are too high to permit any movement thereunder, but there is not sufficient information disclosed of record to definitely arrive at a conclusion as to what would be reasonable rates or what would be a fair and proper relation between scoured wool and pulled wool on the one hand and sheared wool in the grease on the other. **Rail Lake and Rail and Rail and Ocean Rates.** The principal wool movement via rail and lake is from Montana, North Dakota and South Dakota. The rates to Duluth are commodity rates and the proportional rate from Duluth via lake is 55% of the first class rate on wool and mohair in grease in bags or sacks, and 50% of first class on wool in grease in machine compressed bales. HELD the evidence with respect to rail and water rates eastbound is meager and general, and upon this record the Commission is not in position to prescribe any fixed differential under the all rail rates on shipments moving by rail and water route, but in view of the readjustment of the all rail rates the carriers should readjust their rail and water rates so as to bear a fair relationship to the all rail rates. **Westbound Rates.** The present rates on wool in the grease from interior territory to Pacific coast terminals are, with few exceptions, the fourth class rates, minimum 24,000 pounds on sacked wool and 32,000 pounds on baled wool. The present wool rates from interior points to north Pacific coast terminals approximate 60% of the first class rates, but from points in New Mexico and Arizona to California terminals they are much higher, in some instances 70% of the first class. Differences in transportation conditions and density of traffic justify relatively higher rates in this territory than in the east. HELD, present rates unreasonable to extent they exceed on wool and mohair in the grease 55% of first class. **Joint Rates and Through Bills of Lading via Rail and Water Through Pacific Coast Ports.** At the present time the wool shipper from the interior secures a bill of lading for the rail haul and pays the local rate to the terminal. Certain handling charges are assessed at the port, and a new bill of lading is issued to cover the water movement beyond. Most of the western wool carrying roads issue through bills of lading and publish joint rates, which include marine insurance, on traffic destined to the east when moved via the Gulf and south Atlantic ports, but none issues through bills of lading or publishes joint rates on any commodity destined to Atlantic seaboard points when moving via the Pacific coast terminals and the intercoastal steamship lines. There is no evidence to indicate that the present eastbound all rail and rail and water routes are inadequate to expeditiously handle the wool traffic under normal conditions. HELD, request for joint rates and issuance of through bills of lading denied. **Transit.** The western rail carriers now provide in their tariffs that carload shipments of wool may be stored, graded and assorted, or concentrated in transit at intermediate points on their lines at charges ranging from 2.5 to 3.5c per 100 pounds. Complainant asked that the present transit arrangements be continued and that the Santa Fe and

Milwaukee be required to establish similar arrangements at St. Louis. The present through rates to Boston from points on the Santa Fe and Milwaukee apply via Chicago, which point is reached over their own rails. Before transit can be required at any point through rates must apply via that point. There are no through routes in effect via the St. Louis gateway in connection with these carriers. Consequently the request of the St. Louis interests is two fold; first, for the establishment of through routes and joint rates; and, secondly, for transit arrangements. HELD, St. Louis has not shown upon this record that it is unduly prejudicial by the refusal of these carriers to provide joint rates and transit arrangements via that gateway. A number of the western wool carriers also have in effect arrangements whereby shipments of wool may be stopped in transit to finish loading. Under this arrangement the small grower who produces wool in less carload quantities and the larger producers who have on hand small quantities of wool after the bulk of their clip has moved may consolidate their shipments into carloads and thus secure the benefit of carload rates to eastern destinations. Transit to complete loading arrangements are more essential and of greater benefit to the wool shipping interests now than in former years because of the gradual reduction in the number of sheep in the flocks, which has resulted in diminishing the size of the clips. These transit arrangements to complete loading are beneficial also to the carriers if the means adopted are proper and nondiscriminatory; they are of benefit to the carriers because they are conducive to heavier loading and result in more economical transportation provided a reasonable charge is made for the extra service rendered. HELD, the rail carriers will be required to establish on wool and mohair in the grease, both eastbound and westbound, either arrangements for stopping in transit complete loading at directly intermediate points at a stoppage charge not to exceed $6.50 per car for each stop, or special concentration rates similar to those now in effect. **Shall Transit Be Required at Boston and Philadelphia?** If the U. P. system as a matter of policy voluntarily provides for baling in transit at points on its lines, but at a charge adequate to cover the additional service rendered, this showing alone is not sufficient to require the eastern lines serving Boston, and which do not control the policy of the Union Pacific, to grant transit for the purpose of inspection, weighing, grading, assorting, storing, change of ownership, consignee or destination, within the Boston switching district. It is shown that the eastern lines participate with the western carriers in joint rates on the eastbound wool, which include transit if authorized by the tariffs of the individual carriers, but transit is accorded only on the rails of the western or midwestern lines, and it does not appear that the carriers serving Boston grant transit on wool at any point on their lines. HELD, refusal to establish transit arrangements at Boston not unreasonable or unduly prejudicial. HELD, refusal of Pennsylvania and B. & O., to accord in Philadelphia district transit arrangements while according such transit arrangements at other competitive points on their lines unduly prejudicial to Philadelphia. Wool rates Investigation, 1923, 91 I. C. C. 235.

(g) Complainant attacked commodity rates on apples, carloads, since Jan. 1, 1916 from Idaho, Montana, Oregon, Utah, and Washington to Bisbee, Douglas and Nogales, Ariz., as unreasonable. In 73 I. C. C. 292 the Commission found the rates not unreasonable prior to August 26, 1920 but the record contained no evidence of shipments moving subsequent to that date, and prescribed rate of 140.5c, minimum 35,000 pounds for the future. HELD, during period from August 26, 1920 to Oct. 20, 1922, reparation awarded. Douglas Chamber of Commerce v. Director General, 91 I. C. C. 354.

(h) Respondents proposed both increased and reduced rates on grain and grain products in carloads (a) from southeastern Missouri to Memphis, Tenn., New Orleans, La., and other points in the Mississippi valley and (b) between points in southeastern Missouri and St. Louis, Mo., Cairo, Ill., and related points. The principal carriers involved are the M. P., Frisco and Southwestern. In (a) the points of origin are divided into grounds. The principal group lies west of Cairo but there is another important group north of this principal one. These will be referred to as Cairo and St. Louis west side groups. On the opposite side of the Mississippi river the I.

C., and other carriers have what may be called the Cairo and St. Louis east side groups, from which no rate changes are proposed, the former embracing Cairo and a few points in that vicinity, and the latter covering a considerable portion of the territory between Cairo and St. Louis. Formerly the rates of the west side lines were made with relation to the rates of the east side lines, but this relationship was disturbed by the readjustment following 64 I. C. C. 306. Respondents now propose to bring the rates from southeastern Missouri points into harmony with the rates of east side lines from southern Illinois points by increasing the rates from west side groups to the basis of the St. Louis and Cairo locals. As applied from St. Louis and Cairo proper, the local rates are practically paper rates, as substantially all the business moves out on transit arrangements or at the reshipping rates which are lower than the locals. The distances from the points in the west side groups to Memphis and perhaps to other of the destinations in question, may be somewhat less than those from points in the east side groups, but the traffic density on the western lines is lighter, the operating conditions less favorable, and the service apparently involves more branch line hauls, so that for all practical rate making purposes the respective east side and west side groups may be taken as comparable with each other. The present rates to Memphis and other points on the Mississippi river south thereof are much lower than those to intermediate points in Arkansas and Louisiana. The maintenance of higher rates to Arkansas points than to Memphis via the Southwestern in connection with the Frisco through Jonesboro, led to the filing of a formal complaint, Docket, 14846, in which the carriers agreed to increase the rates to Memphis to extent here proposed and to reduce the rates to intermediate points to that basis. The proposed adjustment is for the purpose of keeping the rates to St. Louis, Cairo and related points properly aligned with those to Memphis. Where the rates between St. Louis and southeastern Missouri points are applicable in connection with the east side lines via East St. Louis, making East St. Louis an intermediate point, St. Louis and East St. Louis would be accorded a common rate, whereas at present as to traffic moving to or from East St. Louis a higher rate applies than to or from St. Louis, resulting in a departure from the long and short haul rule. HELD, respondents have justified proposed schedules except rates on coarse grains to New Orleans in so far as they exceed 10% less than those herein proposed on wheat from same points to New Orleans; rates from Oran and Jackson, Mo., to Cairo, Ill. Fourth section relief denied. Grain and grain products, 91 I. C. C. 666.

(i) Complainant attacked commodity rates charged on pickled fish, salted fish and pickled herring, carloads, from Seattle, Wash., and other Puget Sound points, to destinations in transcontinental groups A, B, C and D, as unreasonable to extent they exceeded rates subsequently established. Shipments moved to Chicago, Ill., Detroit, Mich., Cleveland, O., New York and Philadelphia. Rates subsequently established, 85c to Chicago, 90c to Detroit, 95c to Cleveland and New York. The rates of 81.5c and $1.085c to Chicago represent the general increases of 1918 and 1920 over a rate of 65c. The subsequent reduction to 85c followed representations made by the Pacific Coast Cured Fish Association, which urged that there was need for a lower rate if the transcontinental lines expected to participate in this traffic to the same extent as formerly. HELD, rates attacked not unreasonable, complaint dismissed. Bortz Company v. A. A. R. R., 92 I. C. C. 11.

(j) Complainant attacked fifth class rate of $1.215 charged on two cars of apples shipped in September, 1919, from Fort Sumner, N. M., to Omaha, Neb., as unjust and unreasonable. Fort Sumner is on the Santa Fe through Belen and Clovis, N. M., where that line crosses the Pecos River, about 60 miles west of Clovis and 80 miles east of Belen. At Clovis a branch of the Santa Fe extends south to Pecos, Tex., and serves Roswell, N. M., and a number of other fruit and vegetable producing points in southeastern New Mexico on the Pecos river. Shipments moved over the Santa and Burlington, distance 871 through St. Joseph, Mo., 915 miles through Kansas City, Mo. When shipments moved a commodity rate of $1.175 was in effect to Omaha from Las Cruces, N. M., on the Santa Fe running south from Belen to El Paso, Tex. This rate applied through Fort Sumner and under

the intermediate clause of the tariff it became applicable on traffic from Fort Sumner to Omaha. There was contemporaneously in effect a rate of 66.5c on apples from Clovis to Omaha, which in combination with the fifth class rate of 26.5c from Fort Sumner to Clovis made the combination 93c. Effective Feb. 21, 1921 the Santa Fe voluntarily established a rate of 90c from Fort Sumner to Omaha, which is the Roswell branch group rate of 66.5c increased under Ex Parte 74. HELD, rate attacked unreasonable to extent it exceeded 66.5c, reparation awarded. Gilinsky Fruit Company v. Director General, 92 I. C. C. 242.

(k) Complainant attacked fifth class rate of $1.085 charged on one car of wrought iron pipe, shipped March 3, 1922 from Columbia, La., to Howard, Kans., as unreasonable to extent it exceeded 67.5c. Columbia is on the M. P., Howard on the Santa Fe, 612 miles from Columbia. Rate of 67.5c applied from Lake Charles, La., to Howard, Lake Charles being 167 miles south of Columbia. The rate from Lake Charles applied generally to points in the so-called Kansas City group. HELD, rate attacked unreasonable to extent it exceeded 67.5c, reparation awarded. Transcontinental Oil Co. v. A. T. & S. F. Ry., 92 I. C. C. 285.

(l) Complainant attacked commodity rates charged in 1921 and 1922 on fresh meats and packing house products, in straight or mixed carloads, from Austin, Minn., to Dallas and other Texas points, as unreasonable. In 81 I. C. C. 79, the Commission prescribed rates on these commodities from South St. Paul, Minn., and Sioux City, Iowa, to Oklahoma and Texas points. These rates consisted of specific amounts north of Kansas City, Mo., and south thereof the so called 1716 scale prescribed in 22 I. C. C. 160, subjected to the general increases of 1918 and 1920 and the general reduction of 1922. This resulted in rates to Dallas of $1.20 on fresh meats and 93c on packing house products from South St. Paul and $1.095 and 84c from Sioux City. On March 15, 1924 the defendants established rates from Austin on fresh meats 0.5c below the South St. Paul basis and on packing house products the same as those from that point. HELD, rates attacked unreasonable to extent they exceeded rates subsequently established, reparation awarded. Hormel & Company v. C. M. & St. P. Ry., 92 I. C. C. 613.

(m) Respondent, B. & O., proposed to cancel a provision for the application of third class rates plus 3c on common black blasting powder, carloads, from Fairchange and Evans, Pa., and Rita, W. Va., to stations on its line in Pittsburgh group, and east thereof, and thereby to make applicable the first or second class rating or rates. The basis generally applicable on this commodity in the territory governed by the official classification is first class. By exceptions respondent provided for the application of second class rates from and to certain points on its line. Respondent proposes now to establish from all points of origin to all destinations here considered the second class rating and rates inasmuch as that basis now applies from Quaker Falls and other more distant points to those destinations. HELD, second class justified. Exceptions to official classification on blasting powder 93 I. C. C. 451.

(n) Complainant attacked combination commodity rates charged on 19 cars of gas coke between June 1, 1918 and July 25, 1919 from Segundo, Colo., to Delta, Utah, as unjust, unreasonable and unduly prejudicial. Delta is on the L. A. & S. L., 134 miles southwest of Salt Lake City and Segunda is on the C. & W., 13 miles west of Trinidad, Colo., shipments moving via C. & W., D. & R. G., and L. A. & S. L. and also via C. & W., C. & S., U. P., O. S. L., and L. A. S. L., charged 36c composed of 28.25c to Salt Lake City and proportional rate of 7.75c beyond, prior to June 25, 1918 and thereafter 39.75c. Complainants plant was the only one of about 25 beet sugar factories in Utah and Idaho which did not enjoy the rates contended for. No substantial difference is shown between the transportation conditions, encountered from Segunda to Delta and to the other sugar producing points to which the blanket rates applied. HELD, rates attacked unreasonable to extent they exceeded 28.25c prior to June 25, 1918 and 32c thereafter, reparation awarded. Delta Beet Sugar Corp. v. Director General, 93 I. C. C. 551.

(o) Complainant attacked class rates between Chicago, Ill., district, on the one hand, and Michigan City, Valparaiso, La Porte, and Crown Point, Ind., and intermediate points, on the other, as un-

reasonable and unduly prejudicial of the latter and unduly preferential of competing cities in central territory. Class rates between points in central territory are based on 45 I. C. C. 254. It is claimed rates are not based on actual mileage but on an arbitrary distance of 70 miles. For one line hauls of distances up to and including 70 miles in other parts of central territory, the class scale is strictly applied, that is, in accordance with actual distance. Defendants are not warranted in maintaining rates between the Chicago district and the complaining group on any basis except the actual average distance over the direct routes. On that basis, the farther distant points in the group would have rates below the scale, while the nearer points would have rates higher than the scale, but this is characteristic of a group adjustment. HELD, class rates attacked unreasonable to extent they exceed first class 47c, second class, 40, third class 31.5c, fourth class 23.5c, fifth class 16.5c and sixth class 13c. Indiana State Chamber of Commerce v. A. T. & S. F. Ry., 95 I. C. C. 177.

(p) Complainant attacked carload rates on prepared roofing asphalt shingles, building and roofing paper, roofing cement, and related commodities from East St. Louis, Ill., and Kansas City, Mo., to points in southern Missouri, Arkansas, Louisiana, Oklahoma, Texas and eastern New Mexico as unreasonable, unjustly discriminatory and unduly prejudicial. Commodity rates are generally effective on the articles under consideration from East St. Louis, Kansas City and New Orleans to Oklahoma. In publishing rates from East St. Louis and Kansas City, Oklahoma is divided into small destination groups, but the grouping is not the same from both points. From New Orleans practically the entire state is placed in one group. From Port Neches there are some commodity rates to Oklahoma, but generally fifth class rates apply. In 52 I. C. C. 84, 63 I. C. C. 65, 73 I. C. C. 82 and 77 I. C. C. 444 the Commission prescribed the same rates on prepared roofing and asphalt shingles as on building and roofing paper. With certain exceptions the commodities under consideration take class C rates from East St. Louis, Kansas City and New Orleans to Texas, while from Port Neches there is an extensive line of commodity rates. To a large part of Texas common point territory the class C rate from both East St. Louis and Kansas City is 88c, but to certain points in the northern part of the state, the class C rates from Kansas City are 7c lower than those from East St. Louis. Points in eastern New Mexico are grouped from both East St. Louis and Kansas City, a rate of 96c applying from both points, except that to certain points in the northern part of the state the rates are somewhat lower, having apparently been made with relation to the rates to Colorado, formerly in effect. The record in this case discloses no differences in transportation conditions which would warrant any different level or basis of rates for the future than that prescribed in 77 I. C. C. 473. HELD, carload rates from East St. Louis and Kansas City to Oklahoma unreasonable to extent they exceed rates ranging from 8c single line and 10c joint line for 5 miles up to 52c single and joint line for 800 miles. HELD, further, rates from East St. Louis and Kansas City to Texas common point territory, except from Kansas City to Dallas Fort Worth group and Amarillo, Tex., unreasonable to extent they exceed 52c; and that rates from Kansas City to latter territory unreasonable to extent they exceed 45c. HELD, rates from East St. Louis and Kansas City to Texas other than Texas common points unreasonable to extent they exceed rates constructed by adding to the rates prescribed to Texas common points amounts equal to the amounts by which the class C rates to such points exceed class C rates to Texas common points. HELD, rates attacked to points in New Mexico east of the line of the Santa Fe from the Colorado line to El Paso unreasonable to extent they exceed 70c from East St. Louis and 60c from Kansas City. Complainant sought reparation from East St. Louis to Fort Smith on and after Mar. 26, 1921. Rates charged 67.5c in March 1921, 62c in May 1922, 56c in July 1922, and 55.5c thereafter. Short line distance 416 miles. Rates to Little Rock, Texarkana and Shreveport for 346 and 562 miles considerably lower. HELD, rates attacked unreasonable to extent they exceeded 59.5c from March 25, 1921 to 53.5c after July 1, 1922, reparation awarded. Certain-Teed Products Corp. v. A. & L. M. Ry., 95 I. C. C. 273.

(q) In 83 I. C. C. 737, the Commission found the rates on coal, carloads,

from complainants mines on the Greenbrier & Eastern R. R., in West Virginia to interstate destinations unreasonable to extent they exceed the group rates maintained from branch line points on the C. & O., in the New river district in West Virginia to the same destinations. Greenbrier extends from Marfrance, W. Va., 10.8 miles to G. & E. Junction, W. Va., where it connects with the Sewell Valley R. R. Traffic to and from points on the Greenbrier moves over the Sewell Valley line between G. & E. Junction and Meadow Creek, W. Va., 21 miles where the latter connects with defendant. The district rates were made applicable from G. & E. Junction and other points on the Sewell Valley during federal control, 58 I. C. C. 261. The record clearly indicates that the hauls from a number of mines on the Virginia and on defendants Piney Creek branch to the main line of defendants are as great and some greater than that of the longest haul from mines on the Greenbrier to defendants main line at Meadow Creek. It is equally clear that nothing upon this record indicates that the present rates from the New River district to interstate destinations are less than reasonable. HELD, rates on coal from complainants mine on the G. & E. R. R., to interstate destinations are unreasonable and unduly prejudicial to extent they exceed group rates maintained from branch line points on the C. & O., in the New River district in West Virginia to the same destinations, reparation awarded. Nelson Fuel Co. v. C. & O. Ry., 96 I. C. C. 124.

(r) Complainant attacked commodity rates charged on petroleum and its products, carloads, from Kansas, Missouri, Oklahoma, Arkansas, Louisiana and Texas to Indiana destinations as unjust, unreasonable, unjustly discriminatory and unduly prejudicial as compared with rates to Illinois, Wisconsin, Missouri, Kansas, Nebraska, Iowa and Minnesota. Joint rates are maintained to destination territory west of the Illinois-Indiana state line, including points in northwestern Indiana within the Chicago switching district. The rates to Indiana are composed usually of the separately established proportional rates to and beyond East St. Louis, St. Louis, or other Ohio and Mississippi river crossings, the lowest combination applying although in a few instances joint rates are in effect. The record is persuasive that the separate factors of the rates for local application are reasonable. It was not until June 25, 1921 that the rates from the midcontinent field were restricted to routes west of the Illinois Indiana state line; lack of specific routing in the tariffs theretofore having made the Chicago rates applicable intermediately to points in Indiana, although in some instances by circuitous routes. Without weighing this circumstance, it serves to indicate that the central territory carriers operating in Illinois and also in Indiana, participating in joint rates from the midcontinent field to points in the former state, had to provide restrictive routing to prevent the same joint rates from being applicable over their lines or routes to points in Indiana. HELD, rates attacked from Tulsa, Okla., and grouped points in Oklahoma to destinations in Indiana unreasonable to extent they exceeded 42c on refined and 35.5c on fuel oil to points in Indiana on and west of the Pennsylvania extending through Crown Point and Logansport, Ind., to Anderson, Ind., and Big Four thence to Louisville, Ky., and 45.5c and 39c to Indiana east of the territory so described, rates to be adjusted from other points of origin accordingly. Indiana State Chamber of Commerce v. A. T. & S. F. Ry., 96 I. C. C. 485.

(s) Respondents proposed increased rates on petroleum and its products from Gates and Port Arthur, Tex., Ardis, La., and other points to Kansas groups 1, 2 and 3 and also to certain destinations in Oklahoma on the Rock Island and Northeast Oklahoma R. R. Present rates to Oklahoma are 34c from Gates 32.5 from Ardis and Shreveport and 42c from Port Arthur. From Gates the proposed rates range from 37.5c to 47c, average being 41.2c and corresponding increases from the other points. Present rates to Kansas are likewise 34c from Gates, 32.5c from Ardis and Shreveport and 42c from Port Arthur. Respondents concede that the proposed rates may be too high, that is to say, higher than they would be if the carriers were given an opportunity to establish rates to this territory upon a proper basis. They express willingness to establish rates on these articles to the destinations to which there is a movement. HELD, schedules not justified, but carriers may establish reasonable

rates properly related to the rate adjustment on these articles in this territory. Petroleum from southwest, 98 I. C. C. 321.

(t) Complainant attacked rates on apples, carloads, from the Yakima valley of Washington to Portland, Ore., as unreasonable and that the relationship between these rates and the rates from the valley to Seattle and other Puget Sound points subjected Portland to undue prejudice. The rates from the valley to Portland apply over the Oregon-Washington direct, the N. P., via Seattle, and N. O., in connection with the S. P. & S. The rates to Seattle apply over the N. P., direct and over the Oregon-Washington in connection with the N. P. Short line distances to Portland are 300 miles from Yakima and 231 miles from Pasco, and to Seattle 161 miles from Yakima and 351 miles from Pasco. The average distance from the valley is 199 miles to Seattle and 276 miles to Portland. Complainants attack is centered on the main line rates and it does not assail the differentials as such. The record will not support a finding that rates from branch line points, where now higher than rates from main line points, may not continue to be maintained on that basis. At time complaint was filed rates to Portland were 40c from Attalia, Pasco and Kennewick, and 42.5c from all main line points thence west to Yakima and the rates to Seattle were 42.5 from Attalia and 28.5c from the remainder of the valley. The main line rates from the valley are both graded and blanketed to some extent. The rates on cantaloupes and vegetables were at the time the complaint was filed, and are at the present time, blanket rates of 28.5c to Seattle and 35.5c to Portland from all main line points in the valley except that from Pasco and Kennewick to Portland the rate is 31c on cantaloupes and 32c on vegetables. HELD, present rates on apples, carloads, from Carroll, Wash., and main line points in the Yakima valley west thereof to Portland unreasonable and a maximum reasonable rate on apples from all main line points in the valley to Portland will be 38.5c; and present blanket rate of 35.5c on cantaloupes and vegetables from main line points to Portland not unreasonable. Further HELD, rates on apples, cantaloupes and vegetables from the valley to Portland unduly prejudicial to extent they exceed rates from main line points in the valley to Seattle by more than 10c. Portland Traffic & Transportation Asso. v. N. P. Ry., 98 I. C. C. 345.

(u) Complainant attacked commodity rates charged on silica sand, carloads, from Ottawa, Ill., to Cincinnati, O., as unreasonable. In 85 I. C. C. 412, the Commission found rates attacked unreasonable to extent they exceeded $2.78 prior to July 1, 1922 and $2.50 thereafter, awarding reparation. The only carrier east of the Illinois-Indiana state line named as a defendant is the Pennsylvania, and the $2.50 rate was, of course required only in connection with that line. In publishing the rate the tariff agent did not restrict its application and it became effective from the entire producing district in the vicinity of Ottawa in connection with the Big Four and B. & O. Shippers and carriers are agreed that a common rate should apply over all the routes from the producing points in question, not only to Carrel Street station, but to the entire Cincinnati district. The rate from Ottawa to Cincinnati is more or less of a key rate and the reduction required therein jeopardizes the whole fabric of silica sand rates in official classification territory. Already the carriers have had a number of requests for reductions based on the rate to Cincinnati. HELD, rates attacked not unreasonable and increased rate proposed in suspended schedules justified, complaint dismissed. Boldt Glass Co. v. C. B. & Q. R. R., 98 I. C. C. 481.

(v) Rates to and from points on Monongahela Connecting R. R., South Buffalo Ry., Union R. R., and Newburg & South Shore Ry., common-carrier short lines, found unjust and unreasonable to extent they exceeded rates to and from points in same rate districts which are located on trunk lines. Reparation awarded. Jones & Laughlin Steel Co. v. P. & L. E. R. R. Co., 91 I. C. C. 300.

(w) Complainant attacked commodity rate of $5.18 per long ton charged on phosphate rock, carloads, from Dunnellon and other points in Florida to Knoxville, Tenn., as unreasonable, unjustly discriminatory and unduly prejudicial. The hard rock district begins about 45 miles southwest of Jacksonville and extends about 100 miles south through the western side of the state. The pebble rock district lies in the southwestern part of

the state, east of Tampa. Both districts are served exclusively by the S. A. L., and A. C. L. In establishing rates from Florida the carriers have included both of these producing districts in a single rate group. Phosphate rock loads heavily. Loss and damage claims are negligible, and it moves in great volume. Shipments moved from near Bartow, and from Prairie both in the pebble rock district. Bartow is a junction of the A. C. L., and S. A. L., 771 miles by the former and 726 miles by the latter over routes of movement to Knoxville. Prairie is on the A. C. L., about 25 miles southwest of Bartow. Before and after shipments moved complainant requested carriers to publish a commodity rate of $5.25. At that time a rate of $5.75 had been in effect since Nov. 10, 1921. The present rate is $5.18 which has been in effect since the 10% reduction of July 1, 1922. HELD, rates attacked from Dunnellon, Bartow Prairie and other points in Florida taking the same rates to Knoxville unreasonable as compared with rates to the Carolina group to extent they exceeded $5.25 prior to July 1, 1922 and $4.73 thereafter, reparation awarded. Knoxville Traffic Bureau v. A. C. L. R. R., 101 I. C. C. 165.

(x) Rates on pickled and salted fish and pickled herring from Seattle and other Puget Sound Points to destinations in transcontinental Groups A, B, C, and D found not unreasonable as compared with lower rates subsequently established by transcontinental lines in order that they might secure some of the traffic in competition with water routes. Bortz Co. v. A. A. R. R., 92 I. C. C. 11.

(y) Rates on cotton from Phoenix and other Arizona points to Columbus, Eatonton, Macon, and Thomaston, Ga., eastbound transcontinental Group L. points, found unreasonable to extent they exceeded rates to Pittsburgh, a transcontinental Group B point. Geographically, Group L is an extension into southern territory of Group B, and commodity rates from Phoenix to points in Groups B and L are usually the same. Reasonable maximum rates prescribed and reparation awarded. Southwest Cotton Co. v. A. E. R. R., 92 I. C. C. 563.

(z) Rates on lumber, timber,. and other forest products from Frost and Verdun, Ala., local points on the Garyville Northern R. R., to destinations in official and western trunk-line territories, and in Oklahoma, Texas, Kentucky, and Tennessee, found unduly prejudicial to extent they exceed the corresponding blanket rates contemporaneously maintained from Livingston and Garyville, La. Fleming Bros. v. G. N. R. R., 92 I. C. C. 582.

(aa) Rate on tanbark from Ross Spur (Wild Cat Spur), Wis., to Sheboygan, Wis., during Federal control, found not unreasonable as compared with lower rates contemporaneously applicable from Star Lake group points in same general vicinity. Shipments were sporadic, request for a through rate was not made until movement had ceased, and traffic moved during period when operating conditions on the branch were rendered difficult by heavy snowfall. Moreover, rate assailed compares favorably with those found reasonable on similar traffic in 58 I. C. C. 217 and 87 I. C. C. 322. American Hide & Leather Co. v. Director General, 93 I. C. C. 265.

(bb) Proposed establishment of commodity rate lower than prevailing class basis on insulators from Emeryville, Calif., and other western points to transcontinental Groups F to J, inclusive, found justified. Considering extensive areas of the respective groups, proposed rate is not materially out of line with rates from Macomb, Ill., and other eastern producing points. Eastbound Transcontinental Rates on Insulators, 93 I. C. C. 282.

(cc) Rates on lumber from Group 12 points on the Guyandotte branch of the C. & O. in West Virginia to destinations in c. f. a. territory and in Canada found not unreasonable or unduly prejudicial as compared with lower rates to same destinations from points in Groups 11 and 13 on the Coal River branch. While through distances from the respective groups are substantially the same, differentials over junction point rates to Group 12 are higher than those to Groups 11 and 13, but it can not be found that rates assailed are unreasonable because of present variations. Peytona Lbr. Co. v. C. & O., 93 I. C. C. 363.

(dd) Rates assessed on oranges from points in California to Virginia, Minn., found inapplicable and applicable rates, based upon combinations of the blanket rate to Duluth and third-class beyond, found unreasonable to extent they exceeded the transcontinental Group F rates contemporaneously in effect to Duluth. Reparation awarded. Hansen-

Peterson Co. v. A., T. & S. F., 93 I. C. C. 596.

(ee) Class rates on automobile wheels without hubs, tires, or ball or roller bearings, from Portland, Ind., to Los Angeles, San Francisco, Tacoma, and Seattle, found not unreasonable, discriminatory, or unduly prejudicial as compared with lower commodities rates contemporaneously maintained from other points in transcontinental Group C to Pacific coast destinations, which lower rate was subsequently established from Portland. Complainant failed to show that any point accorded the lower rate was in direct competition with Portland, or that there was any movement under the lower rates from the alleged preferred points. Bimel Spoke & Auto Wheel Co. v. L. E. & W. R. R., 95 I. C. C. 9.

(ff) Rate on sweet potatoes from Dardanelle, Ark., to Spokane, found unreasonable to extent it exceeded the contemporaneous Group E commodity rate applicable over another route, and subsequently established via route of movement. Reparation awarded. Ft. Smith Commission Co. v. Director General, 95 I. C. C. 149.

(gg) Rate on wine grapes from Madison, Calif., located on the Rumsey branch of the Southern Pacific to Portland and East Portland, Ore., found not unreasonable, as compared with group rates contemporaneously maintained on like traffic to these destinations from South Vallejo, Napa, and points on the Southern Pacific company's San Ramon and Walnut Grove branches they are unduly prejudicial. New Italian Importing Co. v. S. P., 95 I. C. C. 611.

(hh) Following Lakewood Engineering Co., 88 I. C. C. 588, commodity rate on portable railway track from Tullytown, Pa., a transcontinental Group A point, to Phoenix, Ariz., found not unreasonable as compared with rates on rail and crosstie fastenings, and on various iron and steel articles. In the cited case the commission found not unreasonable the commodity rate applying from transcontinental Group B points to Phoenix and Pacific coast points and record herein fails to show that level of the Group A rate is improper as compared with that from Group B. State of Arizona v. A. E. R. R., 95 I. C. C. 658.

(ii) Proposal to correct error in schedules originally published on the Peoria basis, by increasing to the Chicago group basis the proportional rates on grain and grain products from Kansas City, Mo.-Kans., to points in Iowa on the Chicago & North Western, found not justified. Present adjustment is in harmony with rates from Omaha, Nebr., to same points and Peoria basis is that maintained to same territory by other lines for both single and joint line hauls. Moreover, respondents have not shown that the present adjustment is improper or the present rates too low, nor have they offered any justification for a different basis over their lines from Kansas City to destination territory. Grain from Kansas City, 96 I. C. C. 154.

(jj) Rates on bituminous coal from Group 2 mines on the Carolina, Clinchfield & Ohio to destinations in Alabama, Florida, Georgia, North Carolina, South Carolina, and Tennessee found not unreasonable, but rates from mines north of Steinman, Va., to and including Elkhorn City, Ky. (Group 2 points), which exceed rates contemporaneously maintained from Steinman and Moss, or Clincho, Va. (Group 1 points), are, and for the future will be, unduly prejudicial to Group 2 points. Craney Island Coal Co. v. C., C. & O. Ry., 96 I. C. C. 322.

(kk) Rates on bituminous lump coal from Duluth and West Duluth, Minn., to Ladysmith, Wis., found not unreasonable or unjustly discriminatory. Coal rates in Wisconsin are not constructed primarily with regard to distance, but the controlling consideration is the equalization of ports and grouping of destinations. Original order vacated and complaint dismissed. Great Western Paper Co. v. M., St. P. & S. S. M. Ry. Co., 96 I. C. C. 444.

(ll) For the purpose of applying rates prescribed for the transportation of manufactured iron and steel articles from points in the Pittsburgh, Pa., district to St. Louis, Mo., and points in Illinois and Indiana, reasonable groupings of the origin and destination points may be employed, provided the rates from and to each of such groups and in the aggregate average substantially the same as if made from and to each point separately under the scale prescribed. Jones & Laughlin Steel Corp. v. B. & O., 96 I. C. C. 682, 696.

(mm) Present commodity rates on

sewer pipe from St. Louis, Mo., and points grouped therewith, to Mississippi Valley destinations, found not unreasonable, but these rates and corresponding rates from southeastern producing points to same destinations found to embody a maladjustment of rates due to the revision of rates from the St. Louis group pursuant to commission's decision in 64 I. C. C. 306. Defendants notified to make equitable readjustment of rates by June 1, 1925, record being held open for such further action or proceedings as may be necessary or appropriate. St. Louis Chamber of Commerce v. A. & V. Ry. Co., 98 I. C. C. 29, 34, 35.

(nn) Present rates, established subsequent to movement of shipments here in issue, on lumber from Gantt and Sports, Ala., to Pensacola, Fla., via Andalusia, Ala., found not unreasonable, but group rates assessed on shipments under consideration found to have been in contravention of the aggregate of intermediates clause of the fourth section and unreasonable to extent they exceeded lower combination on Andalusia contemporaneously in effect from origin points to destination. Reparation awarded. Pensacola Creosoting Co. v. C. of G. Ry., 98 I. C. C. 36.

(oo) The commission has repeatedly found, in dealing with group rates, when the propriety of the group is not in question, that distance and ton-mile earnings between selected points can not be regarded as controlling. However, when the near edge of a group is on such a high basis as to produce rates in excess of the aggregate of intermediate rates, this general principle is not adequate justification and there is a strong presumption that the group principle of rate making has been carried beyond reasonable limits, particularly where no compelling necessity is shown for an extensive group. Pensacola Creosoting Co. v. C. of G. Ry., 98 I. C. C. 36, 37.

(pp) There is a commercial necessity for permitting grain produced in Group G to move eastward to the Missouri River cities for transit before being shipped to California. Indeed, this necessity appears to extend to points more than 150 miles west of the Missouri River cities. Provided reasonable charges are assessed for the total transportation, the commission is of the opinion that grain should be permitted to move from all of Group G via the Missouri River cities to California, and that carriers should not be permitted to increase their charges to an unreasonable basis which will prohibit, or nearly prohibit, that movement. Grain to Pacific Coast, 98 I. C. C. 158.

(qq) Evidence in support of rates to Washington as compared with those to Baltimore, is merely an explanation of how the differences grew up, without going into the merits of such differences and a contention that Baltimore is at the farthest edge of a group. Evidence does not show that rate to Baltimore was ever determined on group basis; on the contrary, the only conclusion possible from the record is that rates to New York, Philadelphia, and Baltimore were established upon consideration bearing on those ports alone and not relating to inland points. Washington Publishers' Asso. v. B. & O. R. R. Co., 98 I. C. C. 339, 343.

(rr) Rates on lump coal from northern Colorado to grouped destinations in northwestern Nebraska and western South Dakota found not unreasonable except that rate to Northport, Nebr., on this traffic will be unreasonable for future to extent it may exceed $3.40 per net ton. Colo. & N. Mex. Coal Operators Asso. v. D. & R. G. W. R. R. Co., 98 I. C. C. 377, 391.

(ss) Rate on canned goods from Hayward and San Leandro, Calif., to Oakland, Calif., for reshipment by water to interstate destinations, found not unreasonable. This rate on both intrastate and interstate movements is blanketed over considerable territory and is a commodity rate substantially less than fifth class. Complaint dismissed. Prince & Co. v. S. P. Co., 98 I. C. C. 615.

(tt) Complainant attacked commodity rates on cast iron soil pipe and fittings, carloads, from Somerville, N. J., a local point on the Jersey Central to Flatbush Avenue in the Borough of Brooklyn Long Island City, East New York, Jamacia, and Flushing, all local points on the Long Island R. R., on Long Island, N. Y., as unreasonable unjustly discriminatory and unduly prejudicial. It further alleged that the Long Island subjected complainant to undue prejudice by joining the Pennsylvania in rates on cast iron pipe, carloads, from Hainesport and Bridgton, N. J., Norristown, Pa., and Baltimore, Md., to destinations which are lower, distances considered,

than the joint commodity rates of the Jersey Central and the Long Island. The $2.60 rate attacked is a group rate. It applies not only from Somerville and the points shown in complainants exhibit but from other points including Newark, which is only 8 miles from Jersey City and intermediate on traffic from Somerville. The rate also is blanketed as to destinations on the Long Island. The division accruing to the Long Island is the sixth class rate, collected by that carrier out of all joint rates on cast iron pipe from trunk line territory. HELD, rates attacked not unreasonable or otherwise unlawful, complaint dismissed. Somerville Iron Works v. Long Island R. R. 102 I. C. C. 511.

(uu) Complainant attacked commodity rates on fibreboard and pulpboard, carloads, from New Iberia, La., to Lovefield, Tex., as unreasonable. Shipments made between Dec. 3, 1923 and Feb. 2, 1924, charged 56c, the 40c rate becoming effective Feb. 13, 1924. The contemporaneous rate on fibreboard from New Iberia to Dallas, 463 miles was 40c. Lovefield is a suburb of Dallas, 6 miles more distant from New Iberia. It was evidently the intention to make this rate effective to Lovefield at the same time as to Dallas, on Nov. 28, 1923. HELD, rate attacked unreasonable to extent it exceeded 40c, reparation awarded. Boldt Paper Mills Co. v. N. I. & N. R. R. 102 I. C. C. 682.

(vv) Complainant attacked a combination rate charged on horseshoes, toe calks, and parts shipped between Dec. 8, 1920 and Feb. 8, 1923 from Duluth, Minn., to Rochester, N. Y. as unreasonble, unjustly discriminatory and unduly prejudicial. Charged 77.5c prior to July 1, 1922 and 69.5c thereafter. Seven of the shipments moved from Duluth over the N. P., and were routed NP-CB&Q. Eight of the shipments originated on the Omaha and were routed over C. & N. W. No rate was inserted in the bills of lading. On Aug. 6, 1923 a rate of 51c was made applicable from Duluth and it is to this basis that reparation is sought. The rate from Steelton, within the Duluth switching limits was 51c, due to the inclusion of these commodities in the list of iron and steel articles. A shipment from Steelton can move through Duluth although that is not the usual operating route. HELD, rate attacked unreasonable to extent it exceeded 56c prior to July 1, 1922 and 51c thereafter, reparation awarded. Diamond Calk & Horseshoe Co. v. N. P. Ry. 102 I. C. C. 701.

(ww) In all cases of blanket or group rates there is of necessity more or less disregard of distance and varying degrees of inequality, but such inequalities are not necessarily unreasonable or unjust when the situation is viewed from every standpoint and all the circumstances and conditions are taken into account. In the absence of tangible proof of tangible injury to complainants or of positive evidence that rates are unjustly discriminatory or unduly prejudicial a group adjustment should not be disturbed. Wortham Publishing Co. v. Director General 102 I. C. C. 729, 734.

(xx) Respondents proposed a revision of the rates on fruits and vegetables between California and Oregon, Washington, Utah, Idaho and Montana. In order to remove the undue prejudice found by the Commission in 95 I. C. C. 611, the carriers increased the rate from Madison, Calif., from 55 to 60c, reduced the rates from Micke from 99 to 85c, and in addition, proposed a general revision of the rates. Resulting in increases and reductions. The rates on citrus and deciduous fruits, vegetables and melons from group 1 to Portland are increased from 49.5c to 60c. To Seattle from 81.5c to 85c; on melons from 70 to 79c; on fifth class vegetables, from 78 to 85c; and on class C vegetables from 70 to 79c. While it may be true that some of the rates on fruits and, to a smaller extent, the rates on vegetables between California and Oregon and Washington are, because of active water competition lower than they might otherwise be the earnings produced by the present rates do not show that they are unremunerative to the respondents. The testimony of the protestants shows that the economic condition of the deciduous fruit industry is such at the present time that it can ill afford an increase in rates. Respondents have taken advantage of the orders of the Commission in two cases, in each of which the rate on a single commodity from one point of origin to one destination was in issue, to propose a general revision of the rates between Pacific coast states. This proposed revision was published without giving to the shippers interested a public hearing at which they might have had an opportunity to express their

views. HELD, proposed rates not justified. Fruits and vegetables between Pacific coast states 104 I. C. C. 66.

(yy) Complainant attacked commodity rate of 64c charged on 16 cars of corn and oats shipped from group G in Nebraska to Portland Ore., between June 25 and Oct. 14, 1918 as unjust, discriminatory, exorbitant, unsound and destructive to the extent it exceeded the subsequently established rate of 61c. Group G embraces eastern Kansas and Nebraska, exclusive of certain Missouri river crossings. Prior to June 25, 1918 the applicable rate on wheat from part of this territory to Portland was 58c. This included the points at which these shipments originated. But a special wheat rate of 55c was in effect from many, if not most, of the group G points. G. O. 28 of the director general, increased wheat rates a maximum of 6c and rates on other grain to the wheat rate basis. The above named rates thereby became 64 and 61c, and a rate of 50c from group G points on corn and oats, became 64c. But on Aug. 30, 1918 the latter was reduced to 61c from the points from which the special wheat rate applied and on Oct. 14, 1918, the same rate was made applicable on both wheat and coarse grain from the remaining group G points, including those here involved. In 64 I. C. C. 461 the Commission awarded reparation on basis of 61c. HELD, rate attacked unreasonable to extent it exceeded rate of 61c, reparation awarded. Albers Bros. Milling Co. v. Director General 104 I. C. C. 330.

(zz) Complainant attacked rates on baled hay, carloads, from hay producing points in Arizona to California, New Mexico, Texas, Oklahoma, Missouri, Arkansas, Louisiana, Tennessee, Mississippi, Alabama, Georgia, North Carolina, and South Carolina, as unjust, unreasonable, unduly prejudicial and in violation of section four. Principal points of production are in the vicinity of Phoenix, Thatcher and Yuma. The Phoenix group is in the Salt river valley, and is irrigated from the Roosevelt dam, 80 miles north of Phoenix. This group is served by the S. P., and Santa Fe. The Thatcher group in the eastern part of the state, tributary to the Gila river, has 35,000 acres under cultivation, served by the S. P. Yuma group is served by the S. P. Generally speaking the rates on hay throughout the western group district are extensively grouped. The attacked rates are no exception. Rates the same as those to Los Angeles apply for much shorter distances. The rate of 25c from Lovelock and Fallon to San Francisco is blanketed from Nevada points as far west as Fernley, 276 miles from San Francisco, and the rate of 19.5 from Reno from points as far west as Gorge, 158 miles from San Francisco. Fallon is on a branch line of the S. P. The rate from Fallon to Los Angeles 656 miles, is 54c; and from Utah common points to Los Angeles 801 miles is 44c. From Winnemucca, Nev., to San Francisco, 417 miles rate is 31.5c. Particular complaint is made of the rate of 37.5c from the Thatcher group to Fort Bliss, Tex., which is made by combination of a rate of 28c to El Paso and 9.5c beyond, an additional haul of 4.83 miles. From New Mexico over the Santa Fe to Fort Paso is 6.5c as compared with 9.5c via the S. P., from Arizona points. Defendants expressed willingness to remove this inconsistency by increasing the arbitrary over the Santa Fe. The Santa Fe maintains rates on hay from New Mexico but not from Arizona to Texas which are less than the lowest combinations. The S. P., maintains a rate of 52.5c from the Thatcher group to all points in Texas on its lines where the haul in Texas is 300 miles or more. To Texas points on lines other than the S. P., and Santa Fe the usual basis is the combination on El Paso, which, for hauls in Texas of 300 miles or more, is 65c. The common point rates over these respective routes apply to Fort Worth, a representative Texas common point, 1,215 miles over the S. P., and 859 miles over the T. & P. To Clifton, Ariz., the rates are 45.5c from the Phoenix group, 353 miles, and 39c from the Thatcher group, 166 miles as compared with 35.5c and 28c, to El Paso, 460 and 244 miles. Rates from San Francisco and intermediate points to Kansas City, St. Louis, and southeastern points are graded with regard for distance, while the rates from Arizona points to the same destinations reflect very little regard for distance. The general line of rates on hay to eastbound transcontinental groups are the same from intermediate Arizona and Nevada points as from more distant points in California, except to Groups E. G. and H. The Commission in a number of cases has prescribed rates to or from points in Arizona which are higher than

the rates prescribed for like distances between points in the south west east of Texas differential territory. HELD, attacked rates on baled hay, carloads, from Arizona to El Paso and from Yuma to Los Angeles not unreasonable or otherwise unlawful; rates attacked unreasonable to extent they exceed from Alhambra, Glendale, and Peoria Ariz., to El Paso via Phoenix, Ariz., and S. P., 1c over the rates from Phoenix; from Thatcher, Phoenix and Yuma groups and over S. P., beyond Phoenix from Alhambra, Glendale, and Peoria to Fort Bliss, 4c over rates to El Paso. Attacked rates to river crossings Memphis and south unduly prejudicial to extent they exceed rates from El Paso by more than 6c from Thatcher group, 10c from Phoenix group and 13c from Yuma group. Arizona Hay Traffic Asso. v. A. E. R. R. 107 I. C. C. 591.

(3a) Combination rates to Petaluma, Calif., composed of commodity rates to San Francisco, plus local commodity rates beyond, assessed on shipments of grain and grain products from certain points in Utah, Idaho, Montana, Wyoming, and Oregon, on the Oregon Short Line, found not unreasonable, but failure to accord Petaluma the San Francisco basis of rates while contemporaneously maintaining that basis to San Francisco Oakland, San Jose, South Vallejo, Stockton, Woodland, and Marysville, Calif., found to be unduly prejudicial to Petaluma and unduly preferential of San Francisco, Oakland, San Jose, South Vallejo, Stockton, Woodland, and Marysville, points with which Petaluma comes into competition. Undue prejudice ordered removed by the establishment of rates on the San Francisco basis from same points of origin to Petaluma. Golden Eagle Milling Co. v. B. E. R. R. Co., 100 I. C. C. 41.

(3b) Rates on deciduous fruits from California points to Groups D. to J, inclusive, found not unreasonable as compared with lower rates maintained on fresh vegetables in packages, melons, and cantaloupes from and to same points, and with Class C rates to various eastern groups. Principal market for fresh vegetables and an important one for cantaloupes is in Group D, Chicago territory, while the average haul on deciduous fruits is considerably beyond Chicago, rates being blanketed to large destination groups in the East. Moreover, the classification ratings for fresh fruits are generally higher than on fresh vegetables and melons. See Phoenix Chamber of Commerce, 62 I. C. C. 368. Calif. Growers' & Shippers Protective League v. S. P. Co., 100 I. C. C. 79, 85, 86.

(3c) Rates on fresh deciduous fruits, other than apples, from California points to eastern transcontinental groups, found not unreasonable as compared with rates on grapes, peaches, and strawberries, for shorter hauls from points in the East and South. Differences in length of haul and other conditions surrounding the transportation weaken the force of comparisons made. Moreover, rates from California are blanketed to a destination territory extending more than half across the country, while other rates are more or less graded with respect to distance. Calif., Growers' & Shippers Protective League v. S. P. Co., 100 I. C. C. 79, 87.

(3d) Rates on liquid and solid asphalt from Port Neches, Tex., and points taking same rates, to Tulsa, Okla., found not unreasonable. The record does not justify Tulsa being accorded a lower basis of rates than that which the existing group basis affords. Standard Paving Co. v. A., T. & S. F., 100 I. C. C. 233.

(3e) Upon general investigation, on commission's own motion, of interstate class rates and l. c. l. commodity rates within southern territory and between southern and official territories, all-rail and rail-water, FOUND: That in adjustment between central and southern territories Portsmouth and Ironton, Ohio, Ashland, Ky., and Kenova and Huntington, W. Va., shall be included within a single group, distances to and from basing on Ashland. Southern Class Rate Investigation, 100 I. C. C. 513, 706.

(3f) Upon further hearing finding in original report, 85 I. C. C. 373, that rates on lumber to New Orleans and Mobile, from Lyman, Miss., on the near edge of the blanket of the Gulf & Ship Island origin points, were not unreasonable or unduly prejudicial, affirmed. Evidence amply supports original conclusions that blanket method of making rates on lumber has long been satisfactorily employed in this territory and that it should not be here disturbed. Obviously some shippers will be farther from a given point than others in the

same blanket, but the record shows that whereas Lyman is the nearest shipping point to Mobile and New Orleans it is among the farthest points to destinations in other directions. A blanket rate structure in existence since inception of the sawmill industry in this territory should not be lightly set aside for a rate adjustment in which distance would be the sole factor determining the measure of the rates. Ingram Day Lbr. Co. v. G. & S. I., 101 I. C. C. 287.

(3g) Presumably a group long maintained is fair and should not be disrupted unless there is some very good reason for doing so. Missouri Portland Cement Co. v. A., T. & S. F., 101 I. C. C. 454, 463.

(3h) Group or blanket rates on cast-iron soil pipe from Sommerville and Newark, N. J., to points in New England, found not unreasonable or otherwise unlawful. The commission has often approved blanket or group adjustment especially where, as here, all industries in the district are included within the group. Rates in issue are not shown to subject complainant to undue prejudice in favor of competitors located in the same group, and if complainant is under any disadvantage by reason of the fact that its inbound rates on raw material are higher than those of its competitors in the group, that disadvantage may not properly be offset by reducing the rates on the outbound product unless such outbound rates are themselves in violation of the act. Somerville Iron Works v. C. R. R. Co. of N. J., 101 I. C. C. 683.

(3ha) Contention by complainants that present rate adjustment on coal from mines located on the Monongahela West Penn Public Service Co. unduly prefers competitors in immediate vicinity and all other mines on lines of defendants and their connections accorded the Fairmont district rates, or the same or lower rates to eastern and western markets; relying largely upon fact that group rates apply from certain independent short lines in the general territory here considered, and further fact that commission has in numerous cases prescribed group rates from mines on such lines, not sustained, following Big Mandy Coal & Mining Co., 78 I. C. C. 455, in which commission found that "in cases of this character no rule of general application can be followed, but each situation must be judged in accordance with its particular facts and circumstances." Hook Coal Co. v. M. V. T. Co., 101 I. C. C. 719, 725.

(3hb) Rate on coal from certain mines in the Illinois group to Hoopeston, Ill., over an interstate route, found not unreasonable or unduly prejudicial in their relation to the rates from same origin points to Chicago, Ill., and Indianapolis and Vincennes, Ind. While complainants are entitled to reasonable rates, in considering the level, their relationship from other Illinois group points, and rates from other groups in the same general territory of which they are a part, can not be ignored. Conditions affecting rates to Chicago are not comparable with those affecting rates to Hoopeston, and the record does not justify condemnation of the rate from the southern Illinois group to Hoopeston or application to that point of lower rates from points of origin named than those from the group. Hoopeston Grain & Coal Co. v. C. & E. I., 102 I. C. C. 269.

(3hc) Rates on lumber from Golden, Miss., group points to St. Louis and Buffalo-Pittsburgh territories found not unreasonable or unduly prejudicial as compared with lower contemporaneous rates on like traffic from Corinth, Miss., and other points in same general territory to same destination territories, and rates from and to a number of other points for comparable distances. Northeast Mississippi Traffic Bureau v. A. & V. Ry., 102 I. C. C. 611.

(3hd) Class rates applied on potatoes from Naples and Lily, S. Dak., to points in Iowa found unreasonable to extent they exceeded commodity rates contemporaneously in effect from other points in group in which Naples and Lily are located and as compared with lower rates in effect from and to other points in same general territory. Reasonable rates prescribed and reparation awarded. Naples Potato Growers Asso. v. C., M. & St. P., 102 I. C. C. 649.

(3i) Respondents proposed to increase the class rates and rates on grain and grain products and other commodities between certain points in Iowa and South Dakota on the one hand and points in Colorado and Utah on the other. The points in Iowa are in the western portion of that state between the Missouri river and the line of the Northwestern

extending from Hawarden, Iowa to Arion, Iowa, and north of the Milwaukee, extending from Council Bluffs to Manilla, Iowa. The South Dakota points are Elk Point, Jefferson and McCook on the Milwaukee, from 17 to 30 miles northwest of Sioux City, Iowa. At present the Iowa and South Dakota points involved are grouped with the Missouri river crossings, such as Omaha, Neb., and Sioux City, Ia., and take the same basis of rates on classes and on certain commodities to points in Colorado and Utah. Respondents proposed to eliminate certain Iowa and South Dakota points from the Missouri river rate group and place them in a higher rated group. It is proposed to increase the rates on grain and grain products to a basis of the lowest local rate from any point to Sioux City plus the present rate from Sioux City, such basis to be held as maximum over a large part of the origin territory. Present rates are 36.5c and 33c on wheat and coarse grain, suspended schedules generally representing increases of 6.5c per 100 pounds on wheat and 6c on coarse grain from the Iowa points. From a few points in Iowa on the Milwaukee the proposed increases are from 9.5c to 11c on wheat and from 8.5c to 10c on corn. From South Dakota from 9 to 9.5c on wheat and from 6.5c to 8.5c on coarse grain. The record does not show the extent of the proposed increases in the class rates or the rates on commodities other than grain and grain products between the Iowa point and the western destinations. Respondents' evidence related almost exclusively to the proposals to increase the rates on grain and grain products. Practically no reference was made to the increases proposed in the class rates and the rates on commodities other than grain and grain products, but they point out that the protests were directed against the proposed rates on grain and grain products. HELD, proposed schedules not justified. Grain and grain products from Iowa and South Dakota 109 I. C. C. 27.

(3j) In 85 I. C. C. 425, Commission found rates charged on 28 cars of asphalt, in barrels, from Richmond and El Segundo, Calif., to El Paso, Tex., between March 1, 1920 and Nov. 20, 1921 as unreasonable to extent they exceeded 44c prior to August 26, 1920 and 55c on and after that date, or the same as to Albuquerque, N. M., and Denver, Colo. El Segundo is 18 miles southwest of Los Angeles. Richmond is near San Francisco, Calif. Some moved entirely over S. P., and that carrier participated in the haul of the others. Shipments from Richmond moved over the so called valley route via Los Angeles. They originated on the Richmond Belt Ry., maintained partly by the S. P., and partly by the Santa Fe, the maintenance and operating expenses amounting to about 20c per ton. In addition defendants pay the Richmond Belt a rental charge of 5c per ton. The cars originating at Richmond were twice classified before reaching El Paso. The cars originating at El Segundo were classified at Los Angeles, where the yard expense is unusually heavy. HELD, rates from Richmond not unreasonable, rates from El Segundo unreasonable to extent they exceeded 44c prior to August 26, 1920, and 55c thereafter, reparation awarded. El Paso Bitulithic Co. v. E. & S. W. Ry. 109 I. C. C. 42.

(3k) Complainant attacked commodity rates charged between July 1 and Sept. 11, 1922 on lumber and other forest products in carloads from Washington, Oregon, Idaho, Montana, and British Columbia to Lincoln, Neb., Omaha and other Missouri river points, and to intermediate territory in Nebraska, Kansas, Missouri, Iowa and South Dakota taking the same rates as unjust and unreasonable to the extent they exceeded rates established effective Sept. 11, 1922. The rates to Omaha and the Twin Cities were on a parity except during the complaint period. On traffic generally to and from Pacific coast territory the rates to Omaha and the Twin Cities are either on a parity or else those to Omaha are lower. HELD, rates attacked not unjust or unreasonable, complaint dismissed. Adams Kelly Co. v. A. T. & S. F. Ry., 109 I. C. C. 241.

(3l) Complainant attacked commodity rates on fresh meats and packing house products, in straight and mixed carloads, from Mason City, Waterloo, Des Moines, Cedar Rapids, and Ottumwa, Iowa, and Sioux Falls, S. D., to Texas and Oklahoma as unreasonable. Traffic from Iowa points to the southwest generally moves over the short line routes through Kansas City and not through St. Louis, average distance to Oklahoma City is 623 miles as compared with 543 miles from St. Louis. Fourth

section departures are not protected by applications and should be corrected at once. It is obvious, and is admitted by the parties, that there is not and has not been any consistency in the rates from the points in issue. Each has had a different basis and the relationships to each other and to other competing points have not been well defined. HELD, since July 1, 1922, rates attacked unreasonable on fresh meats, straight carloads and packing house products, straight carloads, to extent they exceed to Oklahoma and Texas destinations, charges on mixed carloads of fresh meats and packing house products to be computed at their respective weights and carload rates subject to minimum of 21,000 pounds at the fresh meat carload rates to be published as arbitraries over the rates from Kansas City, from Sioux Falls, fresh meats 29.5c, P. H. P., 16c; Mason City 28c and 15.5c; from Waterloo, 27c and 15c; from Cedar Rapids 26c and 14c; from Des Moines, 21.5c and 10c; from Ottumwa, 18.5c and 9c reparation awarded. Decker & Sons v. C. R. I. & P. Ry., 109 I. C. C. 261.

(3m) Complainant attacked commodity rate of 45.5c charged on 114 cars of cottonseed shipped between Oct. 15, 1923 and Jan. 15, 1924 from Arthur City and other points in Texas to Memphis, Tenn., as unreasonable and in violation of section four. Average distance from eight of the principal points of origin to Memphis is 545 miles, the 45.5c rate also applying from Texas common points to St. Louis an average distance of about 749 miles. HELD, rates attacked unreasonable to extent they exceeded rates prescribed in 98 I. C. C. 183, reparation awarded. Dixie Cotton Oil Co. v. Ft. W. & D. C. Ry., 112 I. C. C. 1.

(3n) Complainant attacked joint fifth class rate of $1.145 charged on wrapping paper from Orange, Tex., to Hutchinson, Kas., as unreasonable. In 95 I. C. C. 457, this rate was found unreasonable to extent it exceeded 66c. Complainant attacked 66c rate from and to the same points as unreasonable unjustly discriminatory and unduly prejudicial. Shipment moved as routed T. & N. O., to Fort Worth, Rock Island & Gulf to Terral, Okla., and Rock Island beyond 861 miles. Applicable rate was $1.145, the 66c rate being the combination on Wichita, Kas. The rate prescribed in the former report, which yields ton mile earnings of 15.3 miles, compares favorably with other rates on the same commodity in the southwest. HELD, rate of 66c not unreasonable. Hutchinson Paper Co. v. T. & N. O. R. R. 112 I. C. C. 49.

(3o) In a general investigation covering rates from grouped origin territory to related destinations, allowance must be made for balancing of advantages and disadvantages in different routes. Some hauls are longer than others; roads differ in respect of curves and grades; and expense of assembling loaded cars varies with different districts in group. Yet these apparent inequalities do not deter carriers from freely employing method of grouping point of origin or destination for rate-making purpose or of blanketing rates over wide areas; which method has repeatedly received approval of the commission, in absence of showing of circumstances and conditions making such groups lawful. Cotton Mfrs. Asso. of S. C. v. C. C. & O. Ry., 85 I. C. C. 131, 135.

Coal from Tennessee R. R. Stations, 85 I. C. C. 25; Cities of Marshall and Jefferson v. T. & P. Ry. Co., 85 I. C. C. 115; Express Publishing Co. v. G. H. & S. A. Ry. Co., 85 I. C. C. 203; Decker & Sons v. Director General, as Agent, 85 I. C. C. 389; Barnsdale Refining Co. v. A. T. & S. F. Ry. Co., 85 I. C. C. 685; Texas Farm & Ranch Publishing Co. v. A. & W. Ry. Co., 88 I. C. C. 417; Indiana Public Service Commission v. A. T. & S. F. Ry. Co., 88 I. C. C. 709; Dixie Portland Cement Co. v. N. C. & St. L. Ry., 88 I. C. C. 147.

§11. Reasonableness of Group.

See Reasonableness of Rates.

(a) Complainant attacked blanket rates charged on coal from Group 2 mines to destinations in Alabama, Florida, Georgia, North Carolina, South Carolina and Tennessee as unreasonable and unduly prejudicial to extent they exceeded rates from Group 1 points to the same destinations. Complainants real desire is that their mines be included in Group 1. There is nothing in the record to indicate that the rates under attack are unreasonable. The rates from Group 1 mines are the result of orders of the Commission and are not here in ques-

tion. The average extra haul from Group 2 mines over the haul from Group 1 mines is about 30 miles, and the differential in rates since Sept. 1, 1922 has been and is 12c per ton. The rates in issue have not been, since Sept. 1, 1922, and are not now unjust or unreasonable. Group 1 rates apply from all other mines served by defendant and have been extended, for competitive and traffic considerations, to mines served by other carriers in southwestern Virginia, so that the group now covers a territory extending for about 50 miles east and west and for more than 30 miles north and south. HELD, rates attacked not unreasonable but prejudicial to extent they exceed rates from Group 1 mines. Craney Island Coal Co., v. C. C. & O. Ry. 96 I. C. C. 322.

(b) Complainant attacked commodity rates on cement, carloads, from Sugar Creek, Mo., to Kansas and Dewey, Okla., as unreasonable, unjustly discriminatory and unduly prejudicial. Complainant also attacked commodity rates on cement, carloads, from Iola, Kans., to western trunk line territory as unreasonable, unjustly discriminatory and unduly prejudicial. The mill at Sugar Creek is on the Santa Fe about 13 miles from its station at Kansas City, Mo. It is 14.5 miles from Cement Spur to Kansas City, Kas., and 16.5 miles to Kansas City, Mo. It is about 30 miles from Sugar Creek to Bonner Springs. In 69 I. C. C. 644 the Commission provided that these two mills should take the same basis of rates for line hauls in all directions, both to take Kansas City distances. The question is as to the propriety of continuing the grouping of the mills in the Kansas gas belt. The grouping of the gas belt mills was voluntarily established by the carriers, and appears to have been generally satisfactory to all the mills in the group until the mill at Iola was purchased by a company which operates numerous other mills at various points throughout the country. All of the other mills in the group are opposed to breaking it up. The Santa Fe serves all of the mills except Mildred, Kas. Kansas City, one of the most important markets for cement in this territory, is 108 miles from Iola over the short direct line, and 101 miles using the short three line distance. Kansas City is 127 miles from Chanute by the short direct line and 118 miles over the short line three line route. The average mileage from all points in the gas belt to Kansas City is computed at 134 miles, although the short three line distances vary from 87 miles, Mildred to Kansas City to 194 miles from Dewey to Kansas City. The use of individual mileages would not change the rate from Iola to Kansas City. The gas belt is not generally grouped to points within a radius of 70 miles of the mill points. All of the intrastate rates in Kansas appear to be on the basis of the rates prescribed in 69 I. C. C. 644 except those from the gas belt to Argentine, Rosedale, and Glen Park, Kas., which are within the Kansas switching district. The intrastate rates to these points are 8.5c, minimum 60,000 pounds and 11.5c minimum 30,000 pounds, and the interstate rate is 11c, minimum 50,000 pounds. Bonner Springs favors putting each mill on its own mileage but if the gas belt group is continued it desires to have its grouping with Sugar Creek or Kansas City mileages continued. No reason has been shown for disturbing that situation. The record does not indicate that the Sugar Creek complainant would benefit from a breaking up of the gas belt group, and any benefit the Iola complainant might gain would be to only a limited territory, whereas some of the other mills in the group would be seriously injured, and all of them are strongly opposed to breaking up of the group. HELD, rates attacked not unreasonable, unjustly discriminatory or unduly prejudicial except the rate from Sugar Creek to Forty First St., in Kansas City is unreasonable to extent it exceeded 8.5c and the rates from the gas belt mills should be readjusted so as to confine the group basis to interstate destinations beyond 80 miles from Chanute. Missouri Portland Cement Co. v. A. T. & S. F. Ry., 101 I. C. C. 454.

(ba) Rate on cast-iron soil pipe and fittings from Somerville, N. J., to destinations on Long Island, N. Y., found not unreasonable or otherwise unlawful. Rate assailed is a group rate and is also blanketed as to destinations on Long Island. Manifestly in a group adjustment distance is in a measure disregarded, and ton-mile earnings necessarily will be higher to or from nearer border-line points than to or from those farther distant, which is the situation here presented. Somerville Iron Works v. L. I. R. R., 102 I. C. C. 511.

(bb) Grouping of rates over extensive areas is particularly adapted to lumber industry, and so long as this method of constructing rates on lumber from points in southeastern yellow-pine belt is adhered to commission will not, without convincing proof of necessity therefor, disturb or disrupt one group by taking near points out of it and making them far points in another lower-rated group. Northeast Mississippi Traffic Bureau v. A. & V. Ry., 102 I. C. C. 611, 616.

(c) Complainant attacks the lawfulness, under sections 1 and 3 of the act, of the rates on bituminous coal from coal mining districts in Ohio and from the socalled Inner Crescent and Outer Crescent regions embracing certain portions of Pennsylvania, Maryland, Virginia, West Virginia, Kentucky and Tennessee to Elkhart, Ind., Grand Rapids and Kalamazoo, Mich., and six other Michigan points in the same general vicinity, to which the coal rates are the same as to one or the other of the points named. The history and propriety of the general adjustment of the coal rates from and to the origin and destination territories here under consideration, and of the particular rates which form the subject matter of this proceeding have been very carefully considered and exhaustively discussed in several previous cases. 46 I. C. C. 66, 80 I. C. C. 663, and 83 I. C. C. 591. All of the rates and relationships here in issue have been either prescribed or approved by the Commission and there is scarcely an argument or contention of the complainants here which is not specifically considered in the reports in one or more of the cases cited. The Commission is here dealing with a group adjustment which, especially as concerned the origin group, is of long standing and to which business has accustomed itself. The Commission has approved this adjustment and has recognized the Ohio rates as the pillar upon which the entire structure rests. Neither the rates to Toledo, Detroit or Jackson nor the spreads between them furnish an adequate measure of the reasonableness of the rates to the complaining points, nor are the conditions affecting the two groups of points so similar that the failure to accord them substantially identical treatment would necessarily warrant a finding of undue prejudice. HELD, rates attacked not unreasonable or unduly prejudicial, complaint dismissed. Kalamazoo Chamber of Commerce v. C. & O. Ry., 107 I. C. C. 291.

§12. Reasonableness of Individual Rate.

See Reasonableness of Rates.

(a) The Commission does not intimate that a shipper whose rates are part of a group adjustment may not successfully attack his individual rates, but it does say that where the group adjustment is one of long standing and is generally satisfactory to the great majority of shippers of the same commodity in the same general territory, it may not be lightly set aside at the behest of an individual shipper. Hebard Cypress Co. v. A. & R. R. R., 91 I. C. C. 343, 351.

(b) When the rates from a point on the border of a group is under attack the fair measure of distance is not the distance from or to that point but the average distance from or to points throughout the entire group. Chapel v. Pennsylvania R. R. 92 I. C. C. 662, 665.

(c) Complainant attacked commodity rate charged on 66 cars of fire brick from Vandalia, Mo., to Pearson, Ark., from Feb. 3 to Sept. 15, 1923 as unreasonable. Vandalia is on the C. & A., 130 miles northwest of St. Louis. Pearson is on the El Dorado & Wesson, about 1 mile from El Dorado, Ark. Charged 33c prior to July 24, 1923 and 23.5c thereafter. On July 24, 1923 Pearson was included in the El Dorado switching limits and thereafter the same rates were applicable to both points. On Nov. 27, 1923 the rate attacked from Vandalia was reduced to 21.5c following 77 I. C. C. 473. The rate of 33c to Pearson was 9.5c higher than the rate to El Dorado, Shreveport, and Monroe, La., and Texarkana, Ark., and from 6.5c to 8c higher than the rates to certain points in Louisiana and Oklahoma for equal or greater distances. HELD, rate charged of 33c unreasonable, to extent it exceeded 23.5c, reparation awarded. Walsh Fire Clay Products Co. v. C. & A. R. R., 98 I. C. C. 458.

(d) Reasonableness of a blanket rate is not properly tested by a consideration of its earnings to a point on the nearest edge of the blanket. Bush v. Director General, 95 I. C. C. 661, 663.

(e) Complainant attacked commodity rates on coal, car loads, from Trini-

dad, Walsenburg, Canon City, Bowie-Somerset, Crested Butte, Denver, Minnequa, Crested Butte-Baldwin, and Cameo-Palisade Colo., and from Raton-Dawson district in New Mexico to local points in Kansas on the Frisco, MKT and Midland Valley as unreasonable and unjust. At the present time the rates to most of the local points are made ful! combination over the nearest junction, and joint rates are desired. HELD, rates on lump coal from Walsenburg district unjust to extent they exceed $4.60 to local points on the Frisco between Ellsworth and Augusta, $4.85 to points between Augusta and Arkansas City and to local points on the M. V., between Wichita and Arkansas City, and $5 to MKT stations in Kansas and Frisco stations in Kansas other than points referred to. From Canon City to extent they exceed rates from Walsenburg. From other districts to extent they exceed rates from Walsenburg by more than existing differences between Walsenburg and the other districts. Kansas Public Utilities Commission v. A. T. & S. F. Ry. 112 I. C. C. 235.

(f) Complainant attacked commodity rates on petroleum and its products from midcontinent field, from California and from Galveston and El Paso Tex., to Arizona and New Mexico. Generally speaking, these cases bring in issue the rates on refined oil, such as gasoline, kerosene and distillate, and on fuel oil, a residum. The term refined oil will mean gasoline or kerosene, and distillate referred to by name. FUEL OIL. The movement of fuel oil into New Mexico is inconsequential. Under certain intermediate provisions the rates on fuel oil from the midcontinent field into New Mexico are the same as those to farther distant points in Arizona. No evidence was introduced covering fuel oil from California into New Mexico. With the possible exception of El Paso as a point of origin it will be unnecessary to consider fuel oil rates into New Mexico and this report will deal primarily with destinations in Arizona in respect of that commodity. It is reasonably certain that if rates from the California and midcontinent fields into Arizona were to be constructed strictly according to distance, as California would have them, the only logical result would be to deprive the midcontinent producers from competing in this territory, provided the price of fuel oil in the two fields is anywhere near the same. Considering the adjustment as a whole and all the circumstances surrounding it, the Commission does not find that the rates attacked are unlawful under section 3. There are two important exceptions, however, to this general finding, and they concern the rates to Bisbee and Douglas. From southern California to these points for distance of 628 and 643 miles, respectively, the rate is 38.5c which is based upon the rate of 30c approved in 1916. From north Texas points for average distances of 923 and 893 miles the rates are 39 and 37.5c respectively. These Texas rates also apply from Galveston, 1,125 and 1,095 miles respectively. Clearly this relationship of rates does not accord sufficient weight to the factor of distance. The rate from Kansas and Oklahoma to both Bisbee and Douglas is 46c. The record does not show why the normal grouping was departed from in these particular instances. REFINED OIL. The rates on refined oil are in issue in all of the complaints and the California complainants make the same contention as to preference of the midcontinent field as they do in respect of the rates on fuel oil. They did not stress the rates to New Mexico and the findings will be limited accordingly. Generally speaking rates on refined oil from the midcontinent field and from California into Arizona and New Mexico found their origin in the intermediate application of transcontinental rates. A rate established by the rail lines from the Atlantic to the Pacific coast to meet water competition might well be near the border line of confiscation for that movement and still be unreasonable as a maximum when applied to the small proportion of the total movement which occurs from the midcontinent field to Arizona. DIFFERENTIAL AS BETWEEN FUEL OIL AND REFINED OIL. No reason appears of record for any fixed relationship in the rates on these commodities in this territory. The records, considered as a whole, establish quite clearly that a fixed relationship should not exist. The fuel oil rates into Arizona were established primarily to meet the competition of coal mined in northern New Mexico. Arizona is wholly dependent upon outside fuel and the fuel oil consumed there for the generation of heat and power does not compete with refined oil, which is used almost wholly in auto-

mobiles. If the Commission were to establish a fixed relationship which would have the effect of increasing the fuel oil rates the inevitable result would be a loss to the carriers of the long hauls now enjoyed on this traffic. On the other hand, a drastic reduction of the refined oil rates to force a fixed relationship would result in a heavy depletion of carrier revenue and would serve no useful purpose such as increasing the movement. DISTILLATE. The testimony is vague and conflicting as to the proper description of distillate and the purposes for which it is used. The principal use for distillate in Arizona is in pumping engines used for purposes of irrigation. The present rates on distillate from the midcontinent field vary in their relation to the refined oil rates but on the whole seem to be less than 80 per cent of the latter rates. The records will not warrant any change in the existing relationship which should be continued in respect of the rates on refined oil herein prescribed. RATES FROM EL PASO. El Paso is not included in the same rate group with other producing points in Texas in respect of rates into Arizona and New Mexico. It is situated in the extreme western part of Texas near the New Mexico state line and as a refining center draws its crude oil principally from the mid-continent field. The evidence of record does not warrant the prescribing of specific rates on fuel oil. HELD, rates on fuel oil, carloads, from southern California, Kansas, Oklahoma and Texas other than El Paso not unreasonable or unduly prejudicial, with the exception that the rates from Galveston and other points in Texas to Bisbee and Douglas are unduly prejudicial to southern California. This should be corrected by increasing the rates from Galveston and other points in Texas to Bisbee and Douglas to 46c which is the rate applicable from other points in the midcontinent field. HELD, further, rates on refined oil, from midcontinent field to all main line and branch line destinations in Arizona unreasonable to extent they exceed 103.5c prior to July 1, 1922 and 93c subsequent that rates from southern California to all main line and branch line destination in Arizona. Bowie, Flagstaff and west unreasonable to extent they exceed 80c, and rates from midcontinent field to Vaughn Las Vegas, Belen, Albuquerque and Deming, N. M., unreasonable to extent they exceed 65, 70, 80 and 85c. HELD, rates on distillate from southern California and from midcontinent field to destinations in Arizona and New Mexico should bear the same relationship to the rates on refined oil herein prescribed as is maintained in respect of the present rates. HELD, rates from El Paso unreasonable, reparation awarded. Associated Oil Co. v. A. E. Ry., 112 I. C. C. 350.

§12½. Relativity of Group Rate.

See Relative Rates.

(a) These cases bring into issue, broadly, the rates, commodity descriptions, and minimum weights on salt, in carloads, from all producing points in New York, Ohio, Michigan, Kansas, and Louisiana to points on and east of the Missouri river, in Iowa-Missouri territory, central, trunk line, Carolina, southeastern and Mississippi valley territories. The existing adjustment of commodity rates on salt is the outgrowth of keen competition between widely separated producing fields in the sale of this article in the large consuming centers and of competition between many carriers for the revenue derived from the heavy tonnage of this cheap, low grade commodity. Rates from the points of origin in the separate fields have been generally grouped to the larger cities. The relationships of rates from the several competing fields to common markets have been created often without regard for the relative distances. This practice has given rise to numerous complaints. Commodity descriptions. The term salt, will mean sodium chloride, generally termed common salt. The consolidated classification provides carload ratings on salt, common, (sodium chloride) of sixth class in official, class A in southern, and class C in western, in packages, in blocks, or in bulk, C. L., minimum 40,000 pounds. There is practically no division of opinion between the complainants, defendants, and interveners, that there are no transportation or traffic conditions which warrant any distinction in the rates or tariff descriptions between rock salt and evaporated salt. The term rock salt refers to the condition of the salt as it is mined and not to the condition in which it is shipped. The term evaporated salt is used to designate dry salt produced by the solar and steam methods from brine pumped from the ground as distinguished from rock salt that is blasted from

a solid, crystalline state. There is no chemical distinction between rock and evaporated salt. Rock salt is produced in New York, Michigan, Kansas and Louisiana. Evaporated salt is produced chiefly in New York, Michigan, Ohio and Kansas, HELD, any difference in rates resulting from differentiation in commodity rates descriptions between rock salt and evaporated salt, between coarse salt and medium or fine salt, or between table salt and common salt is, unduly prejudicial and preferential, and that such differentiation is an unreasonable practice. **Carload Minima.** Present minimum generally 37,500 pounds and complainants attack this minimum as unreasonable to extent it was less than 45,000 pounds uniformly. The preponderance of opinion among shippers and carriers is that there should be one rate and one minimum on all kinds of common salt, carloads, whether in bulk or in containers. Most of the producers of salt favor the proposed uniform minimum of 45,000 pounds. Carload shipments of rock and evaporated salt, in bulk and in bags, to the packing plants average about 88,000 pounds, and in bulk are ordinarily loaded 10% in excess of the marked capacity of the car. HELD, respondents have justified the reasonableness of the proposed carload minimum of 45,000 pounds for uniform application throughout the United States east of the Rocky Mountains. **Detroit to Chicago.** Rates to Chicago are the most important in the salt rate structure. The eastern and western Michigan producing points by reason of their great advantage in distance to Chicago, as compared with other producing fields, dominate that market. The rates from the Michigan fields are 11.5c, minimum 60,000 pounds, on bulk salt, and 13c minimum 37,500 pounds, on package salt, from Detroit to Chicago. The rock salt plant at Detroit is on the main line of the Wabash, 272 miles from Chicago. This line is practically a water level route, and the salt traffic furnishes loading for box cars which would otherwise move westbound to Chicago and the grain fields. The present rates from Detroit to Chicago are not excessive under section 1 of the act and, in view of the unusuallly favorable operating conditions between Detroit and Chicago, can not be regarded as noncompensatory, but, under the circumstances, the present rate of 11.5c would be unreasonably low for the future. HELD, present rates on salt, carloads, from Detroit to Chicago, will be unreasonably low for the future, and that 13c, minimum 45,000 pounds, would be a reasonable minimum rate for the future. **From Eastern and Western Michigan Points to Chicago.** The distance from some of the other eastern Michigan producing points to Chicago are, Bay City 306 miles Marine City 326 miles, and Port Huron 334 miles. The distances to Chicago from Ludington and Manistee, in western Michigan, are 299 and 298 miles by rail and 185 and 229 miles by car ferry across the lake to Milwaukee, Wis., and by rail beyond. The distances from the eastern and western Michigan points, all rail, warrant the continuation of the same rate from all of them to Chicago, but the car ferry rail distances from Ludington and Manistee justify rates lower than over the all rail routes. The average distances over the all rail route are about 141% of those by the car ferry route. The rates over the car ferry route may be maintained upon the same basis as prescribed as a minimum over the all rail lines. HELD, rates on salt from producing points in eastern Michigan, other than Detroit, to Chicago, less than the rates maintained from Detroit to the same destination, would be unreasonably low. The present grouping of origin points and the relationship of Ohio points to Michigan points should be preserved. HELD, further, rates on salt, carloads, from Ludington and Manistee all rail to Chicago are unreasonable low to extent they may be less than 13c, or less than rates maintained from Detroit and other eastern Michigan producing points to the same destination; and that the rates on salt from Ludington and Manistee to Chicago over the car ferry routes for the future will be unreasonably low to the extent they may be less than 12c. **From New York Points to Chicago.** The rate of 19c on coarse salt, in bulk from Halite and other New York points is attached. Halite is about 30 miles south of Rochester, N. Y., and Retsof is about 3 miles from Halite. The short line from Retsof, the near point in the group, to Chicago is 560 miles and from Halite 563 miles. Present rate to Chicago is 26.5c. HELD, rates from Halite and Retsof to Chicago unreasonably low, and unduly prejudicial to Detroit to extent they may be less

than 21c, minimum 45,000 pounds, and unduly prejudicial to Halite and Retsof to extent they exceed by more than 8c the rate maintained from Detroit to Chicago. **Kansas Group to Chicago.** In 69 I. C. C. 745, prior to the 10% reduction, the Commission found that the rates from Little River, within the Kansas group, to East St. Louis, Ill., and Chicago, 501 and 674 miles, should not be higher than the then existing rates from Louisiana mines of $4.59 per net ton to East St. Louis and $5.13 to Chicago and would be unreasonable to that extent. The finding there that the rates from the Kansas field should not exceed the rates from the Louisiana field is amply supported upon this record. Present rate from the Kansas group to Chicago about 675 miles, is equivalent to 23.1c. The rates from the Kansas mines to Chicago should be related to the prescribed minimum rate of 13c from Detroit to Chicago. The haul from Kansas to Chicago is mostly through an area of lighter traffic density than from Detroit to Chicago, and includes additional cost incident to the crossing of the Missouri and Mississippi rivers. HELD, Rates on salt carloads from Lyons, Little River, Kanopolis, Anthony, Hutchison and Sterling, the producing points in the Kansas group, to Chicago, for future unreasonable low to extent they may be less than 24c, and that the maintenance of rates on a basis lower than 24c, on and after the date that the rates from Detroit and Halite to Chicago are increased to the minima prescribed, will be unduly preferential of Kansas producers, and subject the shippers of salt from the Michigan group and from Halite to undue prejudice and disadvantage. **From Louisiana to Chicago.** The present rate on salt from the Louisiana mines to Chicago is $4.615 per ton. The distances to Chicago from the producing points, Anse La Butte, Avery, Salt Mine, and Weeks Island, on the Southern Pacific lines, and Jefferson Island, on the Gulf Coast lines, average about 1,004 miles. Under present rates Detroit has an advantage of $2.315 per ton over Louisiana in the Chicago market. Defendants, which form the through routes from Louisiana to Chicago, do not serve the New York, Ohio, Michigan or Kansas fields, and ordinarily do not participate in the transportation of salt from those fields to Chicago, although they concur in the tariff publications. The central and eastern trunk lines contend that the I. C., does participate in salt traffic from the eastern fields to Chicago, but the record does not support a specific finding to this effect, and the southern lines deny this is a fact. There is no adequate basis for a finding of undue prejudice. The low rates from Louisiana have been far reaching in their consequences. Retaliatory reductions have been established from other fields, and the truce in the salt rate war which now exists is due almost entirely to the fact that these proceedings are pending. The rates from all the fields to certain highly competitive points, such as Chicago and St. Louis, have reached so low a level that many shippers are asking that the rate level be raised in order that the revenue may be sufficient to make the tonnage attractive to the carriers, and in order that the service may be improved. HELD, a minimum rate of 27c from the Louisiana mines to Chicago will protect the salt rate structure. **To Other Important C. F. A. Points.** The rates from Halite to Cincinnati, Louisville, and Indianapolis, 486, 598 and 527 miles, are $4.60, $5.30 and $4.90 per ton, which are not unreasonably high; and to the two latter destinations a rate of $4.56 applies from the Louisiana mines and $4.92 to Cincinnati for distances of 848, 960 and 960 miles. HELD, rates on salt, carloads, from Halite to Cincinnati, Louisville and Indianapolis not unreasonable as maxima; but rates from Louisiana mines are unreasonably low to extent they may be less than 25c to Louisville and 26.5c to Indianapolis and Cincinnati. **To Other Illinois Points.** To La Salle, Bloomington, Danville, Decatur, and Champaign, rates are $5.71 from Louisiana mines and $3.70 per ton from Detroit. The distances from Louisiana mines range from about 830 to 934 miles, and from Detroit about 301 to 399 miles. The rate from Louisiana is higher than that prescribed herein as a minimum to Chicago. The rates from Halite to Bloomington, 687 miles, Champaign 752 miles, and Decatur 730 miles, are $5.80 over certain routes and $6.20 to the same points over other routes and to La Salle, Ill., 658 miles. These rates are all in excess of the rate from the Louisiana mines. The rate from Halite to Danville, 683 miles, is $5.30 per ton. HELD, rates on salt, carloads from Halite to La Salle and Bloomington are

unjust and unreasonable to extent they exceed 26.5c and 27.5c, respectively. The rates to the other named points in Illinois are not unreasonably high. The rates from the Louisiana mines to the same destinations are not unreasonably low. **To St. Louis.** The present rates to St. Louis from the four principal groups of origin are equivalent to 31c, 779 miles from Halite; 18.5c on bulk and 22c on package salt, 488 miles from Detroit; 20.65c, 497 miles from the Kansas field; and 20.65c, 768 miles, from the Louisiana mines. HELD, present rates to St. Louis from Detroit and from the Kansas field are not unreasonably high or low, but recommend that defendants in revising rates as required under the conclusions herein increase the rates on all salt from Detroit and the eastern Michigan group to the present package basis of 22c, and the rate from Kansas group to 23c. HELD, rate from Halite to St. Louis unreasonable to extent it exceeds 29c, and should not exceed the rate from Detroit by more than 7c. HELD, further, that the rate from Louisiana mines to St. Louis unreasonably low to extent it is less than 24c. Upon this record there is no adequate proof which warrants the Commission in prescribing specific commodity rates from Halite to other points in central territory. To all points in Ohio, Indiana and Illinois to which salt now moves in carload quantities and as the necessity arises therefor defendants should publish such maximum rates fairly aligned with those above prescribed from Halite. **From Ohio and Michigan to Lower and Upper Mississippi River Crossings.** The salt producing points, Michigan City, Ind., points in northern Ohio and the southern Peninsula of Michigan, are largely grouped with respect to the rates to different points on the Mississippi river. The distances from points in these groups to Burlington range from 262 to 560 miles, and average 492 miles. The average distances from the same points of production to St. Louis, Quincy and Hannibal are 521, 548, and 545 miles. Like rates apply to Burlington on salt both in bulk and in packages, namely 25c. The rate on package salt to Burlington also applies to all Mississippi river crossings, Keokuk, Iowa to Dubuque, Iowa, but a rate of 22.5c applies on salt in bulk from these groups to Dubuque, Clinton and Davenport, Iowa, and defendants have offered to establish a like rate on bulk salt to Burlington. A rate of 18.5c applies on bulk salt from the eastern Michigan and Ohio groups to St. Louis over all lines except the Burlington, over which line the rate is 22c, in bulk and in packages. HELD, rates on salt, carloads, from Michigan City and producing points in Ohio and eastern Michigan to the upper Mississippi river crossings, Keokuk to Dubuque, are unjust and unreasonable to extent they exceed 22c, and unduly prejudicial to extent they exceed rates on like traffic from the same producing points to the lower crossings, St. Louis, Hannibal and Quincy. In publishing rates from the eastern Michigan and Ohio groups to Mississippi river crossings and points west thereof defendants should make corresponding changes in the rates from Chicago to the same destinations, preserving existing relationship. **Ohio and Michigan to Iowa, Missouri and Nebraska.** There is no destination territory in the salt rate structure, which has been the source of such prolific strife, as the territory where the distances from Michigan and Kansas producing points are about equal. In this destination territory the salt rate structure is unjustifiedly complicated. There are different rates on different kinds of salt or on salt in different containers, and there are different groupings of destinations under one minimum than under another. The rates from the Ohio and eastern Michigan points have been grouped for many years to the Mississippi river points, but the points beyond the river the Ohio group has taken a differential higher than the Detroit or eastern Michigan group. This inconsistency should be removed by grouping Ohio with eastern Michigan to points west of the Mississippi river. The much shorter distances from Ludington and Manistee, in western Michigan to interior points in northern Iowa, particularly than from eastern Michigan or Ohio, warrant a lower basis of rates and a disruption of the grouping of western with eastern Michigan. HELD, rates on salt from Ludington and Manistee, by car ferry and rail, to the upper Mississippi river crossings, Dubuque to Keokuk, inclusive, are unjust and unreasonable to extent they exceed 20c, and to the lower crossings, Quincy to St. Louis, unjust and unreasonable to extent they exceed 22c, and unduly prejudicial to extent

they exceed rates from eastern Michigan and Ohio producing points to St. Louis. HELD, further, rates on salt, carloads from Ludington and Manistee, by car ferry and rail, and from producing points in eastern Michigan and Ohio to jobbing and packing points in Iowa and Missouri west of the Mississippi river crossings, such as Cedar Rapids, Ottumwa, Fort Dodge, Mason City and Des Moines, and points in Nebraska on the Missouri river, such as Omaha, to which salt moves in carloads are unjust and unreasonable to extent they exceed maximum rates constructed in the following manner: Add 0.5c for each successive distance block of 20 miles to rate up to the nearest upper or lower crossing, using short line routes via existing connections. This finding respecting the rates from eastern Michigan and Ohio is based on the recommended rate of 22c to St. Louis and other crossings. Where circuitous lines desire to meet the rates of the direct lines at competitive points they may, where necessary file applications for relief from the long and short haul provision of the act. The Commission recommends that any rates covered by the above conclusions which are less than the maximum basis herein prescribed by increased to that basis. Like changes should be made in the rates from the Louisiana mines over the I. C., to points in Illinois and Iowa. The record does not warrant a finding with respect to the allegation of undue preference of Louisiana in the rates to Iowa-Missouri territory, or with respect to the rates to Lincoln from the Ohio and Michigan groups. **Kansas to Iowa, Missouri, Illinois and Upper Crossings.** The present rates from the Kansas group to Des Moines and Ottumwa, 25.65c, are the same as from the Michigan and Ohio groups, although the distance from Kansas to Des Moines is about 231 miles less than from the east. The rates from Kansas to Mason City and Fort Dodge 32.5c are higher than from the east to the same destinations, 29c, although the distances from the Kansas group are 72 and 162 miles, less than from the Michigan and Ohio groups to Mason City and Fort Dodge. These disadvantages against the Kansas producers exist in favor of eastern Michigan and Ohio, even though the carriers have failed to make the reductions from the east to Mason City which the Commission recommended in I. & S., 1624. HELD, rates on salt, carloads, from Kansas unjust and unreasonable to extent they exceed 15.5c to Kansas City, 21.5c to Des Moines, 22.5c to Ottumwa, 24c to Fort Dodge, 24.5c to Waterloo, 25c to Cedar Rapids and Dubuque, 25.5c to Mason City and 27.5c to St. Paul. The general basis for the maximum rates prescribed from the Michigan and Ohio fields to this territory is 22c, and from the Kansas group 24c for 500 miles, observing the average distances from the groups to important base points and using the short routes via existing connections. **From Central Territory to Trunk Line Territory.** The rate from Syracuse to Chicago is 7c lower than the rate from Detroit to New York through common territory, although the distance of 652 miles from Syracuse to Chicago is a little greater than that of 632 miles from Detroit to New York. HELD, base rate on salt, carloads, from Chicago, to New York is unjust and unreasonable to extent it exceeds 33.5c; and the rates from Detroit, Saginaw, Akron and Cleveland to points in trunk line territory unjust and unreasonable to extent they exceed the rates resulting from the application to the base rate of 33.5c of the fixed percentages under the so-called Chicago-New York adjustment from the producing points to the respective destinations. HELD, further, rates attacked from Ohio-Michigan producing points to trunk line territory are not shown to be otherwise unlawful. The scope of this record does not warrant consideration of rates to specific points in trunk line territory, and complainants claim for reparation is denied. **Ohio to Washington and Old Dominion Stations.** The present rates from Akron and Cleveland to points in Virginia on the Washington & Old Dominion, and electric line, are based upon the rate of 27c to Potomac Yard, Va., which is the rate to Baltimore, Md., plus arbitraries of 10.5c to stations Alexandria Junction to Herndon, and 12.5c to stations Sterling to Bluemont. The distance from Akron to Potomac Yard is 439 miles and from Watkins 319 miles. The rates from Akron to these stations are too high in comparison with other rates on salt in official territory, higher even than the base rate of 33.5c prescribed herein for the much greater distance of about 912 miles from Chicago to New York. HELD, rates on salt, carload, from Akron and Cleveland to points on the Washington

& Old Dominion Railroad, are unreasonable to extent they exceed 31c and 33c The rates from Akron and Cleveland would become relatively lower than the rate of 32c from New York producing points to the same destinations, resulting in undue prejudice to producers in New York state. While not directly in issue, the rates from the New York points to these Virginia stations should be reduced at the same time to 28.5 and 30.5c, based upon 20.5c to Potomac Yard for 319 miles plus the arbitraries of 8 and 10c beyond. **To Bristol Tenn.-Va.** The applicable rate from Akron to Bristol is 39c. Apparently there is no opposition to the maintenance of the rate parity from the Ohio and New York fields to Bristol. Defendants will be expected to publish rates on salt from the Ohio fields on a commodity basis no higher than those from producing points in New York. **Ohio and Michigan to Carolina and Southeastern Territories.** Many years ago the rates from Ohio and Michigan to Carolina territory were adjusted to equal rates from New York producing points. The rates from New York were published as joint through rates, while those from Ohio and Michigan were made combinations over the Virginia cities. This parity was disturbed by the general percentage increases, and the rates from Ohio and Michigan became higher than from New York. The parity of Ohio and New York producing points at destinations in Carolina territory was restored by agreement between carriers and shippers on Jan. 5, 1922, by taking the rates from Syracuse as a basis and establishing them as specific commodity rates from Akron with slight differentials from producing points in Michigan. Complainants are satisfied with this adjustment. The present rates from Ohio and eastern Michigan to Pensacola, Fla., New Orleans and Mobile, Ala., are 38c and to Memphis, Tenn., 25.5c; the rates to McKenzie, Humboldt, and Clarksville, Tenn., intermediate to Memphis, are 31.5c; to Birmingham and Montgomery, intermediate to Pensacola and Mobile, 42.5c and to Eufaula, Ala., 45c. HELD, rates attacked from Ohio and Michigan producing points to points in Carolina territory not unreasonable or unduly preferential of New York points of origin. Commission is not warranted in making a finding with respect to the rates to southeastern territory, and defendants will be given additional time to remove the fourth section departures in connection with the general revision of rates to and from points in the southeast, or until such reasonable time as they may agree with the salt shippers upon a satisfactory and harmonious adjustment of these rates. **To Mississippi Valley Territory.** The rates to New Orleans and Mobile are 38c from Detroit and Akron, and 31.5c from Chicago; to Memphis, 25.5c from Detroit, and 23.5c from Chicago. The difference, Detroit over Chicago, at Memphis is 2c, and at the farther distant Gulf ports, 6.5c. The rates to McKenzie and Humboldt are 30.5c from Detroit and 20.5c from Chicago. The rates from Detroit to McKenzie and Humboldt, which are based on the Cairo, Ill., combinations, are higher than to Memphis, a farther distant point. The distances from Detroit, Akron and Cleveland to Louisville, 376, 360, and 359 miles, are practically the same as from Milwaukee to St. Louis, 367 miles. There is no apparent reason why the rates from Ludington and Manistee to Memphis, New Orleans and Mobile should be any higher than from the eastern Michigan fields to the same destinations. While the rates from Ohio Michigan producing points to Memphis, New Orleans, Mobile and points throughout Mississippi Valley territory are apparently too high, the evidence is insufficient to warrant the prescription of maximum reasonable rates. The evidence also indicates that the relationship between the rates from the Ohio Michigan producing points and from Chicago is improper, but a strict interpretation of the complaint constrains the Commission from making a finding in this respect. Defendants are now undertaking a revision of commodity rates from central to southern territory generally. It is expected that they will, within a reasonable time, establish rates on salt from Ohio, Michigan producing points and from Ludington and Manistee to the Mississippi Valley on a reasonable basis and properly related to rates from Chicago. **Ohio, Michigan to Interior Florida.** The present rates are based upon triple combinations, composed of the rates from points of origin to Ohio river crossings, such as Cincinnati, the rates from the river crossings to Jacksonville, and class O rates under the Florida classification, from Jacksonville to the interior points in Florida, based

upon a distance scale, with certain groupings of destinations, except to Pensacola, which takes the same rates as New Orleans, and except to Tampa and St. Petersburg. From Jacksonville the difference in favor of interstate shipments as compared with interstate movements is 4.1c. HELD, interstate rates on salt, carloads, from Jacksonville and other Florida basing points to interior points in Florida, for application on through shipments from Ohio and Michigan producing points are not unjust and unreasonable, but are unduly prejudicial to extent they exceed the intrastate rates to the same destinations, except Pensacola, Tampa, and St. Petersburg; and those rates to that extent, cause undue, unreasonable and unjust discrimination against interstate commerce. Salt cases of 1923, 92 I. C. C. 388.

(b) Complainants attacked commodity rates charged on bituminous coal, carloads, from Ohio, West Virginia, Kentucky, and Tennessee to Huntington, Gary, Michigan City, Anderson, Fortville, Yorktown, Muncie, Pendleton, Ben Davis, Union City, Winchester, Snow Hill, Sheridan, Horton, Farmland, Kirkland, Carmel, Parker City, Middletown, Oakville, Wabash and Sulphur Springs, Ind., as unjust unreasonable, unjustly discriminatory and unduly prejudicial. The territories of origin comprise mines in the Inner and Outer Crescents and in Ohio. The destinations are in groups which have been fixed as a result of 46 I. C. C. 66, 80 I. C. C. 663 and 83 I. C. C. 591. HELD, rates attacked not unreasonable following decisions in the cases just mentioned above. Bash & Company v. B. & O. R. R., 96 I. C. C. 178.

C. 54; Dixie Portland Cement Co. v. N. C. & St. L. Ry., 88 I. C. C. 147; Texas Farm & Ranch Publishing Co. v. A. & W. Ry. Co., 88 I. C. C. 417.

V. DISCRIMINATION.

See Blanket Rates §6 (a); Discrimination.

§13. In general.

(a) Complainant attacked class rate charged on gasoline, carloads from Porters Falls, W. Va., to Philadelphia, Pa., as unreasonable, unjustly discriminatory, unduly prejudicial and in violation of the fourth section. Shipments moved between December 9, 1919 and Jan. 27, 1920, over the B. & O. to Wilmington, Del., and Pennsylvania beyond. Fifth class rate of 29c was charged. Commodity rates on petroleum and petroleum products from the territory in which Porters Falls is located were at the time of this movement generally 2c lower to Philadelphia than to Bayonne, N. J., Philadelphia being intermediate, distance 450 miles to Philadelphia and 531 to Bayonne. From points in all directions around Porters Falls a rate of 26c applied to Philadelphia when these shipments were made. HELD, rate attacked unreasonable to extent it exceeded 26c, reparation awarded. Atlantic Refining Company v. Director General, 89 I. C. C. 391.

(b) Complainant attacked commodity rates on grain and grain products carload from Western trunk line territory to Helena, Ark., destined to Mississippi valley territory, as unreasonable, unjustly discriminatory and in violation of section four. Helena is a jobbing point on the west bank of the Mississippi river 66 miles south of Memphis over the Y. & M. V. It is also served from the west by the M. & N. A., and by a branch line of the M. P., extending east from Barton and southeast from Latour, Ark. Typical purchasing points are McGehee, Watson and Elaine south of Helena and Clarendon and Brinkley west of Helena. It competes with Memphis to points in the Mississippi valley. **Rates to Helena.** Grain and grain products move to Helena on both local and proportional rates, the latter applying for the most part on traffic from important market points, the former on grain from country points. Effective April 1, 1922 defendants established rates to Memphis of 12.5c on both wheat and corn from St. Louis, and 25c and 26c on wheat and 23.5c on corn from Kansas City and Omaha. In 57 I. C. C. 11 the Commission directed that rates on grain and grain products should be aligned in accordance with the rates fixed therein on classes. The rates to Memphis are lower than if made in strict accordance to a first class percentage relationship with New Orleans; rates to Corinth which are the same as to Memphis on most commodities from St. Louis

and beyond, are higher than to Memphis; and rates to Helena from St. Louis are lower than to some of the points in the eastern portion of the Helena rate group, although the same as to intermediate points on the Y. & M. V. The rates from St. Louis to Memphis can not be considered as a proper measure of reasonable rates to Helena. The M. P. the rate making and direct route to Helena is a west side line. In reaching Helena it passes through points in western territory to which rates have been fixed by the Commission. The rates to Arkansas and to the Mississippi valley represent the ordinary level of proportional grain rates to this territory. The rates to Memphis are extraordinary, and made to fit a peculiar situation, in no way parrallelled by the situation at Helena, or for that matter at any point in southern or southwestern territory.

Memphis has long been what is termed a primary market. Rates have been made to break thereon. The adjustment is of long standing. These rates have been maintained at a low level consistent with that of other proportional rates from the Missouri river. Proportional rates both from the Missouri river and from St. Louis to Memphis are among the lowest rates in the country on high grade traffic. To maintain rates to Helena, on a lower level than to other interior Arkansas points would create violations of the fourth section and disturb the interior Arkansas adjustment generally. **Rates From Helena.** The rates from Helena are local rates; those from Memphis reshipping or proportional rates, and are the balance of the through rates after deducting the applicable charge for movement from given point of origin to Memphis. There are also local rates maintained from Memphis which are seldom used, but which are on a level comparable with the local rates from Helena. **Rates Via Helena To the Mississippi Valley.** From two points, Omaha and Kansas City, joint rates apply via Helena to points on the Mississippi Valley on the Y. & M. V. Under these joint rates traffic may be halted at Helena, and then moved out within one year either in its original form or in representative amount of products, which contain specified ingredients. Defendants have established joint reshipping rates from St. Louis to a large number of points in the Mississippi valley applicable over the M. P., to Helena and Y. & M. V., and connections beyond, the same in amount as apply over the east side routes, with transit at Helena. **Request that Helena Be Made a Rate Breaking Point.** Memphis is a primary grain market and a rate breaking point. Helena is neither. Memphis is a rate breaking point because it is connected with the important grain regions of the country by numerous powerful trunk lines. There is no similarity between Memphis and Helena from a transportation standpoint. Helena is off the direct route of any important carrier. There is no bridge at Helena and operating conditions across the Mississippi at that point are very unfavorable. Memphis is the gateway for all kinds of grain and grain products to the south. Helena is only a jobbing point dealing chiefly in mixed live stock feed. Helena is doing no more business than may other jobbing points in the south and southwest. HELD, rates attacked not unreasonable, unjustly discriminatory or unduly prejudicial, except that the participation of the M. P., on grain and grain products from Kansas, Kansas City, Mo., and from points in Missouri from which rates base on Kansas City Helena more than 2.5c on wheat and 1.5c on coarse grain higher, and from points in Nebraska and Iowa, and from Missouri except St. Louis, to Helena more than 5c higher on wheat and 3.5c on coarse grains higher than to Memphis is unduly prejudicial. Helena Traffic Bureau v. M. P. R. R., 89 I. C. C. 405.

(c) Following Swift Lumber Co., 61 I. C. C. 485, failure of defendant to accord blanket or group rates on apples from Dufur, a local point on the Great Southern R. R., an independent short line, to Denver, Colo., and to destinations east or west of Missouri River, or taking rates applicable to such territory, while according blanket or group rates to all stations on its main line, branch lines, and proprietary lines, and to Odell, Oreg., a point on the Mount Hood R. R., an independent short line, found not unreasonable but unduly prejudicial of competitors located on such main, branch, and proprietary lines. Dufur Orchard Co-Owners Co. v. A. & R. R. R. Co., 89 I. C. C. 419.

(d) Complainant attacked commodity rates charged on fresh apples, carloads, from Dufur, Ore., to Denver, Colo., and to points east of the Missouri river, as unreasonable and unduly prejudicial to

extent they exceeded rates from The Dalles, Ore., to the same destination. The Dalles is on the Oregon-Washington, the Great Southern Ry. is an independent short line having no rail connection except with the O-W at The Dalles, and extending thence through Dufuer 30 miles, to its terminus at Friend. The difference of 16.5c in the rates from Dufur and The Dalles was the local class C rate between the two points. On April 24, 1922 rates from Dufur were made 10c over the rate from The Dalles, and July 1, 1922 this arbitrary became 9c. To destinations west of the Missouri river, the Oregon-Washington accorded blanket rates to practically all points on its branch and proprietary lines, although on such traffic no independent short line is accorded the benefit of group rates. HELD, to destinations east of the Missouri river rates from Dufur prejudicial to extent they exceed rates from points on branch lines of the Oregon-Washington. As complainants concede for the purposes of this case that the group rates are reasonable, it is clear that any unreasonableness they claim in the Dufur rate is of a relative rather than an inherent nature, rates not unreasonable. Dufur Orchard Co-Owners Co. v. A. & R. R. R., 89 I. C. C. 419.

(e) Complainant attacked commodity rates charged on pipe, in carloads, from McKeesport, Pittsburgh, Woodlawn, and Ellwood City, Pa., Lorraine, and Youngstown, O., and Wheeling, W. Va., to Taft, Calif., since Feb. 5, 1921 as unreasonable and unduly prejudicial. Taft is on the Sunset Ry. 48 miles from Bakersfield, where the Sunset connects with the S. P., and Santa Fe. The rates to Pacific coast points were $1.665 and were held as maximum at intermediate points, including Bakersfield. No joint through rates are in force from group B to Taft, rates being $1.665 to Bakersfield and 17.5c beyond. The usual basis for making rates on various commodities, including pipe, which move from eastern points of origin to points in California or Arizona on branch or short lines, is by combination over junction points with such branches or short lines. HELD, rates attacked not unreasonable or unduly prejudicial, complaint dismissed. Standard Oil Company v. A. T. & S. F. Ry., 89 I. C. C. 425.

(f) Inclusion of Rock Springs and Kemmerer mines in Wyoming in one group found not unduly prejudicial of operators of coal mines in Utah. The commission has on former occasions declined to separate the district into two rate groups on traffic to southern Idaho on ground that grouping both as to shipments westbound and eastbound had existed for many years and should not be interfered with unless a service more acceptable to the public, and at the same time just to carriers, could be established. Moreover, separation of the group on westbound traffic would naturally result in like action as to eastbound traffic, and would seriously disturb the relationship that has existed without complaint over a long period of years. Western Coal Rates, 89 I. C. C. 666, 668, 669.

(g) Complainant attacked combination rates charged of 99c on five cars of apples from Chelan, Wash., to San Francisco, Cal., in Oct. and Nov. 1922, and Jan. 1923 as unreasonable and unduly prejudicial. Chelan is on the G. N., 39 miles north of Wenatchee, Wash. Shipments moved via G. N., to Portland, Ore., S. P., beyond, charged fifth class of 20c to Wenatchee and commodity 79c beyond. Contemporaneously a commodity rate of 79c applied to San Francisco from many important apple shipping points in the same general territory on the G. N., and O. W. R. R. & N., including Spokane, Yakima, Wenatchee, Wash., and Lewiston, Ida., and local points on the Yakima Valley Transportation line, an electric line operating from Yakima. HELD, rate attacked unreasonable to extent it exceeded 79c, reparation awarded. Jacobs Malcolm and Burtt v. G. N. Ry., 89 I. C. C. 723.

(h) Complainant attacked commodity rates charged on grain, carload from Humboldt, Neb., to St. Louis, Mo., since April 1, 1921 as unjust, unreasonable and unduly prejudicial. Humboldt is on Burlington 21 miles west of Falls City, Neb., a junction point between defendants line and the M. P. From Falls City both defendant and M. P., have direct lines to St. Louis. Prior to June 25, 1918 the rate on wheat from Humboldt to St. Louis was 15.5c, increased on that date to 19.5c, increased on Aug 26, 1920 to 28.5c, reduced on Jan. 2, 1922 to 24.5c and on April 20, 1923 reduced to 22.5c. Distance from Humboldt to St. Louis direct through St. Joseph is 398 miles. In 73 I. C. C. 347 and 80 I. C. C. 607 the Commission prescribed for single line hauls rates of 29c for this distance. HELD, rates attacked not unreasonable

or unduly prejudicial, complaint dismissed. Cooper-Company v. C. B. & Q. R. R., 91 I. C. C. 50.

(i) Complainant attacked commodity rates on coal, from complainants mine at Johnston City, Ill., to interstate points as unreasonable and unduly prejudicial. In 88 I. C. C. 111, the Commission found the rates attacked unreasonable and unduly prejudicial to extent they exceeded joint rates from mines on the Southern Ry. in the southern Illinois group to the same destinations. It now appears that the Southern Ry. does not serve the Southern Illinois group. HELD, rates attacked on coal from the Clogo mine at Johnston City unduly prejudicial to extent they exceeded rates from competing mines in the southern Illinois group. Slogo Coal Corporation v. M. P. R. R., 91 I. C. C. 217.

(j) Complainant attacked commodity rates charged on bituminous coal, carloads, from Kanawha district, Group E W. Va., to New Boston, Yorktown, O., between July 1917 and February 1918 as unreasonable, unjustly discriminatory and unduly preferential and prejudicial. Complainant demanded reparation only to the basis of $1 per ton its grievance being that the rate from the Kanawha district to New Boston had been increased 15c while rates to East Ashland and Ashland, Ky., and to Ironton, O., had been increased but 10c thus widening the spread between the rates to its disadvantage. During the entire period the C. & O., maintained a rate of 80c from Kanawha district to Ironton. HELD, rate of $1.05 charged unreasonable to extent it exceeded $1, reparation awarded. Whitaker Glassner Co. v. C. & O. Ry., 91 I. C. C. 339.

(k) Respondents proposed both increased and reduced rates on grain and grain products from Kansas, Missouri, Nebraska, Iowa, Illinois, Minnesota and South Dakota, to Texas, Arkansas, Oklahoma, Colorado and Kansas. The increases range from 1.5 to 6c, but generally are about 4 or 5c. To a considerable extent, rates on grain and grain products in the Middle West have been adjusted to equal the combination of locals into so-called primary markets such as Chicago, Minneapolis, Omaha, Kansas City and St. Louis plus outbound proportionals to destination. Prior to 1918 most of the rates on those commodities from the territory of origin involved to Texas destinations were equal to the combination on St. Louis or Kansas City, whichever made lower. Via the gateways through which the lowest combinations were made such combinations usually applied, but through other gateways through one factor rates equal to the lowest combination on any gateway were generally published in order to permit the traffic to flow through the various markets and gateways. Transit was and is permitted on the one factor through rates, so that even where such rates were or are less than the combinations grain may be stored or milled in transit or given other market privileges at intermediate markets upon the same through charge as shipments moved direct from point of origin to destination. The application of the general increases during and after federal control resulted in the combination becoming in many cases higher than the published through one factor rates, and in recent years in many instances different rates have applied via some lines or gateways than via others. The underlying purpose of most of the rates under suspension is to equalize the various markets, gateways and routes. This it is proposed to do in almost all cases by bringing up the one factor through rates to rates no lower than the lowest combination, usually upon St. Louis or Kansas City. The principle has been quite generally recognized that increases in grain rates designed to place the rates upon the full combination upon market points will not be found justified unless clearly shown to be reasonable in themselves, free from undue prejudice or unjust discrimination, and otherwise lawful. Manifestly, while one of the principal grounds for the proposed increases is the desire to place the primary markets upon a combination basis, thus making the use of transit on one factor rates unnecessary, the rates under suspension will not accomplish this purpose, for in many instances through one or more of the markets, Omaha, Kansas City and St. Louis, through rates lower than the combination through such gateways are proposed. Where points of origin and markets are situated such as are those here involved, it is extremely difficult—well nigh impossible—to bring about an adjustment which will enable the rates to be made combinations on all the markets without so greatly disregarding distance and transportation conditions as to make the rates of extremely doubtful propriety. RESTRICTION IN ROUTING. No. 2085 involves

restriction of routing on grain and grain products originating upon the M. P., in Kansas and Nebraska and destined to Texas. At present the routing south of Kansas City is in most instances unrestricted and grain may move without rate penalty from points on the M. P., into that market and thence to Texas over the M. P. through Arkansas, over the Frisco or M. K. & T., through Kansas and Oklahoma over the K. C. S., and over certain other routes. It is proposed to limit the application of the through one factor rates so that they will not apply south of Kansas City via the Frisco, M. K. & T., or K. C. S., leaving, generally speaking, only the routes of the M. P., through Arkansas to Texarkana and thence into Texas, and certain routes of the M. P., via Oklahoma junctions in connection with the M. K. T., and K. O. & G. HELD, proposed schedules providing routing restrictions south of Kansas City on grain and grain products originating on the M. P., justified, in all other respects not justified. Grain from western trunk line points, 91 I. C. C. 632.

(l) Complainant attacked rates on freight generally, other than cement, packing house products, livestock and lumber, between El Paso and points in New Mexico on the Santa Fe by way of Pecos, Tex., as unreasonable unjustly discriminatory and unduly prejudicial. Complaint is narrowed to class rates applicable to less carload traffic. Traffic between the points of destination and El Paso may move over the route by way of Pecos, in which case the haul between that point and El Paso is over the T. & P., or it may move wholly over the Santa Fe through Belen, N. M. Over the Santa Fe route joint class rates are maintained and over the Pecos route a materially higher basis of combination rates apply, the lowest combination generally basing on Pecos. The distance is 582 miles via Santa Fe and 366 miles over the Pecos route. It appears that the granting of complainants prayer would not result in a lower basis of charges than now applies in connection with the Santa Fe route, as the rates over that route are the rates which complainant seeks to have established over the Pecos route. Undoubtedly the combination rates are on a high level, but the record affords no basis for a finding as to what the level should be, if, in fact, it demands the establishment of joint rates. At least the first class rates now available to complainant over the Santa Fe are on a lower basis than would result from the application of the Shreveport-Texas joint line differential scale at the mileage over the shorter route and the establishment of joint rates over the Pecos route is not shown to be necessary in the public interest. HELD, rates attacked not unreasonable, unjustly discriminatory or unduly prejudicial, complaint dismissed. El Paso Chamber of Commerce v. A. T. & S. F. Ry., 92 I. C. C. 75.

(m) Railroads serving Baltimore, Philadelphia, Jersey City and New York, and Poughkeepsie, N. Y., except the New Haven, proposed a revision of the rates on lumber and forest products, carloads, from those cities to destinations in Pennsylvania, York and New Jersey. Rates from Poughkeepsie became effective April 25, 1924, but rates from other points were suspended. Proposed rates cover practically all kinds of lumber and are intended mainly for application to water borne lumber which originates on the Pacific coast. The purpose of the revision was to establish a relationship between the rates from the ports on the one hand and from Poughkeepsie on the other which would permit Poughkeepsie to reach that territory in competition with the port cities. Over the route of the N. & Y. C., the rates on lumber to the anthracite region are the sixth class rates, while over the New Haven, which is the short line to most destinations in the Erie, N. Y. O. & W., and L. & N. E., more commodity rates less than the sixth class rates. Respondents also proposed certain advances and reductions from Poughkeepsie, Baltimore and Philadelphia to destinations in northern New Jersey. Respondents admitted that they would have attempted no changes in the level of the rates from the ports at this time except in order to establish the relationship between the rates from Poughkeepsie and from the ports above referred to. The distance from Poughkeepsie to Scranton, a typical point in the anthracite region and the point around which the adjustment was built, is 139 miles over the New Haven and connections, and about 216 miles over the N. Y. C. The attempt to base the entire revision of the rates from the ports and from Poughkeepsie on the long mileage and expensive service in the congested New York tribunals is unjustified. The proposed revision appears to be primarily an attempt of the N. Y. C., to

obtain a share, if not a major part, of the lumber traffic from Poughkeepsie to the anthracite region. HELD, proposed rates from Baltimore, Philadelphia, Jersey City, New York and Poughkeepsie and from Baltimore to New Jersey not justified, but reduced rates from Baltimore, Philadelphia and New Jork to New Jersey justified. Lumber between points in trunk line territory, 92 I. C. C. 144.

(n) Complainant attacked combination rates charged of 52.5c on 11 cars of lumber shipped during July, August and October, 1921 from Ranger, Tex., to Drumright, Burbank Copan, Deer Creek, and Temple, Okla., as unjust, unreasonable and unduly prejudicial. Ranger is not in a lumber producing territory, it is on the T. & P., about 95 miles west of Fort Worth, Tex., 64 miles west of Weatherford and 20 miles east of Cisco. Points of destination, except Temple, which is on the Rock Island are on the Santa Fe. A group rate of 39c applied, from numerous points in Texas in the vicinity of Ranger, including Weatherford and Cisco and from Louisiana and Arkansas points to the above destinations as well as to other points in Oklahoma and Kansas. On Jan. 25, 1921 complainant requested the establishment of a rate of 39c which was established. Distance over route of movement 611.6 miles, whereas distance via Fort Worth is 400 miles. Charged class D rate of 13.5c to Cisco plus commodity rate of 39c beyond. HELD, rates attacked unreasonable to extent they exceeded 39c, reparation awarded. Prairie Oil & Gas Company v. A. T. S. F. Ry. 92 I. C. C. 248.

(o) Complainant attacked combination rates charged on seven cars of caustic soda shipped from Painesville, O., and Detroit, Midland and Wyandotte, Mich., to Ardmore, S. D., between June 1921 and December 1923, as unreasonable, unduly prejudicial and preferential, and in excess of those applicable. Shipments moved from Midland through Manitowoc one from Painesville one from Wyandotte and two from Detroit moved through Chicago, distance from 1,254 to 1,367 miles, applicable rates to Chicago 21c from Wyandotte and Detroit and 23c from Painesville, and 21c from Midland to Manitowoc, plus 95.9c beyond both gateways. Caustic soda is rated sixth class in official and fifth class in western. By exceptions to the official the factors to the gateways named were 85% of sixth class. Factors beyond were commodity rates, lower than fifth class. Ardmore is a local point on the Burlington about 400 miles from Billings, Mont. Directly south of Ardmore but on the other Billings line are Bayard, Scotts Bluff, and Mitchell, Neb., 942 to 961 miles from Chicago and still farther south are Denver, Colorado Springs, Pueblo and Trinidad, Colo., 1,018 to 1,081 miles from Chicago. Billings is about 400 miles beyond Ardmore, and rates lower than to Billings were and are maintained on the same traffic to points in the immediate vicinity of Ardmore. The movement to Ardmore has been regular in the past and there appears to be reasonable prospect of its being resumed presently. HELD, rates attacked unreasonable to extent rates from Chicago and Manitowoc exceeded 93c July 6, 1921 to June 30, 1922 and 83.5c thereafter, reparation awarded. Refinite Company v. C. & N. W. R. R., 92 I. C. C. 266.

(p) Complainant attacked commodity rates on paper stock, in bales, carloads, from points in the harbor of New York to destinations in New England and west thereof as unreasonable, unjustly discriminatory, and unduly prejudicial to extent they exceed rates from New York (Manhattan) stations. The N. T. C., is the only line which handles freight to and from New York direct over its own rails. From its stations, other than pier stations, to destinations reached by it no service by water is involved. A water service is necessary on the part of other carriers in connection with all shipments originating in New York. On shipments originating in Brooklyn or at New York lighterage points such service is required in all instances. N. Y. C., has commodity rates lower than sixth class to meet canal competition, while normal basis via other carriers is sixth class. To some destinations the rates from Brooklyn or New York lighterage, or both, are higher than those applicable from New York stations proper. In 51 I. C. C. 163 the Commission found sixth class rating from and to certain points in official classification territory on waste paper was not unreasonable. HELD, rates attacked not unreasonable or otherwise unlawful, complaint dismissed. Chase & Norton v. A. A. R. R., 92 I. C. C. 322.

(q) In 60 I. C. C. 5, the Commission prescribed maximum reasonable rates on classes and commodities between Meridian, Miss., and certain points in Alabama. To remove the undue prejudice

against Meridian therein found to exist, defendants were ordered to cease and desist from maintaining between Meridian and points in Alabama not more than 200 miles distant higher rates on like traffic for like distance than those in effect between Mobile, Selma, Montgomery, Birmingham, Demopolis and Tuscaloosa, Ala., on the one hand, and points in Alabama within 200 miles of Meridian, on the other. COTTON. Rates were prescribed between Meridian and Alabama over the Southern and A. G. S., which were the same as the Alabama intrastate rates on the same lines. The rates fixed for the M. & O., were 10% higher, as were those on all classes and commodities. On Nov. 7, 1923, the Alabama Commission entered an order, revising intrastate rates on cotton and prescribing scales for this commodity which had previously been adopted for application in Georgia. Defendants say that these scales are lower than they might reasonably be, but they are nevertheless willing to apply them between Meridian to Alabama, and complainant does not oppose their substitution for the current rates. The M. & O., is willing to establish the same rates on cotton and clay, concrete and shale products as those proposed for the Southern and A. G. S. HELD, proposed rates would be reasonable maximum rates between Meridian and points in Alabama involved in these proceedings. **Clay, Concrete and Shale Products.** Defendants also desire to substitute the scale of rates on sewer pipe and other clay, concrete, and shale products prescribed by the Alabama Commission for the rates on these commodities which have resulted from the order in 9560. HELD, proposed rates would be reasonable rates between Meridian and points in Alabama involved. **Hay.** The Alabama Commission has not made any general revision of hay. Hay in machine compressed bales, carloads, minimum 20,000 pounds, is rated class D in southern classification and moves in the South principally on class rates. No commodity rates on hay were prescribed in the previous reports in these proceedings. Hay is not shipped from Meridian to points in Alabama in important amounts. The evidence does not warrant a finding that the present rates are unreasonable, but it indicates that the maintenance of these rates between hay shipping stations in western Alabama and Birmingham may impose a handicap on Alabama growers who market their hay at the latter points in competition with those in Mississippi. HELD, rates on hay, carloads, between points in Alabama and Meridian are not so related to the intrastate rates on the same commodity within Alabama as to require the continued operation of prior orders with respect to such rates. **Gravel.** In Jan. 1924, the Alabama Commission ordered reductions in rates from Burnsville to Southern stations which made them somewhat lower than the Meridian scale rates in effect from Demopolis. Gravel is not produced at or distributed from Meridian. HELD, rates on gravel, carloads, between Alabama and Meridian not so related to the intrastate rates on that commodity to and from Demopolis and other points in Alabama as to require the continued operation of the prior orders with respect to such rates. Meridian Traffic Bureau v. Southern Ry., 92 I. C. C. 439.

(r) Complainant attacked commodity rates charged on sulphuric and nitrating and muriatic acid, in straight or mixed carloads, from Kansas City, Mo., to Kansas, Oklahoma and Texas as unreasonable, unjustly discriminatory and unduly prejudicial. Argentine, Kans., is on the Santa Fe, within the switching limits of Kansas City. **Rates to Kansas and Texas.** No substantial showing was made that the rates to Kansas are unreasonable or otherwise unlawful. About 80% of the complainants shipments to Kansas points are intrastate. The Santa Fe, the only carrier serving complainant plant, maintains the intrastate routes to a majority of the destinations in Kansas named in the complaint at which consumers of sulphuric acid are located. The intrastate rates are not in issue. **Rates to Oklahoma.** Complainant is mainly interested in rates from Kansas City to Oklahoma, where 70% of its output is consumed. On March 24, 1923, the carriers published a readjustment, making the St. Louis rates, except as noted, a differential of 7.5c and the Chicago rates a differential of 8c over St. Louis and 15.5c over Kansas City. Rates from Illinois producing points in the Peoria group were also reduced, and were made 4c over St. Louis. To a small group of points in northeastern Oklahoma, of which Bartlesville is representative, the St. Louis differential was made 10.5c and the Chicago differential 18.5c. To Ardmore and a few near by points in southern Oklahoma

the spread between Kansas City and St. Louis was made 8c and between the former and Chicago 16c. HELD, rates attacked to Kansas and Texas not unreasonable, unduly prejudicial or otherwise unlawful, but rates to Oklahoma not unreasonable per se but unduly prejudicial to complainant to extent they exceed rates lower than the rates from St. Louis by the following differentials: Under St. Louis, 12.5c, under said points in Illinois, 12.5c plus differentials of said points over St. Louis. National Zinc Co. v. A. T. & S. F. Ry., 92 I. C. C. 587.

(s) Complainant attacked commodity rates charged on feldspar, in carloads from New England to Trenton, N. J., and nearby points in New Jersey and Pennsylvania, as unreasonable, unduly prejudicial and in violation of fourth section; and that maintenance of same rates on crude and ground feldspar subjects complainant to unreasonable disadvantage. Prior to Nov. 14, 1913 the Buffalo, N. Y. sixth class scale rate of 15c applied on feldspar from points in the Brunswick group to trunk line destinations east of a line extending northward from Perryville, Md., through Harrisburg and Williamsport, Pa., to Buffalo. On that date the Pittsburgh sixth class scale rate of 17c was made applicable on this traffic via the Barlem River, N. J., gateway only, the 15c rate continuing in effect by way of Mechanicville, N. Y. The rate parity via the two gateways was restored later by the establishment of a commodity rate of 15c. By reason of the general increases and reductions the commodity rate became 28.5c on July 1, 1922, reduced to 22.5c on Nov. 27, 1922 to meet the rate from Keene. Commodity rates to Trenton of 25c from Keene and 24.5c from northern New Hampshire were established on Jan. 1 and July 17, 1922. The rate from Keene was reduced to 22.5c the contemporaneous rate from the Connecticut group, on July 1, 1922 and on Dec. 10, 1922 increased to 23c. On Sept. 10, 1923 following the reduction of the Brunswick group rate to 22.5c, the northern New Hampshire and Keene rates to Trenton were reduced to 22.5c and 21c. The commodity rate from the Connecticut group to Trenton, established at 12c in 1902, became 22.5c on July 1, 1922, reduced to 21c on Jan. 7, 1924. Trenton is intermediate over direct open routes from New England to 60% territory. The fourth section violation resulting from the maintenance from the Brunswick group of a rate to Trenton which exceeded that to 60c points was removed on Nov. 27, 1922. HELD, rates attacked to Trenton since July 17, 1922 unreasonable and unduly prejudicial to extent they exceeded on crude feldspar, 19c from Brunswick and northern New Hampshire groups, 18c from Keene, and 16c from points in Connecticut groups; on ground feldspar, 21c from points in the Brunswick group and 20c from Keene. Reparation awarded. Ceramic Traffic Assn. v. Me. Central Ry. 92 I. C. C. 675.

(t) Complainant attacked commodity rate charged on wine grapes, carloads, from Madison, Calif., to Portland and East Portland, Oreg., as unreasonable and unduly prejudicial. Madison is on the S. P., 11 miles north of Winters and 27 miles north of Elmira. A commodity rate of 49.5c applied during the period in question and now applies from Winters to Portland on fresh fruits and vegetables and prior to Dec. 15, 1923 the rate charged and applicable from Madison was a combination rate of 58.5c basing on Winters. On that date the rate was reduced by establishment of joint rate of 55c. The real issue is whether Madison is subjected to undue prejudice by reason of the fact that it is denied the group rate, while that rate is maintained from the extensive blanket. HELD, rate attacked not unreasonable but unduly prejudicial, reparation denied. New Italian Importing Co. v. S. P. Co., 95 I. C. C. 611.

(u) Complainant attacked combination rates charged of $1.08 and 99c on 19 cars of grapes shipped in 1920, 1921 and 1922 from Micke, Calif., to Seattle, Wash., as unreasonable, unjustly discriminatory and unduly prejudicial. Micke is on the Central California Tract on Co. 1 mile from Lodi the interchange point with the S. P. Distance Micke to Seattle is 897 miles, rates charged from Lodi was 90.5c August 26, 1920 to Dec. 31, 1921 but on Jan. 1 1922 was reduced to 81.5c. The factor from Micke to Lodi is third class rate of 17.5c. Lodi is in a group which, in connection with California-Oregon-Washington traffic is known as Group 2 and takes the San Francisco rate. HELD, rate attacked not unreasonable but unduly prejudicial to extent it exceeds rate from San Jose,

Stockton and Lodi, reparation denied. Pioneer Fruit Co. v. C. C. T. Co., 95 I. C. C. 690.

(v) Rates on lumber and forest products from points on Puget Sound & Cascade Ry., in Washington to eastern destinations, higher than coast-group basis of rates contemporaneously maintained on like traffic from competing points in Washington and Oregon situated on defendants' own branch lines, proprietary branch lines, or independent short-line connections, found not unreasonable, but unduly preferential and prejudicial. Reparation awarded for undue prejudice found to have existed prior to subsequent establishment of coast-group basis from points on Cascade Ry. Puget Sound & Cascade Ry. Co. v. Director General, 91 I. C. C. 467.

(w) Rates on printing paper from Hamilton, Ohio, in Cincinnati, Ohio, rate group, and on strawboard from Peoria, Ill., in Chicago, Ill., rate group to San Antonio, Tex., found unduly prejudicial as compared with rates from Fox River, Wis., group, and unreasonable to extent they exceeded lower rates subsequently established. Rates from these groups to Texas common points have always been based upon differentials under Fox River rate. Reparation awarded. San Antonio Paper Co. v. C. & A. R. R. Co. 91 I. C. C. 589.

(x) Complainant attacked commodity rates charged on cast iron soil pipe, carloads, from Somersville, N. J., to New England as unreasonable, unjustly discriminatory and unduly prejudicial. Somerville is on the Jersey Central. Newark is on that line and on the Pennsylvania, 26 miles north of Somerville. Traffic to New England from Somerville and Newark may move either via New York or over the Poughkeepsie bridge route. From Somerville the rates to New England are the same over both routes. From Newark the rate over the bridge route is the same as from Somerville, but via New York it is generally 1.5c less. These rates are shown as applying also from Baltimore, Md., and Lansdale, Linfield and Boyertown, Pa. Baltimore is the most distant point in the origin group and Somerville the nearest. Portland, Me., is the most distant point in the destination group and Bridgeport the nearest. It is not apparent that the rates in issue subject complainant to undue prejudice and unduly prefer its competitors in the group. If complainant is under any disadvantage by reason of the fact that its inbound rates on raw material are higher than the rates of its competitors in the group, that disadvantage may not properly be offset by reducing the rates on the outbound product unless outbound rates are themselves in violation of the act. HELD, rates attacked not unreasonable or otherwise unlawful, complaint dismissed. Somerville Iron Works v. C. R. of N. J., 101 I. C. C. 683.

(y) Rates on lumber, timber, and other forest products from Frost and Verdun, Ala., local points on the Garyville Northern R. R., to destinations in official and western trunk-line territories, and in Oklahoma, Texas, Kentucky, and Tennessee, found unduly prejudicial to extent they exceed the corresponding blanket rates contemporaneously maintained from Livingston and Garyville, La. Fleming Bros. v. G. N. R. R., 92 I. C. C. 582.

(z) An expressed desire of shippers and carriers for the continuance of a group adjustment does not relieve the commission of duty of considering whether its continuance would result in unjust and unreasonable rates or in undue prejudice. C., H. & D. Ry. Co. v. I. C. C., 206 U. S. 142. Lime from Eastern Trunk Line Points, 93 I. C. C. 617, 632.

(aa) Rate on grapes from Micke, Calif., a local point on the Central California Traction Co., to Seattle, Wash., found not unreasonable but unduly prejudicial as compared with group rates contemporaneously maintained from San Jose, Stockton, and Lodi, Calif., main line points. Pioneer Fruit Co. v. C. C. T. Co., 95 I. C. C. 690.

(bb) Present commodity rates on iron and steel articles from St. Louis, Mo., to Mississippi Valley points, adjusted in harmony with commission's decision in 64 I. C. C. 306, found not unreasonable as compared with lower rates from Louisville, Ky., to same destinations or, as applied from Louisville and other points in the St. Louis-Louisville group, unduly prejudicial in relation to corresponding rates from competing points in central territory, on the Ohio River, and in the Southeast, to same destinations. St. Louis Chamber of Commerce v. A. & V. Ry. Co., 98 I. C. C. 29.

(cc) Class rates and commodity rates bearing a direct relation thereto, between points in Lower Peninsula of Michigan north of main line of Michigan Central R. R. from Detroit, Mich., to Chicago, Ill., and points in central territory on and south of that line found unreasonable, unduly prejudicial to persons and localities in Lower Peninsula of Michigan north of said line, and unduly preferential of persons and localities in central territory on and south of said line. Reasonable and nonprejudicial basis of rates prescribed and former report, 85 I. C. C. 47, modified accordingly. Michigan Traffic League v. A. A. R. R. Co., 98 I. C. C. 660.

(cca) Rates on paving and roofing materials from New Orleans to Texas common-point group and all other points in that portion of Texas lying between these points and the port group and related points found unduly prejudicial and unreasonable to extent they exceeded lower contemporaneous class E rates applicable on roofing slate, paving slate, and hard asbestos shingles from and to same points and on similar articles from New Orleans to points in Texas differential territory to extent they exceeded above-mentioned rates, plus class E differentials. Reasonable rates prescribed for future and reparation awarded. Cameron & Co. v. A. & S., 102 I. C. C. 31.

(dd) Complainant attacked commodity rates on soft coal, carloads, from Pittsburg-Youghiogheny, West Virginia, Meyersdale, Cumberland-Piedmont and Clearfield groups to Union Bridge, Md., as unreasonable and unduly prejudicial in that they exceed the rates from the same territory of origin to Security and Hagerstown, Md., Martinsburg, W. Va., and Harrisburg, Pa. Union Bridge is served directly by the Western Maryland and by a branch line of the Pennsylvania. The B. & O., does not serve Union Bridge directly, but connects with the Western Maryland at Cherry Run, W. Va. Union Bridge is on the Western edge of the $2.84 destination group, which includes Baltimore, Washington, Wilmington, Chester and Philadelphia and extends to points in New Jersey. Security is on the B. & O., and Western Maryland, 3 miles east of Hagerstown proper and 39 miles west of Union Bridge on the W. M. It is not served by the Pennsylvania. In 74 I. C. C. 341 the rates to Hagerstown and Security were reduced to $2.33 from the Cumberland-Piedmont and Meyersdale regions. Complainant sought to have this rate made applicable to Union Bridge. The Pennsylvania does not serve Security and has not published the $2.33 rate to Hagerstown. It can not be required under a finding of undue prejudice to establish the same rate to Union Bridge as that applicable to Security from mines on the B. & O., and W. M. The origin groups here described have been in existence for a great many years, and there is no evidence of record to show that the relationship between the groups is improper. There is no justification for a rate of $2.84 from the Cumberland-Piedmont and Meyersdale regions to Union Bridge as long as a rate of $2.33 is in effect from the same origin territory to Security, 39 miles less distant than Union Bridge. The latter point, which is competition with Security in the sale of cement, is undoubtedly under a serious handicap by reason of the disadvantage of 51c in the rates on coal. HELD, rates to Union Bridge unduly prejudicial to extent that over the B. O., and W. M., via Cherry Run, W. Va., and Over Western Maryland direct they exceed the rates to Security, Md. Rates to Union Bridge found not unreasonable. Tidewater Portland Cement Co. v. C. & P. R. R. 102 I. C. C. 391.

ALL OTHER CITATIONS

Cities of Marshall and Jefferson v. T. & P. Ry. Co., 85 I. C. C. 115; Slogo Coal Corp. v. M. P. R. R. Co., 88 I. C. C. 111.

VI. REMEDY FOR UNLAWFUL GROUPING.

§14. In general.

See Distance Rates §1 (o).

(a) Respondents proposed to increase the rates on lumber and shingles, carloads, from Spokane, Wash., and other points to Arona, Pa. Arona is 41 miles southeast of Pittsburgh, Arona being on the Pittsburgh basis. Effective June 6, 1922 joint rates were established to points in Pennsylvania east of Pittsburgh. This adjustment substituted the Philadelphia basis for the Pittsburgh basis and resulted in increased rates to all points east of Turtle Creek, Pa., a point on the Pennsylvania 13 miles east of Pittsburgh, and 27 miles west of Latrobe, except Arona and points intermediate thereto over both direct and indirect

routes. Respondents proposed to increase the rates to Arona to the Philadelphia basis. Generally speaking, class and commodity rates from the Pacific northwest to points in Pennsylvania as far east of Pittsburg as Latrobe are in the Pittsburgh blanket. HELD, schedules not justified. Lumber from northwest to Arona, Pa., 91 I. C. C. 457.

VII. EVIDENCE.

See Evidence.

§15½. In General.

(a) Complainant attacked commodity rate of 39.5c charged on 87 cars of rough oak and gum staves and headings shipped between April 1 and Oct. 31, 1921 from Bonita, La., to Louisville, Ky., as unreasonable, unjustly discriminatory, unduly prejudical and in violation of the fourth section. Bonita is on the M. P., 221 miles southwest of Memphis, Tenn., 40 miles north of Monroe and Rayville, La., junction points between the M. P., and V. S. & P. shipments moved over the M. P., to Memphis and L. & N., beyond, distance 601 miles, charged 39.5c constructed by application of the rule provided in Jellys I. C. D. U. S. L., to the combination of intermediate commodity rates to and from Memphis. The evidence is insufficient to justify a finding in favor of complainant. The fact that the M. P. did not participate in the group rates does not prove that the rate charged was unreasonable, nor is that conclusion warranted from the further fact that the M. P., subsequently established the 34.5c rate from Bonita. The record is devoid of evidence of unjust discrimination; and it does not follow from the fact that the 34.5c rate was in effect on yellow pine and cypress lumber from the junction points, Monroe and Rayville, that complainant was unduly prejudiced thereby in its shipment of oak and gum staves and headings from Bonita. HELD, rate attacked not unreasonable or otherwise unlawful, complaint dismissed. Louisville Cooperage Co. v. L. & N. R. R., 93 I. C. C. 593.

(b) In judging rates to or from points in the percentage groups, it has been the practice of the commission to consider earnings and transportation conditions and not the mere relationship to sixth class. See General Chemical Co. 83 I. C. C. 582 and Grasselli Chemical Co., 89 I. C. C. 383. Washington Publishers' Asso. v. B. & O. R. R. Co., 98 I. C. C. 339, 344.

(c) Manifestly in a group adjustment distance is in a measure disregarded, and the ton mile earnings necessarily will be higher to or from the nearer border line points than to or from those farther distant. Somerville Iron Works v. Long Island R. R. 102 I. C. C. 511, 513.

§16. Burden of Proof.

See Burden of Proof; Evidence I.

(a) Evidence in support of rates to Washington as compared with those to Baltimore is merely an explanation of how the differences grew up, without going into the merits of such differences, and a contention that Baltimore is at the farthest edge of a group. Evidence does not show that rate to Baltimore was ever determined on group basis; on the contrary the only conclusion possible from the record is that rates to New York; Philadelphia, and Baltimore were established upon considerations bearing on those ports alone and not relating to inland points. Washington Publishers' Asso. v. B. & O. R. R. Co., 98 I. C. C. 339, 343.

§18. Comparisons.

See Comparative Rates; Evidence §12, §13; Relative Rates.

(a) Comparisons based upon distance alone have little probative value. This is particularly true where the rates compared are group rates in the establishment of which the element of distance must be subordinate to other considerations. Louisville Cooperage Co. v. L. & N. R. R., 93 I. C. C. 593, 594.

(b) The reasonableness of a blanket rate is not properly tested by a consideration of its earnings to a point on the nearest edge of the blanket. Bush v. Director General, 95 I. C. C. 661, 663.

(c) The Commission has repeatedly found, in dealing with group rates, when the propriety of the group is not in question, that the distances and ton mile earnings between selected points can not be regarded as controlling. The reasonableness of such rates must be judged by average conditions. But this general principle is not adequate justification for this situation. When, as here, the near edge of the group is on such a high basis

as to produce rates in excess of the intermediate rates, a strong presumption is raised that the group principle of making rates has been carried beyond reasonable limits, particularly where no compelling necessity is shown for the existence of such an extensive group. Pensacola Creosoting Co. v. C. of Ga. Ry., 98 I. C. C. 36, 37.

(d) Ordinarily, in making comparison of rates from group points of origin the average distances are used, but where the great preponderance of the movement is from one point within the group, the distance from that point may be taken as fairly representative. Watertown Chamber of Commerce v. A. & W. R. R., 101 I. C. C. 427, 430.

(e) Single rates selected from large groups or averages predicated upon rates to a few points selected from extensive groups do not afford a fair comparison in measuring reasonableness of rates. Dawson Produce Co. v. Am. Ry. Exp., 93 I. C. C. 390, 392.

(f) Rate on rough oak and gum staves and headings from Bonita, La., a local station on the Missouri Pacific, to Louisville found not unreasonable or otherwise unlawful as compared with lower group rate applicable on lumber, staves, and heading, from various points to Louisville for comparable distances, and later established from Bonita via route of movement, or with rate contemporaneously applicable on yellow-pine and cypress lumber from Missouri Pacific junction points. Louisville Cooperage Co. v. L. & N., 93 I. C. C. 593.

(g) In considering the reasonableness of group rates the Commission has repeatedly found that comparisons of distance and ton mile earnings as between selected points can not be regarded as controlling. The reasonableness of such rates must be judged by average conditions. Worth Carter Publishing Co. v. Director General 102 I. C. C. 729, 734.

(h) The reasonableness of a group rate may not be measured by the distance from the nearest point in the group. The fact that the commodity rates from the group may exceed the class rates from some points in the group to some destinations is no more determinative of the unreasonableness of the rates from the group as a whole than it is of the impropriety of the grouping. Furniture from southern points 112 I. C. C. 302, 305.

§19¼. Prior Decision of Commission.

See Previous Decisions of Commission.

(a) Complainant attacked commodity rates charged on newsprint paper and certain paper articles, carloads, from Wisconsin, Michigan, Minnesota and Missouri to Oklahoma City and Guthrie, Okla., between July 9, 1920 and August 10, 1922 as unreasonable. The rates sought with the exception of the rate on newsprint from Kansas City were found reasonable from and to the points named in 66 I. C. C. 571. HELD, rates attacked found unreasonable to extent they exceeded rates established pursuant to the order in 66 I. C. C. 571, reparation awarded. Oklahoma Publishing Company v. A. T. & S. F. Ry., 95 I. C. C. 448.

(b) Complainant attacked commodity rate charged on casing head gasoline, carloads, from Burkburnett, Tex., to Hutchinson, Kas., between August 1922 and April 1923, as unreasonable and unduly prejudicial. Burkburnett is on the M. K. T., and shipments moved over that line through Woodward, Okla., and Santa Fe, 375 miles, charged rate of 34c. Prior to Oct. 8, 1922 the rate of 34c applied to the points named as well as to Wichita and Eldorado. On that date a rate of 27.5c was published to Wichita and Eldorado. In 66 I. C. C. 426, the Commission prescribed the same rates for application on crude petroleum from the Burkburnett group to all points in the Kansas group 2 within which Hutchinson, Wichita and Eldorado are located. HELD, rates attacked unreasonable to extent they exceeded 27.5c, reparation awarded. Frontier Refining Co. v. A. T. & S. F. Ry., 95 I. C. C. 454.

(c) Complainant attacked commodity rates charged on 18 cars of plain paper bags from Marinette, Wis., to Fort Worth, Dallas, San Antonio, and El Paso, Tex., between August 1920 and May 1922 as unjust, unreasonable and unduly prejudicial. Marinette is in the socalled Fox River group. In 66 I. C. C. 571 the Commission prescribed a general adjustment of rates on certain kinds of paper from Wisconsin to points in this territory. HELD, rates attacked unreasonable to extent they exceeded rates subsequently established in accordance with that decision, reparation awarded. Vic-

tory Bag & Paper Co. v. A. T. & S. F. Ry., 95 I. C. C. 677.

(d) Complainant attacked class and commodity rates on iron and steel articles and on sewer pipe, carloads, from St. Louis to points in Mississippi Valley as unreasonable and unduly prejudicial. This report will only consider commodity rates as the class rates are under investigation in No. 13494, Southern Class Rate Investigation. **Iron and Steel Articles.** Since the hearing the rates on iron and steel articles have been revised in harmony with 64 I. C. C. 306. Under the adjustment attacked, the rates are graded southward for a distance and thereafter points in the Mississippi Valley are formed into six consecutive destination groups, known as the Memphis, Helena, Greenville, Vicksburg, Natchez, and New Orleans groups. The grouping is the same as that employed in the class rate structure to this territory, and the relationship of rates on iron and steel articles between the groups is based on the relationship of the corresponding class rates. This arrangement has been retained under the present rates. Complainants attack is directed against the relationship these rates bear from Louisville and other competitive points rather than upon a question of the reasonableness of the rates per se. The disparities in distances from St. Louis and from Louisville to the Mississippi valley destinations are not large when the total hauls are considered. While the cited contrast with the adjustment of rates from those points and others in the same general territory of traffic to the southeast presents no question within the issues, it is not out of place to answer that in point of relative distances, leaving other possible considerations aside, the situations are hardly parallel. The readjustment since the hearing would appear to have taken from the competing points, including Birmingham and others in the southeast, substantially the advantages in rates which complainant has regarded as undue. HELD, present rates not unreasonable or unduly prejudicial. **Sewer Pipe.** The allegation is likewise based on the rates from St. Louis compared with other competitive points. This record does not afford the data upon which the Commission could prescribe a specific realignment of all the sewer pipe rates. HELD, rates attacked not found unreasonable or unduly prejudicial. St. Louis Chamber of Commerce v. A. & Y. Ry., 98 I. C. C. 29.

(e) Complainant attacked commodity rates on refined sulphur, carloads, from Bryanmound and Freeport, Tex., to points in Louisiana on and south of the L. R. & N., from Alexandria to New Orleans, when ground and refined at Freeport, as unjust and unreasonable, and that rates on refined sulphur, carloads, from Sulphur Mine and Mossville, La., via Texarkana, Ark., Tex., to the same destinations as unjustly discriminatory to complainant. Bryanmound is on the H. & B. V., 3 miles from Freeport. This carrier connects with the G. C. L., at Anchor, Tex., and with I. & G. N., at Anchor, Tex. Sulphur Mine and Mossville are on the Brimstone Road in southwestern Louisiana. This carrier connects with the K. C. S., at Mossville and with the S. P., at Brimstone Jct., La. Bryanmound and Freeport are grouped as to these destinations. The same is true of Sulphur Mine and Mossville. Crude sulphur produced at Bryanmound may be shipped to complainants plant at Freeport, there refined, and reshipped within a period of 12 months to points in southern Louisiana at the joint rate from point of origin on the refined product, plus an additional transit charge not here in issue. Similar transit arrangements are enjoyed at Texarkana and St. Charles by intervenor on shipments originating at Sulphur Mine and Mossville and destined to the same points in southern Louisiana. No complaint of undue preference is made against the rate and transit arrangements under which shipments move through Lake Charles. The arrangements at Texarkana and Lake Charles are also available on shipments from Bryanmound and other mining points in Texas. They are maintained by the K. C. S., and S. P., and require a back haul for which no additional charge is made. Present rate on crude sulphur from Bryanmound to New Orleans is 23c. In 60 I. C. C. 579, the Commission found justified proposed rates on refined sulphur 10c higher than on crude sulphur from Sulphur Mine, Bryanmound, Freeport and other points in Texas to various interstate destinations. HELD, rates from Sulphur Mine and Mossville to the destinations covered by this complaint and the transit arrangements at Texarkana not unduly prejudicial or otherwise unlawful HELD,

further, attacked rate of 32c not unreasonable, unjustly discriminatory or unduly prejudicial but that the other rates from Bryanmound and Freeport here attacked are unreasonable to extent they exceed 32c. Stauffer Chemical Co. v. H. & B. V. Ry., 98 I. C. C. 326.

(f) On further consideration, original report 89 I. C. C. 508, rates on animal manure from Perth and Lovelock, Nev., to certain eastbound transcontinental groups found unreasonable. Reasonable rates prescribed by taking average distance to representative points in the respective groups and applying thereto the Calivada scale approved in 73 I. C. C. 496, extended to distances in excess of 800 miles. Reparation awarded. Pacific Manure & Fertilizer Co. v. A. & R., 95 I. C. C. 430.

(g) Following Lakewood Engineering Co., 88 I. C. C. 588, commodity rate on portable railway track from Tullytown, Pa., a transcontinental Group A point, to Phoenix, Ariz., found not unreasonable as compared with rates on rail and crosstie fastenings, and on various iron and steel articles. In the cited case the commission found not unreasonable the commodity rate applying from transcontinental Group B points to Phoenix and Pacific coast points and record herein fails to show that level of the Group A rate is improper as compared with that from Group B. State of Arizona v. A. E. R. R., 95 I. C. C. 658.

(h) Upon further hearing, original report, 83 I. C. C. 737, rates on coal from mines in New River district, W. Va., on the Greenbrier & Eastern R. R., a short line, to interstate destinations, found unreasonable and unduly prejudicial to extent they exceed group rates contemporaneously maintained from C. & O. branch-line points in same district to same destinations. Factor of cost of service, unless the difference is great, should not be controlling. Reparation awarded and measure of reasonable and nonprejudicial rates prescribed. Nelson Fuel Co. v. C. & O., 96 I. C. C. 124.

(i) Shipments of hay from points in northeastern Oklahoma to points in northern Texas, which moved during the period covered by the complaint here involved, appear to have been assessed charges at group rates substantially in accord with prior decision in 69 I. C. C. 207, and the further changes that are now being made are part of a general readjustment of rates in this territory. Reparation denied. Oklahoma Corp. Comm. v. A. & S. Ry., 101 I. C. C. 116, 132.

(j) Upon further hearing finding in original report, 85 I. C. C. 373, that rates on lumber to New Orleans and Mobile, from Lyman, Miss., on the near edge of the blanket of the Gulf & Ship Island origin points, were not unreasonable or unduly prejudicial, affirmed. Evidence amply supports original conclusions that blanket method of making rates on lumber has long been satisfactorily employed in this territory and that it should not be here disturbed. Obviously some shippers will be farther from a given point than others in the same blanket, but the record shows that whereas Lyman is the nearest shipping point to Mobile and New Orleans it is among the farthest points to destinations in other directions. A blanket rate structure in existence since inception of the sawmill industry in this territory should not be lightly set aside for a rate adjustment in which distance would be the sole factor determining the measure of the rates. Ingram Day Lbr. Co. v. G. & S. I. 101 I. C. C. 287.

(k) Contention by complainants that present rate adjustment on coal from mines located on the Monongahela West Penn Public Service Co., unduly prefers competitors in immediate vicinity and all other mines on lines of defendants and their connections accorded the Fairmont district rates, or the same or lower rates to eastern and western markets; relying largely upon the fact that group rates apply from certain independent short lines in the general territory here considered; and further fact that commission has in numerous cases prescribed group rates from mines on such lines, not sustained, following Big Mandy Coal & Mining Co., 78 I. C. C. 455, in which commission found that "in cases of this character no rule of general application can be followed, but each situation must be judged in accordance with its particular facts and circumstances." Hood Coal Co. v. M. V. T. Co., 101 I. C. C. 719, 725.

§19½. Reparation.

See Reparation.

(a) Complainant attacked commodity rates and refrigeration charges on 13 cars of oranges from California to Virginia during 1921 and 1922 as unreas-

onable and illegal, in violation of sections 1, 6 and 4. Shipments moved via Missouri gateway and Duluth, Minn., and were delivered to the D. W. & P. During 1921 a blanket rate of $1.92 on oranges, carloads, was applicable from California points to the territory between the Missouri river and the Atlantic seaboard. On and after Jan. 1, 1922 it was $1.73. Rates charged were this blanket rate to Duluth and third class rate for 78 miles beyond. On and after April 7, 1921 the blanket all rail rate of $1.665 on lemons from California applied to Virginia, further reduced to $1.50 on Jan. 1, 1922. Defendants will extend the blanket rate to Virginia, Minn. The blanket rate also applied to Winnipeg, Manitoba, Virginia being intermediate. HELD, rate charged illegal, shipment overcharged, reparation awarded. Hansen Peterson Co. v. A. T. & S. F. Ry., 93 I. C. C. 596.

VIII. REGROUPING.

See Basing Points and Lines §3 (d); Evidence §66.

§20. In General.

(a) Groups long maintained are presumably fair and are not to be disrupted unless substantial justice clearly requires it. Dissatisfied producers deprived of the benefit of their proximity to common markets must show that they are actually injured by an unjust and unlawful discrimination. Indiana State Chamber of Commerce v. A. T. & S. F. Ry., 95 I. C. C. 177, 179.

(b) Respondents proposed to increase their rates on grain and grain products, carloads, from Indiana, Illinois and Michigan to Aurora, Garrettsville, and Mantua, O. Points of origin are on the Pennsylvania, such as Chicago. The destinations are on the Erie from 24 to 37 miles southeast of Cleveland, O. The rates are joint rates. The principal rate and apparently the only one that moves any traffic is the proportional rate from Chicago applicable on mixed feed originating west of the Mississippi river, present 16c, proposed 19.5c. This increase is to be effect by transferring the three destinations from the Cleveland group to the Youngstown, O., group which adjoins the former and reaches as far as Buffalo, N. Y. The three destinations are on a branch line of the Erie and to reach them the traffic must be practically backhauled from Leavittsburg over the branch line. Leavittsburg is also intermediate, although in the Youngstown group. The proposed rates would correct this situation. There are no joint commodity rates to Cleveland over respondents through routes. Respondents through routes are somewhat circuitous as compared with the direct routes via Cleveland. Over the direct routes from Chicago the three destinations are beyond Cleveland and intermediate to Youngstown. They take the Youngstown rate because they naturally fall into the Youngstown group. The present adjustment is illogical and inconsistent, and its correction is proper, but the application of rates to the three destinations higher than those to Solon and would contravene the provisions of the fourth section. HELD, schedules not justified. Grain and grain products from C. F. A., points, 101 I. C. C. 7.

(c) In 78 I. C. C. 746 the Commission found unlawful the rates applicable on lumber and other forest products, carloads from points in the north Pacific coast group to points in eastern Colorado, southern Kansas, New Mexico, Texas, Oklahoma, Arkansas and Louisiana. Defined destinations groups were prescribed for the future and reparation awarded, the new rates becoming effective Oct. 5, 1923. But it soon developed that the groups established were not satisfactory to lumber merchants in the southwest who were not parties to the proceeding, and complaints were filed and proceedings reopened for further hearing. It appears from this record that Wichita, 47 miles southeast of Hutchinson, Kans., should take the same rates as Hutchinson, Emporia and Topeka, Kas., its principal competitors. Southeastern Kansas, northern Oklahoma, western Texas and southeastern New Mexico should be on a somewhat higher basis. At present Muskogee and Okmulgee are in a higher rated group than Tulsa, although all serve practically the same territory. These hauls are generally shorter than those to middle and southern Texas and Arkansas. Southeastern Oklahoma, Fort Smith, and Texarkana, Ark., Shreveport, La., and southwestern Texas points should take the same rates as Waco, Fort Worth and Dallas. The southern boundary of the 62.5c group prescribed in the former report should be so revised as to include points in southeastern Colorado, Kansas,

western Oklahoma, northwestern Texas, and northern New Mexico on and north of the lines of the M. P., and Santa Fe from Kansas City through Osawatomie, Yates Center, Wichita, and Kiowa, Kas., Amarillo, Tex., Colvis, Vaughn and Belen to Rio Puerco, N. M. A 70c group should be constructed from the present 69 and 75c groups to include points south and east of the foregoing group to and including stations on lines of the Frisco from the Missouri-Arkansas state line south of Seligman, Mo., through Fayetteville, Ark., and Muskogee, Okla., the K. O. & G., through Dustin and Calvin, Okla., and the Rock Island through Holdenville, Okla., thence the Frisco through Ada and Scullin, Okla., to Sulphur, Okla., and Santa Fe thence to Davis, Okla., and the Wichita Valley and connections from Waurika, Okla., through Wichita Falls, Stamford, Abilene, San Angelo and Alpine, Tex., to the Rio Grande and S. P., thence to El Paso. A 77.5c group should be constructed to include the remainder of Texas and Arkansas and that part of Louisiana on and west of the K. C. S. The 85c group should comprise the remainder of Louisiana. Reparation denied. West Coast Lumbermens Asso. v. A. & S. Ry. 104 I. C. C. 695.

I. REASONABLENESS OF RATES.

§1. In general.

See Blanket Rates §10½ (e) (j); Reasonableness of Rates.

(a) Following Swift Lumber Co., 61 I. C. C. 485, failure of defendant to accord blanket or group rates on apples from Dufur, Oreg., a local point on the Great Southern R. R. an independent short line, to Denver, Colo., and to destinations east or west of Missouri River, or taking rates applicable to such territory, while according blanket or group rates to all stations on its main line, branch lines, and proprietary lines, and to Odell, Oreg., a point on the Mount Hood R. R., an independent short line, found not unreasonable but unduly prejudicial of competitors located on such main, branch, and proprietary lines. Dufur Orchard Co-Owners Co. v. A. & R. R. R. Co., 89 I. C. C. 419.

(b) Complainant attacked commodity rates charged from Omar, Christian, W. Va., and Logan, W. Va., in group 12 on the Guyandotte branch of the C. & O., to central territory and Canada as unreasonable and unduly prejudicial. Defendants Guyandotte branch extends in a southerly direction from Barboursville, W. Va., a main line point about 9 miles east of Huntington, W. Va. A number of other branches connect with the main line at points both east and west of Barboursville. Among these is the Coal River branch, extending in a southerly directions from St. Albans, W. Va., which is between Barboursville and Charleston, W. Va. Defendants lumber rates to the territories here considered are grouped both as to main line and branch line points of origin. The rates from the branch line groups, which are published as joint rates, were originally made by adding specific amounts or differentials, lower than the local rates, to the rates from the junction points. Beginning immediately south of Barboursville the points on the Guyandotte branch are divided into three groups, 10, 11 and 12. The record does not establish that the grouping of Barboursville and St. Albans and the practice of maintaining rates from branch line points which exceed the junction point rates by amounts which in general are based on the distances to the junction points are improper. It appears that the rates from the branch lines may properly be higher than those

from the junctions. Complainants evidence on the question of competition is for the most part general in character. HELD, rates attacked not unreasonable or unduly prejudicial, complaint dismissed. Peytona Lumber Co. v. C. & O. Ry., 93 I. C. C. 363.

(c) Respondent proposed to increase and reduce rates on coal from points on the Gauley branch of the C. & O., to various destinations east and west thereof. Gauley branch extends in a northerly direction from Gauley, W. Va., to Belva, W. Va., where it branches, one fork extending northeast, to Greendale and another northwest to Bentree, W. Va. Belva, Bentree and Greendale, are 7, 12 and 14 miles from Gauley. Belva and north is included in the Kanawha district, one of the Inner Crescent group of mines. The territory south of Belva is in the New River district in the Outer Crescent group. On eastbound traffic from the Kanawha district the rates are generally 10c higher than from the New River district, while on westbound traffic the rates from the Kanawha district range from 5 to 40c lower than from New River district. The applicants only justification for authority to continue to charge lower rates from points on the Gauley branch than from the New River district on westbound traffic was based upon the long continuance of the adjustment and its desire to avoid disturbance of business relations that had developed as a result of the rate adjustment. While the proposed adjustment would have the effect of removing fourth section departures, it would at the same time result in an average increase of about 20c per ton on coal from Belva and points north thereof on westbound traffic, and a reduction of 10c per ton on eastbound traffic. No change is proposed from points south of Belva. Respondent made no effort to show that the proposed rates are reasonable per se. HELD, proposed rates not justified. Coal from stations in W. Va., 93 I. C. C. 423.

(d) Rates on mine materials and supplies, chiefly cement and steel articles, from Pittsburgh, Pa., district to Lynch, Ky., a branch-line point, found unreasonable to extent they exceeded lower rates to Benham, Ky., situated on same branch which lower rates were subsequently established to Lynch. Reparation awarded U. S. Coal & Coke Co. v. Director General, 91 I. C. C. 6.

(e) Rates on iron pipe and other oil-well supplies from Pittsburgh, Pa., and other points to Drumright and Oilton, Okla., branch-line points, found unreasonable to extent they exceed rates to Cushing, Okla., the junction point with main line, which basis was subsequently established. No differentials are added to main-line rates to points in this territory on other branch lines having much lighter traffic density, and no addition, because of branch-line service, is made to distance rates applicable intrastate in Oklahoma and interstate between Oklahoma and Kansas and between Oklahoma and Texas when applied to or from points on this branch. Reparation awarded. Prairie Oil & Gas Co. v. A., T. & S. F. Ry. Co., 91 I. C. C. 37.

(f) Rates to and from points on Monongahela Connecting R. R., South Buffalo Ry., Union R. R., and Newburg & South Shore Ry., common-carrier short lines, found unjust and unreasonable to extent they exceeded rates to and from points in same rate districts located on trunk lines. Reparation awarded. Jones & Laughlin Steel Co. v. P. & L. E. R. R. Co., 91 I. C. C. 300.

(g) Rates on lumber and forest products from points on Puget Sound & Cascade Ry. in Washington to eastern destinations, higher than coast-group basis of rates contemporaneously maintained on like traffic from competing points in Washington and Oregon situated on defendants' own branch lines, proprietary branch lines, or independent short-line connections, found not unreasonable, but unduly preferential and prejudicial. Reparation awarded for undue prejudice found to have existed prior to subsequent establishment of coast-group basis from points on Cascade Ry. Puget Sound & Cascade Ry. Co. v. Director General, 91 I. C. C. 467.

(h) Respondent, L. & N., proposed to increase the rates on lumber and forest products, carloads, from station on its Clear Fork, Hog Camp and Crooked Fork branches in Tennessee and Kentucky to Lexington, Ky. Certain reductions are proposed from the same points of origin to Winchester, Ky., and other intermediate points. Carload traffic from points on these branches for Lexington, Winchester and intermediate points north of Corbin, Ky., is handled by a mine crew operating as a

work extra for points on the main line of the Knoxville division not far from its junction with the branches. At present the same rates apply to Lexington from these branch line points as from the nearby main line points. The present rates from Clear Fork and Hog Camp branches to Winchester range from 2 to 3c higher, and the rates to other intermediate destinations from 1 to 3c higher, than the rates to Lexington. The exhibits as a whole indicate that there is little uniformity in the rates on lumber in this territory so far as distance is concerned. If distance were the controlling factor the proposed reductions to Winchester should be greater than those indicated. HELD, proposed schedules not justified. Forest Products between Kentucky and Tennessee, 101 I. C. C. 469.

(i) Complainant attacked commodity rates on coal to interstate destinations reached by the B. & O., and its connections as unreasonable, unjustly discriminatory and unduly prejudicial and seeks establishment of joint rates on the basis of the rates in effect from the mines in the Gauley district on the B. & O., and that defendant be required to establish a just, reasonable and adequate daily car rating for complainants mines. The present rates are made up of the combination of a rate of 18c charged by the Strouds Creek from the mines to Allingdale, plus the district rate beyond. Mines in the Gauley district on westbound traffic takes the same rates as other points in the socalled Outer Crescent district, and on eastbound traffic 15c per long ton over the rates from the Fairmont group. The Strouds Creek files tariffs with the West Virginia commission and makes annual reports to that body. It files no tariffs and makes no reports to the Commission, does not keep its accounts in accordance with rules of the Commission and issues no bills of lading. Cars for coal loading are furnished by defendant upon request of complainant, and are turned over to the Strouds Creek at Allingdale, and hauled by the latter carrier to the mines. Shipping instructions are there made out on form cards furnished by defendant, upon which the shipper fills in the names of shipper and consignee, points of origin and destination, date of loading, and other information. The loaded cars are then hauled by the Strouds Creek back to Allingdale and delivered to defendant. The cars are then moved by defendant to weighing stations on its lines, and regular form bills of lading and waybills are thereupon issued, showing Allingdale as the point of origin. The destination of from 90 to 95% of complainants and all of interveners coal shipments is outside West Virginia. The road has a contract with the United States Government for the carrying of mail; and it is operated on a schedule of two trips per day to and from Allingdale for passengers, mail and express. It follows that the Strouds Creek is a common carrier engaged in interstate commerce. The fact that it is operating in violation of the interstate commerce act is a condition which it must correct at once. Defendant furnishes a rating to mines on the Richwood branch but refuses a rating to mines on the independent short lines connecting therewith, including those of the Strouds Creek. The record shows that the mines of complainant and intervener are entirely dependent upon defendant for their car supply. Under the provisions of the law no distinction can be made by defendant between the service given a mine on its Richwood branch and a mine on the Strouds Creek, each falling equally within the specific provision of the law requiring a carrier to furnish adequate car service, the one because it is actually located on its line and the other because it is customarily dependent upon it for car supply. Whether at the present time a condition of car shortage prevails such as would require the giving of a rating to these mines is conjectural, and the Commission shall not now enter any order on this phase of the case. Complainant and intervener are entitled to the same treatment in the matter of car service as the mines located directly upon defendants Richwood branch. HELD, Strouds Creek & Muddlety R. R., is a common carrier of interstate commerce subject to the act; rates on coal from mines of complainant and intervener to interstate destinations are not unreasonable but will be unduly prejudicial to complainant and intervener to extent they may exceed rates maintained from Allingdale to the same destinations. Tioga Coal Co. v. B. & O. R. R., 101 I. C. C. 611.

(j) In 12712 the issue is whether complainants mines, located in West

Virginia on the Monongahela West Penn Public Service Co., should be accorded the Fairmont district rates on soft coal to interstate destinations. In I. & S., 2390, whether the Monongahela is justified in canceling entirely the present interstate rates from these mines, and in eliminating the mine sidings from its official list of stations. In 73 I. C. C. 54, the Commission found that the Monongahela was a common carrier subject to the act; that the rates of soft coal from complainants mines to interstate destinations were not unreasonable or otherwise unlawful; and that the record did not justify the establishment of the through routes and joint rates sought. The lines of the Monongahela are not, generally speaking, adapted for the transportation of freight in carloads. Owing to light construction, severe grades, and sharp curves, it is impracticable, over considerable portions of the road to handle the freight equipment of the steam roads. Complainants mine sidings are located on the Monongahela between Shinnston and Bingamon Junction and within 4.5 miles of the latter point. The lands owned or leased by complainants aggregate about 60 acres. The coal produced by complainants is the socalled Pittsburgh vein, which underlies western Pennsylvania and northern and central West Virginia. It is substantially the same as that produced throughout that territory and is in competition therewith. Since 1923, when complainants ceased operation, the sidings have not been kept up. The switch to the Cava Coal Companys siding has been removed and the siding itself partly torn up. The sidings of the other complainants could not now be used without considerable repairs. In March 1925, the Monongahela served written notice on complainants, in accordance with the terms of existing contracts, that the license to use the sidings would be revoked, and that the sidings would be taken up. HELD, rates attacked not unreasonable or otherwise unlawful. From all the evidence the conclusion is unavoidable that there is little likelihood that protestants will be able to operate except under abnormal conditions. In justice to respondent it should not be compelled to maintain these switch connections and to continue the rates in effect because of the remote possibility of a return of the market conditions under which the mines have operated in the past. HELD, suspended schedules justified. Hood Coal Co. v. M. V. T. Co., 101 I. C. C. 719.

(k) Rates on lumber from Flinn, Va., a local point on the Warm Spring Valley branch of the C. & O., to destinations in c. f. a., trunk-line, and New England territories, found not unreasonable but unduly prejudicial to extent they exceeded contemporaneous rates from Marlinton, W. Va., and other competing points on the Greenbrier division. Reparation denied. Freehold Lumber Co. v. C. & O., 92 I. C. C. 699.

(l) Rates on zinc ore from points in Oklahoma on Miami Mineral Belt and Northeast Oklahoma railroads, and from trunk-line and junction producing points in Missouri, Kansas, and Oklahoma, to South Fort Smith, Ark., found not unreasonable but unduly prejudicial in favor of competitors operating zinc-smelting plants at Collinsville, East St. Louis, La Salle, Peoria, and Chicago, Ill., and Grasselli, Ind., to extent that factors of above-named carriers exceeded by more than 0.5 cent the contemporaneous factors on like traffic to the preferred plants. Nonprejudicial basis of rates prescribed. Athletic Mining & Smelting Co. v. K. C. S., 93 I. C. C. 119.

(m) Rates on solvent naphtha, a coal-tar product, l. c. l., from Minnequa, Colo., to Johannesburg, Calif., a branch-line point, based upon an arbitrary over Kramer, Calif., the junction point, found not unreasonable or otherwise unlawful. California Rand Silver v. C. & N. W., 93 I. C. C. 197.

(n) Rates on lumber from Group 12 points on the Guyandotte branch of the C. & O. in West Virginia to destinations in c. f. a. territory and in Canada found not unreasonable or unduly prejudicial as compared with lower rates to same destinations from points in Groups 11 and 13 on the Coal River branch. While through distances from the respective groups are substantially the same, differentials over the junction point rates to Group 12 are higher than those to Groups 11 and 13, but it can not be found that rates assailed are unreasonable because of present variations. Peytona Lbr. Co. v. C. & O., 93 I. C. C. 363.

(o) Proposed increased rates on cement from Ada and Hartshorne, Okla., to points in Texas on the Cisco & Northeastern; Eastland, Wichita Falls & Gulf; Wichita Falls, Ranger & Ft. Worth; and

Wichita Falls & Southern, comparatively short line carriers, found not justified. Purpose of proposed advances is to bring these rates into proper alignment with rates to other Texas points and remove existing fourth-section departures. However, new fourth-section departures in some instances would result and the proposed rates do not compare favorably with rates prescribed in 87 I. C. C. 451, for application from Ada to points in Kansas. Cement from Oklahoma to Texas, 95 I. C. C. 596.

(p) Rate on wine grapes from Madison, Calif., located on the Rumsey branch of the Southern Pacific, to Portland and East Portland, Ore., found not unreasonable, but as compared with group rates contemporaneously maintained on like traffic to these destinations from South Vallejo, Napa, and points on the Southern Pacific Company's San Ramon and Walnut Grove branches, they are unduly prejudicial. New Italian Importing Co. v. S. P., 95 I. C. C. 611.

(q) Rate on grapes from Micke, Calif., a local point on the Central California Traction Co., to Seattle, found not unreasonable but unduly prejudicial as compared with group rates contemporaneously maintained from San Jose, Stockton and Lodi, Calif., main line points. Pioneer Fruit Co. v. C. C. T. Co., 95 I. C. C. 690.

(r) Upon further hearing, original report, 83 I. C. C. 737, rates on coal from mines in the New River district, W. Va., on the Greenbrier & Eastern R. R., a short line, to interstate destinations, found unreasonable and unduly prejudicial to extent they exceed group rates contemporaneously maintained from C. & O. branch line points in same district to same destinations. Factor of cost of service, unless the difference is great, should not be controlling. Reparation awarded and measure of reasonable and nonprejudicial rates prescribed. Nelson Fuel Co. v. C. & O., 96 I. C. C. 124.

(s) Combination rates assessed on coal to specific interstate destinations, from Hot Coal, Wyco, Jonben, Tracoal, Devil's Fork, Corinne, and Fireco, W. Va., points in the Winding Gulf section of the New River district served exclusively by the Virginian Railway found unreasonable and unduly prejudicial for the future to the extent they may exceed rates contemporaneously maintained from competing points on the main and branch-line of the C. & O., in the New River district to same destinations. Wyoming Coal Co. v. V. Ry. Co., 96 I. C. C. 359.

(t) Upon further hearing, rates on Gilsonite from American and Watson, Utah, and other points on the Uintah Ry., a narrow gauge line, to interstate destinations found not unreasonable or otherwise unlawful, based upon the normal annual railway operating income of the carrier under existing conditions. Finding in former report, 85 I. C. C. 557, reversed and complaint dismissed. Utah Gilsonite Co. v. A., T. & S. F. Ry. Co., 96 I. C. C. 653.

(u) Reasonable rates on coal from Colorado and northern New Mexico producing districts to Missouri River points and destinations in Kansas, Nebraska, and Western South Dakota prescribed for the future, with suggestion that rates to other points, particularly branch-line points, should be revised, using the prescribed rates as a guide. In revising all rates defendant carriers should follow the rule for the convenient statement of coal rates announced in 80 I. C. C. 383, at page 465. Colo. & N. Mex. Coal Operator Asso. v. D. & R. G. W. R. R. Co., 98 I. C. C. 377, 398.

(v) Through rates on coal from complainant's mines on Kanawha Central in the so-called Kanawaha district of West Virginia to interstate destinations on the lines of other defendants between June 24, 1922, and July 13, 1923, found unreasonable to extent they exceeded the intrastate rate to Brouland, W. Va., the junction point, plus the district rates contemporaneously applicable beyond. Reparation awarded. Kanawha Black Band Coal Co. v. K. C. Ry. Co., 98 I. C. C. 431.

(w) In finding rates on coal from mines on the Virginia Railway in New River district of West Virginia to interstate destinations unreasonable and unduly prejudicial, the record did not warrant a conclusion that the difference in operating conditions from mines to its western terminus between the haul over the Virginia and that over the branch lines and independent short-line connections of C. & O. is in and of itself sufficient to warrant a higher level of rates from complainants' mines. The difficulty of operation as between the lines serving the west and those serving the east ap-

parently is due in a greater measure to operating practice than to physical obstacles. Wyoming Coal Co. v. V. Ry. Co., 98 I. C. C. 488, 492, 493.

(x) Proposed increased rate on grain and grain products between points in Idaho and Washington and Pacific coast points found justified as to destinations in Washington and Oregon but not justified as to destinations in California, no evidence having been offered in justification of proposed rates to points in latter State. These increases are primarily designed to raise the rates from points on branch lines, on which traffic is relatively light, to the level of rates from main line points for approximately same distances, thus preventing the anticipated necessity of eventually reducing the rates from all points of origin here considered found reasonable in the Inland Empire Case, 59 I. C. C. 321. Grain between Pacific Coast Points, 98 I. C. C. 601.

(y) Complainant attacked combination rates charged on 107 cars of petroleum products shipped between Sept. 1918 and Sept. 1919 from Alamosa, Salida and Montrose, Colo., to Colorado and New Mexico on the narrow gauge lines of the D. & R. G. W., and R. G. S., as unjust, unreasonable and unlawful. The petroleum products were all refined originally at Florence, Colo., and thence shipped over standard gauge lines of the Rio Grande to the three points named. These points are junctions of the standard gauge lines of the Rio Grande with its narrow gauge lines. On arrival at these junction points complainant unloaded the contents into permanent storage tanks and later reloaded them into narrow gauge tank cars for movement to the different destinations. The shipments were billed locally from Florence to the junction points and later rebilled to their ultimate destinations. Local rates were published for the latter movements. These were equal to the difference between the through rates from Florence to the same points and the local rates from Florence to the junction points. This equality of the aggregate of the local rates with the through rates maintained following the 25 per cent increase under G. O. 28 until director general issued his rate authority 96. In accordance with that authority an increase of 4.5 in lieu of the 25 per cent increase was added in August 1918 to each local rate, whereas one increase of 4.5c was added to the through rate. This situation was called to the attention of a traffic official of the Rio Grande and, the director general in February 1919 issued another freight rate authority which permitted elimination of the 4.5c increase from the rates over the narrow gauge lines. It is not disputed there was a break in the continuity of movement of complainants shipments from Florence to destinations on the narrow gauge lines and that the local rates in and out of the junction points, increased separately 4.5c were applicable on these movements. The reasonableness of the local outbound rate, thus increased, is a different question. Considering the conditions which led to the use of storage tanks in transferring oil at the junction points instead of by direct car to car method, the agreement between the parties in the interest of efficiency and mutual convenience, for maintainence of inbound and outbound local rates, equal to the through rates in order to carry out this arrangement, the continued maintenance of this basis except for a short period brought about by a change in the manner of levying the increase on oil rates under G. O. 28 and the fact that the transfer through the medium of the storage tanks relieved defendant of considerable expense which he would have had to meet if the shipments had been made on the lower through rates, it appears that the charges attacked were excessive for the service performed. HELD, rate attacked unreasonable to extent they exceeded rates, less increase of 4.5 subsequently established on April 15, 1919, reparation awarded. Continental Oil Co. v. Director General 102 I. C. C. 338.

(z) Complainant attacked commodity rates on coal and coke in carloads from Colorado and New Mexico, Groups 1, 2, and 4 and from Albuquerque, San Antonio and Gallup, N. M., to Tombstone, Ariz., as unjust and unreasonable. Tombstone is on a branch line of the E. P. & S. W., diverging from the main line at Fairbanks, Ariz., and 9 miles distant therefrom Gallup is a local coal producing point on the Santa Fe about 20 miles east of the Arizona-New Mexico state line. The relationship between Gallup and the other producing points concerned was prescribed by the Commission in 80 I. C. C. 383. Complainants case is based upon the contention that the rates

are unreasonable to extent they exceed the rates to Fairbanks, the main line point. It is clear from the record that defendants have not adopted as a general practice the extension of the main line rates to the branch line points similarly located and circumstanced in the vicinity of Tombstone, or that the rates to the junction points are made on a group basis and applied over a considerable territory. HELD, rates attacked not unreasonable, complaint dismissed. Macia v. A. T. & S. F. Ry. 102 I. C. C. 430.

(aa) Complainant attacked commodity rates charged on gasoline in tank cars between March 1, 1920 and March 7, 1921 from El Dorado Kas., and Yale and Grandfield, Okla., to Canon City, Colo., as unreasonable and unduly prejudicial. Canon City is on a branch line of the Santa Fe, extending 41 miles westward from Pueblo, Colo. It is also located on the D. & R. G., which extends from Pueblo to Salt Lake City. Complainant contended that the rates to Canon City should not exceed the rates to Pueblo and other Colorado common points, or should not exceed the rates to such Colorado common points by more than a reasonable differential. HELD, rates prior to August 26, 1920 from Eldorado to Canon City unreasonable to extent they exceeded the rate to Pueblo by more than 8c; on and after Nov. 25, 1920 to and including June 30, 1922 the rates from Eldorado, Yale and Grandfield to Canon City were unreasonable to extent they exceeded the rates to Pueblo by more than 10c, and on and after July 1, 1922 unreasonable to extent they exceeded the rate to Pueblo by more than 9c, reparation awarded. Jewell Co. v. A. T. & S. F. Ry. 104 I. C. C. 380.

(bb) Proposed reduced rates on potatoes and onions from certain points in Colorado, Utah, and Wyoming to destinations in California found justified. Proposed rates are in conformity with respondent's practice of grouping main and branch-line points in western Colorado in making rates on agricultural products, will remove alleged undue prejudice suffered by producers in western Colorado, and are compensatory. Potatoes and Onions from Colorado, Utah, and Wyoming to California, 100 I. C. C. 49.

(cc) Contention of the Western Pacific that the quite general practice of blanketing long-haul rates on certain commodities from branch and independent lines on the junction-point basis and of maintaining short-haul rates from such origins on an arbitrary over the junction-point rate is a sufficient justification for divisions to respondent out of the rates to Garfield different from those out of the rates to Wabuska, not sustained. Mason Valley Mines Co. v. W. P. R. R. Co. 100 I. C. C. 180, 201.

(dd) Schedules proposing readjustment of class rates, both interstate and intrastate, between points in Missouri, and between Missouri and other sections, based upon a maximum distance scale which would result in substantial increases to some points, and reductions between points where the so-called Memphis-Southwestern scale is now in effect, found not justified. Scale of maximum reasonable rates prescribed. Recognized bridge arbitraries at Mississippi River crossings may be added wherever and to extent they now apply, and rates to and from defined territories should be based on the present differentials over the river crossings. Class Rates between Missouri and Interstate Points 100 I. C. C. 274.

(ee) The plan of making through rates to and from local points on a combination or arbitrary basis is open to objection. Such rates put the territory local to the weak line or short line at serious disadvantage and tend to hamper its development. They also run counter to the theory that the financial necessities of weak lines in such cases should be met by liberal divisions of joint rates. Southern Class Rate Investigation, 100 I. C. C. 513, 653.

(ff) Rates on salt from Salduro, Utah, to main-line points on lines of defendants in Montana found to have been unreasonable to extent they exceeded rates shown in distance scale appearing in the Crystal case, 78 I. C. C. 659, 665, for the actual distance from Salduro, and rates on same commodity from Salduro to branch-line points on defendants' lines in Montana found to have been unreasonable to extent they exceeded rates herein found reasonable to main-line points by more than the amounts by which rates from north Pacific ports to said branch-line points exceeded rates to said main-line points. Reparation awarded. Capell Salt Co. v. C., M. & St. P., 101 I. C. C. 34.

(gg) Rates on beef cattle from branch-line points on defendants' line in Arizona to points in California or from other points on defendants' lines in Arizona to branch-line points on their lines in California, found unjust and unreasonable to extent they exceed rates contemporaneously maintained for corresponding distances from and to points on their main line in Arizona and California. Reasonable basis of rates prescribed. Arizona Cattle Growers Asso. v. A. Ry. Co., 101 I. C. C. 181.

(hh) Strouds Creek & Muddlety R. R. found to be a common carrier subject to the act. It holds itself out to transport interstate traffic, has a contract with the United States Government for carrying mail, and many persons avail themselves of its service, a daily schedule being maintained to and from Allingdale, W. Va., the junction point. Tioga Coal Co. v. B. & O., 101 I. C. C. 611.

(ii) Rates on coal from mines on the Strouds Creek & Muddlety R. R., a short line carrier located in the Gauley district of West Virginia to interstate destinations, found not unreasonable, but unduly prejudicial to extent they exceed the rate contemporaneously maintained by the B. & O. from Allingdale, the junction point. Nonprejudicial rates prescribed. Tioga Coal Co. v. B. & O., 101 I. C. C. 611.

(jj) Joint rates on grain and grain products from Milner, Kans., a point on the Kansas & Oklahoma Ry. Co., to interstate destination on the C., R. I & P. Ry., found not unreasonable in comparison with rates from Liberal, Kans., the junction point of the two roads. Duvall v. C., R. I. & P. 101 I. C. C. 630.

(kk) Contention by complainants that present rate adjustment on coal from mines located on the Monongahela West Penn Public Service Co., unduly prefers competitors in immediate vicinity and all other mines on lines of defendants and their connections accorded the Fairmont district rates, or the same or lower rates to eastern and western markets, relying largely upon the fact that group rates apply from certain independent short lines in the general territory here considered, and further fact that commission has in numerous cases prescribed group rates from mines on such lines, not sustained, following Big Mandy Coal & Mining Co., 78 I. C. C. 455, in which commission found that "in cases of this character no rule of general application can be followed but each situation must be judged in accordance with its particular facts and circumstances." Hood Coal Co. v. M. V. T., 101 I. C. C. 719, 725.

(ll) Rate on coal from complainant's mine at Mabie, W. Va., on the Coalton branch of the B. & O., to Port Covington (Baltimore), found unreasonable and unduly prejudicial to extent it exceeded the rate contemporaneously in effect from Mabie Mine No. 6, a farther-distant competing mine, to which complainant's mine was intermediate. Applicable tariff carried reference to rule 77 of Tariff Circular 18-A that upon reasonable request rates which would not exceed those in effect from or to more distant points would be established from or to intermediate points on one day's notice. Complainant made request for establishment of such rates but was refused. Reparation awarded. Brady v. B. & O., 102 I. C. C. 19, 25, 26.

(mm) Class and commodity rates from Jackson, Miss., to destinations in Louisiana west of Mississippi River and southern Arkansas, found unjust, unreasonable, and unduly prejudicial to Jackson and its shippers and unduly preferential of shippers at New Orleans, Memphis, and Natchez, to extent they exceed rates for like distances between points west of Mississippi River herein prescribed, plus charges for Mississippi River crossings prescribed in 93 I. C. C. 463. Reasonable and nonprejudicial rates prescribed. Jackson Traffic Bureau v. A. & V., 102 I. C. C. 129.

(nn) Combination rate to and from Perryville Junction, Mo., assessed on gasoline moving from Cushing, Okla., to Perryville, Mo., on the Cape Girardeau Northern Ry., found unreasonable as compared with lower rate contemporaneously in effect to the junction point and numerous other points in southeastern Missouri. Reasonable rates prescribed for the future and reparation awarded. Illinois Oil Co. v. C. G. N. Ry., 102 I. C. C. 154.

(oo) Shipments of petroleum products moved locally to junctions with narrow-gauge lines, there unloaded into permanent storage tanks, and subsequently reloaded into narrow-gauge

equipment for movement beyond. Plan of storage at the junction was agreed upon between complainant and carrier in interest of efficiency and mutual convenience. An equality existing between the locals and the through rates was disrupted by director general, who applied a flat increase of 4.5 cents to each of the locals but only one increase to the through rate. Subsequently equality was restored. FOUND: Considering conditions leading to use of permanent storage tanks, agreement between parties, prior and subsequent continued maintenance of equal rates, and fact that transfer through medium of storage tanks relieved carriers of expense which they would have incurred had shipments been made on lower through rates, combinations assessed, embodying the double increase, were excessive for service performed. Reparation awarded. Continental Oil Co. v. Director General, 102 I. C. C. 338.

C. 723; United Verde Mining Co. v. A. T. & S. F. Ry. Co., 88 I. C. C. 5; Beaver Sand Co. v. Director General, as Agent, 88 I. C. C. 115; Phoenix Chamber of Commerce v. A. E. R. R. Co., 88 I. C. C. 250; Colorado Fuel & Iron Co. v. Director General, as Agent, 88 I. C. C. 453; Brick and Clay Products in the South, 88 I. C. C. 543.

§2. Compared with main lines.

See Comparative Rates; Evidence §57½; Reasonableness of Rates.

(a) Rates on pipe from points in westbound transcontinental Group B to Taft, Calif., on the Sunset Ry., found not unreasonable or unduly prejudicial as compared with transcontinental rates from same origin points to other California destinations, including Bakersfield, Calif., which lower rates are applicable for considerable distances beyond that point, and also apply to points on other branch lines in California and Arizona. The usual basis for making rates from eastern origin points to California and Arizona points on branch or short lines is by combination over the junction points and instances cited of the extension of such lower rates to branch and short line points were shown to be invariably due to either carrier, water, or market competition. Standard Oil Co. v. A., T. & S. F. Ry. Co., 89 I. C. C. 425.

(b) Upon further hearing, maintenance of class and commodity rates from points in California, Oregon, Washington, and eastern transcontinental groups to Mesa and Nogales, Ariz., relatively lower than those two points on the Globe division of the Arizona Eastern R. R., found not unduly prejudicial to points on the Globe division. Record on further hearing shows that circumstances and conditions surrounding transportation to Mesa and Nogales are not wholly comparable with those in connection with transportation to points on the Globe division. Original report, 81 I. C. C. 134, modified. Class and Commodity Rates to Mesa, 92 I. C. C. 512.

(c) Branch-line operation is probably somewhat more expensive than that on main lines, but there appears to be no uniform recognition of this fact in construction of livestock rates. Arizona Cattle Raisers Asso. v. A. Ry. Co., 101 I. C. C. 181, 187.

ALL OTHER CITATIONS

Phoenix Chamber of Commerce v. A. E. R. R. Co., 88 I. C. C. 250.

§4. In Competition With Main Lines.

(a) Rates on coal and coke from Colorado and New Mexico coal-producing points to Tombstone, Arizona., a branch-line point, found not unreasonable as compared with lower rates to Fairbanks, a main-line point. Carriers have not adopted as a general practice extension of main-line rates to branch-line points similarly located and circumstanced in vicinity of Tombstone, nor are rates to junctions made on a group or blanket basis. A comparison of distances, rates, and earnings to both main and branch line points for lesser and greater distances indicates that rates to Tombstone are reasonable. Moreover, volume of traffic to Tombstone is light, operating conditions on the branch are fraught with difficulties, and there is no showing that conditions under which rates were found reasonable in 80 I. C. C. 383 have changed so as to make those rates unreasonable at this time. Macia v. A., T. & S. F., 102 I. C. C. 430.

(b) Reshipping rates on logs to Louisville from stations in Kentucky and Tennessee on Scottsville-Hartsville branch of

L. & N. found unreasonable to extent they exceeded lower contemporaneous rate on like traffic from equi-distant main-line points of that carrier, which lower rate was subsequently established from branch-line points. Reparation awarded. Wood Mosaic Co. v. L. & N., 102 I. C. C. 684.

IV. FACILITIES.

§7. In General.

(a) Refusal of the B. & O. to rate mines on the Strouds Creek & Muddlety R. R. located in the Gauley district of West Virginia, and accord such mines a just and reasonable distribution of cars for coal loading, while contemporaneously furnishing such a rating to mines on its Richwood branch, located in the same district, found to result in undue prejudice to the Strouds Creek mines. The Strouds Creek mines are entirely dependent upon the B. & O. for their car supply and under the provisions of section 1 (12) of the act are entitled to same treatment in the matter of car supply as are mines located directly upon branches of the B. & O. Tioga Coal Co. v. B. & O., 101 I. C. C. 611, 616.

BREAK-BULK RATES

(a) Strictly speaking, a car ferry route is an all rail route, and ordinarily the expression "rail lake and rail route" is used to describe a rail and water break bulk route. Bergstrowm Paper Co. v. Director General, 93 I. C. C. 591, 592.

(b) Shipments of petroleum products moved locally to junctions with narrow-gauge lines, there unloaded into permanent storage tanks, and subsequently reloaded into narrow-gauge equipment for movement beyond. Plan of storage at the junctions was agreed upon between complainant and carrier in interest of efficiency and mutual convenience. An equality existing between the locals and the through rates was disrupted by director general who applied a flat increase of 4.5 cents to each of the locals but only one increase to the through rate. Subsequently equality was restored. FOUND: Considering conditions leading to use of permanent storage tanks, agreement between parties, prior and subsequent continued maintenance of equal rates, and fact that transfer through medium of storage tanks relieved carriers of expense which they would have incurred had shipments been made on lower through rates, combinations assessed, embodying the double increase, were excessive for service performed. Reparation awarded. Continental Oil Co. v. Director General, 102 I. C. C. 338.

CROSS REFERENCES

See Car Ferry; Floatage; River Crossings.

I. REASONABLENESS.

§1. In General.

See Class Rates §2 (tt).

(a) Extra expense of bridge transportation is frequently disregarded in making rates for hauls embracing a bridge crossing. Dimmitt-Caudle-Smith Live Stock Commission Co., 47 I. C. C. 287, and other cases cited. Nebraska Livestock Case, 89 I. C. C. 444, 456.

(b) Defendants authorized, in making rates under distance scale prescribed for application between points west of the Mississippi River, on the one hand, and Memphis and east-bank Mississippi River crossings south thereof, on the other, to add bridge or ferry tolls not exceeding 2 cents per 100 pounds to rate based upon the distance to or from west-bank points. No allowances should be made for crossings north of Memphis unless and until upon a more complete record the propriety of these allowances is definitely determined. The commission has never approved allowances for crossings at East St. Louis, Cairo, and Thebes Ill. Oklahoma Corp. Commission v. A. & S. Ry. Co., 98 I. C. C. 183, 250.

(c) Ferry tolls to be used with commodity rates should approximate the toll on the class to which the rate on the commodity more nearly corresponds. Natchez Frt. & Traffic Bureau v. M. P., 101 I. C. C. 476, 478.

§1a. Constructive Mileage.

(a) Commission instituted an investigation to determine the lawfulness of the present practice of the respondents in making an allowance or addition to the actual mileage of 20 constructive miles in the application of scales for the interstate transportation of articles taking class or commodity rates based on distance as compensation for crossing the Mississippi river at Vicksburg and Natchez, Miss., Angola, Baton Rouge, Harahan and New Orleans, La. There are no railroad bridges across the Mississippi river south of Memphis, Tenn. Through railroad traffic is carried across the river by car ferries. The distance across the river at these various points is about 1 mile, except in case of Angola-Naples crossing, where the distance is about 9 miles. This 20 mile addition or allowance applies only on traffic moving under class or commodity distance rates, and is added to the distance from or to the west bank points. Clearly, additional service is given, in these river crossings, which, as far as this record discloses, has no parallel or equivalent, in services performed elsewhere upon respondents lines without the inclusion of additional elements in the charges for such services. The barge service is of an unusual character, is difficult, hazardous, and expensive and in the instant proceeding some separate charge seems justified. The Commission should inquire into the cost of the service. The property used in transfer service at each crossing comprises the car ferries and the facilities on each side of the river required to move cars to and from the ferries. Considerations both of the cost of the particular services and the value thereof to the shipper lead to the conclusion that the additional cost should be borne, as nearly as may be, by the traffic accommodated, and not be imposed upon shippers elsewhere whose traffic is carried under less costly circumstances. The whole record considered the Commission is of the opinion that the method of employing arbitraries is more reasonable, and less likely to result in undue or unreasonable prejudice or disadvantages to persons, localities, or descriptions of traffic, than the method now employed of adding 20 constructive miles to the actual distance. HELD, for the transfer of service at Mississippi river the addition of 20 constructive miles to the distances from Delta Point, Vidalia, Naples, Anchorage, Avondale, Algiers, and Gouldsboro, La., in determining interstate distance class and commodity rates to and from Vicksburg and Natchez, Miss., Angola, North Baton Rouge, Harahan, and New Orleans, La., for future will be unjust and unreasonable and unduly prejudicial and that, in lieu thereof, the following ferry tolls will be reasonable: Class 1, tolls, 6.5c, class 2, tolls 5c, class 3, tolls 4c, class 4, tolls 3c, class 5, tolls 3c, class A, tolls 3c, class B. tolls 2.5c, class C, tolls 2.5c, class D, tolls 2.5c, class E, tolls 2.5c. Mileage for Mississippi crossings, 93 I. C. C. 462.

III. CONTROL AND REGULATION.

See Control and Regulation.

§3. Jurisdiction of Commission.

See Jurisdiction of Commission.

(a) Allegation, unsupported by facts, that railroad bridge across Newark Bay was in conflict with comprehensive plan for development of port of New York, adopted by Port of New York Authority, created by compact between New Jersey and New York, under Laws N. J. 1921, p. 412, and Laws 1921, c. 154, with consent of Congress under 42 Stat. 174, and approved by both states under Laws N. J. 1922, p. 25, Laws N. Y. 1922, c. 43, with consent of Congress under 42 Stat. 822, HELD insufficient to support contention that Port Authority's consent was required to construction of bridge. City of Newark v. Central R. Co. of New Jersey, 45 Sup. Ct. 328.

(b) Under Act N. J. Feb. 26, 1847 (P. L. p. 128), incorporating railroad, and authorizing it, in section 6, to construct bridges, and Laws N. J. 1860, p. 157, authorizing its successor to construct bridge over Newark Bay, the railroad had a right to replace the double-track wooden bridge first built thereunder, when such bridge became inadequate, with four-track bridge of masonry and steel, since powers granted were not exhausted by construction of such first bridge, particularly in view of authority to construct new bridge granted by Act Cong. Aug. 8, 1919, in accordance with

Bridge Act (Comp. St. §§9961, 9968), and Act Feb. 15, 1921, and approval of plans and specifications by Chief of Engineers and Secretary of War, under such Bridge Act. City of Newark v. Central R. Co. of New Jersey, 45 Sup Ct. 328.

(c) In the absence of appropriate legislation by Congress, a state had power to authorize construction of railroad bridge over navigable waters within state. City of Newark v. Central R. Co. of New Jersey, 45 Sup. Ct. 328.

(d) Laws N. J. 1914, p. 205, §4, and Laws N. J. 1915, p. 432, §§5, 13, providing for submission to board of commerce and navigation of plans for development of "water front upon any navigable waters," HELD inapplicable to construction of railroad bridge across Newark Bay, in the absence of allegations of fact showing construction of bridge to constitute plan for development of water front. City of Newark v. Central R. Co. of New Jersey, 45 Sup. Ct. 328.

(e) Railroad had right to construct railroad bridge across Newark Bay, under Laws N. J. 1860, p. 157, §§1, 2, Act Cong. Aug 8, 1919, and Act Cong. Feb. 15, 1921, pursuant to approval of plans by Chief of Engineers and Secretary of War, under Bridge Act (Comp. St. §§ 9961-9968), though not authorized to so do by Port of New York Authority, a corporation established by compact between New Jersey and New York, under Laws N. J. 1921, p. 412, and Laws N. Y. 1921, c. 154, with consent of Congress, under 42 Stat. 174, notwithstanding adoption by such corporation of comprehensive plan for development of port of New York, approved by both state and consented to by Congress, under Laws N. J. 1922, p. 25, Laws N. Y. 1922, c. 43, and 42 Stat. 822. City of Newark v. Central R. Co. of New Jersey, 45 Sup. Ct. 328.

(f) Laws N. J., 1860, p. 157, authorizing certain railroads to construct bridge across Newark Bay, and Act N. J. Feb. 26, 1847 (P. L. p. 128), incorporating railroad, conferred on the railroad, not only the powers expressly defined, but also those which fairly are incidental thereto. City of Newark v. Central R. Co. of New Jersey, 45 Sup. Ct. 328.

(g) A bridge across waters between two states and connecting such states is an instrument of interstate commerce and traffic across it is "interstate commerce." Burkburnett Bridge Co. v. Cobb (Okla., 1925) 233 Pac. 463.

§4. State Control.

See State Rates and Regulations.

(a) Whether two states can, in the absence of legislation by Congress, fix by reciprocal action rates of toll and fares over bridges connecting such states, this court does not decide in this case. Burkburnett Bridge Co. v. Cobb (Okla., 1925) 233 Pac. 463.

(b) A state has no power to regulate tolls upon a bridge connecting such state with another state. Burkburnett Bridge Co. v. Cobb (Okla., 1925) 233 Pac. 463.

BUNCHING

See Demurrage §10⅝.

BURDEN OF PROOF

CABLE RATES

See Telephone and Telegraph Companies.

CANADA

See Adjacent Foreign Country; Through Routes and Joint Rates.

(a) Joint rates prescribed by the commission for transportation from points in United States to points in Canada with anticipation that Canadian carriers will concur therein on basis found reasonable. However, if they should decline to do so, the matter may again be brought to the commission's attention for appropriate action with respect to portion of the transportation subject to its jurisdiction. Grasselli Chemical Co. v. B. & O. R. R. Co., 89 I. C. C. 383, 385.

(b) The Commission is without authority to require the establishment of through joint rates to points in Canada. New Orleans Joint Traffic Bureau v. A. & A. R. R. Corp., 95 I. C. C. 77, 82.

(cd) Defendants argue that there is no provision of the act which confers upon the commission jurisdiction over joint rates from Canada to Knoxville. The rates attacked are found to be unduly prejudicial and the Commission clearly possesses the power under the act to require removal of the undue prejudice. Knoxville Traffic Bureau v. C. P. Ry., 101 I. C. C. 605, 610.

(e) Complainant attacked commodity rates charged on two cars of chestnut lumber shipped on March 11 and 13, 1922 from Camden-on-Gauley, W. Va., to Montreal, Canada, and reconsigned at the latter point to Ste. Therese, Canada, as illegal, unreasonable and in violation of the fourth section to extent it exceed 52.5c Ste. Therese is on the North Shore Line of the C. P., between Ottawa and Montreal. The shipments were originally consigned to Montreal, routed B. & O., for C. P. delivery. Upon instructions issued to the lumber agent of the C. P., at Montreal, the shipments were reconsigned at that point by the C. P., to Ste. Therese. The shipments moved over B. & O., to Toledo, O., M. C., to Windsor, Ont., C. P., beyond. Charged 60.5c, composed of 52.5c to Montreal and local rate of C. P., not on file with the Commission of 8c beyond. The shipments were transported from point of origin to Montreal under a joint through rate prescribed in and by a tariff on file with the Commission to which the B. & O., and M. C., and C. P., were parties and that tariff contained a provision to the effect that property destined to points beyond the B. & O., is entitled to such privileges and subject to such charges as are provided for in the tariffs of the carriers granting the privileges and performing the services pertaining to the privileges. HELD, rate of 52.5c to Montreal not unreasonable or in violation of the fourth section. HELD, the question, whether action taken by the C. P., upon and in connection with the reconsignment of the shipments from Montreal to Ste. Therese resulted in overcharges which entitled complainant to an award of reparation, must be determined under the laws of Canada and by some tribunal other than this Commission. HELD, complaint dismissed. Natl. Amer. Wholesale Lumber Asso. v. B. & O. R. R., 101 I. C. C. 741.

(f) Rate on newsprint from Sault Ste. Marie, Ontario, Canada, to St. Joseph, Mo., found not unreasonable as compared with lower rate subsequently established in connection with an extensive readjustment of rates prescribed in the Paper case, 66 I. C. C. 571. News Corp. v. M. P., 93 I. C. C. 381.

(g) Joint rate on newsprint paper from Thorold, Ontario, Canada, to New York City, found unreasonable as compared with rates from other newsprint-producing points and groups to same destination. Reparation awarded. Ontario Paper Co. v. C. N. Rys., 95 I. C. C. 66.

(h) On question of reparation on shipments from Canada to points in United States the reasonableness of joint rates as a whole must be considered by the commission and not merely the component for that portion of the haul from the border. International Nickel Co., 66 I. C. C. 627, 631. Ontario Paper Co. v. C. N. Rys., 95 I. C. C. 66, 72.

(i) Upon contention that with respect to both reparation on past shipments and the prescribing of a rate for the future on shipments moving from points in Canada to points in United States the commission's jurisdiction is limited to determination of the lawfulness of the amount received or to be received for transportation from Canadian border to the United States points. HELD, as to reparation, decisions in International Nickel Co., 66 I. C. C. 627, and a number of later cases, adverse to this contention, are controlling. Ontario Paper Co. v. C. N. Rys., 95 I. C. C. 66, 72.

(j) Commission is without authority to require establishment of joint through rates to points in Canada. New Orleans Joint Traffic Bureau v. A. & A. R. R. Corp., 95 I. C. C. 77, 82.

(k) The commission is unable to control acts of carriers within Canada, but can require carriers so far as they operate within United States to cease from participating in rates which unduly prefer Canadian points to the undue prejudice of points in United States. Maritime Asso., Boston Chamber of Commerce v. A. A. R. R., 95 I. C. C. 539, 573.

(l) Combination rates assessed on shipments of sisal from New Orleans, La., to Indianapolis, Ind., reshipped to Welland, Ontario, Canada, during Federal control found not unjust or unreasonable, and failure of defendant to permit storage in transit at Indianapolis, found not unjust, unreasonable, or unduly prejudicial. Capital Warehouse Co. v. Director General, 96 I. C. C. 293.

(m) Facts and circumstances surrounding the establishment of through routes between points in the United States partly over Canadian rail lines in connection with the Northern Navigation Co., Ltd., a Canadian owned and operated steamship line, covered by tariffs on file with the commission, and the matter of recognition of these routes under section 27 of the merchant marine act, 1920, considered. Proceeding discontinued. Rail-Lake-and-Rail Rates via Canada, 96 I. C. C. 633.

(n) Charges resulting from rates on sheep and lambs, in double-deck cars, from Montreal, Canada, to New York, N. Y., and Somerville, Mass., and minima provided in connection therewith, found not unreasonable. This traffic between points involved is very light in volume; the present yield per car is not excessive as compared with rates and minima on like traffic between other points for similar distances. Swift & Co. v. G. T. Ry. Co. of Canada, 98 I. C. C. 649.

(o) Although commission can not prescribe joint rates from points in Canada to points in United States, it has jurisdiction to award reparation against the lines within United States which participate in joint rates shown to be unreasonable, and it has the power to require these carriers to cease and desist from participating in such rates for the future. See 66 I. C. C. 627 and 74 I. C. C. 733. Swift & Co. v. G. T. Ry. Co. of Canada, 98 I. C. C. 649, 652.

(p) The Commission may not prescribe joint rates for the future to Canadian points, but as to rates constructed on combination, such factors as apply wholly within the United States are subject to its jurisdiction. In respect of the joint rates charged and likewise the joint rate factors used in constructing combination rates charged, the American lines over which the shipments moved are subject to its jurisdiction and all carriers parties to such rates are jointly and severally liable for any damage resulting from their unlawfulness. Washington Publishers Asso. v. A. C. & H. B. Ry., 104 I. C. C. 4, 9.

(q) Rates on newsprint paper from Shawinigan Falls, Quebec, and Canadian points taking same or related rates, to Knoxville, Tenn., via Detroit gateway, found not unreasonable, but unduly prejudicial to Knoxville and unduly preferential of Nashville, to extent they exceed rates on like traffic contemporaneously maintained from same points of origin to Nashville. Nonprejudicial relationship prescribed. Knoxville Traffic Bureau v. C. P. Ry. Co., 101 I. C. C. 605.

(r) Upon contention by carriers that no provision of the act confers upon the commission jurisdiction over joint rates from Canada to the United States, HELD: Where such rates are found unduly prejudicial the commission clearly possesses the power under the act to require its removal. Knoxville Traffic Bureau v. C. P. Ry., 101 I. C. C. 605, 610.

(s) Shipments of chestnut lumber moved from Camden-on-Gauley, W. Va., to Montreal, Canada, and at latter point were reconsigned to Ste. Therese, Canada, charges being collected based on a joint commodity rate to point of reconsignment and a local rate of Canadian carried beyond; FOUND: Rate from point of origin to reconsignment point not unreasonable or in violation of long-and short-haul clause of fourth section of the act, and question, whether action taken by Canadian carrier upon and in connection with reconsignment of the shipments from Montreal to Ste. Therese resulted in overcharges which entitle complainant to an award of reparation, does not come within the jurisdiction of commission. Natl.-Amer. Wholesale Lbr. Asso. v. B. & O. 101 I. C. C. 741.

(t) Question of whether, as alleged, overcharges were collected by a Canadian carrier in Canada on shipments of chestnut lumber from Camden-on-Gauley, W. Va., after they were reconsigned from Montreal to Ste. Therese, Canada, found not to be within jurisdiction of commission. Under section 1 (2) of the act, commission's jurisdiction over transportation applies only to such transportation as takes place within the United States. Natl.-Amer. Wholesale Lbr. Asso. v. B. &. O., 101 I. C. C. 741, 742, 743.

(u) Commission has no jurisdiction to require establishment of joint rates for future from or to a point in United States to or from a point in a foreign country or from a point in United States through a foreign country to a point in United States. See 69 I. C. C. 337, 343. San Diego Chamber of Commerce v. A. & V., 102 I. C. C. 27, 29.

(v) Rates on wood pulp from Canadian points through Rouses Point, N. Y.,

to Thompson, N. Y., found not unreasonable, but to subject complainant at Thomson to undue prejudice and disadvantage and unduly prefer its competitors at Glens Falls, N. Y., and other points. Nonprejudicial basis of rates prescribed and reparation denied. Iroquois Pulp & Paper Co. v. G. & J. Ry., 102 I. C. C. 121.

(w) Proposed cancellation of import commodity rate on clay from Montreal, Canada, to Syracuse and Solvay, N. Y., leaving applicable higher domestic rates, found not justified. No justification whatever was offered for the increased rate which would result. Moreover, import rate proposed to be canceled is same as the import rate on like traffic in effect from and to same points over other routes. Import Clay and Class Rates to New York Points, 102 I. C. C. 217.

(x) Upon reargument, original report, 95 I. C. C. 66, finding rate on newsprint paper from Thorold, Ontario, Canada, to New York unreasonable, affirmed without modification, relying mainly upon comparison of such rate with contemporaneous rate on like traffic from Niagara Falls to same destination. Ontario Paper Co. v. C. N. Rys., 102 I. C. C. 365.

(y) Combination rates assessed on shipments moving from Edmonton and Patricia, Canada, to Chicago, Ill., found inapplicable. Tariff naming rates covering one factor of the combination made reference to the combination rule which provided a method for constructing through rates made on combination, and, by express terms, limited application to continuous rail shipments. There being an original and continuing intention on part of shippers that the cattle should move through to Chicago the doctrine of the Settle case, 260 U. S. 166 is controlling, and following principle laid down in the Sligo case, 62 I. C. C. 643; 73 I. C. C. 551, the shipments were subject to rates made by application of the combination rule. Reparation awarded. Chicago Live Stock Exchange v. Director General, 102 I. C. C. 452.

(z) Rates on clean rice from Memphis to Canadian destinations found not unreasonable as compared with lower rates from New Orleans, and other farther distant producing points. Such rates, however, found to violate the long-and-short haul provision of section 4 of the act. Memphis Frt. Bureau v. A. A. R. R., 102 I. C. C. 489.

Pacific Coast Shippers Asso. v. Director General, as Agent, 85 I. C. C. 386; Crown Willamette Paper Co. v. Director General, as Agent, 85 I. C. C. 657; Albers Brothers Milling Co. v. Director General, as Agent, 85 I. C. C. 747; Cutler-Hammer Mfg. Co. v. Director General, as Agent, 88 I. C. C. 600.

CAR FERRY

See Across Lake Rates; Allowances §8½; Break Bulk Rates (a); Ferry Charges; Floatage; Routing and Misrouting §6½ (b).

(a) Rates on sewer pipe from Brazil, Ind., to Monitowac and Sheboygan, Wis., and Menominee, Mich., found unreasonable as compared with lower unrestricted rates applicable over car-ferry routes across Lake Michigan to more distant points in Wisconsin, Minnesota, and Michigan, and to extent they exceeded aggregate of intermediates contemporaneously in effect. Reparation denied due to lack of proof as to payment and bearing of freight charges. Chicago Fire Brick Co. v. Director General, 91 I. C. C. 755.

(b) Rates applying over car-ferry routes are considered all-rail rates. Chicago Fire Brick Co. v. Director General, 91 I. C. C. 755, 756.

(c) Rules, regulations, and practices of C. R. R. Co. of N. J., under which it refuses to float shipments of cast-iron soil pipe from Jersey City to its North River piers, Manhattan Island, N. Y., and requiring shippers to take delivery at former point, found unreasonable. Iron pipe, due chiefly to amount of time required to unload, may be undesirable traffic at pier stations, but defendant does not similarly restrict other substantially similar commodities which are bulky and difficult to handle, and nothing of record indicates that latter should be accorded more favorable rules respecting delivery than cast-iron soil pipe. Somerville Iron Works v. C. R. R. Co. of N. J., 93 I. C. C. 39.

(d) Upon investigation by commission on its own motion, FOUND, that for performing car ferry service in crossing the Mississippi River, the addition of 20 constructive miles to distances from west-bank points in determining charges

for transportation of articles taking class or commodity rates, computed on basis of interstate distance scales to and from Vicksburg and Natchez, Miss., Angola, North Baton Rouge, Harahan, and New Orleans, La., is unreasonable. Reasonable ferry tolls based upon arbitraries added to distance rates from and to westbank points, prescribed for future. Mileage for Mississippi Crossings, 93 I. C. C. 462.

(e) Considerations both of cost of performing car ferry service at lower Mississippi River crossings, and value thereof to shippers, lead to conclusion that additional cost should be borne, as nearly as may be, by traffic accommodated, and not imposed upon shippers elsewhere whose traffic is carried under less costly circumstances. Mileage for Mississippi Crossings, 93 I. C. C. 462, 475.

(f) Method of employing arbitraries is more reasonable, and less likely to result in undue or unreasonable prejudice or disadvantages to persons, localities, or descriptions of traffic, than method of adding 20 constructive miles to actual distances in computing charges for car ferry service at lower Mississippi River crossings. Mileage for Mississippi Crossings, 93 I. C. C. 462, 475.

(g) Strictly speaking, a car-ferry route is an "all-rail" route. Bergstrom Paper Co. v. Director General, 93 I. C. C. 591, 592.

(h) Complainant sought direct service from Cape Charles to Newport News, by car float, in lieu of circuitous movement through Port Norfolk. Defendant questioned the jurisdiction of the commission to require the service, the proceeding involving the lawfulness of rates and not the extension of lines. HELD, the commission is not convinced that it could under the pleadings or upon the record require the service. Newport News v. B. & O. R. R. Co., 96 I. C. C. 425.

(i) By the route shipments of second hand refrigerators from Camp Dix (Wrightstown), N. J., to Sheffield, Ala., actually moved a car-ferry transfer from Cape Charles to Norfolk, Va., was necessary, which in complainant's opinion is equivalent to a rail-and water movement. This contention not sustained, Conf. Ruling 316, and in absence of specific instructions for rail-and-water route defendants were only under the obligation to protect the rate applicable over route specified by shipper. Florence Chamber of Commerce v. N. S. R. R. Co., 98 I. C. C. 594, 595.

(j) The cost of the car-ferry service out of San Francisco, Calif., is alleged to be greatly in excess of that from Oakland, Calif. If cost of ferriage between these two points were transmuted into rail miles at average costs of rail haulage it would place them some miles apart. While origin points nearer to destination points must not be unduly deprived of the benefit of their locations and more distant origin points unduly favored, distance alone frequently is not controlling and must not be given undue weight, particularly where, as here, considerations which are largely determinative of the rates from the farther distant point exist in a markedly less degree from the nearer point. Galloway Coal Co., 40 I. C. C. 311. Oakland Chamber of Commerce v. S. P. Ry. Co., 100 I. C. C. 55, 62.

(k) Joint rates on tin plate from McKeesport, Pa., Yorkville, Ohio, and Cumberland, Md., to New London, Wis., moving via Ludington, Mich., thence by car ferry to Manitowoc or Kewaunee, Wis., thence by rail to destination, found not unduly prejudicial but unreasonable to the extent that they exceeded the combination of proportional and local factors which would have applied in the absence of joint rates. Proportional factors which would have been applicable were so restricted as to result in violations of section 4 from McKeesport and Yorkville, but not from Cumberland. Reasonable rates prescribed for the future and reparation denied. Borden Co. v. A. A. R. R. Co., 100 I. C. C. 153.

(l) Ferry tolls to be used with commodity rates should approximate the toll on the class to which the rate on the commodity more nearly corresponds. Natchez Frt. & Traffic Bureau v. M. P. 101 I. C. C. 476, 478.

I. CONTROL AND REGULATION.

See Control and Regulation.

A. Jurisdiction of Commission.

See Interstate Commerce Commission I.

§½. In General.

(abc) The Commission has jurisdiction over cars used in hauling railway fuel over a carriers own line, on the theory that such cars were instrumentalities of interstate commerce and could be regulated with a view to bringing about a just and equal distribution and preventing an unjust and discriminatory one. Whether the cars were used in common carrier transportation was immaterial. Assigned cars for bituminous coal mines 93 I. C. C. 701, 716.

(de) Hauling coal cars for its own use from mine by railroad, which, though intrastate as to its lines and termini, participated in interstate commerce through connection with other railroads, was "interstate commerce." Freeman v. United States, 4 Fed. (2d) 13.

(f) The provision of Transportation Act 1920, tit. 4, §402 (15), being Comp. St. Ann. Supp. 1923, §8563 (15), making the violation of the Interstate Commerce Commission's emergency priority orders punishable as a crime, HELD valid. Avent v. United States, 45 Sup. Ct. 34.

(g) The commission's authority over the distribution of cars of carriers subject to the act is to be found in sections 1, 3, and 15. Section 1 requires rules of car distribution to be reasonable, section 3 prohibits them from being unduly preferential or prejudicial, and sections 1 and 15 authorize the commission to prescribe just and reasonable rules. Provisions of these sections clearly indicate the broad scope of authority which Congress has conferred upon the commission, and important duties with which the commission is charged, to require, in time of car shortage, a just and equal distribution of cars and prevention of a distribution which is unjust and discriminatory. U. S. v. New River Co., 265 U. S. 533. Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701, 714.

(h) Upon contention that under section 1 (12) of the act the commission has no jurisdiction over distribution of cars to carrier-owned or output-contract mines which furnish railway fuel exclusively for at least six months, because such mines are not "served" by a carrier. HELD, word "served" has no judicially determined or technical meaning which would make it inapplicable to such mines. The commission believes that Congress intended to use the word in its ordinary and well-accepted meaning, i. e., to mean the furnishing of cars by a carrier at its own mines or at those the output of which it takes. As used in paragraph (12) "served" is a convenient term to show that provisions of this paragraph apply not only to mines located on a carrier's own line, regardless of ownership or contractual arrangements, but also to those mines located off its line and which it customarily supplies with cars. Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701, 714, 715.

(i) Upon contention that the commission is without jurisdiction over the distribution of special types of equipment used exclusively in hauling company fuel because such equipment has never been impressed with character of common-carrier instrumentalities, such equipment is not used in commerce at all, but only in performing private work of a railroad company. HELD, such special types were in commercial service before being put in fuel-coal service, are placed at partial-output mines selling commercial coal, are counted and distributed on a pro rata basis, and may be unloaded like ordinary coal cars. They constitute part of the available equipment of these carriers for commercial shipments, and fall within class of equipment as to which Congress requires "a just and equal distribution and prevention of an unjust and discriminatory one." Illinois Central case, 215 U. S. 452, 474. Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701, 725.

(j) Contention that section 1 (12) of the act, which was incorporated by the transportation act, 1920, limits the commission's power to change or extend by further limitation the rule of car distribution laid down in the Traer case, 13 I. C. C. 431, and Hocking Valley case, 12 I. C. C. 398, not sustained. That this was not the intent of Congress is clear. In United States v. P. R. R. Co., 69 L. Ed. 76, the court said that there was nothing in the interstate commerce act as originally enacted, or in the transportation act, or in any earlier amendment, which indicates a purpose on the part of Con-

gress either to allow a carrier to create undue prejudice by use of facilities possessed, or to narrow the commission's powers to prevent unjust discrimination. Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701, 730.

(k) Fact that large sums may have been invested in reliance upon a rule of car distribution laid down by the commission which is unreasonable and unjustly discriminatory or may become or be found so under the act does not mean that the commission is powerless to change the rule and prescribe a just and nonpreferential one. Douglass case, 21 I. C. C. 97, 101; So. Pac. Co. v. I. C. C., 219 U. S. 433; Mottley case, 219 U. S. 467. Assigned Cars for Bituminous Coal Mines, 93 I. C. C., 701, 737.

(l) The act makes it the duty of every carrier subject thereto to furnish an adequate supply of trains for the transportation of property, and confers upon the Commission authority to determine and prescribe, after full hearing what practice in this respect is or will be just, fair, and reasonable, to be thereafter followed, and to enter an appropriate order. Train service on N. P. 112 I. C. C. 191, 194.

§½a. Construction of Act.

(a) Competition is not an assential element under section 1. Assigned cars for bituminous coal mines, 93 I. C. C. 701, 717.

(b) There is no more insidious or effective way by which a carrier may discriminate between its shippers than through a regulation or practice that denies to them the equal enjoyment of its facilities. And if the rules of carriers with respect to car distribution are not included within the scope of the law, the prosperity of shippers, during periods of car shortage, largely lies in the hands of the carriers on whose lines they conduct their business enterprises, whenever such carriers are disposed to and do actually favor some shippers at the expense of others. The underlying purpose of this legislation, as will doubtless be agreed, was to put shippers on a basis of absolute equality; to assure to them not only equal rights but an impartial enjoyment of the facilities and services of interstate carriers. Assigned cars for bituminous coal mines, 93 I. C. C. 701, 718.

(c) It is important to bear in mind that the fundamental purpose of the act is equality of treatment in rates and service, and this principle may not be violated merely because the carrier in that way may operate at less expense. If this were not true a carrier in times of car shortage could restrict its car supply to a few large and well operated mines on its line and ignore the remainder. Assigned cars for bituminous coal mines, 93 I. C. C. 701, 721.

(d) The effort of a carrier to obtain more business, and to retain that which it had secured, proceeds from the motive of self interest which is recognized as legitimate; and the fact that preferential rates were given only for this purpose relieves the carrier from any charge of favoritism or malice. But preferences may inflict undue prejudice though the carriers motives in granting them are honest. Self interest of the carrier may not override the requirement of equality in rates. Assigned cars for bituminous coal mines, 93 I. C. C. 701, 721.

(e) A carriers self interest may not override the requirement of equality in car distribution. Assigned cars for bituminous coal mines, 93 I. C. C. 701, 721.

(f) The right to buy is one thing and the power to use the equipment of the road for the purpose of moving the articles purchased in such a way as to discriminate or give preference are wholly distinct and different things. Assigned cars for bituminous coal mines, 93 I. C. C. 701, 725.

(g) There is nothing in the act as originally enacted, or in Transportation act, 1920, or in any earlier amendment, which indicates a purpose on the part of Congress either to allow a carrier to create undue prejudice by the use of facilities possessed, or to narrow the Commissions powers to prevent unjust discrimination. Assigned cars for bituminous coal mines, 93 I. C. C. 701, 730.

(h) The great underlying purpose of the act, amplified and strengthened with each successive amendment and supplemental act, is to sweep away every form of favoritism based upon the personality of the shipper, or upon his relations with the carrier as a customer, and to place all, the large and small, the steady and occasional, the rich and the poor, upon a plane of equality in the right to service; and to condemn and to make unlawful every regulation, device, or subterfuge

which undertakes to give to anyone an advantage based upon conditions other than those inhering in the transportation itself and alone. If more equipment is needed to permit the railroads to service all their offering patrons with coal cars, impartially, in volume sufficient to meet the country's needs, then it is the declared policy of Congress that requires that such equipment shall be procured, and that it be used with impartiality, rather than that an indefinably smaller quantity might be turned over to the exclusive service of favored members of an industry whose past has been wayward, reckless, dissipated, and extravagant, and which lacks proper sense of responsibility. Monopolies are odious, alike by common law and under federal statute. The Commission can not consider with favor a proposition to create of an unregulated favored class of already favorably circumstanced producers, a complete monopoly by compelling the carriers to violate the principle of equality of treatment which it is the right of every citizen to demand. Rules governing ratings of coal mines, 95 I. C. C. 309, 332.

(i) The commission's authority over distribution of cars of carriers subject to the act is to be found in sections 1, 3, and 15. Section 1 requires rules of car distribution to be reasonable, section 3 prohibits them from being unduly preferential or prejudicial, and sections 1 and 15 authorize commission to prescribe just and reasonable rules. Provisions of these sections clearly indicate the broad scope of authority which Congress has conferred upon the commission, and the important duties with which it is charged, to require, in time of car shortage, a just and equal distribution of cars and prevention of a distribution which is unjust and discriminatory. U. S. v. New River Co., 265 U. S. 533. Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701, 714.

(j) Upon contention that under section 1 (12) of the act the commission has no jurisdiction over distribution of cars to carrier-owned or output-contract mines which furnish railway fuel exclusively for at least six months, because such mines are not "served" by a carrier. HELD, word "served" has no judicially determined or technical meaning which would make it inapplicable to such mines. The commission believes that Congress intended to use the word in its ordinary and well-accepted meaning, i. e., to mean the furnishing of cars by a carrier at its own mines or at those the output of which it takes. As used in paragraph (12) "served" is a convenient term to show that provisions of this paragraph apply not only to mines located on a carrier's own line, regardless of ownership or contractual arrangements, but also to those mines located off its line and which it customarily supplies with cars. Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701, 714, 715.

(k) Section 1 (12) of the act held to apply to cars placed at carrier-owned and output-contract mines, and can not be relied upon to show that Congress exempted such cars from other provisions of section 1 requiring reasonable rules of distribution, and provisions of section 3 prohibiting unduly preferential or prejudicial rules. Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701, 716.

(l) Fundamental purpose of the act is equality of treatment in rates and service, and this principle may not be violated merely because carrier in that way may operate at less expense. If this were not true a carrier in times of car shortage could restrict its car supply to a few large and well-operated mines on its line and ignore the remainder. A carrier's self-interest may not override requirement of equality in car distribution. See 263 U. S. 515, 523; 225 U. S. 326. Handling Charges on Cement, Fertilizer and Salt, 93 I. C. C. 640, 721.

(m) The question of a just and nondiscriminatory car distribution rule under provisions of sections 1 and 3 of the act is a different question from that of a rule to be prescribed in case of emergency. The distinction is recognized in section 1 (15) where it is provided that the commission may suspend car service rules at such times. Handling Charges on Cement, Fertilizer and Salt, 93 I. C. C. 640, 724.

(n) Contention that section 1 (12) of the act, which was incorporated by the transportation act, 1920, limits the commission's power to change or extend by further limitation the rule of car distribution laid down in the Traer case, 13 I. C. C. 431, and Hocking Valley case, 12 I. C. C. 398, not sustained. That this was not the intent of Congress is clear. In United States v. P. R. R. Co., 69 L. Ed. 76, the court said that there was

nothing in the interstate commerce act as originally enacted, or in the transportation act, or in any earlier amendment, which indicates a purpose on the part of Congress either to allow a carrier to create undue prejudice by use of facilities possessed, or to narrow the commission's powers to prevent unjust discrimination. Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701, 730.

§1. Over car distribution.

(a) Interstate Commerce Commission's jurisdiction with respect to regulation of distribution of cars, under Interstate Commerce Act, §1 (3), (4), (6), (10), (11), (12), (14), section 3 (1), and section 15 (1) being Comp. St. §§ 8563, 8565, 8583, is exclusive. United States v. New River Co., et al., Slab Fork Coal Co. v. Same, 44 Sup. Ct. 610.

(b) Interstate Commerce Commission Rule 4, Circular CS-31, Revised, prohibiting operators of joint mines served by two or more carriers from ordering cars on the basis of more than 100 per cent. of the gross daily rating, HELD, not an unreasonable and arbitrary exercise of the Commission's power to regulate the distribution of cars, under Interstate Commerce Act, §1 (3), (4), (6), (10), (11), (12), (14), section 3 (1), and section 15 (1) being Comp. St. §§ 8563, 8565, 8583, as against contention that such order discriminates against operators of joint mines in favor of operators of local mines. United States v. New River Co. et al. Slab Fork Coal Co. v. Same, 44 Sup. Ct. 610.

(c) Ordinarily question of discrimination, including inequitable distribution of cars in times of car shortage, are referable initially to Interstate Commerce Commission, and not to courts, under Transportation Act, §1, par. 12 (Comp. St. Ann. Supp. 1923, §8563.) Freedman v. United States, 4 Fed. (2d) 13.

(d) In absence of Interstate Commerce Commission's suspension of provision of Transportation Act, §1, par. 12 (Comp. St. Ann. Supp. 1923, §8563), making it railroad's duty to count every car furnished to mine against mine, statute create absolute duty enforcable under Elkins Act, §3 (Comp. St. §8599), in federal equity court in first instance. Freeman v. United States, 4 Fed (2d) 13..

(e) Rev. St. Mo. 1919, §§9985, 9990, prohibiting discrimination between shippers in the furnishing of cars, HELD inapplicable where usual route to intended destination was an interstate one, and shipper did not designate intrastate route, in view of Interstate Commerce Act, §1, subds. (3), (4), (6), (10), (11), (12), (14), section 3, subd. (1), section 15, subd. (1), being Comp. St. §§8563, 8565, 8583, and section 3, as amended by Act Feb. 28, 1920, §405 (Comp. St. Ann. Supp. 1923, §8565), protesting shippers of goods in interstate commerce from such discrimination. Missouri Pac. R. Co. v. Stroud, 45 Sup. Ct. 243.

§2. Car Regulations.

(a) Transportation Act 1920, tit. 4, §402 (15), being Comp. St. Ann. Supp. 1923, §8563 (15), authorizing the Interstate Commerce Commission in case of emergency to make reasonable rules as to car service, and an order of the Interstate Commerce Commission thereunder prescribing a preference in the order of purposes for which coal should be carried, are not invalid under the Fifth Amendment, and the statutes does not trench on powers reserved to the state, and are not invalid as a delegation of legislative power. Avent v. United States, 45 Sup. Ct. 34.

(b) Under Transportation Act 1920, tit. 4, §402 (15), being Comp. St. Ann. Supp. 1923, §8563 (15), authorizing the Interstate Commerce Commission in times of emergency to give preference of traffic, the power of the Commission or priority in transportation or movement is restricted to emergencies, and the only requirement is that the rules shall be reasonable and in the interest of the public and of commerce. Avent v. United States, 45 Sup. Ct. 34.

§3. Fuel Cars.

(a) Upon contention that under section 1 (12) of the act the commission has no jurisdiction over distribution of cars to carrier-owned or output-contract mines which furnish railway fuel exclusively for at least six months, because such mines are not "served" by a carrier. HELD, word "served" has no judicially determined or technical meaning which would make it inapplicable to such mines. The commission believes that Congress intended to use the word in its ordinary and well-accepted meaning, i. e., to mean the furnishing of cars by a carrier at its own mines or at those the output of which it takes. As used in

paragraph (12) "served" is a convenient term to show that provisions of this paragraph apply not only to mines located on a carrier's own line, regardless of ownership or contractual arrangements, but also to those mines located off its line and which it customarily supplies with cars. Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701, 714, 715.

(b) Upon contention that commission is without jurisdiction over distribution of special types of equipment used exclusively in hauling company fuel because such equipment has never been impressed with character of common-carrier instrumentalities, such equipment is not used in commerce at all, but only in performing private work of a railroad company. HELD, such special types were in commercial service before being put in fuel-coal service, are placed at partial output mines selling commercial coal, are counted and distributed on a pro rata basis, and may be unloaded like ordinary coal cars. They constitute part of the available equipment of these carriers for commercial shipments, and fall within class of equipment as to which Congress requires "a just and equal distribution and prevention of an unjust and discriminatory one." Illinois Central case, 215 U. S. 452, 474. Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701, 725.

§4. Private Cars.

See Common Carrier §6; Infra §31, §32; Private Cars.

(a) Fundamental principle which has governed the commission in dealing with private cars is that such cars, being paid for by carriers through allowances to their owners, are to be treated as part of the carrier's equipment, and may not be so used as to bring about unjust discrimination or unreasonable practices. Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701, 729.

(b) The act not only confers authority upon the commission to restrict the preferential use of private cars as was done in Hocking Valley case, 12 I. C. C. 398, and Traer case, 13 I. C. C. 431, but authorizes the commission to prohibit altogether such preferential use. U. S. v. New River Co., 265 U. S. 533, and cases there cited. Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701, 729, 730.

II. DUTY TO FURNISH CARS.

§7. In General.

See Bills of Lading §5; Branch Lines IV; Demurrage §6; Evidence §22.

(a) Complainant contended defendants have failed and refused to make a just and reasonable distribution of coal cars as between complainants mines and a mine operated by defendants thus unduly prejudicing complainant. Defendants operate a line of railroad, known as the Blair R. R., extending from Kregar, Pa., to Jones Mill, Pa., distance 3.7 miles. At Jones Mill the Blair railroad connects with the Indian Creek Valley Ry., which in turn connects with the B. & O., at Indian Creek near Connellsville, Pa. The Blair road was constructed primarily for the purpose of serving their lumber mill at Kregar. Prior to and during the construction of the Blair road defendants negotiated with complainants for the joint construction and operation of a railroad to be used for the transportation of lumber and logs to and from defendants mill and coal from complainants mine. Complainants mine is located on the Blair road a short distance from Kregar. Complainants coal has practically all moved to interstate points. The Blair road is not incorporated and has no charter to operate as a common carrier. It is without the power of eminent domain and its right of way was acquired by purchase or gift. They do not comply with any federal or state requirements applying to common carriers except that they pay amounts under the workmens compensation act of the state at the rates provided for employees on railroads. They do not participate in any joint rates with other carriers. Freight charges are not collected by defendants for connecting lines or by connecting lines for defendants. The distribution of coal cars between the Blair mine and the complainants mine was made by the defendants, and the complaint is directed solely against them. HELD, defendant was not and is not a common carrier subject to the act, complaint dismissed. Piper v. Blair, 96 I. C. C. 102.

(b) Complainant alleged that Southern Ry. has failed and neglected to furnish complainants at their mines served by that carrier with a reasonably adequate car supply for transportation of

coal; that it has failed to make a just and reasonable distribution of cars for the transportation of coal among the coal mines served by it; that in the case of certain favored mines served by the defendant, Interstate Railroad, it has failed to count against those mines each and every car furnished to or used by such mines; and that during 1922 and since, it has failed and neglected to furnish complainants with an equitable pro rata distributive share of available equipment, and has favored mines on the Interstate Railroad in making such distribution, thereby discriminating against complainants. Questions are, 1, whether the Interstate should any longer be charged with being customarily dependent upon the Southern for car supply for mines located on the Interstate; and 2, whether in times of car shortage it is incumbent upon the Southern to undertake to furnish the Interstate as a dependent connection, from its car supply, cars under the customarily dependent clause of paragraph 12 of section 1 of the act. Interstate has about 80 miles of track and extends from Appalachia, Va., northward to all the mines in the Appalachia region, and from Appalachia eastward, connecting with the Southern and L. & N., at Appalachia. The Southern and other connections of the Interstate deliver cars to the latter for distribution to the mines on its line on the same basis as if such mines were local to such connections; that is, the same percentage of distribution is accorded mines on the Interstate as currently accorded to mines on such other carriers. Practically all of the coal from the Interstate moves under joint rates with its connections. On coal from mines on its line and via the Southern and its connections the average division of the rates is 10% to the Interstate and 90% to the Southern and its connections. While there is clearly an obligation laid by the law upon the Southern to furnish a reasonably adequate car supply sufficient to fill all reasonable orders of mines on its line, and to satisfy its legal obligation to furnish its proper proportion of cars for the operation of the through routes to which it is a party under its joint tariffs, the Interstate owes a like obligation to the mines on its line, and to the Southern and other roads over which there are through routes and joint rates. Neither can divest itself of this obligation. HELD, Southern and Interstate are each charged with the duty of furnishing cars for transporting traffic originating on their respective lines, that the obligation to furnish cars for shipments of traffic from points on their respective lines to points upon the lines of their connections is joint with the latter, and custom between them, whereby one carrier undertakes to furnish cars that it is legally incumbent upon the other to furnish, does not relieve the latter of its liability for failure to furnish cars. Further HELD, Interstate is not dependent upon the Southern for the supply of cars for the coal mines served by it under the provisions of paragraph 12 of section 1. United Collieries, Inc. v. Southern Ry., 96 I. C. C. 338.

(c) It is the view of the Commission that each carrier subject to the act is charged with the duty of furnishing cars to the industries located upon its line. In the case of through routes composed of two or more carriers the obligation to furnish cars for transportation over such through routes, is joint upon the carriers therein. Its obligation to furnish cars for shipments between points upon the lines of its connections is joint with such connections, and it can not be relieved of its portion of such joint liability by any contract with such connections. United Collieries v. Southern Ry., 96 I. C. C. 338, 340.

(d) When joint rates are established the carrier must be prepared to comply with its obligations of furnishing a proper share of the cars needed to transport the traffic originating on its line. While the responsibility to the shipper of furnishing a proper supply of cars rests upon the road upon which the shipper is located and the traffic originates, the originating line, as between it and its connections, does not necessarily rest under the burden of supplying all the cars which may be required for transportation over through routes under joint rates. United Collieries v. Southern Ry. 96 I. C. C. 338, 340.

(e) The obligation to furnish cars rests on all carriers parties to joint rates. Wyoming Coal Co. v. V. Ry., 96 I. C. C. 359, 365.

(f) As a common carrier participating in joint rates, complainant is under an obligation to furnish its share of the

equipment. Virginia Blue Ridge Ry. v. S. Ry., 96 I. C. C. 591, 593.

(g) The obligation to furnish cars rests on all carriers parties to joint rates. Wyoming Coal Co. v. Virginian Ry., 98 I. C. C. 488, 494.

(h) If more equipment is needed to permit railroads to serve all their offering patrons with coal cars, impartially, in volume sufficient to meet the country's needs, then it is the declared policy of Congress that requires that such equipment shall be procured, and that it be used with impartiality, rather than that an indefinably smaller quantity might be turned over to the exclusive service of favored members of an industry, whose past has been wayward, reckless, dissipated, and extravagant, and which lacks proper sense of responsibility. Rules Governing Ratings of Coal Mines, 95 I. C. C. 309, 333.

(i) Duty of carrier to furnish transportation does not arise until request is made therefor. No request being made, no liability to furnish cars arose. Ayrshire Coal Co. v. S. Ry. Co., 96 I. C. C. 161, 165.

(j) Carriers are charged with the duty of furnishing cars for transporting traffic originating on their lines. United Collieries v. S. Ry. Co., 96 I. C. C. 338.

(k) Carrier's obligation to furnish cars for shipments of traffic from points on its line to points on the lines of its connections is joint with the latter; and arrangements between them whereby one carrier undertakes to furnish cars that it is legally incumbent upon the other to furnish do not relieve the latter of its obligation. United Collieries v. S. Ry. Co., 96 I. C. C. 338.

(l) The Interstate Railroad, a short-line carrier, held not to be a dependent connection of the Southern Ry. for supply of cars for the coal mines served by it under the provisions of par. (12), sec. 1 of the act. United Collieries v. S. Ry. Co., 96 I. C. C. 338, 341.

(la) Failure and refusal of defendants to serve complainant's mine on the Coalton branch of the B. & O., at Mabie, W. Va., with cars and interchange coal traffic from such mine to all interstate destinations reached by the Western Maryland and connections, and to accord such traffic the flat West Virginia region basis of rates while according such service, cars and rates to farther-distant competing mines located on the same branch found not to have resulted in undue prejudice with consequent damages to complainant. Having refused an offer of the same arrangements as were accorded competing mines under agreement, complainant can not now with propriety contend that he was damaged by any failure to receive a proper share of cars because not accorded the same status as the competing mines. Brady v. B. & O., 102 I. C. C. 19.

(m) Respondent is under obligation to furnish the equipment necessary for the transportation of traffic tendered to it, and if it does not possess such equipment the charges paid for the revenue thereof can not be considered as an item of expense which is not included in the rate. Demurrage on coal and coke, 102 I. C. C. 554, 557.

ALL OTHER CITATIONS

Colorado & Utah Coal Co. v. D. & S. L. R. R., 85 I. C. C. 547; Peerless Lumber Co. v. Director General, as Agent, 88 I. C. C. 457.

§7½. Inspection.

See Inspection.

(a) Where injury was alleged to have been caused by defect in floor of street car and not in the step, excluding report of car inspectors made a week after injury was not error. Bradley v. Lewis (Ala. 1924). 100 So. 324.

§8. Size and kind ordered by shipper.

See Class Rates §2 (k); Classification §21; Follow Lot Shipments; Minimums §3, §4.

(a) Complainant attacked commodity rates charged on flour in sacks, shipped from Hutchinson, Kas., to Los Angeles, Calif., in December, 1919, as unreasonable unjustly discriminatory and unduly prejudicial. Complainant delivered at Hutchinson to the Santa Fe 78,400 pounds of flour for one consignee loaded in two refrigerator cars, each containing 39,200 pounds. The agent of the Santa Fe signed a separate bill of lading for each car, each bill of lading bearing notation that for the railroads convenience two refrigerator cars were furnished in lieu of one car of larger capacity ordered, that the remainder of the consignment was in the other car, identified by number. Complainant ordered a

car of 80,000 pounds for each of the 78,400 pound shipments. The capacity of the cars furnished was 50,000 pounds. There is no contention that 78,400 pounds of flour, in sacks, could not have been loaded into the larger cars ordered. HELD, rates attacked unreasonable to extent they exceeded through rate of 71c less rate on wheat from Kansas City to Hutchison, reparation awarded. Larabee Flour Mills Corp. v. Director General 92 I. C. C. 745.

(b) Shipper ordered 50-foot car of 12,000 pounds minimum and carrier being unable to furnish car of that dimension furnished two smaller cars of 10,000-pounds capacity each. Charges assessed under applicable tariff which provided that such charges be based on minimum of car furnished and carrying heavier load, and on other car at basis of actual weight, found unreasonable to extent they exceeded charges which would have accrued under rule subsequently established which provided that such charges be based on minimum weight of car ordered, all freight in excess of minimum to be charged for on basis of c. l. rate. Reparation awarded. Dallas Transfer Co. v. S. P. Co., 91 I. C. C. 73.

(c) Carrier for own convenience furnished two small cars in lieu of large car ordered. In conformity with two-for-one rule shipper tendered first car loaded to capacity with balance of shipment in second car. Upon advice of carrier's agent, consignment was reloaded by dividing weight between the two cars. Separate bills of lading covering each bore notations linking them together. Subsequent shipments were tendered in accordance with advice covering initial shipment. HELD: While shipper had knowledge of published tariff and his rights thereunder, those rights may not be denied without resulting liability, and he should not suffer for failure to do what might reasonably have been considered a vain thing, especially where it occasioned wasted labor. Charges assessed found unreasonable to extent they exceeded those applicable under the two-for-one rule. Reparation awarded. Larabee Flour Mills Corp. v. Director General, 92 I. C. C. 745.

(d) Shipper ordered 50-foot cars for movement of cotton-factory sweepings and twine but carrier supplied in each instance two smaller cars. Shipments were partially loaded into one car and remainder forwarded as follow lots. Charges collected at c. l. rates and minimum weights on first cars, and at actual weights on the follow lots found not unreasonable. Cases containing cotton twine while of uniform size varied considerably in weight indicating that some were not packed as heavily as they might have been. Cars furnished could have accommodated more cases than were actually loaded, and had full loading capacity been utilized the minimum would have been exceeded. As to bales of sweepings, considerably in excess of weight loaded by complainant has been loaded in cars of dimensions equal to those furnished, and in the South a greater weight is generally loaded in equipment available. California Cotton Mills Co. v. S. Ry., 95 I. C. C. 7.

(e) Large car ordered but carrier furnished two small cars for its own convenience. Charges collected at c. l. rate, based on applicable minimum on first car, and at actual weight on second car, found illegal, as exceptions to classification provided that where carrier furnishes two small cars in lieu of larger car ordered, charges should be assessed at actual weight, subject to minimum for car ordered. Complainant's shipment exceeded this minimum and could have been loaded in car ordered. Shipment found overcharged and reparation awarded. Goodpasture v. N. C. & St. L., 93 I. C. C. 65.

(f) Shipper ordered 50-foot cars for movement of cotton-factory sweepings and twine, but carrier supplied in each instance two smaller cars. Shipments were partially loaded into one car and remainder forwarded as follow lots. Charges collected at c. l. rates and minimum weights on first cars and at actual weights on the follow lots found not unreasonable. Cases containing cotton twine while of uniform size varied considerably in weight, indicating that some were not packed as heavily as they might have been. Cars furnished could have accommodated more cases than were actually loaded and had full loading capacity been utilized the minimum would have been exceeded. As to bales of sweepings, considerably in excess of weight loaded by complainant has been loaded in cars of dimensions equal to those furnished, and in the South a greater weight is generally loaded in

equipment available. California Cotton Mills v. S. Ry., 95 I. C. C. 7.

(g) Failure of defendants operating south of the Ohio River to maintain rates on hogs in double-deck cars and to apply them to complainant's shipments under a two-for-one rule found not to have resulted in unreasonable or otherwise unlawful rates. The subsequent publication of the rate is, in itself, insufficient to establish the unreasonableness of the former rate, as applied to either single or multiple shipments. Patterson Commission Co. v. C. of G. Ry. Co., 96 I. C. C. 473, 474.

(ga) Shipper ordered stock cars but carrier furnished box cars in lieu thereof. FOUND: Since it was the duty of carrier to furnish kind of equipment ordered, or its equivalent, and it was not possible for shipper to have loaded the applicable minimum in cars furnished charges assessed based on the c. l. minimum for each car used at the applicable rate found unreasonable to extent they exceeded charges based on actual weight at the same rate. Gullikson v. Director General, 102 I. C. C. 327.

(gb) When a carrier for its own convenience furnishes a shipper a short car, which will not safely carry as much freight as a standard car, it is not necessarily entitled to same revenue as it would have received had a standard car been furnished. Florida R. R. Commrs. v. A. & R., 102 I. C. C. 677, 680.

(gc) Practice of assessing charges at the published minimum where cars furnished by carriers for their own convenience can not reasonably be loaded to the minimum, is unwarranted. See 74 I. C. C. 747. Florida R. R. Commrs. v. A. & R., 102 I. C. C. 677, 680, 681.

(h) Complainant attacked failure of classification rules in official territory to provide for the furnishing, at the carriers convenience, of two cars of less height than that of a single car ordered by the shipper, on basis of charges applicable on the one car, as unreasonable. The existence of one difficult condition under a rule of wide application ordinarily is insufficient reason for the establishment of another in the absence of undue prejudice or preference. Many sizes of automobile bodies are now shipped readily in ordinary equipment, so that this difficulty is confined chiefly to the movement of a few sizes. It would seem profitable for both carrier and shipper that the former should be able to furnish equipment most suitable for the reasonable needs of the traffic ordered. The record shows that the recent acquisition of cars 10 feet in height by the carrier serving this plant has enabled it to meet complainants demands in this respect, so that the situation now is greatly relieved. Despite the obvious disadvantage of cars of this dimension in handling numerous light and bulky commodities, it may be said that their usefulness is still somewhat in the experimental stage. The demand for cars of a type different from ordinary equipment usually should be more general than that of a single shipper before it may be said to be incumbent upon a carrier to acquire them. If in time it seems desirable or necessary for the carriers to increase the proportion of cars of this height, further consideration can be given to the application of the two for one rule, particularly for the movement of commodities weighing less in carloads than the lowest practicable minimum weight. Approximately 90% of the existing cars 10 ft. in height belong to the western roads. It is doubtful, whether, owing to the limited number of such cars, particularly on eastern lines, the two for one rule could be enforced at this time without imposing undue burden on the carriers generally. HELD, complaint dismissed. Ohio Body & Blower Co. v. A. C. & Y. R. R., 104 I. C. C. 19.

(i) Complainant attacked refusal of defendants to apply the socalled two for one rule to shipments to transcontinental territory from points on the Wabash in Indiana in group C territory as unreasonable, unjustly discriminatory and unduly prejudical. Shipments moved Feb. 5 and May 10, 1917. In each instance complainant ordered a 50 foot car, but two 36 foot cars were furnished instead. Single bills of lading were issued, with notation thereon regarding the two for sification, traffic to the Ashland divispaid on this basis. The expense bill also carried reference to the rule. The applicable tariff provides joint commodity rates on kitchen cabinets subject to 18,000 pound minimum for single cars of any size from Group C points and east. The same tariff carries a rule for application in connection with commodity rates from Group D points, and west, by which the carload rate may be applied on the actual weight of contents of the

second car if the first car is loaded to capacity. The carriers have the privilege of loading other freight in the second car. Hence, this rule is afforded shippers west of the Illinois Indiana state line, whereby manufacturers in Indiana suffer in handicap in competition with those in Illinois. Graduated minima rules for cars of different sizes did not apply to kitchen cabinets and therefore, failure to publish the rule can not be found prima facie unreasonable. HELD, failure of defendants to maintain a rule substantially similar to rule 5d of Countiss tariff I. C. C. 1036 on this traffic from points on the Wabash in Indiana in group C territory to transcontinental destinations, while applying same to shipments from Group D is unduly prejudicial, reparation denied. Wasmuth Endicott Co. v. C. R. I. & P. Ry., 107 I. C. C. 588.

(j) The two for one rule, in general, provides that, when graduated minima apply on cars according to the sizes thereof and a shipper orders a large car, but the carrier supplies two smaller cars instead, the minimum weight of the car orders shall apply to the combined contents of the two smaller cars, provided the first car thereof is loaded to capacity. The failure of the carrier to accord the rule when graduated minimum weights apply according to the size of the cars constitutes a prima facie unreasonable act. But it is not prima facie unreasonable for a carrier to fail to include a two for one rule in its tariffs, for application on a particular commodity in the absence of graduated minima for cars of different sizes. Wasmuth Endicott Co. v. C. R. I. & P. Ry., 107 I. C. C. 588, 589.

(k) Proposed increased commodity rates and increased minimum weight on tin cans, in carloads, from points in Illinois to points in Michigan, Minnesota, and Wisconsin, and proposed cancellation of the two-for-one rule wherever in effect under commodity rates, found not justified. In Wisconsin Dairy Products Co., 68 I. C. C. 307, and Armour & Co., 74 I. C. C. 709, the commission found that the commodity rate from Chicago to Stoughton, Wis., and the fourth-class rate from Chicago to Bloomer, Wis., applicable on tin cans was unreasonable to extent they exceeded the basis of commodity rates subsequently established, and these rates as modified only by general changes in rate levels are now in effect. Tin Cans from C. F. A. Points to Michigan, Minnesota, and Wisconsin, 100 I. C. C. 208.

§9. Form and Time of Order.

See Infra §36; Evidence §36.

(a) A tariff provided that orders for cars would be given in writing. Cars were not furnished in accordance with the request, which was oral. There is no claim that the rule requiring written notice was void. The contention is that the rule was waived. The transportation service to be performed was that of common carrier under published tariff. The rule was a part of the tariff. Suit dismissed. Davis v. Henderson, decided by Supreme Court of United States Oct. 27, 1924. Campbell Construction Co. v. L. C. & S. E. Ry., 95 I. C. C. 603, 605.

(b) Rule of carrier, approved by Interstate Commerce Commission, that orders for cars must be placed with local agent in writing, cannot be waived by acceptance of oral order by agent, or otherwise; rule being part of tariff. Davis v. Henderson, 45 Sup. Ct. 24.

§9½. Heater Cars.

See Heater Car Service; Protective Service.

(a) Storage charges, applicable during winter months, on Eastman heater cars, provided with artificial-heating apparatus, found not unreasonable, discriminatory, or otherwise unlawful. Such charges are contained in published tariffs, and as they are assessed against all alike, there can be no undue prejudice or discrimination. C. R. R. of N. J. v. U. S., 257 U. S. 247. Moreover, no evidence was introduced tending to show that charges are unjust or unreasonable per se, and no ambiguity exists in the tariff provision under which charges were assessed. Hunter v. N. Y., N. H. & H., 96 I. C. C. 57.

§9⅝a. Live Stock Cars.

See Live Stock Shipments.

(a) Complainant alleged that by reason of the failure of defendants operating south of the Ohio river to publish rates on hogs in double deck cars they were charged unreasonable, unjustly discriminatory and unduly prejudicial rates on hogs, carloads, from Atlanta and other points in Georgia to destinations in Ohio and Indiana. At time of ship-

ment complainants requested the southern lines to furnish double deck cars, but those lines at that time did not own any equipment of this character or publish rates to Cincinnati applicable on shipments therein. HELD, rates attacked not unreasonable or otherwise unlawful, complaint dismissed. Patterson Commission Co. v. C. of Ga. Ry., 96 I. C. C. 473.

(b) Director general cancelled "per car" rates on livestock and established rates in cents per 100 pounds. After Federal control terminated carriers restored "per car" basis. FOUND, charges on shipments moving during period when rates in cents per 100 pounds were in effect found not unreasonable. Complainants depended almost entirely upon showing that increases resulted from the change but they furnished no comparisons by which reasonableness may be judged. Even if it be granted that increased rates resulted, this alone would not prove them unreasonable for such increases might have been justified by increased cost of transportation and increased value of livestock during period under consideration. Dickerson v. Director General, 93 I. C. C. 304.

(c) Failure of defendants operating south of the Ohio River to maintain rates on hogs in double-deck cars and to apply them to complainant's shipments under a two-for-one rule found not to have resulted in unreasonable or otherwise unlawful rates. The subsequent publication of the rate is, in itself, insufficient to establish the unreasonableness of the former rate, as applied to either single or multiple shipments. Patterson Commission Co. v. C. of G. Ry. Co., 96 I. C. C. 473, 474.

§9¾. Peddler Cars.

See Peddler Cars.

(a) Failure of defendants to maintain peddler-car service on lard substitutes and vegetable cooking oils from Houston, Sherman, San Antonio, and Taft, Tex., to points in Oklahoma, Arkansas, and Louisiana, equivalent to peddler-car service maintained on lard and other packing-house products from other points to same destinations found not unreasonable or unduly prejudicial; showing that such service as maintained from certain points is inadequate to prove that failure to establish it from San Antonio and Taft is unreasonable or unduly prejudicial; and number and length of routes from other points is not of necessity a proper measure for reasonable service from Houston and Sherman. Absence of evidence on operating and commercial conditions on the different routes, existing and sought, and of comparative distances, precludes finding of undue prejudice in that particular. Moreover, peddler-car service may be reasonably required from points originating a considerable traffic in packing-house products requiring refrigeration, but not from other points. Interstate Cotton Oil Rfg. Co. v. A., T. & S. F., 95 I. C. C. 171.

(b) Rates on lard substitutes, cottonseed, and other cooking oils, in peddler cars, found unreasonable and unduly prejudicial to extent they exceed the contemporaneous rates on lard, in peddler cars, for equal distances. From transportation and commercial standpoints lard substitutes are closely related to lard and in 32 I. C. C. 192 the commission prescribed same rate on lard substitutes as applied on packing-house products, in which group lard is included. Moreover, in important particulars lard substitutes have more favorable transportation characteristics, as they do not require icing and may move in ordinary channels, whereas lard requires refrigeration. Interstate Cotton Oil Rfg. Co. v. A., T. & S. F., 95 I. C. C. 171.

(c) Upon contention that as lard substitute is but cottonseed oil, the commission should prescribe peddler-car rates on lard substitutes which are 130 per cent of the c. l. rates on cottonseed oil. FOUND, contention ignores the refining process which cottonseed oil undergoes in its manufacture into lard substitute, difference in value between the two articles, and the character of the containers. Interstate Cotton Oil Rfg. Co. v. A., T. & S. F., 95 I. C. C. 171, 175.

(d) Charges on fresh meat and packing-house products, in peddler cars, from East St Louis, Ill., to points in Indiana and Illinois, found to have been unreasonable to extent they exceeded charges which would have accrued at rates and minimum subsequently established. Furthermore, the rates and minimum charges assailed were on a basis higher than applied over all lines other than that of defendant operating in the particular territory, and throughout central territory. Reparation awarded. Armour & Co. v. I. C. R. R. Co., 96 I. C. C. 678.

(e) Complainant attacked less carload rates and minimum charges on fresh meats and packing house products, in peddler cars, from Chicago to branch line points on the Big Sandy and Logan divisions of the C. & O., in Kentucky and West Virginia as unreasonable, unjustly discriminatory and unduly prejudicial. Respondents proposed to increase the minimum charges on fresh meats and packing house products, in peddler cars, from East St. Louis, Ill., to points on the C. & O., in Kentucky and West Virginia. The peddler car traffic under consideration from both Chicago and East St. Louis is subject to the class rates. There is no contention that commodity rate should be established on this traffic, the complaints being directed against the propriety of the applicable class rates as such. The issues may be determined by considering only those points of destination on the main line of the C. & O., east of Gauley, W. V., and the Ashland, Big Sandy and Logan divisions of that carrier. Traffic from Chicago and East St. Louis to all of the points in question, except those on the Ashland division, is governed by the official classification, traffic to the Ashland division being subject to the official classification for the movement to the main line junction and the southern classification beyond. Class rates from Chicago and East St. Louis to Gauley and main line points west thereof are based upon the C. F. A., zone A scale prescribed in 45 I. C. C. 254. Virginia cities group rates apply to main line points beyond Gauley. Rates to points on the Ashland division are based upon the lowest combination on junction points. To points on the Big Sandy and Logan divisions the rates from Chicago are made by combination on Catlettsburg and Barboursville, the factors beyond the junctions being proportionals approximately 80% of the local rates from Catlettsburg and 67% to 80% of the locals from Barboursville. The combinations to points on the Big Sandy division are subject to the rates to St. Paul as maxima. Joint rates somewhat lower than the combinations apply from East St. Louis to points on the Big Sandy and Logan divisions. In some instances the aggregate of intermediate rates to and from Gauley make through rates lower than the Virginia cities group basis which applies to all main line points east of Gauley. The record shows that materially less than 80% of the locals from the junctions is added to the junction point rates to make through rates from Louisville and Cincinnati to points on the Big Sandy and Logan divisions or branches. The method of shipment and transportation services incident to the movement of articles in peddler cars are too well known to require any detailed description here. Generally speaking, peddler car traffic between points in C. F. A. territory is subject to minimum charges predicted upon the fresh meat carload rate to the final destination and a weight of 20,000 pounds. HELD, class rates on fresh meats, packing house products, and other articles in peddler cars, from Chicago and East St. Louis, Ill., to points on the C. & O., east of Gauley, W. Va., unreasonable to extent they exceed the Gauley combination; class rates on these articles from Chicago and East St. Louis to those portions of the Big Sandy and Logan divisions of the C. & O., extending in a southerly direction from the main line at Catlettsburg, Ky., and Barboursville, W. Va., unreasonable to extent they exceed rates to main line junctions plus arbitraries for hauls beyond the junctions computed as shown later; Class rates to points on C. & O. other than those described not unreasonable or otherwise unlawful; minimum charge from Chicago and East St. Louis to points on the C. & O., to Kentucky, West Virginia and Virginia unreasonable to extent it is greater or less than charges on 20,000 pounds of freight at 3c per 100 less than fourth class rates from point of origin to final destination of the car; proposed increased minimum charges from East St. Louis not justified, reparation awarded. Wilson & Company v. C. & O. Ry., 104 I. C. C. 641.

§10. Tank Cars.

See Tank Car Shipments.

(a) Charges on fuller's earth, moving in tank cars furnished by shipper because of inability of carriers to furnish adequate box-car equipment, from Georgia and Florida points to Richmond, Calif., based on combinations to and from the Mississippi River, found unreasonable to extent class rates for haul east of New Orleans, La., exceeded the contemporaneous commodity rates applicable on shipments moving in box cars. Reparation awarded. Standard Oil Co. v. A., T. & S. F. Ry. Co., 89 I. C. C. 27.

(b) Upon further hearing, rates on crude petroleum, in tank-car loads, from Irvine and Beattyville, Ky., to Blue Island, Ill., found unreasonable to extent they exceeded rates from mid-continent field. Taking into consideration the greater distance from mid-continent than from eastern Kentucky field, a parity of rates as between the two fields would sufficiently allow for mountainous character of originating territory in eastern Kentucky, for lesser volume of movement, and for lighter weight of oil. Reasonable rates prescribed and reparation awarded. Original report, 59 I. C. C. 689, reversed. Barnett Oil & Gas Co. v. Director General, 93 I. C. C. 85.

(c) On account of risk to passenger traffic, the New York Rapid Transit Corp. refused longer to permit petroleum oil, in tank cars, to be transported through its subway in Brooklyn, N. Y. Complainant was notified by the South Brooklyn Ry. Co. that it would not transport such commodity to complainant's plant after June 1, 1924. Upon complaint requesting that commission require carrier to continue such transportation after June 1. HELD, upon the record, made in March, 1924, the commission has before it no violation of the act in that regard. Huber v. C. R. R. Co. of N. J., 93 I. C. C. 539, 540.

(d) Upon contention that in determining reasonable rates on cottonseed oil consideration should be given to the high percentage of empty to loaded mileage of tank cars used in the transportation of that commodity, HELD: While the total mileage may be about twice that of the loaded mileage, this fact is to a large extent offset by the further fact that the maintenance expense to the owners of these tank cars is considerably more than twice the mileage allowance by the carriers. It is a convenience to interveners to have their own equipment but the fact remains that if this equipment, or other equipment of like serviceability, were not purchased and maintained by shippers, carrier would be put to a great deal of additional expense which is now borne by shippers. Oklahoma Corp. Commission v. A. & S. Ry. Co., 98 I. C. C. 183, 225.

(e) Respondents proposed to so restrict the term "tankcar" as to make it applicable only when the tanks thereon are permanently attached and can not be detached for filling, emptying, or storage of their contents. For about two months after the first multiple unit car was shipped cars of that type were handled by the carriers on the tank car basis, but on March 9, 1922 the official classification committee ruled that it was not a tank car, and this resulted in considerable increases in the charges and the complaint in 85 I. C. C. 728. In that case the Commission found that the multiple unit car, with the full complement of tanks securely attached to the underframe of the car when offered for transportation, fell within the undefined designation of "tank car" as used in classification. Chlorine gas has become a necessary article of commerce, and its dangerous character requires that every safeguard be used in its transportation and handling. The multiple unit car affords such safeguard, both as to transportation and the necessary handling at the loading point and destination. It would not be practicable, or even possible, for some of the consumers to use chlorine gas when shipped in single unit cars. The use of a car, the tanks of which may be removed in the interest of safety in handling, is necessary for the future development of the chlorine gas industry. If the full complement of tanks which form the superstructure of the multiple unit car is securely attacked to the underframe when offered for transportation, and also when offered for return movement after being unloaded there seems to be no good reason for the application of different rules and charges on cars of that type and the class V cars. It has not been shown that the application of the tank car basis on the multiple unit car will unjustly discriminate against shipments in tanks loaded on gondola cars owned by the railroad company and fitted by the shipper with cradles similar to those of the multiple unit car. Such a gondola car is not a private car and is not entitled to return without charge when empty nor to the private car per mile allowance. The gondola car can be made suitable for the transportation of other commodities by the removal of the cradle. HELD, schedules not justified. New schedules may be filed containing a rule defining the term "tankcar" so worded as to include within the meaning thereof specially constructed multiple unit tank cars consisting of underframe designed only for the carriage of tanks or cylinders which form the superstructure and are integ-

ral parts of the car and are securely attached when offered for transportation. Definition of tank cars 104 I. C. C. 196.

(f) Specially constructed multiple-unit tank car with full complement of tanks which form superstructure of the car, securely attached to underframe when offered for transportation, falls within undefined designation "tank cars" as used in defendants' classification and tariffs. Such cars are designed only for carriage of 1-ton tanks or cylinders without which they are not suitable for loading or transportation of any commodity. Mathieson Alkali Works v. B. & O. R. R. Co., 85 I. C. C. 728.

ALL OTHER CITATIONS

Kanotex Refining Co. v. M. V. R. R., 85 I. C. C. 200.

§10½. Private Cars.

See Infra §13, §31; Supra §4; Common Carrier §6; Private Cars.

(a) Complainant alleged that the definition of private car, as published in Fairbanks tariff I. C. C. 8, effective July 7, 1920, is unjust, unreasonable and unduly prejudicial. The cars were under bona fide lease to the complainant and were detained upon a track owned by it, but they did not bear any evidence that they were under lease to the complainant. The record in this case shows that there are upwards of 300,000 private cars in operation throughout the country; that such cars are leased under various conditions for terms as short as a single trip; and that the task of formulating a rule which would give effect to the finding of the Commission and at the same time have due regard for the interests of the carriers and the shippers, was attended by considerable difficulty. It further shows that the rule adopted was the result of mature deliberation and has worked out in practice in a generally satisfactory manner; and no better substitute has as yet been brought to the attention of the Commission. HELD, rule attacked not unreasonable or otherwise unlawful, complaint dismissed. International Agricultural Corp. v. A. & W. P. R. R., 93 I. C. C. 189.

(b) The failure to charge private cars in the distribution of available equipment has been repeatedly condemned by the Commission and the courts. Farmers Union Cooperative Business Asso. v. M. P. R. R. 112 I. C. C. 269, 274.

§11¾. Rental Charges.

(a) Complainant attacked rules and regulations and charges proposed by defendant for the use and detention of cars on its line as illegal and unreasonable. Complainant operates a switching or belt line in Rockland, Me., 5.1 miles in length. Its capital stock is owned by the Rockport Lime Corporation. The proprietary industry performs complainants accounting and other office work at a stated charge of $1,000 per annum and its general officers serve as general officers of complainant without compensation. It files tariffs and reports with the Commission. It does not participate in joint rates, but maintains switching charges on both local and interline business. It does not issue bills of lading nor make way bills for outbound shipments. Defendant is the only line haul carrier serving Rockland, that point being the eastern terminus of one of its branches. For interline business complainant depends entirely on defendant for car supply. It keeps foreign cars in repair according to the master car builders rules of the association, seals cars, and maintains a seal record. Defendant has kept a record of cars detained on complainants line and entered on its books charges for same at the uniform per diem rate of $1 per car, without switching reclaim, which is the basis fixed by the association for nonmember roads. Complainant sought establishment of the special demurrage basis prescribed in 61 I. C. C. 551, which would allow three days free time on each load interchanged. The average detention of cars on complainants line for years 1920, 1921 and 1922 was 1.86 days, HELD, detention of cars as at present in effect unjust and unreasonable, and that modified rules provide a proper basis for car hire settlement, on cars received loaded and returned empty, or received empty and returned loaded, 48 hours free time will be allowed and on cars received loaded and returned loaded, 96 hours free time. Lime Rock R. R. v. M. C. R. R., 102 I. C. C. 48.

(b) Complainant owns certain tank cars which is forwarded empty during 1920 from Kansas City, Kas., and other points to a lessee at Ranger, Tex. At time of this movement the cars were stenciled with complainants lettering,

but upon arrival at Ranger the lessee restenciled them with its own lettering. When delivered to the lessee at Ranger the cars had accrued, since the last accounting date an excess of empty over loaded movement of 32,826 miles. During 1923 the cars were turned back to complainant and restenciled with the lettering which they bore when forwarded to Ranger in 1920. The cars accrued an excess of loaded over empty movement of 23,246 miles during 1923 which complainant desires to use as a partial offset against the 32,826 miles of excess empty movement accruing in 1920. The applicable tariffs provided in substance that defendant would pay rental to the owners of tank cars of 1c per loaded or empty car mile prior to Nov. 1, 1920 and 1.5c thereafter, subject to the limitation that the empty mileage for which payment would be made must not exceed the loaded mileage. The tariffs further provided that defendant would assess transportation charges for each mile of empty movement in excess of the loaded movement. Upon instructions from complainant defendant paid the lessee for the use of the cars represented by the excess empty movement of 32,286 miles. The lessee became insolvent and defendant demands payment for the 1920 excess empty mileage from complainant. Six months is allowed after the close of the accounting year within which excess empty mileage accruing during the accounting year may be offset by subsequent loaded mileage. The granting of complainants request would require an offset by loaded mileage accruing about three years later. Carriers can not reasonably be expected to hold their books open indefinitely to permit offsets of this character. There is nothing in the record which would justify the conclusion that the rules should be changed. HELD, rules attacked not unreasonable complaint dismissed. Kansas City Structural Steel Co. v. A. T. & S. F. Ry., 102 I. C. C. 113.

(c) It is a fundamental principle that a car owner is entitled to adequate compensation for the use of his car by another carrier. Morehead & North Fork Railroad Co. v. C. & O. Ry. Co., 100 I. C. C. 45, 48.

§11⅞. Per Diem charges.

See Supra §11¾; Per Diem Charges.

(a) Per diem charges are in the nature of a reciprocal charge, not intended to yield a profit. Virginia Blue Ridge Ry. v. S. Ry., 96 I. C. C. 591, 593.

(b) Complainant attacked per diem charge of $1 per car per day demanded by defendant for the use and detention of cars on its line subjects it to unjust and unreasonable charges. Complainant operates 24.42 miles of main line railroad between Morehead, Ky., and Redwine, Ky. At Moorhead complainants line connects with that of defendant, which is its only trunk line connection; at Redwine it connects with the Lenox R. R., a line 8 miles in length which has no outlet except via the Morehead. Prior to May 1, 1921 settlements between defendant and complainant for the use and detention of freight cars on the line of the latter were made on the straight demurrage basis, which allowed two days free time on each load interchanged. Since that date defendant has rendered bills for cars delivered to the complainant, whether for its own use or for the account and use of the Lenox, on the basis of $1 per car day, which is the current per diem rate. The per diem plan with reclaims applies to carriers which perform a switching service as distinguished from a line haul. No reclaim is allowed where a short line whether industrially owned or otherwise, performs a line haul service as distinguished from a switching service. The complainant herein performs only a line haul service. To prescribe the rules laid down in 61 I. C. C. 551 to short line road haul carriers would enable them to participate in a through movement without incurring any responsibility for car hire. It is a fundamental principle that a car owner is entitled to adequate compensation for the use of his car by another carrier. The modified demurrage basis asked for in this case would lessen the incentive to hasten the loading or unloading and return of cars to its trunk line connections. In fact, it would give the short line the unrestricted use of foreign equipment to such an extent as to practically obviate the necessity of supplying itself with adequate equipment. HELD, defendants practice of requiring complainant to pay for the use or detention of freight cars while on complainants line at the current per diem rate is not unreasonable, complaint dismissed. Morehead & North Fork R. R. v. C. & O. Ry., 100 I. C. C. 45.

(c) Practice of Southern Ry. Co. of requiring the Virginia Blue Ridge Ry., a short-line originating carrier, to pay for the use or detention of foreign freight cars while on the latter's line at the current per diem rate, found not unjust or unreasonable. Complainant participates in joint rates and applies the uniform demurrage rules, and is not entitled to both free-time allowance on foreign cars it uses and divisions covering compensation for the hire of such cars. Virginia Blue Ridge Ry. v. S. Ry. Co., 96 I. C. C. 591.

(d) The per diem plan with reclaims applies to carriers which perform a switching service as distinguished from a line haul. No reclaim is allowed where a short line, whether industrially owned or otherwise, performs a line-haul service as distinguished from a switching service. Application of the modified demurrage plan prescribed in 61 I. C. C. 551 was restricted to industrial common carriers, and its purpose was to prevent undue favoritism to the proprietary industries through the payment of switching reclaims. It was not designed to govern the interchange of cars between trunk lines and independent line-haul common carriers. Virginia Blue Ridge Ry. v. S. Ry. Co., 96 I. C. C. 591, 593.

(ef) A carrier is not entitled to both free-time allowance on foreign cars it uses and divisions covering compensation for the hire of such cars. Virginia Blue Ridge Ry. v. S. Ry. Co., 96 I. C. C. 591, 594.

(g) Complainant found not entitled to the basis of settlement for the use and detention of foreign freight cars prescribed in 61 I. C. C. 551, in view of the fact that it performs a line-haul service, and not a switching service, and performs no service at all on the majority of its own shipments moving over defendant carrier's line. Were it given the demurrage basis sought it would secure practically the free use of trunk-line equipment, and its connections would have to pay per diem for the extra free time asked. Such a basis would be more favorable to complainant than straight per diem. Western Pine Lumber Co. v. Director General, 96 I. C. C. 625.

(ga) Assessment of charges for use or detention of foreign cars on the Lime Rock R. R. under per diem rules of the American Ry. Asso., found unjust and unreasonable. Establishment of special demurrage basis prescribed in Birmingham Southern case, 61 I. C. C. 551, would be too liberal to be applied here and would encourage inefficiency in car handling and unnecessary delays. Basis for settlement upon rules laid down in the cited case, as modified herein, prescribed and settlement in accordance therewith authorized. Lime Rock R. R. v. M. C., 102 I. C. C. 48.

(gb) Basis for payment by the Chaffee R. R. for use or detention of foreign cars on its line, equal to the current per diem rate, prescribed. Chaffee R. R. v. W. M., 102 I. C. C. 53.

(gc) Practice of defendant carriers in requiring the Jefferson & Northwestern Ry. Co., an industrial common carrier, to pay for use or detention of foreign freight cars while on latter's line at the current per diem rate, found not unjust or unreasonable. Complainant applies the uniform demurrage rules, participates in joint rates and divisions on traffic on which it receives a line haul, and is under obligation to furnish its share of equipment, which it may do either by purchase or rental. Jefferson & Northwestern Ry. v. M., K. & T., 102 I. C. C. 72.

(h) Complainant attacked charges exacted by defendants under the code of per diem rules of the American Railway Association for the use or detention of foreign freight cars on its line as unjust and unreasonable. The Complainant, Jefferson & Northwestern Ry. Co., operates about 40 miles of standard gauge railroad, located wholly within Texas. It connects with the M. K. & T., and T. & P., at Jefferson. From Jefferson it extends 35.45 miles to Marietta with a branch line from Givens to Linden, 4.86 miles. For interline business it is entirely dependent on connecting lines for car supply. As a nonsubscriber complainant now accounts to its immediate connections for the use of foreign freight cars, such connections under the per diem rules being directly responsible to the owners for per diem charges. If it became a subscriber it would be obliged to maintain separate accounts and make separate settlements with all owners of cars which were used on its road. Car owners would also be compelled to maintain separate accounts, and the number of settlements to be made each month would be increased. HELD, defendants practice of requiring com-

plainant to pay for the use or detention of foreign freight cars while on complainants line at the current per diem rate not unjust or unreasonable, complaint dismissed. Jefferson & Northwestern Ry. v. M. K. & T. Ry., 102 I. C. C. 72.

(i) Per diem charges are designed to represent the average cost of car ownership and are not intended to yield a profit. As a common carrier participating in joint rates, complainant is under an obligation to furnish its share of the equipment. This it may do either by purchase or rental. The per diem rental that complainant pays for the use of cars is merely equivalent to interest, depreciation, insurance ,taxes, and other car ownership costs which it would have to bear if it owned the cars used in interline traffic. The car owners incurs these costs in the first instance, and is reimbursed by complainant through the per diem or rental charges. Jefferson & Northwestern Ry. v. M. K. & T. Ry. 102 I. C. C. 72, 75.

(ia) Proposal of Tennessee R. R., a short-line carrier, to amend its rule providing for exemption from demurrage rules of empty cars placed for coal loading, and cars under load with coal, by making such exemption inapplicable to mines on its line and providing in lieu thereof for assessment of the current per diem rate on all cars held after free-time allowance after placement until released, designed apparently for no purpose except to transfer carrier's car-hire costs to coal operators, found not justified. Demurrage on Coal and Coke, 102 I. C. C. 554.

(ib) A carrier is under obligation to furnish equipment necessary for transporting traffic tendered to it, and if it does not possess such equipment charges paid for revenue thereof can not be considered as an item of expense which is not included in rate. See 42 I. C. C. 509. Demurrage on Coal and Coke, 102 I. C. C. 554, 557.

(j) Complainant, Marcellus & Otisco Ry. alleged that the charges for the use and detention of foreign cars on its line under the per diem code and car service rules of the American Railway Association were and are unjust, unreasonable and unlawful. Complainant extends from Martisco to Otisco Lake, N. Y., distance 10 miles. Complainant owns one locomotive but no other equipment. The per diem system is intended to be a reciprocal agreement, although it is extended to short lines which own few cars and interchange none. In some instances, the short line receives some return by the assessment of demurrage against shippers or consignees for a part or the full time that the car is on its rails. The per diem that complainant pays for car hire is merely equivalent to interest, depreciation, insurance, taxes, and other car ownership costs which it would have to bear if it owned the cars used in interline traffic. By renting cars from defendant on a per diem basis, complainant is relieved of the necessity of investing in equipment. HELD, defendants practice of requiring complainant to pay for the use or detention of foreign freight cars while on complainants line at the current per diem rate, without allowance of free time, not unjust, unreasonable or otherwise unlawful, complaint dismissed. Marcellus & Otisco Ry. v. N. Y. C. R. R., 104 I. C. C. 389.

(k) Charges exacted by defendant under the code of per diem rules for the use and detention of foreign freight cars on the line of Morehead & North Fork Railroad Co., found not unjust or unreasonable. It is a fundamental principle that a car owner is entitled to adequate compensation for the use of his car by another carrier. The application of the special demurrage basis, prescribed in the Birmingham Southern case, 61 I. C. C. 551, to short-line road-haul carriers would lessen the incentive to hasten loading or unloading and return of cars to trunk-line connections, and give the short line the unrestricted use of foreign equipment to such an extent as to practically obviate the necessity of supplying themselves with adequate equipment. Morehead & North Fork Railroad Co. v. C. & O. Ry. Co., 100 I. C. C. 45.

(l) The per diem plan with reclaims applies to carriers which perform a switching service as distinguished from a line haul, and no reclaim is allowed where a short line, whether industrially owned or otherwise, performs a line-haul service as distinguished from a switching service. Morehead & North Fork Railroad Co. v. C. & O. Ry. Co., 100 I. C. C. 45, 48.

III. ASSIGNMENT AND DISTRIBUTION.

A. Counting of Cars.

§12. In general.

See Demurrage §7½ (a).

(a) Complainant attacked defendants rules, regulations and practices governing the distribution and allotment of box cars to shipper at Garbutt and Wheatland, N. Y., for interstate transportation of gypsum products as unreasonable, unjustly discriminatory and unduly preferential to a competitor at Wheatland, N. Y. Defendants rule provided that the quota of each industry was fixed by taking the prior month of highest loading and shipment in 1922 from its plant over both railroads and a percentage was worked out whereby cars were to be allotted to each of the industries on the basis of such quota. Cars received by any industry from the Pennsylvania were to be charged against the percentage allotment. This rule remained in effect only one month. The complainant does not seek damages. Complainant withdrew its prayer for the establishment of a rule or regulation for the future. The rule was put in as an emergency matter, remained in effect but one month, and is not now in force. The case is purely moot. HELD, complaint dismissed. Empire Gypsum Company v. B. R. & P. Ry. 91 I. C. C. 719.

(b) Commission instituted an investigation concerning the justness, reasonableness, and lawfulness of the rules, regulations, and practices of all carriers by railroad subject to the act, with respect to the distribution of cars to coal mines, other than anthracite, for coal loading, and ratings of such mines as the basis for the distribution of cars thereto for coal loading. See 80 I. C. C. 520 and 93 I. C. C. 701. Mine ratings are the formulary basis according to which railroads make distribution of cars to coal mines for loading. Especially in times of socalled car shortage, a just and reasonable basis of mine ratings must exist in order that there may be a just and reasonable distribution of available cars to coal mines, then usually most clamorous for cars. The purpose of this proceeding is to insure that the system of rating coal mines, other than anthracite, will result in fair, just and reasonable ratings, which will measure as closely as possible the relative lawful rights of shippers tendering such coal for transportation at the mines to distributive shares of cars when enough are not available to supply all demands. Obviously the duty of the carrier to supply equipment for coal loading is based on what is recognized as a tender of coal for shipment, or, as the nature of the business of both the coal mines and the railroad make an actual tender impossible, what is equivalent to such a tender. Experience has shown that in times of car shortage the mines on a given line generally are desirous of shipping all the coal for which equipment can be obtained, as car shortages and high prices for coal have more than a casual connection. As a tender of coal physically has always been recognized as impossible, by custom systems of ratings of the mines have developed, supposed to indicate the ratios of equipment which should legally be made available at the respective mines, in carrying out the carriers duty to distribute its available car supply equitable in times when it can not meet all demands in full. Physical condition takes into consideration the character of the mine—whether a drift, slope, or a shaft mine—the number of entries, the length of the runways or haul, the grades in the runway, the number of loaders, including machines, the number of mine cars and the capacity thereof, the capacity of the shaft, and also the tipple capacity, the number of tipples, and the capacity for dumping, including screenings or preparation of the coal for certain classes of trade. There is included in addition to these the length and car capacity of the tracks under the tipple. Past performances as used here does not include the so-called commercial factor, but is developed by taking the normal working days when a mine had a full car supply and no interference with its operation, which would give it an opportunity to have an accumulation in its pit or mine cars by reason of a previous day of idleness or short car supply, breakdowns, etc. Labor supply is, under the new rules, a controlling factor, which is accorded considerable weight, since it is the factor most subject to continual change. It relates only to men who are actually occupied in the production of coal and in the necessary incidents thereto. The Commission has been given no regulatory jurisdiction with respect to the coal industry, and owe no duty to it other than to enforce, as to the

carriers within its jurisdiction, the provisions of the act, which require adequate service, and prohibit unjust discrimination and undue preferences as between shippers. Whether the coal industry may need reform was not in issue before the Commission; the record is silent upon the question and it is not within the province of the Commission to comment upon or determine it in this proceeding. The object of rating rules is to secure a just and equitable distribution of equipment among those who desire and are prepared to ship, and not to determine who shall and shall not be in a position to produce a commodity to be shipped. Congress has not authorized common carriers to make the personal qualities of the shipper or of his product the test as to whether such a carrier shall respond to a demand for cars, otherwise lawful, upon equal terms with other shippers of the same product possessing different personal or physical characteristics. The primary duty of promulgating proper ratings rests upon the carriers. The present rules represent the result of an earnest and whole hearted effort on their part, with the full cooperation and advice of the operators. Certainly the rules mark a distinct advance over what has prevailed in the past. Clearly they better reflect the actual ability or capacity of the mines to produce and load coal on cars. The rules have not yet had a true test as to their workability, reasonableness, and propriety during an extended period of car shortage, since they have only been in effect during a car surplusage. They should remain in force a sufficient length of time to give them a fair trial. The rules permit of modification from time to time to meet the practical exigencies of particular districts and particular mines, and, having been framed after joint conferences between carrier and operators, they may fairly be expected to work out satisfactorily. HELD, carriers are again admonished to maintain ratings that will be in line with both their duty and ability and the needs of the country. Rules governing ratings of coal mines. 95 I. C. C. 309.

(c) Complainant alleged defendant failed to furnish a reasonable car supply to complainants mines for loading coal; that it inequitably distributed its available equipment, and that it unduly preferred mines located on its lines in the same and other districts. The mines are on the St. Louis-Louisville division of the Southern. The report showing performance of the mine for December contains the following statement: Mine closed down Dec. 4 1922 on account of market conditions: This report was made under oath to defendant in accordance with its mine rating rules. At the hearing it was stated that the mine was shut down, not by reason of market conditions, but because of inadequate car supply, and complainant sought to hold defendant liable for losses sustained after operations ceased, on the theory that by shutting down the mine it was fulfilling its duty of lessening the amount of damage sustained. This argument is not consonant with letter to defendant and report issued to its agent that market conditions were the governing factor in the closing of the mine. Certainly the carriers duty to furnish transportation does not arise until request is made therefor. HELD, defendants practice of distributing cars during the period covered by the complaint not unreasonable or unduly prejudicial, complaints dismissed. Ayrshire Coal Co. v. S. Ry., 96 I. C. C. 161.

(d) It is the duty of a carrier to furnish a reasonable car supply and make a reasonable and equitable distribution of such cars as it has available. Ayrshire Coal Co. v. S. Ry., 96 I. C. C. 161, 169.

(e) It is not possible always for carriers to furnish particular mines their exact quota of cars during periods of car shortage, and if shortages or averages are adjusted with reasonable promptness a carrier may be said to have fulfilled its duty. Ayrshire Coal Co. v. S. Ry., 96 I. C. C. 161, 169.

(f) The Interstate Commerce Commission passed a preferential car service order known as service order No. 23 as amended July 25, 1922, regulating the furnishing of cars by interstate common carriers for the loading and carrying of coal, which put such car service into five classes, each class constituting a paragraph in itself and being followed by "and subject thereto in the order of priority." Class 2 contained clauses (a), (b), (c), and (d), and at the end of the paragraph constituting class 2 there was this language: "Note.—It is not intended by this paragraph to give any priority as between clauses (a), (b), (c) and (d)

hereof." HELD, that the language at the conclusion of each of said five classes, "and subject thereto in the order of priority," meant that each class stated in said car service order was to be given priority in the furnishing of cars over those classes following in numerical order, and that the note attached to class 2 was controlling as to the clauses in said class, and therefore there was no priority as between clauses therein (a), (b), (c), and (d). Stoner & Co. v. Blocton Export Coal Co. (Miss. 1924) 100 So. 5.

(g) Findings in former report, 80 I. C. C. 520, that practice of carriers in assigning private cars, and system or foreign-line cars for railway fuel, to bituminous-coal mines in excess of ratable share contemporaneously distributed to bituminous-coal mines upon their lines, which do not receive assigned cars, was unjust, unreasonable, discriminatory, and unduly prejudicial to mines not receiving assigned cars in favor of mines furnished such cars in excess of ratable proportion, and that cars specially placed by order of the commission under provision of section 1 (15) of the act may properly be treated as assigned cars, and need not be taken into account in determining ratable distribution when order of placement so requires, affirmed. Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701.

(h) Upon contention that under section 1 (12) of the act the commission has no jurisdiction over distribution of cars to carrier-owned or output-contract mines which furnish railway fuel exclusively for at least six months, because such mines are not "served" by a carrier. HELD, word "served" has no judicially determined or technical meaning which would make it inapplicable to such mines. The commission believes that Congress intended to use the word in its ordinary and well-accepted meaning, i. e., to mean the furnishing of cars by a carrier at its own mines or at those the output of which it takes. As used in paragraph (12) "served" is a convenient term to show that provisions of this paragraph apply not only to mines located on a carrier's own line, regardless of ownership or contractual arrangements, but also to those mines located off its line and which it customarily supplies with cars. Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701, 714, 715.

(i) Assigned-car mines which furnish their output for long periods of time to railroads are, at the end of such periods, because of lower costs and better labor conditions, in a position to undersell competing unassigned-car mines. Railroad-owned mines in many instances sell coal commercially and may not only dispose of their product commercially, but they may be leased or sold to outside interests, and thus actively engage in selling commercial coal. Moveover, there is competition in labor between railroad-owned and output-contract mines on the one hand and commercial mines on the other. The commission thinks, therefore, that it has jurisdiction to deal with the distribution of cars to all of such mines under section 3 of the act, competition not being an essential element under section 1. Penn Tobacco Co., 18 I. C. C. 197, 200. Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701, 717.

(j) Fundamental purpose of the act is equality of treatment in rates and service, and this principle may not be violated merely because carrier in that way may operate at less expense. If this were not true a carrier in times of car shortage could restrict its car supply to a few large and well-operated mines on its line and ignore remainder. A carrier's self-interest may not override requirement of equality in car distribution. See 263 U. S. 515, 523; 225 U. S. 326. Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701, 721.

(k) Storage of coal by railroads and others in periods of car surplus tends to equalize demands by operators on railway equipment throughout the year, and to prevent periods of extreme car shortage during which, because of the great demand for coal, inefficient high-cost mines spring into operation, and the public is required to pay excessive prices for coal. Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701, 724.

(l) The question of a just and nondiscriminatory car distribution rule under provisions of sections 1 and 3 of the act is a different question from that of a rule to be prescribed in case of emergency. The distinction is recognized in section 1 (15) where it is provided that the commission may suspend car service rules at such times. Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701, 724.

(m) Contention that elimination of the so-called assigned-car rule of car dis-

tribution would be an unwarranted interference by commission with carriers' rights to purchase coal where and from whom they please, not sustained following Illinois Central case, 215 U. S. 477, in which the court said "The right to buy is one thing and power to use equipment of the road for purpose of moving articles purchased in such a way as to discriminate or give preference are wholly distinct and different things." Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701, 725.

(n) In determining upon a just and workable car distribution rule, the commission must recognize fact that car shortages result from a general shortage in facilities, including terminals, motive power, etc., and that to permit private-car owners to have their cars placed at designated mines in excess of the pro rata allotment means that private-car owners will receive more than their fair share of those transportation facilities which they do not own, while to require pro rata distribution of cars is to bring about a just and nonpreferential distribution in conformity with fundamental requirements of the act. Assignment Cars for Bituminous Coal Mines, 93 I. C. C. 701, 732.

(o) Upon investigation of the rules, regulations, and practices governing the ratings and distribution of cars to coal mines, other than anthracite. FOUND, that rules established in 1923 should be allowed to remain in force for a fair trial. They mark a distinct advance over what has prevailed in the past, better reflect actual ability of mines to produce and load coal, have not had a true test as to their workability, reasonableness, and propriety during extended car-shortage periods, and, as framed, permit of modification to meet practical exigencies of particular districts and mines. Having been framed after joint conferences between carriers and operators they may fairly be expected to work out satisfactorily. Rules Governing Ratings of Coal Mines, 95 I. C. C. 309.

(p) Inflation of the rating of one mine or district while other ratings are normal, or inflated to a lesser extent, inevitably brings about discriminations or preferences forbidden by the act. Rules Governing Ratings of Coal Mines, 95 I. C. C. 309, 323.

(q) Upon contention that practices of Southern Railway in connection with distribution of coal cars to complainants' mines in Indiana during period September 1, 1922, to March 31, 1923, resulted in unreasonableness, undue prejudice to complainants, and undue preference of the Sunlight Coal Co. and other mines in same district. HELD, due to abnormal conditions following strikes of bituminous-coal miners and railway shopmen, special service orders of commision controlled distribution of equipment for coal loading from September 1 to December 20, 1922, and all rules, regulations and practices of common carriers were suspended so far as they were in conflict with the special service orders which provided for assignment of cars for special purposes in preference to use for any other purpose and required preference and priority in movement of certain specified commodities. Such unusual conditions made impossible the equalization in car supply sooner and defendant's practice of distributing cars during period covered by complaints not shown to have been unreasonable or unduly prejudicial. Ayrshire Coal Co. v. S. Ry. Co., 96 I. C. C. 161.

(r) If the Interstate Railroad had made proper arrangements with its connections for the return of its cars, there would have been available for the use of mines on its line more cars than they actually received under the existing arrangements. The Interstate should distribute cars under its rules governing distribution of cars to coal mines dependent upon it, and invoke the regulations provided for the prompt return of the cars by connections, instead of delegating these duties to the Southern. United Colleries v. S. Ry. Co., 96 I. C. C. 338, 341.

(s) Proposal of Missouri Pacific to exempt coke ovens on its line from the operation of the demurrage rules found not justified, in view of the fact that experience has demonstrated that the application of such rules at the only by-product coke oven on the line of this carrier has not worked any hardship. Proposed schedules making car-distribution rules applicable would afford its oven an undue advantage in the use of its equipment over other users of said equipment, with the exception of coal mines and coke ovens adjacent to mines and operating under car-distribution rules. Demurrage Rules on Coke, 96 I. C. C. 731.

(t) Complainant alleged that during

the period Aug. 1, 1922 to Feb. 28, 1923 defendant failed and neglected to apply just and reasonable ratings to the coal mines served by it, and to distribute cars among said mines so as to give complainants mines their just, reasonable and proper share of the cars available for coal loading, result in undue prejudice and in violation of the act. Complainants mines, known as Nos. 1 and 3, are located on a short spur which connects with the Winding Gulf branch of defendants line at Loop Junction, W. Va. The mines are on the same siding and have separate tipples, but are rated as one mine. Complainant operates another mine in the same general territory, located on the C. & O. Semibituminous or smokeless coal is produced, which is of substantially the same character as, and in competition with, that produced throughout the New River and other districts in southern West Virginia. During the period complainant of, except for about 10 days in Nov., defendant rated mines on its line in accordance with the code of rules embodied in circular CS-31, revised, promulgated by the United States Railroad Administration in Sept. 1918. The Commission is not prepared to say that, because ratings established under that circular were based largely upon the sworn reports of the operators, the carrier violation paragraph 12 of section 1. It was the general practice during this period for all bituminous coal loading carriers in the country to rate the mines served by them in accordance with that circular. A mine is entitled to its pro rata share of available cars ordered, but not to exceed its ratings. The evidence here shows that complainants mine, based on its order, received more than its pro rata share of available cars during the period in question. HELD, complaint dismissed. Winding Gulf Collieries Co. v. V. Ry. 102 I. C. C. 41.

(ta) While section 1 (12) of the act casts upon carriers the duty, during car-shortage periods, to apply and maintain just and reasonable mine ratings, it does not specify in detail the manner in which those ratings should be deduced. Winding Gulf Colliery Co. v. V. Ry., 102 I. C. C. 41, 42.

(tb) A mine is entitled to its pro rata share of available cars ordered, but not to exceed its rating. Winding Gulf Colliery Co. v. V. Ry., 102 I. C. C. 41, 42, 45, 46.

(u) Complainant alleged failure and refusal of defendant to furnish the proportion of cars to which it was lawfully entitled for the shipping of bulk grain between Sept. 16 and Dec. 31. 1922 subjected it to undue prejudice as compared with shippers at Bushton, Kas. Bushton is on the M P. Tisdale is 8 miles east of Winfield, Kans. Complainant testified that it was the practice to order a car whenever wheat enough was on hand to load. During the period of the complaint the elevator was kept as full of wheat as practicable. A severe car shortage existed during the period of the complaint and defendant was distributing its cars in accordance with the usual practice of having station agents report to the chief train dispatcher the local situation based upon the grain on hand and the orders received for cars. HELD, complaint dismissed. Tisdale Farmers Union Cooperative Asso. v. M. P. R. R., 102 I. C. C. 61.

(ua) Failure and refusal of defendants to serve complainant's mine on the Coalton branch of the B. & O., at Mabie, W. Va., with cars and interchange coal traffic from such mine to all interstate destinations reached by the Western Maryland and connections, and to accord such traffic the flat West Virginia region basis of rates while according such service, cars, and rates to farther-distant competing mines located on the same branch found not to have resulted in undue prejudice with consequent damages to complainant. Having refused an offer of the same arrangements as were accorded competing mines under agreement, complainant can not now with propriety contend that he was damaged by any failure to receive a proper share of cars because not accorded the same status as the competing mines. Brady v. B. & O., 102 I. C. C. 19.

(ub) Upon complaint alleging that practice of the C. & O. in rating mines in accordance with rules embodied in circular CS-31, revised, promulgated by U. S. Railroad Administration, resulted in an unjust, unreasonable, and unduly prejudicial distribution of coal cars to complainant's mines in the New River district of West Virginia. FOUND: Carrier did not violate section 1 (12) of the act because ratings established under that circular were based largely upon sworn reports of operators. It was the general practice to rate mines in accordance with that circular, and complainant failed to show in any instance that operators' reports,

upon which ratings were based, were erroneous. Moreover, evidence shows that complainant's mines, based on its orders, received more than its pro rata share of available cars. Winding Gulf Colliery Co. v. V. Ry., 102 I. C. C. 41.

(v) Refusal of the B. & O. to rate mines on the Strouds Creek & Muddlety R. R., located in the Gauley district of West Virginia, and accord such mines a just and reasonable distribution of cars for coal loading, while contemporaneously furnishing such a rating to mines on its Richwood branch, located in the same district, found to result in undue prejudice to the Strouds Creek mines. The Strouds Creek mines are entirely dependent upon the B. & O. for their car supply and under the provisions of section 1 (12) of the act are entitled to same treatment in the matter of car supply as are mines located directly upon branches of the B. & O. Tioga Coal Co. v. B. & O., 101 I. C. C. 611, 616.

(w) In 60 I. C. C. 569, division 5 found that the practices of defendant the director general during the period July 1, 1919 to March 1, 1920 in the distribution of coal cars between the mines as a whole on the Monongahela Ry and Morgantown & Wheeling Ry. on the one hand, and mines on the P. & L. E., south of Pittsburgh and on the Monongahela division, Southwest branch, and Pittsburgh West End division of the Pennsylvania, on the other hand, subjected operators of coal mines on the first two named roads to undue prejudice to the extent that the percentage of cars furnished the mines as a whole on the latter roads was less than the average percentage of cars furnished the mines on the other lines named HELD, previous findings modified and practices of director general during the period July 1, 1919 to March 1, 1920 excluding Nov. 1919, in the distribution of coal cars subjected complainant to undue prejudice to the extent that the percentage of cars furnished mines of complainants members was less than the percentage of cars the Mines as a whole, on all lines here considered, would have received had all the system cars placed for coal loading on those lines been equally distributed under the car distribution rules then in effect. Northern W. Va. Coal. Asso. v P. R. R. 109 I. C. C. 604.

(x) Complainant attacked commodity rates on coal, car loads, from Mabie, W. Va., to destinations in other states reached by the Western Maryland, and its connections as unjust, unreasonable and unduly prejudicial in that they exceeded the flat West Virginia basis of rates. He further alleged failure and refusal of defendants to serve his mine with cars and to interchange coal traffic from such mine to all destinations at some convenient point in the Elkins district of West Virginia, and to accord such traffic the flat West Virginia region basis of rates while according such service, cars, and rates to competing mines of the West Virginia Coal & Coke Co. as unduly prejudicial. In 102 I. C. C. 19 division 5 found rates charged on coal, carloads, from complainants mine to Port Covington, Baltimore, Md., as unreasonable and awarded reparation. Complainants mine is on a short spur leading off the Coalton branch of the B. & O., less than 0.5 mile from Mabie, W. Va., and about 6.31 miles south of Norton, W. Va. It is intermediate to Coalton mine 1 and Mabie mine 6. These mines, in addition to Arianna mine 7 of the coal company are the only coal operations on the Coalton branch. It is complainants position that the acts and practices of defendants on and after Oct. 14, 1922 when the Maryland began serving the coal companys mines on the Coalton branch, gave those mines the status of joint mines, namely, mines entitled to service by more than one carrier, and that his mine, being intermediate, was entitled to the same status and treatment. It is clear from the record that the arrangement whereby the coal companys car supply would be furnished by the Maryland and B. & O., in the proportion of 80 and 20 per cent was adapted to the needs of the coal company based upon their past shipments. It is also clear that the arrangement was the result of conference and agreement with the president of the coal company. Similar consideration was not given complainant, but he was advised that cars would be supplied by both carriers only in the proportion of 80 and 20 percent as was done with the coal company. Under the circumstances complainant should have been permitted to divide his orders for cars to the respective carriers in such divisions of 100 per cent of the rating of his mine as his judgment dictated and cars should have been accordingly furnished in conformity with

the supply of cars available on the respective roads. HELD, acts and practices of defendant unduly prejudicial to complainant, reparation awarded. Brady v. B. & O. R. R. 112 I. C. C. 244.

(y) A mine served by two carriers should not be permitted to order cars in excess of 100 of its rating from both roads serving it. It had a right to order its full rating from either of the roads, if it so desired. It also had a right to divide its orders between the two roads as desired, provided that the combined orders did not exceed 100 per cent of its rating. Brady v. B. & O. R. R. 112 I. C. C. 244, 247.

(z) It is well established that a mine served by two roads enjoys advantages not possessed by a mine served by only one road. The reasonable enjoyment of these advantages should be protected. The Commission thinks also that carriers may not, by withholding their equipment or facilities, dictate or control the markets which a particular shipper shall seek or enjoy, while adapting their services to the needs of a competing shipper. Brady v. B. & O. R. R 112 I. C. C. 244, 250.

(aa) Complainants alleged defendants failure and refusal to furnish them with their proportionate share of the available cars for the shipment of bulk grain, while contemporaneously furnishing their competitors cars in excess of their proportionate share, subjected them to undue prejudice in violation of section 3. Complainants are in competition with shippers located at the same points, particularly with the Ryan Grain Co., the Ryan Company, which has elevators at McCracken and Hargrave, and the Bushton Grain & Supply Co. at Bushton. These two companies are specifically designated as having received a preference in the number of cars furnished. Defendant is the only line serving the points in question. Cars available for grain loading during the period of complaint were distributed in accordance with defendants circular 19. This circular provided that cars would be distributed among the shippers on the basis of the amount of grain on hand, conveniently located for prompt loading, and tendered for shipment as reported to the carriers agent, in writing, when cars were ordered. This method was in accordance with 47 I. C. C. 475. Defendant admits that it was unable to furnish all cars ordered and asserts that its cars in many instances were unfit for grain loading because of its inability to place them in proper condition because of the strike of its mechanical forces. The record does not indicate the number of cars ordered by the complainants, by those alleged to have been preferred, or other grain shippers nor does it show in all instances the amount of grain the shippers had on hand at the time cars were ordered. It is impossible therefore to determine the number of cars that each shipper was entitled to, especially at McCracken, where shippers other than those named herein ordered and received cars for grain loading. HELD, complaints dismissed. Farmers Union Cooperative Business Asso. v. M. P. R. R. 112 I. C. C. 269.

§13. Private Cars.

See Supra §4, §10½; Infra §31; Demurrage §10; Private Cars.

(a) Commission instituted an investigation with respect to the reasonableness and propriety of the present car distribution rules of the respondents, i. e., all of the steam railroad carriers subject to jurisdiction of the Commission, in so far as such rules apply to privately owned coal cars and cars furnished for railroad fuel coal, with a view to prescribing such just or reasonable rules or regulations as might appear to be necessary. Former report in 80 I. C. C. 520. **Assigned Cars for Railway Fuel.** The principal contentions of the carriers are that the Commission is without authority under the act to abolish the assigned car rule as applied to cars placed at mines owned by a railroad and furnishing it their entire output for an extended period, six months or more, and to mines from which a carrier purchases the entire output for a like period, and that if it has such authority, the record shows that the rule is reasonable and not unjustly discriminatory. Assigned car mines which furnish their output for long periods of time to railroads are, at the end of such periods, because of lower costs and better labor conditions which they have enjoyed, in a position to undersell competing unassigned car mines. The record also shows that railroad owned mines in many instances sell coal commercially. Such mines may not only at any time dispose of part or all of their

product commercially, but may be leased or sold to outside interests, and thus actively engage in selling commercial coal. Moreover, while the Commission does not consider this circumstance essential to its decision in this case, the record clearly shows that there is competition in labor between railroad owned and output-contract mines on the one hand and commercial mines on the other. The Commission has jurisdiction to deal with the distribution of cars to all of such mines under section 3. Competition is not an essential element under section 1. **Private Assigned Cars.** In determining upon a just and workable rule the Commission must recognize the fact that car shortages result from a general shortage in facilities, including terminals, motive power, etc., and that to permit private car owners to have their cars placed at designated mines in excess of the pro rata allotment means that private car owners will receive more than their fair share of those transportation facilities which they do not own, while to require pro rata distribution of cars is to bring about a just and nonpreferential distribution in conformity with the fundamental requirements of the act. The fundamental problem is to determine whether differences in transportation conditions justify the inequality of treatment resulting from the assigned car rule. The evidence which has been presented as to the economic necessity of individual shippers or classes of shippers does not warrant the Commission in concluding that this inequality of treatment is justified under the provisions of sections 1 and 3 of the act. As to the contention that the use of private cars during car shortage periods releases railroad cars for commercial mines, which otherwise would have to be placed at private car mines, this overlooks the fact that particularly in time of shortage the mine operator is entitled to an equitable rationing of the transportation facilities which are at hand, and that equality is vastly more important to him than a slight addition to his allotment effectuated by giving his neighbor and competitor a better car supply. Furthermore, if private cars should be withdrawn from carrier service and the remaining supply of cars should be inadequate the Commission has power under the act to require the cars to furnish an adequate supply. In the original report the Commission did not find that the use of private coal cars should be prohibited or that they should not be placed at the mine to which they were consigned. What it did prohibit was the placement of such cars at a mine in excess of the pro rata share of available cars. Private car owners were left free to continue to use their cars and to have them so distributed to designated mines as not to exceed the pro rata share of such mines. HELD, original report, 80 I. C. C. 520, affirmed, and find and conclude that in the distribution of cars for transportation of coal among the bituminous coal mines served by the respective respondents, and each of them, whether located upon the line of a respondent or customarily dependent upon it for car supply, or whether owned or leased by or furnishing their entire output to a respondent, any rule, regulation, practice of the respondents, or any of them, whereby private cars or cars for the loading of bituminous coal for railway fuel purposes are placed at any such mine in excess of the pro rata allotment and distribution of cars for coal loading, currently made to any other of such mines which do not receive private cars or cars for railway fuel and which are on the same division or district established by such respondent for the distribution of cars, is and for the future will be, unjust and unreasonable, and unduly and unreasonably preferential of such mines receiving private cars or cars for railway fuel in excess of such allotment, and unjustly discriminatory against and unduly prejudicial to such other mines not receiving private cars and cars for railway fuel. HELD, further, that all cars should be distributed by such respondent to all mines on such district or division on a pro rata basis; and that if cars are assigned or consigned to any of such mines, and if they are placed at the mines to which they are assigned or consigned, they should be so placed that every mine on the same division or district should receive the same pro rata share of the total number of available cars, whether assigned, consigned or unassigned, which are distributed to all mines on such division or district, and that all such assigned or consigned cars should be counted and charged against the mines at which they are placed in the same manner and to the same extent that unassigned cars are counted and charged. It is not intended that this finding shall prevent the assigning of privately owned cars or cars for

railway fuel to designated mines, provided such mines are not thereby given more than their pro rata share of available cars. It is also not intended that this finding shall preclude the emergency powers conferred on the Commission from requiring the placement of cars for bituminous coal loading at any mine or mines in excess of the current percentage allotment made to mines generally upon the lines of the same carrier, or upon the same division, when the order or direction for placement shall so provide. Assigned cars for bituminous coal loading, 93 I. C. C. 701.

(b) Throughout the Commission reports it has held to the central idea that the carrier, in permitting the use of the private car, must at its peril see that the use of the vehicle does not permit, excuse, or justify a discrimination, preference, or advantage in favor of the owner of the private car, regardless of the present ability of the carrier to furnish on demand an adequate supply of equipment needed for transportation. Throughout the Commission has recognized that when the carrier permits the use of the private car upon its rails, it is responsible for the manner in which the service is conducted in that car, and that the car becomes in all respects as if it were one of the general stock of those owned by the carrier, and subject to the same liabilities and responsibilities as to the use in interstate transportation. Assigned cars for bituminous coal mines, 93 I. C. C. 701, 727.

(c) The fundamental principle which has governed the Commission in dealing with private cars is that such cars, being paid for by the carriers through allowances to their owners, are to be treated as part of the carriers equipment, and may not be so used as to bring about unjust discrimination or unreasonable practices. Assigned cars for bituminous coal mines, 93 I. C. C. 701, 729.

(de) The mere ownership of a private car gives to the owner no superior right to use the facilities of the carrier in transporting it; it gives to him no right to have his private car attached to a locomotive in preference to a system car loaded by another shipper. The ownership of a private coal car or the possession of a foreign railway fuel car can give to an operator no preferred right to other tracks as against a system car loaded by another coal operator, or to have it handled by a train crew in preference to a system car. When any of these general facilities are insufficient to move all the traffic offered, no operator has a superior right over another merely because he enjoys the advantage of owning private cars or has fuel contracts with connecting lines. And this shortage in other facilities which rarely, if ever, fails to accompany a shortage in cars, has an important bearing upon the matter of the distribution of cars, and underlies what the Commission has said on those questions in its formal decisions. Assigned cars for bituminous coal mines, 93 I. C. C. 701, 730.

(f) A private car owner is either entitled to the preference to the full extent of the carriers willingness to accept his cars, or is entitled to no preference whatsoever on account of that ownership, and a compromise is untenable. Assigned cars for bituminous coal mines, 93 I. C. C. 701, 730.

(g) Findings in former report, 80 I. C. C. 520, that practice of carriers in assigning private cars, and system or foreign-line cars for railway fuel, to bituminous-coal mines in excess of ratable share contemporaneously distributed to bituminous-coal mines upon their lines, which do not receive assigned cars, was unjust, unreasonable, discriminatory, and unduly prejudicial to mines not receiving assigned cars in favor of mines furnished such cars in excess of ratable proportion, and that cars specially placed by order of commission under provisions of section 1 (15) of the act may properly be treated as assigned cars, and need not be taken into account in determining the ratable distribution when the order of placement so requires, affirmed. Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701.

(h) Contention of private-car owners that they are entitled to unrestricted use of their cars unless this involves some preferential use of facilities other than cars, not sustained following Rail & River Coal Co., 14 I. C. C. 86, 92. Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701, 730.

(i) Private cars which are paid for by carriers for use and are used on their lines are clearly "facilities possessed," and come within broad powers conferred upon commission by the statute to prevent unjust discrimination. Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701, 730.

(j) Contention that use of private cars during car-shortage periods releases railroad cars for commercial mines, which otherwise would have to be placed at private-car mines overlooks fact that particularly in time of shortage the mine operator is entitled to an equitable rationing of the transportation facilities which are at hand, and that equality is vastly more important to him than a slight addition to his allotment effectuated by giving his neighbor and competitor a better car supply. Furthermore, if private cars should be withdrawn from carrier service and remaining supply should be inadequate, the commission has power under the act to require carriers to furnish an adequate supply. Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701, 736, 737.

§14. Foreign Cars.

(a) Findings in former report, 80 I. C. C. 520, that practice of carriers in assigning private cars, and system or foreign-line cars for railway fuel, to bituminous-coal mines in excess of ratable share contemporaneously distributed to bituminous-coal mines upon their lines, which do not receive assigned cars, was unjust, unreasonable, discriminatory, and unduly prejudicial to mines not receiving assigned cars in favor of mines furnished such cars in excess of ratable proportion, and that cars specially placed by order of the commission under provisions of section 1 (15) of the act may properly be treated as assigned cars, and need not be taken into account in determining ratable distribution when order of placement so requires, affirmed. Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701.

§15. Railway and Fuel Cars.

(a) The word "transportation" as used in paragraph 12 is not limited in its meaning to transportation for compensation, but includes also transportation of the carriers own coal over its line. Assigned cars for bituminous coal mines, 93 I. C. C. 701, 715.

(b) When a railroad company becomes a purchaser of coal upon the lines of a connection, and ships it to itself as consignee, it is entitled to the same consideration as any commercial shipper or consignee and no more, and this is true when the shipment moves partly over the rails of the carrier that is in fact the shipper or consignee. Assigned cars for bituminous coal mines, 93 I. C. C. 701, 716.

(c) It may not be doubted that the equipment of a railroad company engaged in interstate commerce, included in which are its coal cars, are instruments of such commerce. From this it necessarily follows that such cars are embraced within the governmental power of regulation which extends, in time of car shortage, to compelling a just and equal distribution and the prevention of an unjust and discriminatory one. Assigned cars for bituminous coal mines, 93 I. C. C. 701, 716.

(d) Section 1 (12) of the act held to apply to cars placed at carrier-owned and output-contract mines, and can not be relied upon to show that Congress exempted such cars from other provisions of section 1 requiring reasonable rules of distribution, and provisions of section 3 prohibiting unduly preferential or prejudicial rules. Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701, 716.

§16. Car Pools.

(a) Practice of complainant of pooling cars at one of its mines was in violation of defendant's rule and condemned in McCaa Coal Co., 33 I. C. C. 128. Ayrshire Coal Co. v. S. Ry. Co., 96 I. C. C. 161, 166.

§20. Car Shortage.

(a) A shortage in cars usually if not invariably is accompanied by a shortage in some one or more of the other facilities of carriers. Locomotives, tracks, employees, terminal facilities, etc., are so related to number of cars in service that an excessive demand for cars places an excessive burden upon such other facilities. Assignment Cars for Bituminous Coal Mines, 93 I. C. C. 701, 731.

(b) In determining upon a just and workable car distribution rule, the commission must recognize the fact that car shortages result from a general shortage in facilities, including terminals, motive power, etc., and that to permit private-car owners to have their cars placed at designated mines in excess of the pro rata allotment means that private-car owners will receive more than their fair share of those transportation facilities which they do not own, while to require pro rata distribution of cars is to bring about a just and nonpreferential distri-

bution in conformity with fundamental requirements of the act. Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701, 732.

(c) Upon investigation of the rules, regulations, and practices governing the ratings and distribution of cars to coal mines, other than anthracite, FOUND, that rules established in 1923 should be allowed to remain in force for a fair trial. They mark a distinct advance over what has prevailed in the past, better reflect actual ability of mines to produce and load coal, have not had a true test as to their workability, reasonableness, and propriety during extended car-shortage periods, and, as framed, permit of modification to meet practical exigencies of particular districts and mines. Having been framed after joint conferences between carriers and operators they may fairly be expected to work out satisfactorily. Rules Governing Ratings of Coal Mines, 95 I. C. C. 309.

(d) Especially in times of car shortage, which may be due to many causes other than a general inadequacy of the supply of coal cars available to carriers, a just and reasonable basis of mine rating must exist in order that there may be a just and reasonable distribution of available cars to coal mines, then usually most clamorous for cars. Rules Governing Ratings of Coal Mines, 95 I. C. C. 309, 310.

(e) Duty of carrier to supply equipment for coal loading is based on what is recognized as a tender of coal for shipment, or, as nature of the business of both the coal mines and the railroad make an actual tender impossible, which is equivalent to such a tender. In times of car shortage mines on a given line are desirous of shipping all the coal for which equipment can be obtained, as car shortages and high prices have more than a casual connection. As a tender of coal physically has always been recognized as impossible, by custom systems of ratings have developed, supposed to indicate the ratios of equipment which should legally be made available at the respective mines, in carrying out the carrier's duty to distribute its available car supply equitably in times when it can not meet all demands in full. Rules Governing Ratings of Coal Mines, 95 I. C. C. 309, 311.

(f) Before February 28, 1920, when paragraph 4 of section 402 of the transportation act, 1920, was enacted and became paragraph (12) of section 1 of the interstate commerce act, there was no statutory requirement that carriers rate mines as the basis for the distribution of cars thereto during periods of car shortage, although that practice had been in force for many years. Rules Governing Ratings of Coal Mines, 95 I. C. C. 309, 311.

(g) If more equipment is needed to permit railroads to serve all their offering patrons with coal cars, impartially, in volume sufficient to meet the country's needs, then it is the declared policy of Congress that requires that such equipment shall be procured, and that it be used with impartiality, rather than that an indefinably smaller quantity might be turned over to the exclusive service of favored members of an industry, whose past has been wayward, reckless, dissipated, and extravagant, and which lacks proper sense of responsibility. Rules Governing Ratings of Coal Mines, 95 I. C. C. 309, 333.

(h) Upon contention that practices of Southern Railway in connection with distribution of coal cars to complainants' mines in Indiana during period September 1, 1922, to March 31, 1923, resulted in unreasonableness, undue prejudice to complainants and undue preference of Sunlight Coal Company and other mines in same district. HELD, due to abnormal conditions following strikes of bituminous-coal miners and railway shopmen, special service orders of commission controlled distribution of equipment for coal loading from September 1 to December 20, 1922, and all rules, regulations, and practices of common carriers were suspended so far as they were in conflict with the special service orders, which provided for assignment of cars for special purposes in preference to use for any other purpose and required preference and priority in movement of certain specific commodities. Such unusual conditions made impossible the equalization in car supply sooner and defendant's practice of distributing cars during period covered by complaints not shown to have been unreasonable or unduly prejudical. Ayrshire Coal Co. v. S. Ry. Co., 96 I. C. C. 161.

(i) While section 1 (12) of the act casts upon carriers the duty, during car-shortage periods, to apply and maintain just and reasonable mine ratings, it does not specify in detail the manner in which those ratings should be deduced. Winding

Gulf Colliery Co. v. V. Ry., 102 I. C. C. 41, 42.

B. Rating of Mines.

§21¾. In General.

See Branch Lines §1 (i); Words and Phrases (r).

(a) Upon contention that under section 1 (12) of the act the commission has no jurisdiction over distribution of cars to carrier-owned or output-contract mines which furnish railway fuel exclusively for at least six months, because such mines are not "served" by a carrier. HELD, word "served" has no judicially determined or technical meaning which would make it inapplicable to such mines. The commission believes that Congress intended to use the word in its ordinary and well-accepted meaning; i. e., to mean the furnishing of cars by a carrier at its own mines or at those the output of which it takes. As used in paragraph (12) "served" is a convenient term to show that provisions of this paragraph apply not only to mines located on a carrier's own line, regardless of ownership or contractual arrangements, but also to those mines located off its line and which it customarily supplies with cars. Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701, 714, 715.

(b) Assigned-car mines which furnish their output for long periods of time to railroads are, at end of such periods, because of lower costs and better labor conditions, in a position to undersell competing unassigned-car mines. Railroad-owned mines in many instances sell coal commercially and may not only dispose of their product commercially, but they may be leased or sold to outside interests, and thus actively engage in selling commercial coal. Moreover, there is competition in labor between railroad-owned and output-contract mines on the one hand and commercial mines on the other. The commission thinks, therefore, that it has jurisdiction to deal with the distribution of cars to all of such mines under section 3 of the act, competition not being an essential element under section 1. Penn Tobacco Co., 18 I. C. C. 197, 200. Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701, 717.

(c) "Mine ratings" are the formulary basis according to which railroads make distribution of cars to coal mines for coal loading. Rules Governing Ratings of Coal Mines, 95 I. C. C. 309, 310.

(d) Inflation of the ratings of one mine or district while other ratings are normal, or inflated to a lesser extent, inevitably brings about discriminations or preferences forbidden by the act. Rules Governing Ratings of Coal Mines, 95 I. C. C. 309, 323.

(e) In determining mine ratings labor supply relates only to men who are actually occupied in the production of coal and necessary incidents thereto. Rules Governing Ratings of Coal Mines, 95 I. C. C. 309, 324.

(f) The law recognizes the right of new mines, which have never shipped coal, to an equitable share of cars when they properly make switch connection with a railroad. By section 1 (9) of the act the carrier is required "to furnish cars for movement of such traffic to the best of its ability without discrimination in favor of or against such shipper." By section 1 (1) the term "transportation" is defined as including cars and all instrumentalities and facilities of shipment or carriage. By section 1 (4) it is made the duty of every common carrier subject to the act to provide and furnish cars upon reasonable request therefor. The rights of every shipper to be protected against undue preferences of others are preserved for him by section 3. Nowhere in the act, or in any decision construing the act, is any distinction made between old and new shippers, or between economical or efficient producers, and the reverse. Rules Governing Ratings of Coal Mines, 95 I. C. C. 309, 331.

(g) Congress has not undertaken to authorize interstate common carriers to make the personal qualities of the shipper or of his product the test as to whether such a carrier shall respond to a demand for cars, otherwise lawful, upon equal terms with other shippers of the same product possessing different personal or physical characteristics. Rules Governing Ratings of Coal Mines, 95 I. C. C. 309, 332.

(h) The law has never undertaken to permit, much less require, a common carrier to discriminate between persons when they tender freight for carriage, because of efficiency of shipper or his lack of it, because he is extravagant and needs reforming or does not, or because the product is superior or inferior. With these qualities of shipper and article carried the railroad as a common carrier may not rightfully concern itself. Whether Congress might do so the commission

need not inquire, although the prohibition of personal attainders, which may well be considered as including the right to resort to services of a common carrier possessed alike by all men, is contained in the Constitution itself. Rules Governing Ratings of Coal Mines, 95 I. C. C. 309, 332.

(i) The commission doubts if it would be in the public interest to give to the high-grade, favorably circumstanced coal fields and mines a monopoly of production, even if lower costs to consumers would follow. Such a course would result in first completely exhausting the best portion of a natural resource and weaken our national position by compelling utilization in ever greater degree of the poorer, less economical raw products, until in the end the country would have nothing left but the lowest grade, most costly, bituminous coal, with none of the higher grades for special purposes which are so dependent upon such fuel. The widest possible equable use of coal of all qualities, rather than forced use of the most readily accessible highest grades, is that which is consonant with public good. Rules Governing Ratings of Coal Mines, 95 I. C. C. 309, 334.

(j) Objection of interveners to establishment of rates on coal from mines on Virginia Railway on the New River district basis due to fear that the car supply of the Virginia might be depleted, found not to be a sufficient reason for denying rates sought, following 63 I. C. C. 179. Wyoming Coal Co. v. V. Ry. Co., 98 I. C. C. 488, 494.

(k) Refusal of the B. & O. to rate mines on the Strouds Creek & Muddlety R. R., located in the Gauley district of West Virginia, and accord such mines a just and reasonable distribution of cars for coal loading, while contemporaneously furnishing such a rating to mines on its Richwood branch, located in the same district, found to result in undue prejudice to the Strouds Creek mines. The Strouds Creek mines are entirely dependent upon the B. & O. for their car supply and under the provisions of section 1 (12) of the act are entitled to same treatment in the matter of car supply as are mines located directly upon branches of the B. & O. Tioga Coal Co. v. B. & O., 101 I. C. C. 611, 616.

§23. Commercial Plus Physical Capacity.

(a) In determining mine ratings physical condition takes into consideration the character of the mine—whether a drift, slope, or a shaft mine—number of entries, length of runways or haul, grades in the runway, number of loaders, including machines, number of mine cars and capacity thereof, capacity of the shaft, and also tipple capacity, number of tipples, and capacity for dumping, including screenings or preparation of the coal for certain classes of trade; also length and car capacity of tracks under the tipple. Rules Governing Ratings of Coal Mines, 95 I. C. C. 309, 324.

(b) In determining mine ratings labor supply is a controlling factor, which is accorded considerable weight, since it is the factor most subject to continual change. It relates only to men who are actually occupied in the production of coal and necessary incidents thereto. Rules Governing Rating of Coal Mines, 95 I. C. C. 309, 324.

(c) In determining mine ratings past performance does not include the so-called commercial factor, but is developed by taking the normal working days when a mine had a full car supply and no interference with its operation, which would give it an opportunity to have an accumulation in its pit or mine cars by reason of a previous day of idleness or short car supply, breakdowns, etc. Rules Governing Rating of Coal Mines, 95 I. C. C. 309, 324.

(d) Results of experience with the commercial factor do not commend it as a universal or controlling future basis for determining mine ratings. Rules Governing Ratings of Coal Mines, 95 I. C. C. 309, 330.

(e) Advocates of the commercial-factor basis of mine ratings stated that the bituminous coal industry has been guilty of numerous economic offenses, and that the responsibility of reforming that industry rests with the commission. FOUND, the commission has been given no regulatory jurisdiction with respect to the coal industry, and owes no duty to it other than to enforce the provisions of the act, which require adequate service, and prohibit unjust discrimination and undue preferences as between shippers. It is not within the commisson's province to comment upon or determine whether the coal industry is in need of reform, that issue properly should be addressed to Congress, if at all. Rules Governing Ratings of Coal Mines, 95 I. C. C. 309, 331.

(f) Argument in favor of use of the commercial basis for mine ratings is that

thereby the public interest is best subserved by encouraging a more uniform movement of coal throughout the year, and by eliminating inefficient and high-cost mines. FOUND, point of departure between this theory and that which the commission can accept is basic. Object of rating rules is to secure a just and equitable distribution of equipment among those who desire and are prepared to ship, and not to determine who shall or shall not be in a position to produce a commodity to be shipped. Rules Governing Ratings of Coal Mines, 95 I. C. C. 309, 331, 332.

§24. Idle-hour system.

(a) Complainant alleged that during certain periods of car shortage defendants gave to the mines on the Belt lines a greater portion of available cars than was given to its mines on the West Virginia Ry., and that during these periods defendants overrated Belt mines, which resulted in those mines receiving more cars and complainants mines less cars than they were respectively entitled to and that such action resulted in unjust discrimination against complainant. The "idle hour" basis of car distribution was in effect on both the West Virginia and West Side Belt. Upon this basis it is the object to keep all mines in operation the same number of hours per day by giving each a portion of the available car supply; and if, due to car shortage, any mine is entitled to a greater or lesser number of hours than the average of all mines in a common group or unit car distribution is equalized every few weeks by giving that mine a sufficiently increased or reduced supply of cars. Upon the facts presented it is manifestly impossible to determine whether complainant failed to receive its proper share of available cars. In the instant case the same weather conditions were incurred, but it is contended that the operation of the line of the defendant west of the Ohio river was rendered much more difficult by these conditions. The line west of the Ohio river was congested with cars under load destined for the W. & L. E., while those conditions did not exist east of the river. The tunnels were blocked with ice, and the sidetracks were filled with cars loaded with coal, which had become frozen and in some instances were not unloaded for three months, because of the failure of the W. & L. E., to accept them on account of the condition of its power. There is also testimony to the effect that on several occasions no trains other than passenger, merchandise or supply trains, were moved over the line west of the river. HELD, complaint not sustained, complaint dismissed. Wayne Coal Co. v. Director General, 92 I. C. C. 3.

(b) Object of "idle-hour" basis of car distribution is to keep all mines in operation same number of hours per day by giving each a portion of available car supply; and if, due to car shortage, any mine is entitled to a greater or lesser number of hours than average of all mines in a common group or unit, car distribution is equalized every few weeks by giving that mine a sufficiently increased or reduced car supply. Wayne Coal Co. v. Director General, 92 I. C. C. 3, 5.

(c) Allegation that complainant's mines located on the Pittsburgh & West Virginia Ry. were discriminated against and that mines on the Pittsburgh Terminal R. R. & Coal Co. were preferred in the matter of car supply during certain periods of car shortage, not sustained. Distribution was made on the "idle-hour" basis but practice of advance billing indulged in by complainant during period in question, and complicated figures showing supply of cars which complainant claims it was entitled to, present a situation such as to make it impossible to determine whether complainant failed to receive its proper share of available cars. Wayne Coal Co. v. Director General, 92 I. C. C. 3.

§25. Mine Capacity Plus Shipments.

(a) In determining mine ratings past performance does not include the so-called commercial factor, but is developed by taking the normal working days when a mine had a full car supply and no interference with operation, which would give it an opportunity to have an accumulation in its pit of mine cars by reason of a previous day of idleness or short car supply, breakdowns, etc. Rules Governing Ratings of Coal Mines, 95 I. C. C. 309, 324.

IV. CONTRACTS FOR CAR SUPPLY.

§28. In general.

(a) Car distribution rules, as ordinarily in force, are expected to and do provide a penalty for detention of equipment which, while not of the same character, accomplish the same purpose as the penalty provided by demurrage rules. A

shipper who does not pay a penalty of either character is at a manifest advantage over other shippers who operate either under car-distribution rules as properly applied or under demurrage. Demurrage Rules on Coal and Coke, 89 I. C. C. 230, 232.

V. DUTY TO TRANSPORT CARS.

See Transportation II.

§30. Interchange of Cars.

See Interchange of Traffic; Through Routes and Joint Rates.

(a) In the interchange of traffic between carriers it is the ordinarily accepted practice for receiving line to designate tracks within a reasonable distance of intersection of its rails with those of a connecting carrier where cars will be received from delivering line, and latter carrier places cars on tracks so designated. Peoria & Pekin Union, 93 I. C. C. 3, 9.

(b) In accordance with usual railroad practice, matter of making and receiving deliveries of cars is the subject of mutual agreement, each line having the right within reasonable limits to designate point where cars will be received. Peoria & Pekin Union, 93 I. C. C. 3, 16.

(c) Practice of Peoria & Pekin Union Ry., in assessing charges at and in the vicinity of Peoria, Ill., for interchange service between connections with its tenants and rails of the Minneapolis & St. Louis, and St. Louis, Springfield & Peoria, an electric line, while contemporaneously performing a like service between connections with its tenants and rails of C., B. & Q., and Rock Island without charge, found unjustly discriminatory and unduly prejudicial. Peoria & Pekin Union, 93 I. C. C. 3, 23.

(d) Complainant attacked commodity rates on coal, carloads, from complainants mine at Mabie, W. Va., to interstate destinations reached by the Western Maryland and its connections as unjust, unreasonable and unduly prejudicial to complainant in that they exceed the flat West Virginia basis of rates; that the failure and refusal of defendants to serve complainants mine with cars and to interchange coal traffic from such mines to all interstate destinations reached by the Maryland, and its connections, at some convenient point in the Elkins district of West Virginia, and to accord such traffic the flat West Virginia region basis of rates while according such service, cars, and rates to competing mines of the West Virginia Coal & Coke Co., called coal company, and is unduly prejudicial. Complainants mine is located on a short spur leading off the Coalton branch of the B. & O., less than 0.5 mile from Mabie, W. Va., and about 6.31 miles south of Norton, W. Va. It is intermediate to Coalton mine No. 1 and Mabie mine No. 6 of the coal company. These mines in addition to Arianna mine No. 7 of the coal company, which is not in operation are the only coal operations on the Coalton branch. The coal from complainants mine and that of the coal company are of similar grade and complainant is in active competition with the coal company in the sale of coal. Complainants mine is and has been entirely dependent upon the B. & O., for its car supply. In 74 I. C. C. 433 the Commission found that a mine served by two carriers should not be permitted to order cars in excess of 100% of its rating from both roads serving it. It had the right to order its full rating from any one of the roads if it so desired. HELD, undue prejudice not sustained, rate attacked unreasonable to extent it exceeded $2.84 per long ton, reparation awarded. Brady v. B. & O. R. R., 103 I. C. C. 19.

§31. Private Cars.

See Supra §4, §10½, §13; Infra §32; Common Carrier §6; Private Cars.

(a) Private cars which are paid for by carriers for use and are used on their lines are clearly "facilities possessed," and come within broad powers conferred upon the commission by the statute to prevent unjust discrimination. Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701, 730.

(b) Rate on locomotive cranes, on own wheels, with overhanging or detached parts, from Gilmerton, Va., to Greystone, N. C., found not unreasonable as compared with rates from Virginia cities to destinations in North Carolina to which Greystone is intermediate. Raleigh Granite Co. v. S. A. L. Rv. Co., 96 I. C. C. 573.

§32. Rates on Private Cars.

See Supra §31; Classification §7½; §12⅞.

(a) Sixth-class rate on coal tar, in

tank-car loads, from Fairmont, W. Va., to Everett (East Boston), Mass., found unreasonable as compared with lower commodity rates contemporaneously in effect from Dunbar, Pa., and other points to same destination, and to extent it exceeded lower commodity rate subsequently established. Complainant made application for establishment of commodity rates more than five months prior to movement of shipments, but, due to inconsistencies in commodity rates on coal tar, carriers delayed their establishment. Reparation awarded. Barrett Co. v. B. & O. R. R. Co., 91 I. C. C. 53.

§32⅛. Repair of equipment.

(a) Upon investigation into classified repairs made to 115 locomotives of the Central R. R. Co. of N. J., in 1920-21, under contracts negotiated with Baldwin Locomotive Works and American Locomotive Co., FOUND: That cost of such repairs was greatly in excess of cost of similar work in respondent's own shops; that even though at end of Federal control some assistance in respondent's shops may have been necessary or expedient as an emergency, the contract work was carried beyond reasonable necessities and a large part of the excess expenditures could have been avoided; also that those expenditures would at least have gone far to provide respondents with much needed additional shop facilities. Construction and Repair of Railway Equipment: C. R. R. of N. J., 89 I. C. C. 751.

(b) Commission instituted a general investigation to determine whether common carriers by railroad have caused or are causing certain of their locomotives or other equipment to be constructed or repaired at construction or repair shops other than their own, and have purchased or are purchasing from or through such shops materials and supplies used in such construction or repairs, at costs in excess of those for similar construction or repairs in their own shops, including materials and supplies therefor, in disregard of efficient and economical management, resulting in unreasonable expenditures. Respondent, Central Railroad of New Jersey, repairs by the American Locomotive Company and Baldwin Locomotive Works during 1920 and 1921. In all, 115 of respondents locomotives were repaired by the two construction companies. 57 were sent in 1920 and 30 in 1921 to the Baldwin plant and 3 in 1920 and 25 in 1921 to the American. Since 1914 with the acquisition of new locomotives of increased size and tractive power, respondent has had some difficulty in maintaining the necessary classified repairs in its own shops. In respect of the shop burden respondents motive power conditions were somewhat less favorable at the end of federal control than at the beginning, and as early as May 1920, there was a prospect of an increasing demand for power. On the other hand, considering the good shop performance in 1918 and the material outside assistance received in 1918 and 1919, and conceding some indeterminable figure degree of inefficiency, the claimed incapacity of the shops to meet the burden to the extent of the number of locomotives repaired under the contracts is not borne out by the record. Even though some assistance may have been necessary or expedient in the beginning as an emergency step, the record strongly negatives a conclusion that it was necessary to supplement the material outside help received during federal control by contracting for the repair of so great a proportion of the total motive power. The record convinces the Commission that the contract work was carried beyond the reasonable necessities and that a large part of the excess expenditures could have been avoided. Construction and repair of railway equipment, C. R. R. of N. J. 89 I. C. C. 751.

(c) This report relates to locomotive equipment of various respondent railway companies, and is in pursuant of an investigation, instituted on motion of the Commission, to determine whether common carriers by railroad subject to the act have caused or are causing certain of their locomotives or other equipment to be constructed or repaired at construction or repair shops other than their own, and have purchased or are purchasing from or through such shops, including material and supplies therefor, in disregard of efficient and economical management, resulting in unreasonable expenditures, or otherwise contrary to law. Chicago Burlington & Quincy R. R. July 23, 1920, respondent entered into contract with the Baldwin Locomotive Works for repair of 15 locomotives and with the Davenport Locomotive Works, for the installation of new boilers on five switch engines and the repair of additional locomotives, not exceeding 15 in all. The contracts were on a cost plus basis. The primary factors which impelled the re-

sort to the outside shops were continued heavy business and a failure to make required gains in the condition of the motive power. The record does not impeach respondents good faith or establish a careless attention to its own interests in entering into the contracts. It is none the less true, however, that an excess expenditure of the character and even approaching the amount of that above mentioned is regrettable and at all times to be avoided if possible. Irrespective of the existing relationship of normal shop capacity to normal repair demands, an investment of the margin of such an outlay in increased shop facilities which would more nearly meet emergencies would make for increased efficiency and economy. C. M. & St. P. Ry. The contracts into which this respondent entered were distinctive in that they covered the conversion of so-called Vauclain compound locomotives into simple ones, in addition to the classified repairs the locomotives received. This type of locomotive embodies a faulty mechanical principle and respondent was justified in converting them into simple locomotives. The company shops were not so well equipped for conversion work as is the Baldwin plant, but it is conceded that the shops are capable of doing and have done such work. During the contract period there was a shortage of men in its shops and it appears principally to have been for this reason that the administration was asked to authorize the sending of the 20 locomotives in 1919 to the Baldwin plant. It appears that, apart from the conversion problem, respondents shops are equal to no more than normal demands, or a maximum represented by 10% of its motive power out of service for all repairs requiring more than 24 hours. In these circumstances a consistent policy of efficient expenditures as the contract work has repeatedly been shown to involve be made in the procurement of such shop enlargements or additions to or modernization of shop equipment as would enable the carrier reasonably to meet exceptional demands. P. & R. Ry. In 1920 this company entered into a contract with the Baldwin for the repair by the latter of 15 or more of respondents Mallet compound locomotives. It appears that the corporate officers were fully cognizant of the incapacity of the company shop to take appropriate care of all the Mallet compounds. The excess cost of the contract repairs on 15 Mallets would have gone far toward providing the mechanical department with the much needed facilities. The large sum paid out under the contract secured by respondent on only relatively short lived repairs, with a margin above a reasonable expenditure would have covered the major portion of an essential addition to respondents capital equipment. The practice followed could not be said to make for efficiency and economy in management. St. Louis San Francisco Ry. Under a contract five locomotives of this respondent were repaired by the Pittsburgh Boiler & Machine Co., Pittsburgh, Kas. In the light of the facts that not many locomotives were sent to either contract shop and that the work was not extended beyond the advent of the general business depression, the Commission may accept the submitted justification of those contracts as having met an emergency. On the other hand, the wisdom of rebuilding the wrecked locomotives at such high figures, which restored to service power units only partially the equivalent of new ones, is not clear. Missouri Pacific R. R. This respondent sent to outside shops for repair in 1920 and 1921 a total of 49 of its locomotives. The record affords little opportunity for a determination of the ability of respondents shops to meet power requirements in 1920, when the contract repairs were made, except by contracts with 1919, and the contracted items do not tell a very definite story. Every energy should unceasingly be bent upon a realization of the utmost production of which the company facilities and forces are capable, in the effort to minimize, and better yet to eliminate, such expensive maintenance costs. **St. Louis Southwestern Ry.** This company entered into a formal contract with the Grant Locomotive & Car Works for the repair by the latter of not less than ten or more than 20 of respondents locomotives. Whatever the true answer to the cost question in this instance may be the Commission deems it unnecessary to go farther than to accept the limitation of the contract work, as denoting a policy on respondents part, with the return of normal conditions, to utilize its own facilities in the future maintenance of its motive power and equipment. **Texas and Pacific.** Under contracts 5 of respondents locomotives were repaired by private contractors. Gratifying as is the fact that but five locomotives were repaired under the two contracts in question, the record indicates that the work

was done at a considerable excess cost. Correspondence in evidence discloses that respondents officials regarded some of the labor charges as unreasonable and sought revisions, and also were dissatisfied with the quality of the work in certain respects. The Commission deems the circumstances to justify it in assuming that in future respondents will leave nothing undone to avoid further recourse to the costlier contract work. Construction and repair of railway equipment, 91 I. C. C. 399.

(d) Commission instituted an investigation under section 15a of the act to determine whether common carriers by railroad subject to the act have paid, or are paying, excessive amounts for the repair of their locomotives or other equipment at construction or repair shops other than their own, as compared with costs for similar work in their own shops, in disregard of efficient and economical management, resulting in unreasonable expenditures, or otherwise contrary to law. Respondent, Erie R. R. Co. In 1920, respondent entered into a contract with the Baldwin Locomotive Works for the repair of locomotives on a cost plus basis, plus 120% of the direct labor cost to cover overhead expense, plus 15% of the whole for profit. The evidence justifies the conclusion that the right locomotives could have been repaired in the company's shop at a cost materially less than was paid for repairs at the Baldwin plant and would have been available for service much sooner. Clearly, economy and efficiency of operation were disregarded in making new contracts and in sending out additional locomotives while negotiations were being conducted for a final settlement with its striking employees during the latter part of September. HELD, respondent has not justified the tremendous increase in costs nor the extraordinary allowances for overhead which to a great extent made up such excessive costs. The record compels the Commission to regard these expenditures as improvident. Construction and repair of railway equipment, 93 I. C. C. 646.

(e) Upon investigation by commission on its own motion; FOUND: That in 1920 the C., B. & Q., C., M. & St. P., Philadelphia & Reading, St. L.-S. F., Missouri Pacific, St. Louis Southwestern, and Texas & Pacific, contracted for repair of locomotives in outside shops, or purchased locomotive parts, at costs which were materially in excess of cost of similar work or production in their own shops, in some instances incurred because of a want of adequate facilities which excess expenditures would have supplied or gone far to supply. Construction and Repair of Railway Equipment, 91 I. C. C. 399.

(f) Upon investigation by commission on its own motion. FOUND, that cost of repairs to locomotives and cars of the Erie R. R. at outside shops during 1920-1923 was greatly in excess of cost of similar work in its own shops, and that a large part of such excess cost was an unreasonable expenditure for maintenance of equipment, and not in the interest of efficient and economical management as required by section 15a of the act. Construction and Repair of Ry. Equipment, 93 I. C. C. 646.

(g) This is an investigation instituted upon the motion of the Commission to determine whether common carriers by railroad subject to the act have paid, or are paying, excessive amounts for the repair of their locomotives or other equipment at construction or repair shops other than their own, as compared with costs for similar work in their own shops, in disregard of efficient and economical management and resulting in unreasonable expenditures. Previous report as to the Central Railroad of New Jersey, 89 I. C. C. 751. Respondent has failed to show any necessity for incurring excess expenditures as a result of sending out locomotives in the fall of 1921. For several months prior and subsequent to the execution of the contracts of Sept. and Oct., 1921 its shops were being operated below their capacity. Instead of building up its reserve power for the winter it failed to attain its objective of 15 to 20% of its power stored, and at the end of Sept. and Dec., 1921 had only 7.21 and 7.53%, of its locomotives stored against winter demands. But even then, power conditions were better than they had been for a long time. HELD, the excess expenditures under the contract represent improvidence in management which should be considered when fixing rates intended to yield the standard return contemplated by law. Construction and Repair of Ry. Equipment 104 I. C. C. 352.

(h) This is an investigation instituted on motion of the Commission under section 15a of the act to determine

whether common carriers by railroad subject to the act have paid or are paying excessive amounts for the repair of their locomotives or other equipment at construction or repair shops other than their own, as compared with costs for similar work in their own ships, in disregard of efficient and economical management and resulting in unreasonable expenditures. This report deal with the subject of repairs to steam locomotives of the New Haven system. In all, respondent sent to contract shops, including the two outside railroad shops, between July 1, 1922 and Jan. 24, 1924, 231 locomotives and 40 additional boilers, which were repaired at a total cost of $3,733,514.44. Taking all the circumstances under consideration, no criticism is directed to the contracts with the American and Baldwin plants for outside work, notwithstanding the great cost. Whether or not any of the other contracts were justified is debatable. It is clear, however, that much of the repair work performed at excessive cost in outside shops subsequent to Nov. 1, 1922, was unnecessary and without adequate justification. Without attempting to draw the exact line, the record compels the Commission to regard a substantial portion of the extraordinary expenditures incurred by respondent in this outside repair work as improvident and of a character which should be considered when fixing rates to yield the standard return as provided by the act. Construction and repair of Ry. equipment, 107 I. C. C. 721.

VI. REMEDIES AND DAMAGES.

See Reparation.

§32½. In general.

(a) Fact that an individual is permitted to make a charge for a service which the carrier is bound under its tariff to furnish, can not deprive shippers of their right to hold the carrier responsible for the consequences of its act, and a carrier is answerable in damages for a refusal to accept cars for transportation to a certain point, resulting in shippers being put to expense of having them transported to a station where they would be accepted. Miles Lumber Co. v. C., B. & Q. R. R. Co., 89 I. C. C. 761, 764.

(b) Supreme Court holds that in computing damages resulting from discrimination by a carrier in car allotments, it is error to assume that the complaining shipper should have received cars in the same ratio to shipping requirements as was allowed his favored competitor in the making of the distribution. It was held that the plaintiff mines were entitled only to such car supply as they would have received had the available cars been equally distributed. Northern W. Va. Coal Asso. v. P. R. R. 109 I. C. C. 604, 607.

§33. Actions at Law.

See Actions at Law.

(a) District Court, in restraining discrimination by railroad in furnishing coal cars to mines in violation of Transportation Act, §1, par. 12 (Comp. St. Ann. Supp. 1923, §8563), had no power to include proviso that daily orders for cars should constitute daily rating of mine one day on which order was given, since it did not involve construction of statute, but determination from facts whether distribution was unfair, which is for Interstate Commerce Commission in first instance. Freeman v. United States, 4 Fed. (2d) 13.

§36. Evidence.

See Supra §9; Evidence §39.

(a) Assigned-car mines which furnish their output for long periods of time to railroads are, at end of such periods, because of lower costs and better labor conditions, in a position to undersell competing unassigned-car mines. Railroad-owned mines in many instances sell coal commercially and may not only dispose of their product commercially, but they may be leased or sold to outside interests, and thus actively engage in selling commercial coal. Moreover, there is competition in labor between railroad-owned and output-contract mines on the one hand and commercial mines on the other. The commission thinks, therefore, that it has jurisdiction to deal with the distribution of cars to all of such mines under section 3 of the act, competition not being an essential element under section 1. Penn Tobacco Co., 18 I. C. C. 197, 200. Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701, 717.

(b) Storage of coal by railroads and others in periods of car surplus tends to equalize demands by operators on railway equipment throughout the year, and to prevent periods of extreme car shortage during which, because of the great demand for coal, inefficient high-cost

mines spring into operation, and the public is required to pay excessive prices for coal. Assigned Cars for Bituminous Coal Mines, 93 I. C. C. 701, 724.

(c) In support of its allegation of prejudice in car distribution, complainant introduced figures from defendant's report which were inaccurate. The burden of proving its allegation held to rest upon complainant. Ayrshire Coal Co. v. S. Ry. Co., 96 I. C. C. 161, 171.

VIII. CAR SERVICE REGULATION.

§39. In General.

(a) Primary duty of promulgating proper mine ratings rests upon carriers. Rules Governing Ratings of Coal Mines, 95 I. C C. 309, 335.

(b) Upon contention that practices of Southern Railway in connection with distribution of coal cars to complainants' mines in Indiana during period September 1, 1922, to March 31, 1923, resulted in unreasonableness, undue prejudice to complainants, and undue preference of the Sunlight Coal Co. and other mines in same district. HELD, due to abnormal conditions following strikes of bituminous-coal miners and railway shopmen, special service orders of commission controlled distribution of equipment for coal loading from September 1 to December 20, 1922, and all rules, regulations, and practices of common carriers were suspended so far as they were in conflict with the special service orders which provided for assignment of cars for special purposes in preference to use for any other purpose and required preference and priority in movement of certain specified commodities. Such unusual conditions made impossible the equalization in car supply sooner and defendant's practice of distributing cars during period covered by complaints not shown to have been unreasonable or unduly prejudicial. Ayrshire Coal Co. v. S. Ry. Co., 96 I. C. C. 161.

§40. Filing and Publication.

(a) Mine rating rules are not required to be filed with the commission as are tariff publications. Winding Gulf Colliery Co. v. V. Ry., 102 I. C. C. 41, 45.

CIRCUITOUS ROUTES

See Long and Short Hauls, §4¾; Routing and Misrouting §4; Through Routes and Joint Rates §6.

CIRCUS TRAINS

See Long and Short Hauls §4, §4¾; Routing and Misrouting §4; Through Routes and Joint Rates §6.

(a) Contracts with carriers for moving circus outfits provide for transportation of agents in advance of shipments. The latter move as freight. The organization and outfit follow over the same circuit as the advance agents. There is no analogy between this service and that accorded Chautauquas. Coit-Alber Chautauqua Co. v. A. & S. R. R. Co., 85 I. C. C. 357, 361, 362.

charges; Passenger Fares and Facilities IV; Reparation; Undercharges.

I. WHEN STATUTE OF LIMITATION RUNS.

See Infra §5½, §8; Crimes §28; Loss and Damage §11¼, §13½; Overcharges §7; Reparation; Statute of Limitation.

§1. In general.

(a) Original formal complaint attacking one factor of a combination rate was filed against originating carrier within statutory period. By amended complaint filed more than six months after notice that claim could not be disposed of informally and more than two years after cause of action accrued, carrier publishing other factor was brought in as an additional party defendant. HELD: Claim against originating line, whose factor only is assailed, found not barred, but claim against carrier named in amended complaint found abandoned under Rule III (g) of Rules of Practice. Inland Empire Paper Co. v. C., M. & St. P. 92 I. C. C. 29, 30.

(b) Claim for reparation on shipments delivered more than two years prior to date of filing of complaint found barred by the statute of limitations. Ash Grove Lime & Portland Cement Co. v. M. P. R. R., 92 I. C. C. 51.

(c) Overcharge claim on shipment moving during Federal control filed informally more than one year after termination thereof. Formal complaint subsequently filed brought in additional issue of misrouting. HELD: Overcharge claim, since filed within two years and six months after Federal control terminated, found not barred, but misrouting claim is barred because not filed within one year after that period had terminated. Empire Refineries v. Director General, 92 I. C. C. 59, 60.

(d) Formal complaint against director general alleging overcharges on shipments moving during Federal control, filed with commission within two years and six months' period as provided in section 206 (c) of transportation act, 1920, found not barred. Givens v. Director General, 92 I. C. C. 63, 66.

(e) Formal complaint originally received by commission within statutory period of limitations was twice returned to complainant for correction and was subsequently received after statutory period had run. HELD: Claim found not barred since original receipt constituted a filing of the claim with the commission as of that date. Marion Coal Co., 27 I. C. C. 441; Knopke Bros., 50 I. C. C. 465. Givens v. Director General, 92 I. C. C. 63, 66.

(f) Contention that filing of an informal complaint did not stop running of the statute in favor of complainant named in the formal proceeding because it did not specifically state that it was filed in his behalf, not sustained. Party filing informal complaint made no claim in its own behalf or in behalf of complainant but bills of lading and paid expense and demurrage bills accompanying the claim clearly indicated that complainant named in the formal proceeding was the real party in interest. Givens v. Director General, 92 I. C. C. 63, 66.

(g) Excluding period of Federal control in accordance with section 206 (f) of the transportation act, 1920, informal complaint covering shipments moving prior to Federal control found to have been filed within two-year statutory period and not barred. Diamond Match Co. v. Director General, 92 I. C. C. 68, 70.

(h) Informal complaint named Buffalo, Black Rock, and Niagara Falls, N. Y., as destination points. Formal complaint, specifically intended to cover same shipments, named Harriet, N. Y., as point of destination. Upon contention of director general that claims covered by formal complaint are barred because Harriet was not named as destination point therein until subsequent to time allowed by law for filing complaints for damages against him, FOUND: Freight bills on some shipments show Harriet as destination, and correspondence and final letter of rejection of informal claim from director general refer to that claim as covering shipments from that point. There is therefore no room for reasonable doubt that he was put on notice by informal complaint as to subject matter of the formal proceeding. Acheson Graphite Co. v. Director General, 92 I. C. C. 215, 216, 217.

(i) Formal complaint filed with commission within 90-days period after institution of suit by carriers in the courts for undercharges. Complaint was amended by bringing in an additional party defendant after expiration of such 90-day period. Such additional defendant was not a party to, nor did it bring an action for recovery of, undercharges within three years' period pre-

scribed by the statute. FOUND: Such additional defendant is protected by the statute of limitations, complainant having failed to bring an action against it before the commission within two years from date of delivery of shipments. Randolph Furniture Works v. E. R. R., 92 I. C. C. 245.

(j) Director general contended that because he was not named a party defendant in the informal complaint and was not so named until formal complaint was filed, in so far as he was concerned the claim was barred under section 206 (c) of the transportation act, 1920. However, informal complaint was presented to him for consideration but adjustment thereon was declined. Moreover, during pendency of the informal proceeding, with his consent the commission ordered that in proceedings paying for reparation under said section, wherein director general was not named, he be made a defendant for all interests and purposes of the section. Under this state of facts the failure to name the director general in the informal complaint is immaterial. Midland Coal Co. v. St. L.-S. F., 92 I. C. C. 283, 284.

(k) Where an informal complaint filed within statutory period specified certain shipments, and formal complaint based upon informal proceedings brings in additional shipments, such additional shipments are barred unless brought in issue within the statutory period. Whiting Plover Paper Co. v. S. Ry., 92 I. C. C. 292.

(l) Complaints involving shipments moving after termination of Federal control, filed more than two years after delivery of shipments, found barred by the statute of limitations. Monarch Cement Co. v. A., T. & S. F., 92 I. C. C. 325.

(m) Claims on shipments moving more than two years prior to date of filing of complaint found barred by the statute of limitations. Houston Cotton Exchange v. A. & S. Ry., 92 I. C. C. 363, 364.

(n) Complainant named in informal proceeding, which failed of adjustment, differed from that set forth in subsequently filed formal complaint. The former owns all the capital stock, and controls and operates the plants facilities, and business of the latter. HELD: Following Gillican-Chipley Co., 85 I. C. C. 702, the two complainants being in law separate entities the formal complaint can not be considered a continuation of the informal proceeding. Moreover, party named in the formal proceeding not having brought its complaint in its own name within the statutory period, is barred. Badger Bag & Paper Co. v. M. D. & W. Ry., 92 I. C. C. 485.

(o) Collection of an unreasonable rate constitutes a tort giving rise to a claim for damages whether that rate be collected by common carriers or by an agent of director general. Shreveport Creosoting Co. v. L. & P. Ry., 92 I. C. C. 519, 523.

(p) Complainant in its petition sought reparation down to a certain basis but at the hearing asked that damages be awarded to still lower basis. Objection by defendant that reparation can not be awarded to lower basis sought because request therefor was made after expiration of limitation period prescribed in the act, found not well taken. Request for increased damages is founded upon facts stated in original complaint, does not constitute a new cause of action, and therefore relates back to time of filing of the complaint. Shreveport Creosoting Co. v. L. & P. Ry., 92 I. C. C. 519, 520.

(q) Formal complaint relating to applicability of rates on shipments moving subsequent to Federal control, filed more than six months subsequent to closing of informal file but within three-year period provided for in amendment of June 7, 1924, to section 16 (3) of the act, found not barred. Caddo Central Oil & Rfg. Corp. v. Director General, 92 I. C. C. 627, 628.

(r) Informal complaint alleging unreasonableness on shipments moving during Federal control filed March 1, 1921. Less than two years and six months after Federal control terminated informal complaint was amended so as to bring into issue applicability of the rates. Formal complaint filed less than six months after closing of informal file. HELD: Shipments are not barred as to section 6 of the act. Caddo Central Oil & Rfg. Corp. v. Director General, 92 I. C. C. 627, 628.

(s) Complainant notified on January 24, 1922, that claim could not be adjusted informally. Formal complaint filed July 24, 1922. Contention that complaint should have been filed not later than July 23, 1922, to bring it within the six months' rule, HELD: Following West Cache Sugar Co., 87 I. C. C. 368, complaint found to have been filed within

six months after notification that claim could not be adjusted informally as provided under Rule III (g) of Rules of Practice. New Idea Spreader Co. v. Director General, 92 I. C. C. 742, 743.

(t) After shipper's right to enforce carrier's common-law liability of coercing payment of exorbitant charges has been barred by limitation, bar may be removed without violating carrier's rights. Cocke v. Morgan's Louisiana & Tex. R. S. S. Co. 4 Fed. (2) 961.

(u) Home Accident & Insurance Co. assumed direction of complainants' business and selected a general manager who paid freight charges in complainants' name on shipments consigned to him individually and to a road commissioner from funds advanced by the insurance company. Identity of complainants' company was maintained and all items of expense and merchandise charged to it. Defendants contended that complainants were not real parties in interest, so complainants' counsel moved to amend complaint by making insurance company a party complainant. This was permitted subject to defendants' objections. HELD, under facts stated complainant is entitled to reparation and since insurance company presented no adverse claim, it is unnecessary to pass upon motion to amend. Edwards Construction Co. v. J., L. C. & E., 93 I. C. C. 370, 371, 372.

(v) Formal complaint filed by same company filing informal proceeding bore signature of complainant's attorney and of the general traffic manager of another company which bought complainant's entire stock. Upon contention that formal complaint is barred because filed by successor company and does not represent a formal complaint filed by same company named in the informal proceeding. HELD, while formal complaint carries signature of general traffic manager of the successor company without showing agency, it is also signed by complainant's attorney, and as presented is properly signed and not barred. Forrester-Nace Box Co. v. Director General, 93 I. C. C. 665.

(w) Issue as to statute of limitations not being raised, the commission proceeded and rendered its decision upon complaint filed within 90 days after institution of suit by carriers in the courts for collection of undercharges, the court action having been brought after the statutory period of three years provided therefor had run. Goodrich Bros. Hay & Grain Co. v. C., C. C & St. L., 95 I C. C. 5.

(x) Informal complaint filed within statutory period showed association as claimant. Formal complaint subsequently filed named a corporation as complainant. Upon contention that informal filing was not on behalf of the corporation and that claim of latter is barred because first presented in formal complaint filed after statutory period had elapsed. FOUND, failure of association to comply with Rule III (e) of the Rules of Practice which provides that informal complaint contain a statement of capacity or authority in or by which complaint is made, if recovery is sought on behalf of others than complainant, was not fatal to the corporation's claim, since filing by the associaton was, in fact, on behalf of the corporation, and for express purpose of tolling the statute. Thaxter & Co. v. Director General, 95 I. C. C. 693, 694, 695.

(y) Claims covered by informal proceeding, held within statutory period, were not embraced in formal complaint subsequently filed. FOUND, reparation thereon can not be awarded in formal case because under rules of practice an informal complaint will not be reconsidered unless, within six months after date of mailing of notice that claim is not susceptible of informal adjustment, it is resubmitted on informal docket or formal complaint filed. Here, however, claims were recorded and complainant advised to take matter up with carrier and advise commission in event claims were denied. Failure to include shipments in formal complaint might be construed as an abandonment, but since they were held pending adjustment by the parties and a determination in the formal case, complainant has tolled the statute thereon and no reason appears why overcharges should not be refunded. Mauk Produce Co. v. Director General, 95 I. C. C. 728, 729, 730.

(z) Formal complaint originally received by commission within statutory period of limitations was returned to complainant with instructions to state with greater particularity the manner in which sections of the act were violated. As revised it was returned to commission after statutory period had run. HELD, claim found not barred in that complaint received on first date was sufficient under the law to toll the statute of limitations, and that date must be regarded as date of filing. Marion Coal Co., 27 I. C. C. 441. Quebracho Products Co. v. S. I. R. T. Ry., 96 I. C. C. 52.

(aa) Formal complaint returned for correction was received by commission after statutory period had run. Citing Rule III (g) of Rules of Practice carrier contended that complaint as originally received should be regarded as an informal complaint and that revised complaint does not bar the running of the statute since not received within six months after original complaint was returned. FOUND, rule relied upon relates to complaints on the informal docket, which can not be disposed of informally, are denied, or are withdrawn from further consideration by complainant. Quebracho Products Co. v. S. I. R. T. Ry., 96 I. C. C. 52, 53, 54.

(bb) Informal complaint covering overcharges on certain shipments moving during Federal control filed within statutory period. Additional shipments on which such period had expired included in formal complaint subsequently filed found barred. Burkhart & Co. v. Director General, 96 I. C. C. 77.

(cc) Complaint filed within 90-day period after institution of suit by carrier in the court for collection of undercharges. Oakes & Co. v. O. S. L., 96 I. C. C. 95.

(dd) Upon complaint filed more than one year after the termination of Federal control assailing rates on shipments moving and delivered during the Federal control period, the director general was not named as a party defendant. FOUND, such shipments are barred. Stailey Lbr. Co. v. P. R. R., 96 I. C. C. 175.

(ee) Upon further consideration statement in original report, 92 I. C. C. 32, that defendants not made parties to the complaint within the statutory period may join in payment of reparation, eliminated. In Phillips v. Grand Trunk Ry., 236 U. S. 662, it was held that with respect to claims not filed within the statutory period the remedy is barred and liability destroyed. Larrowe Milling Co. v. A. A. R. R., 96 I. C. C. 329.

(ff) Complaint found not barred although it failed to name as defendants the director general as agent and the L. & N., necessary parties. Complaint referred to rates published in an L. & N. tariff and thus put the director general on notice that shipments moved over the L. & N., a road under Federal control. Allen v. Director General, 96 I. C. C. 561.

(gg) Complainant, in its informal and formal complaints, sought reparation down to a certain basis, but in the presentation of the case it asks that damages be awarded to a still lower basis. Defendants argue that the only issue which may properly be presented to the commission under section 206 (c) of the transportation act, 1920, is a claim for reparation on the basis of the rate sought in the informal and formal complaints. In Shreveport Cresoting Co., 92 I. C. C. 519, and Omaha Steel Works, 87 I. C. C. 403, similar contentions were rejected. Los Angeles Pressed Brick Co. v. Director General 98 I. C. C. 45, 46.

(hh) The date upon which complaint was originally received by the commission although subsequently returned for correction and stamped as filed on a later date, is the date which tolls the statute. Walford Forwarding Corp., 87 I. C. C. 43, Hopeman Material Co. v. N. P. Ry. Co., 98 I. C. C. 361.

(ii) Petitions in intervention toll the statute from the date on which they are received by the commission irrespective of the date of the order permitting intervention. Cotton Manufacturers' Asso. of S. C., 57 I. C. C. 584. Hopeman Material Co. v. N. P. Ry. Co. 98 I. C. C. 361, 369.

(jj) Upon contention that formal complaint was barred by statute because informal complaint on which it rested was filed by New Jersey Zinc Co., as principal and not as agent for complainant, FOUND, Informal filing was, in fact, on complainant's behalf and formal complaint not barred. Tulsa Fuel & Mfg. Co. v. Director General, 98 I. C. C. 411.

(kk) Informal complaint alleged rates to be inapplicable; formal complaint referred to the informal, but alleged rates to be unreasonable and in violation of the fourth section. Upon contention that claim of overcharge was thus abandoned, FOUND, that pleadings and record were sufficient to support a finding upon the issue of overcharge. Southern Products Co. v. Director General, 98 I. C. C. 462.

(ll) Contention that informal filing of complaint by Fuller Co. was not sufficient to stop running of the statute as to the Libbey-Ownes Co., which in formal complaint is alleged to have suffered damage, found immaterial following 88 I. C. C. 492. Under the contract between the two parties, Libbey-Ownes Co. was not a party to the transportation record and no order could be entered in respect

of it. Fuller Co. v. Director General, 98 I. C. C. 468, 469.

(mm) Objection to consideration of claim based on the allegation of undue prejudice on ground that as it was not contained in informal complaint, and as formal complaint was not filed within one year after termination of Federal control, it was barred by statute of limitations, sustained. Conejos Cooperative Mills & Mfg. Co. v. Director General, 98 I. C. C. 515.

(nn) Contention that as paragraph 3 of Rules of Practice requires that where recovery is sought on behalf of other than complainant a statement of the capacity or authority in and by which complaint is made must be set forth, the complaint is invalidated so far as it concerns the rightful claimants, namely the consignors, who actually bore freight charges, not sustained, following 88 I. C. C. 492. Barse Live Stock Commission Co. v. Director General, 98 I. C. C. 539.

(oo) Fact that correspondence was conducted with the interested carrier to ascertain its attitude on the question of the reasonableness of the rates charged, resulting in a final closing of the informal file later than otherwise would have been the case, could not toll the statute of limitations, and was not in any other respect equivalent to the filing of a complaint within the meaning of the act. St. Louis Fruit & Vegetable Asso. v. L. & N. R. R. Co., 98 I. C. C. 553, 554.

(pp) Informal claim alleged overcharges on imported shipments of potato flour, billed as potato starch in error, moving during Federal control from Seattle, Wash., to New York, N. Y., the rates applicable on potato starch being collected. Formal complaint filed more than one year after the termination of Federal control, alleging the rate charged was unreasonable, found barred by statute since the issue in the informal complaint was solely one of legality. Lasker & Bernstein v. Director General, 98 I. C. C. 624.

(qq) Complainant attacked charges collected on a car of yellow pine lumber shipped from Stamps, Ark., June 1, 1921 to Carpenter, Ill., and reconsigned to Glens Falls, N. Y., as illegal. Shipment was delivered on June 27, 1921. On July 7, 1923 complaint covering the shipment was originally presented on the informal docket. On Dec. 20, 1923 complainant was advised that as the matter was not presented to the Commission within two years from the date of delivery of the shipment the claim was barred from consideration by the statute. On August 2, 1924 complainant resubmitted the claim on the informal docket, citing the amendment of June 7, 1924 to section 16 of the act which extended the time for filing claims for overcharges to three years. On Dec. 5, 1924 complainant filed a formal complaint. The shipment here considered was barred by the statute prior to the enactment of June 7, 1924 and comes within the provisions of the ruling and is barred. HELD, complaint dismissed. Milne Lumber Co. v. Wabash Ry. 104 I. C. C. 669.

(rr) In 45 Sup. Ct. 612 decided June 8, 1925 the Supreme Court held that a cause of action once barred could not be revived by subsequent legislation. Common carriers subject to the act are prohibited from paying and that the Commission is prohibited from awarding reparation on account of claims for refund of straight overcharges which were barred by statute at or prior to the date of the amendment. Sturges Co. v. A. & V. Ry. 107 I. C. C. 136, 139.

(ss) Complainant alleged misrouting of several cars of canned hominy, fruits, vegetables and hams, moving between March 15, 1918 and Feb. 19, 1919 from and to points in Indiana, Ohio, West Virginia, Virginia, Kentucky, Tennessee and Georgia in violation of section 6. HELD, complaint barred by the statute, complaint dismissed. Armour & Company v. Director General 107 I. C. C. 310.

(tt) Upon inquiries as to the effect of the decision rendered on June 8, 1925, by the Supreme Court in Wm. Danzer & Co., v. G. & S. I. the Commission construes that decision considered in connection with the decision in Kansas City Sou. Ry. v. Wolf, 261 U. S. C. 133, as prohibiting common carriers subject to the act from paying straight overcharge claims which were barred by statute at or prior to the amendment of June 7, 1924 to paragraph 3 of section 16 of the act, and as prohibiting the Commission from awarding reparation on any claim which was barred by statute at or prior to the date of that amendment.

Saxony Mills v. M. P. R. R. 107 I. C. C. 649, 650.

(uu) Upon motion of defendant to strike out amended complaints on the ground that the allegations in those complaints are equivalent to new causes of action which either are barred by the statute of limitations or must be considered to have been abandoned under Rule III (g) of the Rules of Practice, FOUND: That the original complaints were filed within six months after complainants were advised that informal adjustment had been declined by defendant and that it would be necessary to file formal complaints within six months if they desired to press the matter further. The amended complaints were filed subsequent to the expiration of those six months and of statutory period, and there is merit to defendant's motion. The amendments to the complaints are barred, and further consideration of these cases will be confined to the issues presented in the original formal complaints. Nash Spokane Co. v. Director General, 100 I. C. C. 223.

(vv) Contention of defendant that formal complaint was barred because filed after the statutory period and more than six months after notification that claim could not be adjusted informally not sustained. Notification was not properly mailed to complainant in accordance with the wording of Rule III (g) of the Rules of Practice, although received by him. Corley v. Director General 100 I. C. C. 293, 296.

(ww) Complaint received within the statutory period but returned to complainant for correction, which was not made within the statutory period, found not barred. Northern Grain & Warehouse Co. v. O. S. L. R. R. Co., 100 I. C. C. 319, 320.

(wwa) Neither informal nor formal complaint made any reference to fact that shipments received transit service and were subsequently reshipped to destinations beyond transit point, complainant having been permitted to later amend formal complaint to show this fact, and also to name additional carriers over whose rails shipments moved beyond transit point. Upon contention that claims in respect of such shipments are barred by statute of limitations. HELD: Both complaints contained sufficient information to put defendant upon notice as to the subject matter and to stop running of statute in respect of all such shipments. See 92 I. C. C. 215. Fact that all of the carriers involved were not named in original complaint can not act as a bar where shipments, as here, moved during Federal control wholly over federally controlled lines and only reparation is sought. See 80 I. C. C. 485. Farrell v. C., M. & St. P., 102 I. C. C. 455, 456.

(xx) Where a statute of limitations is of general application the burden of showing that it does not apply to a particular case is usually on the party who denies the bar to the statute. Krauss Bros. Lumber Co. v. Director General 112 I. C. C. 117, 118.

(yy) The basis of an informal claim can not be broadened or otherwise varied by a formal complaint subsequently filed unless such formal complaint itself be filed within the statutory period. Harmon & Husley v. Director General 112 I. C. C. 275.

ALL OTHER CITATIONS

Smokeless Fuel Co. v. N. & W. Ry. Co., 85 I. C. C. 395; Lilly Co. v. O. S. L. R. R. Co., 85 I. C. C. 644; International Harvester Co. v. N. Y. C. R. R. Co., 88 I. C. C. 370.

§1½. Under transportation act.

See Transportation Act.

(a) Contention that causes of action which accrued more than two years prior to date of filing of informal complaint are barred from consideration by paragraph (3) of section 16 of the act, and that in so far as section 206 (f) of the transportation act seeks to revive such causes of action it is unconstitutional, HELD: Not sustained. Section 206 (f) provides that period of Federal control shall not be computed as part of the period of limitation in claims for reparation for causes of action arising prior thereto. Thomas Iron Co. 57 I. C. C. 657. Buxton-Smith Co. v. A., T. & S. F. Ry. Co., 89 I. C. C. 373, 374.

(bc) Limitation period in the act expired prior to the filing of the claim and prior to the enactment of the transportation act, 1920. Section 206 f of the transportation act provides that the period of federal control shall not be computed as a part of the periods of limitation in claims for reparation for causes of action arising prior to federal

control. Carriers contended claim was barred. Contention not sustained. Cohn v. C. M. & St. P. Ry., 96 I. C. C. 257.

(d) Complainant attacked fifth class rate of $1.90 charged on two cars of potato starch shipped May 29 and June 24, 1918 from Seattle, Wash., to New York, as unreasonable. The claims were not filed within one year as prescribed in section 206 c of the transportation act, 1920, and are barred. HELD, complaint dismissed. Lasker & Bernstein v. Director General, 98 I. C. C. 624.

(e) Excluding period of Federal control as part of period of limitation in claims for reparation on shipments moving prior thereto, as provided in paragraph (f) of section 206 of transportation act, 1920, complaint found to have been filed within two years after accrual of cause of action and not barred. Ryan Fruit Co., 60 I. C. C. 733. Whitaker-Glessner Co. v. C. & O. Ry. Co., 91 I. C. C. 339, 340.

(f) Formal complaint against director general alleging overcharges on shipments moving during period of Federal control, filed with commission within two years and six months' period as provided in section 206 (c) of the transportation act, 1920, found not barred. Givens v. Director General, 92 I. C. C. 63, 66.

(g) Claims based upon causes of action arising prior to Federal control, which, excluding Federal control period, arose within two years prior to filing of complaint are not barred by the statute of limitations under provisions of section 206 (f) of the transportation act, 1920. Ball, Seligman & Co., 73 I. C. C. 223. Warren Construction Co. v. G. N. P. S. S. Co., 92 I. C. C. 302, 303.

(h) Transportation Act Feb. 28, 1920, §206f (Comp. St. Ann. Supp. 1923 §10071¼cc), so far as it excludes period of federal control from limitation period Commerce Commission for causes arising prior to federal control, operates retrospectively so as to revive cause of action which had theretofore become barred by Interstate Commerce Act, §16, par. 2 (Comp. St. §8584). Cocke v. Morgan's Louisiana & Tex. R. S. S. Co. 4 Fed. (2d) 961.

(i) Where both informal and formal complaints involving shipments moving during Federal control were filed more than one year after the termination of Federal control the allegation of unreasonableness contained therein can not be considered. Tidal Osage Oil Co. v. Director General, 96 I. C. C. 112.

(j) Contention that the transportation act, 1920, did not and could not operate to revive a cause of action barred by pre-existing law, not sustained, following Pacific Coast Shippers' Asso., 78 I. C. C. 10, and other cited cases. Section 206 (f) of transportation act provides that period of Federal control be disregarded in computing statutory period of limitation in actions against carriers or in claims for reparaton for causes of action arising prior to Federal control. Under the two-year Federal statute of limitations, all "causes of action arising prior to Federal control" were barred at expiration of Federal control, and, unless section (206 f) was intended to and did revive such causes of action, it was meaningless and of no effect. M. Cohn v. C., M. & St. P. Ry. Co., 96 I. C. C. 257, 258.

(ja) Formal complaint alleging unreasonableness on shipments moving during Federal control, filed with commission within 90 days after institution of suit by carrier in the courts for collection of undercharges, but more than one year after termination of Federal control, found barred. The right of action under allegation of unreasonableness was not revived by court proceeding and is not properly before the commission under section 16 (3) of the interstate commerce act. The commission's jurisdiction to entertain complaints for reparation on account of the exaction of unreasonable rates on shipments moving during Federal control is derived solely from section 206(c) of the transportation act, 1920, under which such complaints must be filed within one year after termination of Federal control. See 264 U. S. 456. Cudahy Packing Co. v. Director General, 102 I. C. C. 598, 599, 600.

(k) Claims barred by statute not revived by subsequent change in statute. Upon inquiries as to the effect of the decision rendered on June 8, 1925 by the Supreme Court in Wm. Danzer & Co., Inc. v. G. & S. I. The Commission construes that decision, considered in connection with the decision in Kans. City Sou. v. Wolf 261 U. S. 133 as prohibiting common carriers subject to the act from paying straight overcharge claims which were barred by statute at or prior to the amendment of June 7, 1924 to paragraph 3 of section 16 of said act,

and as prohibiting the Commission from awarding reparation on any claim which was barred by statute at or prior to the date of that amendment. Milne Lumber Co. v. Wabash Ry. 104 I. C. C. 669.

(l) Supreme Court has held that section 206 f of the transportation act, 1920 which provides that the period of federal control shall not be computed as a part of the period of limitation in claims for reparation for causes of action arising prior to federal control, may not be construed retroactively to create liability. 268 U. S. 633. Parkersburg Rig & Reel Co. v. C. R. I. & P. Ry. 107 I. C. C. 182.

(m) Complainant attacked commodity rate of 30c charged on logs from Mascouche, Que., to Aspen, N. J., during Feb. and March 1920, as inapplicable to the extent it exceeded a rate of 27c. HELD, complaint barred, complaint dismissed. American Splint Corporation v. C. P. Ry. 109 I. C. C. 170.

(n) Complainant attacked rate charged on dressed granite from South Ryegate, Vt., to Columbus, O., March 12, 1921 as unreasonable and inapplicable. Complaint filed Feb. 16, 1925. HELD, complaint barred, complaint dismissed. Mason v. M. & W. R. R. R. 112 I. C. C. 56.

ALL OTHER CITATIONS

Eshelman & Sons v. Director General, as Agent, 85 I. C. C. 578; Lilly Co. v. O. S. L. R. R. Co., 85 I. C. C. 644; Parkersburg Rig & Reel Co. v. Director General, as Agent, 85 I. C. C. 665; Mifflin Hood Brick Co. v. Director General, 88 I. C. C. 206.

§2. Claims Accruing before June 7, 1924.

(a) Claims which were barred by statute at or prior to the date of the amendment of June 7, 1924 can not be revived. American Splint Corp. v. C. P. Ry. 109 I. C. C. 170.

(b) Claims which were barred at or prior to the date of the June 7, 1924 amendment could not be revived. Chevrolet Motor Co. v. B. & O. R. R. 109 I. C. C. 184, 185.

(c) Section 206f of the transportation act, 1920 can not be applied to revive complaints which were barred by the statute of limitations at the time the section was enacted. Chevrolet Motor Co. v. C. & A. R. R. 109 I. C. C. 462.

(d) Complainant alleged that during the period from Aug. 1, 1921 to July 15, 1922 it made certain shipments of cotton from South Carolina to North Carolina and Virginia compressed at Toccoa, Ga., upon which a rate of 69c was applied; that on Oct. 23, 1924 defendants collected 15c as the cost of compressing the cotton at Toccoa; that during the same period complainants competitors were furnished free compression in some instances and in others a rate of 72.5c which included 15c for compression was applied by defendants upon similar shipments from and to more distant points. Complainant contended rates and charges unreasonable, unduly prejudicial and in violation of the fourth section. The shipments were delivered to defendants for transportation to Toccoa with the privilege of concentration and compression there by a compress company and reshipment to final destination on the basis of through rates under tariffs and transit rules that made no provision for the absorption of the charges for compression assessed by the compress company. On Aug. 8, 1924 defendants instituted suit in court against complainant to recover the compress charges thus paid by their agent to the compress company. To terminate the litigation and to establish what complainant believed to be a proper foundation for a complaint before the Commission, the amount of the compress charges was paid by complainant to defendants on Oct. 23, 1924. On Nov. 6, 1924 this complaint was filed. The complaint having been filed more than two years after delivery of the shipments, the claim is barred in so far as concerns the two year limitation of section 16 (3) of the act as well as section 16 (3b) as amended June 7, 1924. By those provisions the period of limitation is extended 90 days from the time action is begun by a carrier for recovery of charges in respect of the same transportation service. For present purposes assume that the suit instituted by defendants was for the recovery of charges in respect of the same transportation service. As the action was begun on Aug. 8, 1924 complaint could have been filed with the Commission on that date. As that counts one day, ninety days from the time such action is begun would permit filing the complaint not later than Nov. 5. Complaint was filed

Nov. 6. Under the long standing practice the day on which the shipment is delivered is included in ascertaining whether a complaint seeking reparation has been filed within the period provided by the act. The amendment of June 7, 1924 for the first time provided for an extension of the period of limitation to 90 days after the collection of charges in respect of transportation service. As that is limited to instances where the collection is made without beginning action, it has no application to any portion of the present claim. HELD, claim is barred, complaint dismissed. Latham Bradshaw Cotton Co. v. B. R. Ry., 109 I. C. C. 593.

(e) Complainant attacked commodity rates charged on a car of wrapping paper shipped during Jan. 1922 to Memphis, Tenn., from Piercefield, N. Y., as inapplicable. Complaint filed Dec. 31, 1924. Shipment here concerned was barred by the statute prior to the enactment of the amendment of June 7, 1924 and comes within the provisions of conference rule and is barred. HELD, complaint dismissed. Memphis Freight Bureau v. C. & O. Ry., 112 I. C. C. 55.

(f) Claims barred by statute prior to June 7, 1924 can not be revived. Mason v. M. & W. R. R. R. 112 I. C. C. 56.

(g) Complainant attacked commodity rates charged on a number of tank cars of gas oil between Dec. 3, and 21, 1920 from Vinita, Okla., to Blissville and Hempstead, N. Y., and Detroit, Mich. as in violation of section 6. Complaints filed with the Commission Dec. 1, 2, 3 and 5, 1924. The claims were not filed with the Commission prior to the dates of the filing of the formal complaints, about 3 years 11 months after the shipments were delivered and the cause of action accrued. This filing was within six months after the passage of the amendment of June 7, 1924 to section 16 of the act. However, when the cause of action accrued the statutory period of such claims was two years and these claims were barred prior to the amendment of June 7, 1924. Such amendment did not revive the action. HELD, claims barred by the statute, complaints dismissed. Standard Oil Co. v. St. L. S. F. Ry. 112 I. C. C. 217.

§2½. Reliance For Filing on Carrier.

(a) Fact that correspondence was conducted with the interested carrier to ascertain its attitude on the question of the reasonableness of the rates charged, resulting in a final closing of the informal file later than otherwise would have been the case, could not toll the statute of limitations, and was not in any other respect equivalent to the filing of a complaint within the meaning of the act. St. Louis Fruit & Vegetable Asso. v. L. & N. R. R. Co. 98 I. C. C. 553, 554

§3. Date of Delivery of Shipment.

ALL CITATIONS

Citizens Gas & Electric Co. v. A. T. & S. F. Ry. Co., 85 I. C. C. 435; Lilly Co. v. O. S. L. R. R. Co., 85 I. C. C. 644; Lakewood Engineering Co. v. B. & O. R. R. Co., 88 I. C. C. 588; Swift & Co. v. T. & P. Ry. Co., 88 I. C. C. 610.

§5. Date of Amending Claims.

(a) Complaint only sought reparation on past shipments therein specified but at original hearing complainants filed an amendment to cover all shipments moving since filing of the complaint, to which defendants interposed no objection. Subsequently a further hearing was held and defendants there contended that shipments delivered more than two years prior thereto are barred by the statute, HELD: Complainants clearly seek reparation on shipments made during pendency of the proceeding. Wichita Board of Commerce v. Director General, 92 I. C. C. 370, 371.

(b) Neither informal nor formal complaint made any reference to fact that shipments received transit service and were subsequently reshipped to destinations beyond transit point, complainant having been permitted to later amend formal complaint to show this fact, and also to name additional carriers over whose rails shipments moved beyond transit point. Upon contention that claims in respect of such shipments are barred by statute of limitations, HELD: Both complaints contained sufficient information to put defendant upon notice as to subject matter and to stop running of statute in respect of all such shipments. See 92 I. C. C. 215. Fact that all of the carriers involved were not named in original complaint can not act as a bar where shipments, as here, moved during Federal control wholly over Federally-controlled lines and only reparation is sought. See 80 I. C. C. 485. Farrell v. C., M. & St. P., 102 I. C. C. 455, 456.

§5½. After notice to file formal complaint.

See Supra §1.

(a) Claim on shipments moving more than six months after notice that claim had failed of informal adjustment found barred by the statute of limitations. American Stores Co. v. P. R. R. Co., 89 I. C. C. 41.

(b) A formal complaint filed March 12, 1923 after claimant had been notified on Sept. 12, 1922 that the claim could not be adjusted informally, was filed within six months after the date of mailing of notice that the claim could not be adjusted informally. New Idea Spreader Co. v. Director General, 92 I. C. C. 742, 744.

(c) Complainant attacked commodity rates charged on two cars of coal in February and March 1918 from Ziegler, Ill., to Agar, S. D., one reconsigned to Lake Preston, S. D., and other to Miller, S. D., as unreasonable. Freight charges based on combination rates to and beyond Tracy, Minn., the reconsigning point. Complainant was advised that claim could not be handled on informal docket, and the submission to the Commission on the formal docket was long after the time allowed by law for filing claims against the director general. HELD, complaints dismissed. Sexauer & Son v. Director General, 93 I. C. C. 687.

(d) Complainant notified by letter dated January 28, 1922, that informal complaint could not be adjusted informally, and formal complaint was filed July 28, 1922. Contention that complaint should be considered as having been abandoned under Rule III (g) of Rules of Practice not sustained, since formal complaint as above noted was filed "within six months after date of mailing of notice that claim could not be adjusted informally". See West Cache Sugar Co., 87 I. C. C. 368. Du Pont De Nemours & Co. v. Director General, 91 I. C. C. 15.

(e) Formal complaints filed with commission "within six months after date of mailing of notice that the claim could not be adjusted informally," as provided by Rule III (g) of Rules of Practice, are not barred by statute of limitations contained in section 16 (3) of the act. Ouachita Cotton Oil Co. v. M. P. R. R. Co., 91 I. C. C. 750; Macbeth Glass Co. v. B. & O. R. R. Co., 91 I. C. C. 758.

(f) Original formal complaint attacking one factor of a combination rate was filed against originating carrier within statutory period. By amended complaint filed more than six months after notice that claim could not be disposed of informally and more than two years after cause of action accrued, carrier publishing other factor was brought in as an additional party defendant. HELD: Claim against originating line, whose factor only is assailed, found not barred but claim against carrier named in amended complaint found abandoned under Rule III (g) of Rules of Practice. Inland Paper Co. v. C. M. & St. P. 92 I. C. C. 29, 30.

(g) Complainant was notified by letter mailed January 24, 1923, that its informal complaint could not be adjusted informally. Formal complaint was filed July 24, 1923. Upon contention of defendant that complaint should be deemed to have been abandoned under rule III (g) of Rules of Practice, FOUND: Formal complaint was filed "within six months after date of mailing of notice that claim could not be adjusted informally." See also West Cache Sugar Co. 87 I. C. C. 368. National Supply Co. v. Director General, 92 I. C. C. 610, 611.

(h) Informal complaint alleging unreasonableness of shipments moving during Federal control filed March 1, 1921. Less than two years and six months after Federal control terminated informal complaint was amended so as to bring into issue applicability of the rates. Formal complaint filed less than six months after closing of informal file. HELD: Shipments are not barred as to section 6 of the act. Caddo Central Oil & Rfg. Corp. v. Director General, 92 I. C. C. 627, 628.

(i) Complainant notified on January 24, 1922, that claim could not be adjusted informally. Formal complaint filed July 24, 1922. Contention that complaint should have been filed not later than July 23, 1922, to bring it within the six months' rule, HELD: Following West Cache Sugar Co., 87 I. C. C. 368, complaint found to have been filed within six months after notification that claim could not be adjusted informally as provided under Rule III (g) of Rules of Practice. New Idea Spreader Co. v. Director General, 92 I. C. C. 742, 743.

(j) Complainant was informed by

commission that its informal claim for reparation on shipments moving during Federal control was not susceptible of informal adjustment and that resource lay through formal complaint. After extensive correspondence between complainant and the railroad administration culminating in a refusal of the director general to pay the claim it was resubmitted to the commission formally. HELD, formal complaint is barred because not filed within one year after termination of Federal control as prescribed in section 206 (c) of the transportation act, 1920. Sexauer & Son v. Director General, 93 I. C. C. 687.

(k) Informal complaint filed within statutory period alleging violation of the act in matter of tariff construction, and formal complaint filed more than two years after cause of action accrued further alleging that rates charged were unreasonable and unduly preferential. HELD, through filing of formal complaint the informal complaint was not broadened so as to include allegations of unreasonableness and undue preference, as contended by complainant, and formal complaint is barred by statute of limitations. St. Louis Fruit & Vegetable Asso. v. L. & N. R. R. 98 I. C. C. 553, 554.

(l) Informal claim alleged overcharges on imported shipments of potato flour, billed as potato starch in error, moving during Federal control, from Seattle, Wash., to New York, N. Y., the rates applicable on potato starch being collected. Formal complaint, filed more than one year after the termination of Federal control, alleging the rate charge was unreasonable, found barred by statute, since the issue in the informal complaint was solely one of legality. Lasker & Bernstein v. Director General, 98 I. C. C. 624.

(m) Formal complaint was filed on April 16, 1923 more than two years after the cause of action accrued and more than six months after notice to complainant that the claims had failed of informal adjustment. These claims must be deemed to have been abandoned and will not be considered. Jones v. Pennsylvania R. R. 107 I. C. C. 483, 484.

(n) Complainant attacked demurrage charges collected at New Orleans, La., on nine cars of flour shipped from St. Louis between July 10, and August 3, 1920 for export to Havana, Cuba, and the rate of 42c collected on five of the nine from New Orleans back to St. Louis, as inapplicable. Shipments moved over M. P., from St. Louis to New Orleans and return. The flour was not exported to Havana. It was held at New Orleans until, upon complainants instructions, it was returned to St. Louis and accepted by complainant in October, 1920. The claim was presented informally Oct. 15, 1921. On Feb. 7, 1922 it was denied. On Feb. 4, 1924 it was again presented on the informal docket. Complainant was advised that as it had not been resubmitted on the informal docket nor a formal complaint filed within six months from the date of its denial on the informal docket, or within the statutory period under the act, it was barred from further consideration. The claim was again resubmitted on the informal docket on June 23, 1924. Formal complaint was filed Dec. 29, 1924. HELD, complaint was barred prior to the date of the amendment of the act and was not revived, complaint dismissed. Saxony Mills v. M. P. R. R. 107 I. C. C. 649.

(o) Complainant alleged that by reason of the error and negligence of defendants one car of lumber shipped April 19, 1920 from Milepost 45, Minn., to complainant at Sparta, Wis., was forwarded to Chicago, Ill., that, on arrival of the car at Chicago, by reason of the further error and negligence of defendants, complainant was not notified of such arrival; and that complainant paid and bore charges; freight charges point of origin to Chicago $78.10, demurrage at Chicago $103, penalties $270, reconsignment from Chicago to Sparta $5, and freight charges from Chicago to Sparta $42.50. The matter was brought to the attention of the Commission by informal complaint filed August 10, 1921. Under date of Jan. 14, 1922 complainant was informed that charges were legally assessed. Nothing further was done until the formal complaint was filed, more than two years ten months later. HELD, claim held to have been abandoned, complaint dismissed. Barnes v. C. & N. W. Ry., 109 I. C. C. 589.

(p) Complainant attacked defendants failure and refusal to reconsign promptly at Jackson, Miss., numerous carload shipments of lumber originating at Columbia and other points in Mississippi on defendants lines, during the

period Oct. 27, 1917 to Jan. 15, 1918 and subsequently forwarded from Jackson to Pennsylvania, Ohio, West Virginia, New Jersey, New York and Illinois resulted in assessment of demurrage and other charges in excess of published tariffs in violation of section 6. The matter was declined informally April 13, 1921 and not submitted on formal docket until May 5, 1924. HELD, informal claims abandoned and complaints barred, complaints dismissed. Krauss Brothers Lumber Co. v. Director General 112 I. C. C. 117.

Wadhams Oil Co. v. C. & N. W. Ry. Co. 85 I. C. C. 705; Alaska Junk Co. v. Director General, as Agent, 85 I. C. C. 745; Sunderland Brothers Co. v. Director General, as Agent, 88 I. C. C. 585; Santa Rosa Mercantile Co. v. Director General, as Agent, 88 I. C. C. 753.

§5¾. Interveners.

See Interveners.

(a) Shipper was notified that its claim for overcharges could not be adjusted informally and that formal complaint should be filed within six months thereafter; otherwise claim could not be further considered. Claim was not again presented until intervention of shipper at hearing more than six months after notification that claim could not be adjusted informally, and more than two years and six months after termination of Federal control. HELD: Claim barred under Rule III (g) of Rules of Practice; also under section 206 (c) of the transportation act, 1920, as amended. Fairmont Creamery Co. v. Director General, as Agent, 89 I. C. C. 359, 360.

II. INFORMAL COMPLAINTS.

See Reparation §22.

§6. In General.

(a) Informal file was closed, subsequently revived by letter from complainant, and again closed. HELD: Consideration of shipments involved therein is not barred by the statute of limitations where formal complaint is filed within six months after date of second closing. Duluth Iron & Metal Co. v. Director General, as Agent, 89 I. C. C. 343.

§7. Formal Complaint.

(a) Formal complaint alleging unreasonableness found barred because informal complaint not filed within statutory period of one year from termination of Federal control, but in so far as overcharges alleged in same complaint are concerned, it is not barred, the informal complaint having been filed within statutory period of two years and six months after Federal control terminated. San Antonio Paper Co. v. Director General, 102 I. C. C. 243.

(b) Defendant contends that neither informal nor formal complaint alleged an overcharge, because in neither is it specifically stated that rates charged were in violation of section 6. Both complaints, however, alleged that charges collected were neither applicable nor lawful and set forth rates complainant contends were applicable. HELD: This is sufficient allegation of an overcharge. San Antonio Paper Co. v. Director General, 102 I. C. C. 243, 244.

(c) Where formal complaint originally received by commission within statutory period of limitation is returned for correction and subsequently refiled after statutory period has run, claim is not barred, since original receipt constitutes a filing with the commission as of that date. See also 98 I. C. C. 361, 369. Clark Lbr. Co. v. A., B. & A., 102 I. C. C. 252, 253.

(d) Where formal complaint relating back to informal complaint filed in behalf of same shippers brings into issue additional shipments not covered by informal proceeding, such additional shipments are barred unless filed within statutory period of limitation. Chicago Live Stock Exchange v. Director General, 102 I. C. C. 452.

(e) Formal complaint contained but a partial list of shipments, complainant stating a complete list would be furnished at hearing. No such list was furnished, but reference was made to informal complaint for complete list. HELD: A mere reference to shipments contained in informal complaints does not incorporate them in formal complaints under commission's rules of practice. Western Pine Mfrs' Asso. v. Director General, 102 I. C. C. 753, 755.

(f) Contention that claim for misrouting, raised for the first time in a complaint filed after expiration of the one-year period provided in section 206 (c) of the Transportation Act, 1920, is barred by the statute of limitations, not sustained. Informal complaint filed

within statutory period alleged that "the charges assessed on this shipment were unreasonable and violative of sections 1, 2, 3 *** and also section 10 of the Federal control act ***." Such general allegation of unreasonableness is sufficient to permit of the consideration of a claim for misrouting, and, accordingly, the specific allegation of misrouting in the formal complaint does not amount to the setting up of a claim or cause of action different from that originally relied upon. Gwinn Bros. & Co., 56 I. C. C. 298, 302. Mifflin Hood Brick Co. v. Director General, as Agent, 88 I. C. C. 205, 206.

ALL OTHER CITATIONS

Gerhard & Hey (Inc.) v. Director General, as Agent, 88 I. C. C. 293; Radiant Glass Co. v. Director General, as Agent, 88 I. C. C. 295; Midland Linseed Products Co. v. N. Y. S. & W. R. R. Co., 88 I. C. C. 329; International Harvester Co. v. N. Y. C. R. R. Co., 88 I. C. C. 368; Armour & Co. v. Director General, as Agent, 88 I. C. C. 569.

§8. Requisites of Informal Complaint.

See Supra §1.

(a) Informal complaint filed within statutory period alleging violation of the act in matter of tariff construction, and formal complaint filed more than two years after cause of action accrued further alleging that rates charged were unreasonable and unduly preferential. HELD, through filing of formal complaint was not broadened so as to include allegations of unreasonableness and undue preference, as contended by complainant, and formal complaint is barred by statute of limitations. St. Louis Fruit & Vegetable Asso. v. L. & N. R. R. Co., 98 I. C. C. 553, 554.

ALL OTHER CITATIONS

Glenn v. Director General, as Agent, 85 I. C. C. 743; Wyoming Sugar Co. v. Director General, as Agent, 88 I. C. C. 213; International Harvester Co. v. N. Y. C. R. R. Co., 88 I. C. C. 368; Doniphan Brick Works v. Director General, as Agent, 88 I. C. C. 438.

IV. PARTIES ENTITLED TO RECOVER.

§12. In General.

(a) Informal complaint showed "The Team Company" a copartnership composed of three partners as claimant. Formal complaint brought in the Wichita Company as additional complainant. Upon contention that the Wichita Company is a department of the copartnership; that informal complaint tolled the statute with respect to all shipments on its behalf; that partners were operating under two names; and that trade names, as such, have no standing under the law, copartners being real parties in interest, HELD: Failure to name the Wichita Company in informal complaint is not fatal. The parties in interest are named and the statute tolled in respect of the shipments here involved. Wichita Chamber of Commerce v. Director General, 102 I. C. C. 745, 746.

§13. Assignments.

(a) Purported assignments and letters of authorization to complainant from consignors of all rights to reparation respecting shipments on which consignors bore charges, bearing dates after that on which the statutory period within which complaints for the recovery of damages could have been filed, found to come too late to accomplish the purpose intended. See 80 I. C. C. 55. Farrell v. C., M & St. P., 102 I. C. C. 455, 456, 457.

(b) Upon contention that under section 3477 of the Revised Statutes of the United States assignments were void because they transfer unliquidated claims against the Government, HELD: Section 3477 does not apply to claims brought under the transportation act against the Director General. See 89 I. C. C. 645, 649. Wichita Chamber of Commerce v. Director General, 102 I. C. C. 745, 746, 747.

CLASS RATES

§1. In general.

II. REASONABLENESS AND DISCRIMINATION.
§2. In general.

III. REPARATION.
§3. In general.

CROSS REFERENCES

See Classification V; Commodity Rates §2; Differentials; Evidence §13 (1½); Reasonableness of Rates §28.

I. TARIFFS AND PUBLICATION.

§1. In general.

See Commodity Rates §2; Tariffs.

(a) Fifth class rates on tank-car loads of gasoline, in effect during Federal control, from Central, Bristol, Wilsonburg, Clarksburg, Jacksonburg, Jane Lew, and Skinner's Creek Siding, W. Va., to Bayonne, N. J., found unreasonable to extent they exceeded lower commodity rates contemporaneously in effect from Ellenboro, Parkersburg, Hastings, Gassaway, and Charleston, W. Va., farther distant points, which lower rates were published subject to rule 77 of Tariff Circular 18-A, requests for publication of rates in accordance with that rule not having been made until after shipments had moved. Reparation awarded. Standard Oil Co. v. Director General, as Agent, 89 I. C. C. 7.

(b) Complainant attacked class rates charged of $1.485 and $1.335 on two cars of steel grinding balls shipped on Feb. 23, 1922 and April 25, 1923 from Cgrome, N. J., to Ada, Okla., as unreasonable and inviolation of section four. Shipments moved via N. Y. & N. J. S. S. Co., Morgan Line to Galveston, Tex., G. C. & S. F., and Santa Fe beyond, charged fifth class rates. The rates are on a low basis and reflect the competition of the river crossings and the northern Atlantic ports and are not maximum reasonable rates. HELD, rates charged applicable, no violation of the fourth section, complaint dismissed. Oklahoma Portland Cement Co. v. A. T. & S. F. Ry., 93 I. C. C. 203.

(c) Complainant attacked class rates charged on two cars of bicycles June 20 and Nov. 15, 1921 from Middleton, O., to Los Angeles, Calif., as inapplicable. Charged first class rate of $5.835 on bicycles and third class rate of $4.20 on the unfinished bicycle forks. Contemporaneously there was in effect a commodity rate of $2.765 on vehicles, nonself propelling, and parts thereof. Effective Sept. 30, 1922 defendants established a commodity rate on bicycles from and to these points higher than the rate then in effect on vehicles as described in western classification under the heading of vehicles, horsedrawn. A bicycle is neither a freight nor a passenger vehicle and rate charged on bicycles was applicable. HELD, complaint dismissed. United Cycle & Supply Co. v. B. & O. R. R., 93 I. C. C. 689.

(d) Complainant attacked fourth class rate of $3.665 charged on two cars of woven paper fabric bags in February 1922 from Cleveland, O., to San Francisco and Los Angeles, Calif., as unjust, unreasonable and unduly prejudicial. Shipments moved as routed. At time shipments moved defendants maintained a commodity rate on paper bags from Cleveland to San Francisco and Los Angeles of $1.92 and commodity rate on burlap, gunny, and jute bags, in bales of $1.835. The latter rate, subject to the general reduction of 1922 was established on woven paper fabric bags, effective June 1 1923 and it is to this basis that reparation is sought. In view of the specific rating on woven paper fabric bags, the Commission can not agree that the broad description used in connection with the commodity rate on paper bags took complainants article out of the classification. HELD, rate attacked unreasonable to extent it exceeded $1.92, reparation awarded. Cleveland Akron Bag Co. v. W. & L. E. Ry., 93 I. C. C. 699.

(e) Complainant attacked class rates charged on paper tablets, paper bags, and wrapping paper, in straight and mixed carloads, from Birmingham, Ala., and Atlanta, Ga., to Jackson, Miss., as unreasonable unjustly discriminatory and unduly prejudicial. Rates attacked are class rates governed by the southern classification which provides on paper tablets, fifth class, paper bags or wrapping paper, class A and on mixed carloads the highest rating and highest minimum applicable to any article in the car. No complaint is made of the measure or relationship of the rates as class rates. The record shows that class rates are generally applicable to these paper articles within and to points in the south. No sound reason appears for prescribing rates on these paper articles which will reflect certain percentages of the corresponding class rates. The record is convincing that the class basis is reasonable and proper for these occasional carload shipments, and that complainant has suffered no undue prejudice by reason of the maintenance of the unused commodity rates from Atlanta. HELD, rates attacked not unreasonable or otherwise unlawful, complaint dismissed.

Jackson Paper Co. v. A. G. S. Ry., 98 I. C. C. 442.

(f) Class rates charged on matches from Oswego, N. Y., to certain team-track delivery points in Philadelphia, found inapplicable. Lower commodity rate to Baltimore, published in tariff which provided that "rate to any station not provided with a specific rate, and which is directly intermediate to a station having a specific rate, will be the rate shown to next more distant station," found applicable. Although shipments for Baltimore would not ordinarily pass through Philadelphia delivery points here involved, it would have been physically possible to have so moved them, and there was no restriction against such routing. Shipments found overcharged and reparation awarded. Diamond Match Co. v. Director General, 92 I. C. C. 68.

(g) Class rate on l. c. l. shipment of iron pipe fittings from Barberton, Ohio, to Duluth, Minn., destined to Virginia, Minn., found inapplicable to extent it exceeded lower commodity rate published in same tarfif on "iron and steel articles, c. l., which lower rate by tariff note applied on a list of commodities in which pipe fittings were included without limitation as to whether c. l. or l. c. l. While carriers intended to omit all reference to l. c. l. rates in connection with lower commodity rate, through oversight this was not done. However, erroneous publication of rates does not justify a departure therefrom and intention of framers is not controlling. Reparation awarded. Murray-Egan-McLeod Co. v. P. R. R., 93 I. C. C. 79.

(h) Combination fifth - class rates based on Ohio River crossings assessed on sporadic shipments of canned meats (surplus army stock) moving from Atlanta to Chicago, found not unreasonable as compared with lower commodity rates on other canned goods, or with rate on the complete canned goods list, including meats, vegetables, fruits, etc., southbound from Ohio River crossings to Atlanta. Probability of any traffic northbound other than sporadic shipments is remote, and a northbound commodity rate south of Ohio on these shipments as low as that applicable in reverse direction, under which traffic moves regularly, does not seem justified. Armour & Co. v. L. & N., 93 I. C. C. 360.

(i) Upon contention that class rates are properly applicable on isolated shipments in lieu of commodity rates, as latter are established to take care of sustained movements. HELD, shippers are entitled to reasonable rates, and fact that there have been relatively few shipments of a commodity between certain points is not sole determinative factor. Parkersburg Rig & Reel Co. v. M. P., 93 I. C. C. 667, 669.

(j) Class C rates on prepared roofing from Port Neches, Tex., to Couchwood, Cotton Valley and Haynesville, La., and State Line and Emerson, Ark., found unreasonable as compared with rates from St. Louis and Kansas City to same destinations, from Port Neches to Shreveport, Monroe, New Orleans, Vicksburg and Memphis, and to extent they exceeded lower commodity rates subsequently established equal to basis prescribed in Memphis Southwestern Investigation, 77 I. C. C. 473, 562, for distances the same as those between Port Neches and the several points of destination of complainant's shipments. Reparation awarded. Texas Pipe Line Co. v. L. & A., 95 I. C. C. 674.

(k) Proposed restriction of the application of distance class rates between points in Nebraska, except Omaha, and points in Wyoming, so as to make them inapplicable from and to points on the line of the C., B. & Q. lying generally east of Lincoln, Crete, Beatrice and Wymore, Nebr., resulting in higher specific class rates becoming applicable, found not justified. Casper Chamber of Commerce v. C. & N. W. Ry Co., 96 I. C. C. 736.

(l) Interstate class rates, between points in southern territory should be not higher than a normal level based upon a distance scale or scales of such extent as to cover hauls of all lengths. Southern Class Rate Investigation, 100 I. C. C. 513, 615.

(m) Upon general investigation, on commission's own motion, of interstate rates within southern territory and between southern and official territories, FOUND: Class percentage relationships should be uniform for all traffic, intraterritorial or interterritorial governed by southern classification. Such uniform percentage relationships shown. Southern Class Rate Investigation, 100 I. C. C. 513, 630.

(n) Hay, straw, shucks, grain, grain products, and grain by-products should be excepted for present from application of class rates herein approved between

official and southern territories and from Ohio River and Mississippi River crossings to points in southern territory. Southern Class Rate Investigation, 100 I. C. C. 513, 707.

(o) Fifth-class rates on sugar from Philadelphia, Pa., and New York, N. Y., to St. Louis, Mo., found inapplicable in that a lower commodity rate was contemporaneously in effect. The item in tariff publishing commodity rate contained a note restricting rates to proportional application only in so far as east Mississippi River crossings are concerned. It may have been the intention of carriers to so restrict application of the rate to all points listed in the item but the tariff does not effectuate that intention in so far as St. Louis is concerned. The language of the tariff rather than intention of the framers is controlling. Defendants state that use of rates on local shipments to St. Louis will result in fourth section violations, but this does not constitute a ground for holding that they apply other than in accordance with the terms of the tariff. Refund of overcharges directed. National Candy Co. v. P. R. R., 101 I. C. C. 43.

(p) Third-class and first-class rates applicable on c. l. and l. c. l. shipments of printed matter, n. o. i. b. n., assessed on shipments of paper envelope blanks, or paper wrappers, in sheets, printed or lithographed, moving over an interstate route from New York, N. Y., to Buffalo, found not unreasonable or otherwise unlawful as compared with the second-class and fifth-class rates applicable on "envelopes, other than Government stamped, printed or not printed," assessed on envelopes reshipped to New York. Rates higher on unfinished than on finished products are unusual, but in other cases the commission has declined to disturb the classification as applied to particular kinds of printed matter, even where the value was less than that of the commodity here considered and if an exception was made in this instance it would open up an endless field for complaint from the manufacturers of all kinds of printed matter. Furthermore, it would be practically impossible to distinguish between the different grades of commodities that come under the designation "printed matter" for the purpose of fixing specific rates on each. American Lithographing Co. v. L. V. R. R., 101 I. C. C. 100.

(pa) Class rate assessed on thin lumber or veneer, found applicable. While a commodity tariff carried a lower rate on lumber and articles taking same rates, the list of articles published therein did not include thin lumber or veneer, such tariff being specific as to what manufactured commodities are entitled to rate on lumber. On the other hand, the classification specifically describes veneer of the kind here shipped. Commodity tariffs must be strictly construed, therefore, until the specific commodity description is physically incorporated into the commodity tariff the class rate must be applied. Milne Chair Co. v. A. C. L., 102 I. C. C. 165.

(q) Complainant attacked rates on sirup and molasses, in straight carloads, and on sirup, molasses and preserves, in mixed carloads, from Kansas City, Mo., to destinations in Kansas since May 21, 1922 as unreasonable, unjustly discriminatory and unduly prejudicial. In the absence of commodity rates, sirup, molasses and preserves in this territory in straight carloads, take fifth class rates. This basis applies from Kansas City. Fifth class rates apply on mixed carloads. There may be need from a commercial standpoint for commodity rates on mixed carloads but there is no showing that the present rates impose an undue burden on the traffic. HELD, rates attacked not unreasonble or otherwise unlawful, complaint dismissed. Bliss Sirup Refining Co. v. A. T. & S. F. Ry., 109 I. C. C. 391.

(r) Complainant attacked class A rate charged on 6 cars of contractors outfits shipped in August and Oct. 1921 from Buffalo, Iowa, to Apache and Richards Spur, Okla., and return as unjust and unreasonable and inapplicable. Five cars moved from Buffalo to Apache and one from Richards Spur to Buffalo. Charged class A rates $1.25 to Apache and $1.33 to Buffalo. Reparation is sought to basis of commodity rate of 84.5c from and to the same points, this basis being canceled Dec. 15, 1923. In the general index to commodities appearing in the front of the tariff no reference is made to contractors outfits, but the term "outfits, graders" is shown and reference made to the item carrying the 84.5c rate. The Commission can not consider only the part of the rule that is favorable to complainants contention, and ignore other provisions of the tariff that make clear its appli-

cation. It is clear that the 84.5c rate did not apply on contractors outfits. The testimony was directed almost wholly to the tariff issue. The record fails to show any prior movements between points, nor are there likely to be any but sporadic movements in the future. Complainant does not attack the reasonableness of the classification rating as such, but admits that it is reasonable for general application. HELD, class rates attacked applicable and not unreasonable, complaint dismissed. Dolese Bros. Co. v. C. R. I. & P. Ry., 109 I. C. C. 561.

II. REASONABLENESS AND DISCRIMINATION.

§2. In general.

See Classification §17; Commodity Rates §2, §4 (c); Discrimination §8 (3); Equalization of Rates; Reasonableness of Rates §28.

(a) Fifth-class rates on tank-car loads of gasoline, in effect during Federal control, from Central Bristol, Wilsonburg, Clarksburg, Jacksonburg, Janelew, and Skinner's Creek Siding, W. Va., to Bayonne, N. J., found unreasonable to extent they exceeded lower commodity rates contemporaneously in effect from Ellensboro, Parkersburg, Hastings, Gassaway, and Charleston, W. Va., farther distant points, which lower rates were published subject to rule 77 of Tariff Circular 18-A; requests for publication of rates in accordance with that rule not having been made until after shipments had moved. Reparation awarded. Standard Oil Co. v. Director General, as Agent, 89 I. C. C. 7.

(b) Class A rates on horses, mules, asses, and burros from Kansas City, Mo. to points in Texas and Louisiana, found unreasonable and unduly prejudicial as compared with rates within Texas or Louisiana or between those States, and to extent they exceed the distance rates based on the class C scale provided for in Memphis-Southwestern Investigation, 55 I. C. C. 515, herein prescribed for future. Kansas City Chamber of Commerce v. A. & W. Ry. Co. 89 I. C. C. 22.

(c) Charges on fuller's earth, moving in tank cars furnished by shipper because of inability of carriers to furnish adequate box-car equipment, from Georgia and Florida points to Richmond, Calif., based on combinations to and from Mississippi River, found unreasonable to extent class rates for haul east of New Orleans, La., exceeded the contemporaneous commodity rates applicable on shipments moving in box cars. Reparation awarded. Standard Oil Co. v. A., T. & S. F. Ry. Co., 89 I. C. C. 27.

(d) Class D rate on nut coal from Cornell, Kans., to Fairview, Mo., found unreasonable to extent it exceeded lower commodity rate subsequently established. Reparation awarded. Midland Coal Co. v. M. P. R. R. Co., 89 I. C. C. 101.

(e) Fifth class rate on straw from Yorktown, Ind., to Grand Rapids, Mich., found not unreasonable as compared with lower temporary commodity rate established after shipments moved. Earnings under rate assailed can not be condemned as unreasonable per se and in United Paperboard Co., 69 I. C. C. 573, fifth class rates on this commodity were found not unreasonable. American Box Board Co. v. Director General, as Agent, 89 I. C. C. 271.

(f) Rates on fresh fruits and vegetables from Los Angeles and San Francisco, Calif., to Douglas and Bisbee, Ariz., found unreasonable to extent they exceed contemporaneous class C rates, which basis was found reasonable and prescribed by commission in Murray & Layne Co., 59 I. C. C. 552, and various other cases. Rates equivalent to class C were subsequently established by carriers. Reparation awarded. Buxton-Smith Co. v. A., T. & S. F. Ry. Co., 89 I. C. C. 373.

(g) Combination class rates between points on the Federal Valley R. R., and points on connecting lines, found unreasonable and unduly prejudicial as compared with joint rates maintained from competing points on other lines in Athens County, Ohio. Reasonable basis for joint class rates for future prescribed. Ohio Farm Bureau Federation v. A. & W. Ry. Co., 89 I. C. C. 489.

(h) Fifth-class rates on petroleum and products, including gasoline, in tank-car loads, from Point Breeze, Philadelphia, Pa., to Fresh Pond, N. Y., found unreasonable and unduly prejudicial as compared with commodity rates from refining points to a large number of destinations in trunk-line and New England territories, which are on a somewhat lower basis than fifth-class rates. Repa-

ration awarded. Transcontinental Oil Co. v. P. R. R. Co., 89 I. C. C. 738.

(i) Complainant attacked class rate of 63c collected on two cars of tanning extract shipped Feb. 21 and March 6, 1916, from Andrews, S. C., to Mariners Harbor, N. Y., as unreasonable, unjustly discriminatory and unduly preferential. Shipments moved via Southern to Potomac Yard, thence one car via Pennsylvania to Linden Junction, N. J., and one car via B. & O., to Crawford Junction, N. J., thence Staten Island Rapid Transit Ry. to destination, applicable sixth class rate 64c, shipment undercharged. Contemporaneously, commodity rate of 26c applied on tanning extract from Andrews, N. C., to New York City and points in that vicinity, which was increased on June 1, 1916 to 26.6c and made applicable to Mariners Harbor. Mariners Harbor and other points on the Staten Island water front are within the free lighterage limits of New York Harbor. HELD, rates attacked unreasonable to extent they exceeded 26c, reparation awarded. Haley Hammond Co. v. Southern Ry., 91 I. C. C. 1.

(j) Complainant attacked sixth class rate of 34.5c charged on 18 cars of coal tar shipped in January 1921 from Fairmount, W. Va., to Everett, Mass., as unreasonable. Distance moved 820 and 832 miles. On July 13, 1920 complainant requested established of a commodity rate and a rate of 31c was established Oct. 15, 1921. Coal tar is a comparatively low grade commodity. It is not shown that this commodity moves generally or, except under circumstances such as those here described, even occasionally on the classification basis from producing to consuming points in this territory. HELD, rate attacked unreasonable to extent it exceeded rate of 31c, reparation awarded. Barrett Company v. B. & O. R. R., 91 I. C. C. 53.

(k) Complainant attacked class rates charged on two cars of automobiles shipped in May 1922 from Dallas, Tex., to Los Angeles, Calif., as unreasonable to extent they exceeded charges which would have accrued had defendants furnished one car as ordered. A 50 foot car was ordered but defendant furnished two smaller cars. HELD, rates attacked unreasonable to extent they exceeded what would have been applied on the 50 foot car, reparation awarded. Dallas Transfer Co. v. Southern Pacific Co., 91 I. C. C. 73.

(l) Complainant attacked fourth class rates charged on carloads of fresh tomatoes from western New York to Pittsburgh, Pa., during August, September and October, 1919 and during the same months in 1920 as unreasonable, unjustly discriminatory and unduly prejudicial. Points of origin are in the Silver Creek district extending about 28 miles along Lake Erie, being 218 to 246 miles from Pittsburgh, movement being via the Pennsylvania, charged fourth class. The average number of shipping days was 53 in 1919 and 1920, and average number of cars shipped per day was 22.7. 278 cars were assigned to this service in 1920. There is practically no return movement from Pittsburg to the Silver Creek district except the empty baskets and dunnage, upon which fourth class rate also applies. Tomatoes do not generally move to factories for distances over 50 miles. There have never been commodity rates from and to the points in question. Considering the volume of traffic, its seasonal nature, the expense of assembling and returning the equipment, and all other pertinent facts, the Commission is of the opinion rates charged were unreasonable and that with a minimum of 40,000 pounds, rates of 24.5c prior to August 26, 1920 and 34c thereafter, would be reasonable. HELD, rates attacked unreasonable to extent it exceeded 80% of fourth class, 24.5c prior to August 26, 1920 and 34c thereafter, subject to general reductions of 1922, reparation awarded. An order will be entered prescribing for the future a group rate not exceeding 30.5c minimum 40,000 pounds. Heinz Company v. Director General, 91 I. C. C. 358.

(m) Complainant attacked class rates on watermelons from Atlanta, Ga., to Murphy, N. C., since May 1921 as unjust, unreasonable, unduly prejudicial. Shipments originated at points south of Atlanta, and were either billed to complainant in the first instance or rebilled in transit from Atlanta to complainant at Murphy, over the L. & N., rate charged from Atlanta being the proportion of the joint rate based on Atlanta. Prior to July 1, 1922 the rate from Atlanta over L. & N., was sixth class 47c, reduced on that date to 42.5c. Until July 1, 1922 the Southern main-

tained a rate of 19c from Atlanta to Murphy reduced to 17c on that date. On April 14, 1923 both L. & N., and Southern established a rate of 33.5c, the present rate. The short line distance over L. & N., from Atlanta to Murphy is through Marietta and Jasper, Ga., 130 miles, distance via Southern 375 miles. While the distance is 66 miles farther to Knoxville, Tenn., than to Murphy, the shipments to Knoxville move in through trains and under more favorable operating conditions than to Murphy. The rate to Murphy should be somewhat higher than to Knoxville, not, however, exceeding 5c. HELD, rate attacked via the Southern not unreasonable, but rate attacked via L. & N., unreasonable to extent it exceeded 21c., reparation awarded. Fain Grocery Co. v. L. & N. R. R., 91 I. C. C. 374.

(n) Complainant attacked fifth class rates charged on wire rods, carloads, from Canton and Youngstown, Ohio and Pittsburgh, Pa., to Lancaster, Pa., of wire, in coils from Lancaster to Harrison, N. J., and of band steel, in coils and bundles, from Lancaster to points in New England, New York and New Jersey, as unreasonable. In 73 I. C. C. 567, the Commission found rates attacked unreasonable, and awarded reparation. HELD, reparation awarded. Lancaster Steel Products Corp. v. Director General, 92 I. C. C. 1.

(o) Complainant attacked fourth class rate charged on metallic and woven wire mattresses, in carloads, from Chicago, Ill., to Indianapolis and Evansville, Ind., Cincinnati, O., and Louisville, Ky., between March 25, 1918 and Jan. 9, 1919, as unjust and unreasonable to extent they exceeded rates subsequently established. Commodity rates were established on commodity basis. This adjustment was disrupted when class rates in central territory were readjusted on Sept. 20, 1917. The carriers attempted to cancel various commodity rates, including those applicable to this traffic, schedules suspended but permitted to become effective March 25, 1918. HELD, rates attacked not unjust or unreasonable, complaint dismissed. Madden v. Director General, 92 I. C. C. 48.

(pq) Complainant attacked commodity rate of 34c charged on five cars of cullet from Memphis, Tenn., to Sapulpa, Okla., between August 26, 1920 and March 24, 1922 as unjust and unreasonable to extent it exceeded 25.5c. Cullet is rated class C in classification, distance shipments moved 483 miles, charged commodity rate of 34c prior to August 4, 1921, a rate of 25.5c being in effect after that date. The establishment of this rate placed Memphis on a parity with Fort Smith, Ark., and St. Louis, Mo. HELD, rate attacked not unreasonable, complaint dismissed. Liberty Glass Company v. St. L. S. F. R. R., 92 I. C. C. 199.

(r) Complainant attacked class rates charged on four cars of fresh tomatoes shipped between July 28 and August 9, 1923 from St. Louis, Mo., to Pueblo, Colo., as unreasonable and in violation of the fourth section. Shipments charged fifth class 96c, while a commodity rate of 88c applied from New Orleans to Pueblo, and effective April 1, 1924 a commodity rate of 87c was established from St. Louis. HELD, rate attacked unreasonable to extent it exceeded 88c, reparation awarded. Pressey Fruit Company v. M. P. R. R., 92 I. C. C. 287.

(s) Complainant attacked fifth class rate from Omaha, Nebr., to Dubuque, Iowa, of 27.5c charged as first factor of combination rates on 10 cars of potash shipped in April 1919 from Omaha to destinations east of the Mississippi river, as unjust, unreasonable, discriminatory and unduly prejudicial. All moved via C. G. W., to Dubuque. Alkali salts were rated fourth class in official classification under Potassium salts, n. o. i. b. n., although sixth class was provided for other specified varieties of potash. Commodity rates were in effect from Lakeside, Neb., point of origin to eastern destinations named but these shipments were stored at Omaha because of insufficient storage facilities at the plant. In February 1922 rating of potash in western classification was reduced from fifth to class C. No evidence bearing upon the reasonableness of the combination rates, or even an exact statement of such rates, was introduced by complainant. HELD, rate attacked not unreasonable, complaint dismissed. Standard Potash Co. v. Director General 92 I. C. C. 337.

(t) An attack upon the reasonableness of a class rate implies either that the article is improperly classified, or that, if properly classified, the class rate, as such, is too high, or that it moves in sufficient volume to entitle it

to a commodity rate. Burson Knitting Co. v. B. & O. R. R., 92 I. C. C. 607, 608.

(u) Complainant attacked class rate on coke, carloads, since Nov. 8, 1922 from Portsmouth, O., to Wingate, Ind., as unreasonable, unduly prejudicial and in violation of the fourth section. Wingate a local point on the Clover Leaf is 480 miles from Portsmouth over the B. & O., to Holgate, O., thence Clover Leaf to Wingate, charged sixth class $4.70. There was a commodity rate of $3.03 from Portsmouth to Wingate, Linden and Veedersburg, Ind., applicable over the N. & W., in connection with the Clover Leaf. Shipper routes shipments via route they moved. There is no necessity for a commodity rate over the circuitous route of the B. & O., and Clover Leaf. HELD, rate attacked not unreasonable, unduly prejudicial or in violation of the fourth section, complaint dismissed. Crabbs, Reynolds, Taylor Co. v. B. & O. R. R. 92 I. C. C. 621.

(v) Complainant attacked fifth class rate of 22.5c charged on 25 cars of copper bars, rough cast, shipped from Rome, N. Y., to Perth Amboy, N. J., between Jan. 1 and 12, 1920 as unreasonable. In 64 I. C. C. 691, rates attacked found not unreasonable or otherwise unlawful. This was a return movement of goods rejected by the vendee. The rate sought as the basis for reparation is 18c, which was the same as the commodity rate paid on the original movement from Perth Amboy to Rome and which was published in the reverse direction soon after these shipments moved. The contemporaneous rate from Rome to Perth Amboy on copper wire, the manufactured product of copper bars, was also 18c, a commodity rate. In the reverse direction a higher class rate was applicable on copper wire. HELD, rate attacked not unreasonable or otherwise unlawful, complaint dismissed. Raritan Copper Works v. Director General 92 I. C. C. 671.

(w) Complainant attacked class A rate of 50c charged on one car of tanker furnace blocks, shipped June 24, 1922 from Tallapoosa, Ga., to Alton Park, Tenn., within the switching limits of Chattanooga, as unjust and unreasonable to extent it exceeded 20c. Shipment moved over Southern from Tallapoosa via Anniston to Chattanooga, distance 181 miles. These blocks are fire brick of large size and are used for the same purposes as fire brick. They move on fire brick in official territory, from that territory to points in southeastern and Carolina territories, and from interior eastern points to southern points. The rating in the three major classifications is the same on both commodities. The contemporaneous applicable rate on fire brick was 20c. In 68 I. C. C. 213, the Commission provided a uniform brick list, in which tank or furnace blocks take the same rate as fire brick. HELD, rate charged unreasonable to extent it exceeded 20c, reparation awarded. Chattanooga Bottle & Glass Mfg. Co. v. Southern Ry., 93 I. C. C. 71.

(x) Complainant attacked class rate charged on one car of toilet paper shipped on May 24, 1922 from Green Bay, Wis., to Muskogee, Okla., as unreasonable and unduly prejudicial. Shipment moved over Northwestern to Council Bluffs, Iowa, M. P., to Okay, Okla., and K. O. & G., to destination charged fifth class of 94c. Subsequent to the movement, effective June 15, 1922, a rate of 76c was established pursuant to 66 I. C. C. 571. HELD, rates attacked unreasonable to extent it exceeded 76c, reparation awarded. Hale Halsell Co. v. K. O. & G. Ry., 93 I. C. C. 205.

(y) Complainant attacked class rate charged of $4.335 on three cars of rubber arctics from Seattle, Wash., to Omaha, Neb., as unreasonable. In 83 I. C. C. 525, rate attacked found not unreasonable and complaint dismissed. Upon rehearing, rates charged unreasonable to extent they exceeded $2.085 the rate in the opposite direction, reparation awarded. Hayward Bros. Shoe Co. v. C. M. & St. P. Ry., 93 I. C. C. 243.

(z) Complainant attacked third class rate charged on drugs and medicines carloads from Norwich, N. Y., to points in trunk line territory during the two years next preceding the filing of the complaint as unreasonable, unjustly discriminatory and unduly prejudicial. Norwich is on the D. L. & W., and N. Y. O. & W., 234 and 225 miles over the respective lines from Hoboken, N. J. The short line distance of 223 miles from Norwich to New York is over the Western and Erie and includes 10 constructive miles for the floatage service in New York Harbor. Charged third class rate

of 47.5c. The general basis of rates on drugs and medicines, in carloads, throughout trunk line and central territories is third class, except from the central territory to New York, Philadelphia and Baltimore, to which destinations commodity rates are published. The third class rate from Norwich is 71.4% of the first class rate, whereas the commodity rates from central territory points represent an average of about 54.5% of the first class rates from those points to New York. HELD, rates attacked to New York not unreasonable or unjustly discriminatory but are unduly prejudicial to extent it exceeded a rate made less than the following amounts under rates from Cleveland, 17.5c, Detroit 17.5c, Kalamazoo and Holland 31c, Indianapolis 33c and St. Louis 58c and the undue prejudice to be removed by the withdrawal of the D. L. & W., and N. Y. O. & W., from the tariffs publishing commodity rates from the points in central territory to New York, or by the establishment of a commodity rate from Norwich to New York in accordance with the above finding. Norwich Pharnacal Co. v. B. & O. R. R., 93 I. C. C. 246.

(aa) Complainant attacked fifth class rates of $1.25 and $1.13 charged on two cars of common pottery insulators shipped Oct. 29, 1921 and Dec. 23, 1922 from East Liverpool, O., to Jackson, Miss., as unjust, unreasonable, unduly prejudicial and unjustly discriminatory. Distance is 1,066 miles. Defendants point out that insulators are almost invariably subject to fifth class rates to all points in the country, the principal exception being a commodity rate to the Pacific coast. HELD, rate attacked not unreasonable unduly prejudicial or unjustly discriminatory, complaint dismissed. Jackson Traffic Bureau v. B. & O. R. R., 93 I. C. C. 342.

(bb) Complainant attacked class rates charged on one car of earthenware jugs, insulated and metal jacketed, shipped Feb. 13, 1923 from Macomb, Ill., to Dallas, Tex., as unreasonable. Shipment moved via Burlington, Kansas City, M. P., to O. K. Junction, Okla., K. C. O. & G., to Denison, Tex., and H. & T. C., beyond 846 miles, charged one and one-half times first class or $3.69. Effective June 10, 1923, subsequent to the movement, the classification was amended as follows: Jugs, flasks or earthenware, insulated and steel jacketed, fourth class carloads. During February 1923, the fourth class rate from and to the points in controversy was $1.565. Defendants are willing to award reparation to this basis. HELD, rates attacked unreasonable to extent it exceeded $1.565, reparation awarded. Cullum & Boren Co. v. C. B. & Q. R. R., 93 I. C. C. 354.

(cc) Complainant attacked fifth class rates charged on canned meats, carloads, from Atlanta, Ga., to Chicago, Ill., between Nov. 1, 1921 and Oct. 1, 1922 as unreasonable. Hauls were 854, 785, and 733 miles according to the route used, charged fifth class of 83c to Ohio river and 31.5c beyond. The record indicates that the probability of any traffic northbound other than sporadic or isolated shipments is remote. A northbound commodity rate south of the Ohio river on these shipments as low as or lower than that applicable in the reverse direction, under which traffic moves more or less regularly, does not seem justified under the circumstances. HELD, rates attacked not unreasonable, reparation awarded. Armour & Company v L. & N. R. R., 93 I. C. C. 360.

(dd) Complainant attacked class rate charged on two cars of crushed marble shipped May 14 and August 3, 1921 from Los Angeles to Fort Bliss, Tex., as unreasonable. Fort Bliss is 6 miles east of El Paso, Tex., Group J territory Charged class E rate of $1.055. There was a rate of 65c, on stone, and on rock (lime) ground or unground. On Sept. 1, 1922 the description on the latter was changed to read stone, crushed or ground, without restriction as to kind, which would embrace the article here considered, this rate being further reduced to 50c on June 18, 1923. Crushed marble is low in value, loads heavily, is not susceptible to damage, and rarely moves at class rates even for very short hauls HELD, rate attacked unreasonable to extent it exceeded 65c, reparation awarded. Musto Sons-Keenan Co. v. S. P. Co., 93 I. C. C. 447.

(ee) Complainant attacked class rates charged on six cars of mussel shells shipped during April, July, August and Sept. 1922 from Marked Tree, Pocahontas, and Clarendon, Ark., to Oswego, Kas., as unreasonable. Points of origin and destination are on the Frisco, except that Clarendon is on the St. L. S. W. Charged class E of 44.5c from Po-

cahontas, 36.5c from Marked Tree, and 40c from Clarendon. Effective Oct. 26, 1922, after the shipments had moved, and subsequent to the general reductions of July 1 of that year, defendant established commodity rates of 24.5c from Pocahontas and 26c from Marked Tree and Clarendon, and these rates are still in effect. None of defendants tariffs makes any distinction between whole or crushed clam or mussel shells. These shells load heavily are not easily damaged, and can be shipped in either gondola or box cars. HELD, rates attacked unreasonable to extent they exceeded 27c from Pocahontas and 26c from Marked Tree and Clarendon, reparation awarded. Pioneer Pearl Button Co. v. St. L. S. F. Ry., 93 I. C. C. 599.

(ff) Complainant attacked class rates charged on six cars of fabricated steel tank material between May 3 and Dec. 4, 1922 four from Haynesville, La., to Smackover, Ark., one from Haynesville to El Dorado, Ark., and one from Couchwood, La., to Smackover, as unreasonable. Haynesville is on the L. & N. W., between Gibsland, La., and McNeil, Ark., and Couchwood on the L. & A., south of Stamps, Ark., Smackover and El Dorado served by the M. P., and C. R. I. & P. Charged fifth class 39.5c from Haynesville to Smackover, 45.5c from Couchwood to Smackover, and 50c from Haynesville to El Dorado. In 57 I. C. C. 390, the Commission found reasonable rates to be 60% of the fifth class rates. HELD, rates attacked unreasonable to extent they exceeded 60% of fifth class, reparation awarded. Parkersburg Rig & Reel Co., v. M. P. R. R., 93 I. C. 667.

(gg) Complainant attacked class rates charged on 13 cars of automobile wheels, shipped between Sept. and Nov. 1921, May 1922 and from July to October, 1922, from Portland, Ind., to Los Angeles, and San Francisco, Calif., and Tacoma and Seattle, Wash., as unreasonable unjustly discriminatory and unduly prejudicial. Shipments consisted of wheels without tires, hubs, or ball or roller bearings, some having only the priming coat of paint, but others having additional coats; and motor truck wheels, wooden, in the white, without hubs, tires, or ball or roller bearings. Charged class A of $3.035 prior to July 1, 1922 and $2.73 thereafter. Portland is in origin Group C for the application of rates on shipments to Pacific coast points. Effective June 1, 1922 a commodity rate of $2.42 was established on this commodity from Group C points. HELD, rate attacked not unreasonable, or otherwise unlawful, complaint dismissed. Rimel Spoke & Auto Wheel Co. v. L. E. & W. Ry., 95 I. C. C. 9.

(hh) Complainant attacked class rates charged on wire rods, in coils, from Acme and Peoria, Ill., Harriett, N. Y., and Johnstown, Pa., to Kansas City, Mo., are unreasonable, unjustly discriminatory and unduly prejudicial. Wire rods are about one fourth inch in diameter and are shipped in open top cars in coils. Claims for damage are negligible. The rates to Kansas City from Johnstown and Harriet are combination rates based on St. Louis, Mo. East of the Mississippi river wire rods are accorded the same rate as billets, and complainant asked that the rate on billets west of the river be made applicable on wire rods. Wire rods are rated fifth class in official and western classifications, billets are rated sixth class in official and class D in western. The rate applicable west of St. Louis is fifth class proportional rate. The rates from Acme and Peoria to Kansas City are fifth class. Rate from Johnstown to St. Louis, 689 miles, is $7.20 and from Johnstown to Kansas City, 968 miles, $14.03. HELD, rates attacked not unreasonable or otherwise unlawful, complaint dismissed. Black Steel & Wire Co. v. A. T. & S. F. Ry., 95 I. C. C. 161.

(ii) Complainant attacked fifth class rates charged on wrought iron pipe, carloads, from Goose Creek and Docbrown, Tex., to Anse La Butte and Olivier, La., as unjust and unreasonable. Goose Creek is on the Dayton-Goose Creek Ry., 23 miles from the junction of the latter with the C. P., and Docbrown is on the O. & N. W., both points being in the Houston-Galveston group. Anse La Butte is on the M. L. & T., 5 miles east of La Fayette, and Olivier is a short distance south of Anse La Butte on the S. P., and G. C. L. Normally these points take the New Orleans group rates. The complaint is directed against the application and maintenance of rates eastbound which were and are higher than the rates in the reverse direction of 36.5c before and 33c after July 1, 1922. HELD, rates attacked unreasonable to extent they exceeded 54.5c and 49c before and after July 1, 1922 and for future unreason-

able to extent they exceed 32c from Docbrown to Olivier and 37c from Goose Creek to Anse La Butte and Olivier, reparation awarded. Humble Oil & Refining Co. v. D. G. C. Ry., 95 I. C. C. 435.

(jj) Complainant attacked class rate charged on two cars of coal, one shipped August 18, 1918 from Marshall, Colo., to Stanhope, Iowa, and other shipped August 22, 1918 from Frederick, Colo., to Fredericksburg, Iowa, as unjust and unreasonable. Shipment from Marshall moved C. & S., to Denver, Burlington to Council Bluffs, Iowa, C. & N. W., beyond, 755 miles, applicable rate class D 46.5c. Shipment from Frederick moved over U. P., to Council Bluffs and C. G. W., beyond 803 miles, charged $6.80, made up of $3.90 to Council Bluffs and Class D beyond $2.90. Subsequently a rate of $5.49 was established. HELD, rates attacked unreasonable to extent they exceeded rates subsequently established, reparation awarded. National Supply Co. v. Director General, 95 I. C. C. 445.

(kk) Complainant attacked fifth class rate of 40.5c charged on 11 cars of steel from Carnegie, Pa., to Richmond, Va., from April to May 1924 as unjust and unreasonable to extent it exceeded 38c. Carnegie is on the P. C. & Y., and Pennsylvania 8.5 miles southwest of Pittsburgh. Shipments moved 493 miles, charged fifth class of 40.5. At the time of movement a joint commodity rate of 38c was in effect to Richmond from Pittsburgh proper and from Leetsdale, Ambridge, and Economy, Pa., local stations on the Pennsylvania about 15, 16.5 and 18 miles northwest of Pittsburgh. This rate was subsequently established. HELD, rate attacked unreasonable to extent it exceeded 38c, reparation awarded. McClintic Marshall Steel Supply Co. v. P. C. & Y. Ry., 95 I. C. C. 459.

(ll) Complainant attacked class A rate of $3.035 charged on a car of oil well supplies shipped June 9, 1922 from Toledo, O., to Bakersfield, Calif., as unjust, unreasonable and unduly discriminatory. Shipment was routed by shipper and moved over B. & O., and I. C., to New Orleans, thence M. L. & T., L. W., G. H. & S. A., and S. P., 3,300 miles. Complainant asked reparation based on commodity rate of $2.61 applicable since June 1, 1922, from Toledo over either the T. St. L. & W., or Ann Arbor and connections and established on Sept. 30 1922 via route of movement. The short line route of the T. St. L. & W. and connections is 2,902 miles. HELD, rate attacked not unjust, unreasonable or unjustly discriminatory, complaint dismissed. National Supply Co. v. N. Y. C. R. R., 95 I. C. C. 461.

(mm) Complainant attacked sixth class rates charged since January 1922 on broken glass, cullet, carloads, from Washington, Pa., Newark, O., and Ottawa, Ill., to Marion, Ind., as unreasonable, unjustly discriminatory and unduly prejudicial. In 81 I. C. C. 685, the Commission found the sixth class rates not unreasonable. HELD, rates attacked not unreasonable or otherwise unlawful, complaint dismissed. Marion Glass Dash Co. v. Pennsylvania R. R., 96 I. C. C. 172.

(nn) Complainant attacked fifth class rates charged on scrap brass and scrap copper, carloads, from New York to points in New England as unreasonable, unjustly discriminatory and unduly prejudicial. Rates attacked are fifth class, which is the basis in effect without exception on scrap brass and scrap copper within New England territory and, generally speaking, within trunk line and central territories. The class rates from New York to New England points are on the bases approved in 49 I. C. C. 421. HELD, rate attacked not unreasonable or otherwise unlawful, complaint dismissed. Lissberger & Co. v. N. Y. N. H. & H. R. R., 96 I. C. C. 231.

(oo) Complainant attacked class rates charged on spelter, carloads, from Trenton, N. J., to Baltimore and Sparrows Point, Md., Weir Branch, Cambridge, Boston and Worcester, Mass., Providence, R. I., and Stamford, Springdale, Cheshire, Bridgeport and Waterville, Conn., as unjust, unreasonable, unjustly discriminatory and unduly prejudicial. Prior to Feb. 25, 1922 the sixth class rate of 25c applied from Trenton to Baltimore and Sparrows Point. Sparrows Point is 5 miles beyond Baltimore and usually takes the Baltimore rate. On that date a specific commodity rate of 16c was established from Trenton to Baltimore. Defendants stated they would establish a rate of 13.5c for future application which was satisfactory to complainant. Prior to July 1, 1922 the

rates from Philadelphia and Trenton to New England destinations on the New Haven were generally sixth class, ranging from 27 to 30.5c. On that date commodity rates were published of 15.5c advanced Sept. 1, 1922 to 17c. Defendants agreed to the hearing to establish a specific commodity rate of 17c from Trenton to all the New England destinations named in the complaint. It is clear from the record that complainants showing was based entirely upon the fourth section violations complained of and a finding that the class rates charged were unreasonable prior to the time of the establishment of the rates from the more distant points under rule 77 is not warranted. HELD, rates attacked not unjustly discriminatory or unduly prejudicial and not unreasonable except that from Trenton to Baltimore and Sparrows Point they were unreasonable to extent they exceeded 13.5c from and after Feb. 17, 1922; from Trenton to Boston and Worcester, Mass., Providence, R. I., and Bridgeport unreasonable to extent they exceeded 15.5c from July 1, 1922 to August 31, 1922 and 17c thereafter, reparation awarded. Trenton Smelting & Refining Co. v. Pennsylvania R. R., 96 I. C. C. 264.

(pp) Complainant attacked class rates charged on black powder, carloads, from Quaker Falls, Pa., to Clinton, Terre Haute, Oakland City, Yankeetown, and Evansville, Ind., and to Danville, Joliet, Hilliary, Catlin, and East St. Louis, Ill., as unreasonable and unduly prejudicial compared to its competitors at Mooar and Keokuk, Iowa and Pleasant Prairie, Wis. Quaker Falls is on the P. & L. E., 9 miles southeast of Youngstown, O. Mooar is within the switching limits of Keokuk. Pleasant Prairie is on the C. & N. W., 20 miles from Kenosha, Wis. Charged second class rates, and rates from Mooar and Pleasant Prairie are commodity rates, ranging from 42.7% to 87.5% average 68.4% of the second class rates. HELD, rates attacked unreasonable to extent they exceed to Terre Haute, Joliet and Clinton, Ind., 60c prior to July 1, 1922 and 54c thereafter; to Danville, Hilliary and Catlin, Ill., 61c prior to July 1, 1922 and 55c thereafter; to Evansville and Oakland City, Ind., 67c prior to July 1, 1922 and 60c thereafter; to East St. Louis, Ill., 72c prior to July 1, 1922 and 65c thereafter, reparation awarded. Grasselli Powder Co. v. A. C. & Y. Ry., 96 I. C. C. 271.

(qq) Complainant attacked fifth class rates charged on brass and copper ingots, carloads, from East Liberty, Pa., to New York, West Virginia, Ohio, Indiana, Kentucky, Illinois, Michigan and Missouri are unjust and unreasonable and in violation of section four. East Liberty is within the switching limits of Pittsburgh, Pa., on the Pennsylvania. From Williamsport, Pa., a point on the Pennsylvania about 93 miles north of Harrisburg, commodity rates on brass and copper ingots are published to Pittsburgh and to practically all points in central territory. These rates are scaled on the New York-Chicago basis and are considerably lower than the rates from East Liberty to the same destinations. These rates are applicable through East Liberty and are published subject to rule 77. Subsequent to the hearing the rates from Williamsport were canceled. Defendants maintain rates from Chicago, Grasselli, Ind., Kankakee, and Bradley, Illinois to points in central territory which are less than the fifth class rates. HELD, rates attacked to Follansbee and Wheeling, W. Va., Toronto, Youngstown, Canton, Cleveland, Newburg, Howard Avenue, Lorain, Toledo, Wagon Works, Maryville, Springfield and Bellaire, O., Detroit, Mich,, East Chicago and Gary, Ind., Chicago and South Chicago, Ill., Louisville and South Louisville, Ky., and St. Louis, Mo. unreasonable to extent they exceed rates from Williamsport, Pa. Rates attacked to Buffalo, Lackawanna and Depew, N. Y., unreasonable to extent they exceed rates from 60% group points to Rochester, reparation awarded. Duquesne Reduction Co. v. Pennsylvania R. R., 96 I. C. C. 351.

(rr) Complainant attacked class rates charged on four cars of burlap bags, shipped from New Orleans, La., to Jackson, Miss., between Oct. 29, 1921 and April 27, 1922 as unjust, unreasonable, unduly prejudicial and in violation of section four. Shipments moved 184 miles. Rates charged sixth class, and on July 10, 1922 a commodity rate of 29c was established. HELD, rates attacked unreasonable to extent they exceeded 36.5c, reparation awarded. Jackson Traffic Bureau v. I. C. R. R., 96 I. C. C. 449.

(ss) Complainant attacked class rate

of $2.80 charged on two cars of soft coal April 30, 1923 from Boston, Mass., to Hills Grove, R. I., as unreasonable and unduly prejudicial. Hills Grove is on the New Haven 53 miles from Boston, charged sixth class rate of $2.80. HELD, rate charged unreasonable to extent it exceeded $1.85 per long ton, reparation awarded. Rhode Island Malleable Iron Works v. N. Y. N. H. & H. Ry., 98 I. C. C. 43.

(tt) Complainant attacked interstate rates and minimum weights on cottonseed, cottonseed and related vegetable oils, cakes and meals, feet, and sediments, inedible tallow, between all points in the southwest and western trunk line territory as unreasonable and unduly prejudicial. The southwestern cotton growing industry is that portion of the southwest embraced within the area bounded by the Gulf of Mexico, the Mississippi river, and a line drawn from St. Louis over the Frisco to Seneca, Mo., thence along the Kansas-Oklahoma state line to, but not including, Liberal, Kas., the Rock Island and Rock Island & Gulf to the New Mexico state line west of Bravo, Tex., the New Mexico Texas state line to Texico, N. M., the Santa Fe to Roswell, N. M., thence southwest via an imaginary line to El Paso, Tex., and southeast along the Rio Grande to the Gulf of Mexico. **Rates in the Southwest.** It appears that uniformity now exists in the rates on cottonseed and cottonseed products, except oil and feet and sediments between points in the southwest generally east of the K. C. S., from Kansas City to Port Arthur, but not west thereof. Disparities as pronounced as those which moved the Commission to prescribe a uniform basis of rates for application in the southwest east of the K. C. S., exist in the present rates on cottonseed and its products in this territory west of the K. C. S., and also on cottonseed oil and related oils east of that line. Due largely to influence of competition from mills located at Memphis and other points on and east of the Mississippi river, especially in the Mississippi Valley, the rates on many commodities, including those here considered, in the territory east of the K. C. S., have always been on a somewhat lower level, generally speaking, than the rates on the same commodities west of that line. Many of the rates on cottonseed and its products in the territory west of the K. C. S., and between points east and points west of that line are higher for shorter than for longer distances, and frequently the rates vary over different routes between the same points for about the same distances, brought about largely through the establishment by different carriers of rates at varying levels in order to meet the demands of commercial or carrier competition. Disparities similar to those shown in the rates on cake and meal also exist throughout this territory on cottonseed hulls. There is no fixed relationship between the rates on these commodities, but hulls generally take lower rates than cake and meal. No joint rates are published on cottonseed between many points requiring a joint haul, and the lowest combinations, generally made up of local distance rates, apply. Similar lack of uniformity exists in the rates on inedible tallow, feet and sediments, and the related vegetable oils and vegetable cakes and meals. HELD, rates on cottonseed, and related vegetable oils, cakes, and meals, feet and sediments, cottonseed hulls, and inedible tallow, carloads, between points on class L railroads, in Texas as common point territory, and in the states of Oklahoma, western Louisiana, Arkansas, and southern Missouri, between points in the southwest, on the one hand, and Mississippi river crossings, Memphis to New Orleans, on the other, and from points in the southwest to Cairo and Thebes, Ill., and Kansas City, Mo., are unduly prejudicial and preferential to the extent that the interrelationships differ from those hereinafter prescribed. All of the complainants and interveners agree that the similarity of transportation conditions in the southwest warrants a uniform basis of rates throughout that territory. If the competition from the Mississippi Valley is to influence the level of the rates in the eastern section, consistency demands that consideration be given also to the commercial competition from the eastern section which the mills in the western section have to meet. The difference in the force of this competition is only in degree, and is brought about primarily by the lower level of rates east than west of the Mississippi river. The difference in the levels of reasonable rates in the Mississippi Valley and in the eastern section is at present shrouded with much uncertainty, which will not be allayed

until the relative levels of reasonable class and commodity rates in both territories have been definitely determined. Until that determination has been made the degree of difference between the force of commercial competition which the eastern section has to meet and that which the western section meets, or is entitled to meet, is impossible of ascertainment. HELD, the undue prejudice and preference in the interstate rates hereinbefore found to exist should be removed by the establishment, for application to the commodities considered, of a fairly uniform basis of interest rates throughout the southwest, between points in the southwest and Mississippi river crossings, Memphis and south, and from points in the southwest to Cairo and Thebes, Ill., and Kansas City, Mo. **The Intrastate Rates.** Numerous disparities, similar in many respects to those found in the interstate rates in the southwest, exist between the intrastate rates on these commodities, particularly in Oklahoma and Texas, on the one hand, and the interstate rates applying between those states on the other. The Arkansas intrastate rates on cottonseed oil, the Louisiana intrastate rates on cottonseed hulls, and the Missouri and New Mexico intrastate rates on all of these commodities are not of record, and no finding can be made with respect thereto. The evidence of record upon which a conclusion may be reached as to the discriminatory character of the intrastate rates on cottonseed and cottonseed cake, meal and hulls now in effect in Arkansas and on all of these commodities applying between points in Louisiana is very meager. There is no material difference between the transportation conditions surrounding intrastate traffic in Texas common point territory and Oklahoma and the transportation conditions surrounding interstate traffic between points in Texas and Oklahoma. In such a circumstance the law entitles both intrastate and interstate shippers to a uniform basis of rates. HELD, interstate rates on cottonseed cake, meal, hulls and oil between points on class 1 railroads, in Texas and Oklahoma, will be reasonable, but those rates and intrastate rates in Texas and Oklahoma are unduly prejudicial to interstate shippers to extent said intrastate rates may be lower than the corresponding interstate rates maintained for like distances on class 1 railroads in Texas and Oklahoma, and that any such disparity between said intrastate and interstate rates will result in unjust discrimination against interstate commerce between Texas and Oklahoma. **Reasonableness of the rates in the southwest.** The record leaves no room for doubt that, particularly in the feeding of livestock and swine, cottonseed cake, and meal comes into competition with corn, linseed meal, and other stock foods taking corn rates. This competition is, of course, much more severe throughout the portions of intermountain territory where cattle are extensively raised and where the hardships of winter create a greater demand for stock foods of large protein content, such as cottonseed cake and meal, that it is in the southwest. The principal differences in the transportation characteristics of corn and cottonseed cake and meal are in the average loading and volume of movement. These differences are important, but it must not be overlooked that a number of stock foods, including linseed meal, some more and others less valuable than cottonseed cake and meal, with which cottonseed cake and meal are directly competitive, have long taken the corn rates in this general territory, and that the transportation characteristics of these related stock foods differ very little from those of cottonseed cake and meal. The reasons for the original establishment of the Texas common point blanket are well known, and in the day's of unlimited carrier competition may have been entirely sufficient to warrant its establishment; but under the minimum and maximum rate powers which have since been lodged in the Commission, and in the absence of forceful competition by water through the Gulf ports, affecting many of the commodities as to which the blanket still prevails, including cottonseed and cottonseed products, the continued maintenance of the extensive Texas common point grouping is no longer warranted. The establishment of reasonable rates on cottonseed and cottonseed products within and to and from Texas with greater regard for distance will be a step toward a solution of the financial difficulties with which the Texas carriers have long contended. HELD, interstate minimum weights in the southwest on the commodities in question as well as rates unreasonable to extent they exceed minimum of 40,000 pounds and rates ranging on cake

and meal single line 6c for 10 miles, joint line 8c for 10 miles, on hulls single line 5c for 10 miles and joint line 6.5c for 10 miles to 66c single and join line on cake and meal for 2,600 miles and 36c single and joint line on hulls for 1,-200 miles. The value of cottonseed generally ranges from about $5 to $12 a ton higher than that on cottonseed meal, although this difference varies considerably at different periods of the shipping season and in the various sections of the cotton growing territory. Cottonseed requires more care while in transit because of its tendency to become heated, but claims for loss and damage are small in number and amount on both cottonseed and products. HELD, interstate rates and minimum weights on cottonseed seed, in carloads, and minimum weights on cottonseed, carloads, between points in the southwest between points in the southwest on the one hand, and Mississippi river crossings, Memphis to New Orleans, on the other, and from points in the southwest to East St. Louis, Cairo, Thebes, and Kansas City, on all class 1 carriers, are unreasonable to extent they exceed rates hereinbefore mentioned subject to minimum of 40,000 pounds, actual weight to govern when car is loaded to full space capacity, and 30,000 pounds to apply on immature cotton bolls. **Cottonseed Hulls.** The present rates in the southwest range from as low as 50% to 100% of the rates on cottonseed cake and meal. The average would perhaps not exceed 75%. HELD, rates on cottonseed hulls unreasonable to extent they exceed rates prescribed subject to minimum of 30,000 pounds. The rates under the prescribed scale on hulls are about 75% of the rates prescribed on cake and meal. **Cottonseed Oil and Related Vegetable Oils & Oil Sediments.** The primary purpose of complainants and interveners in suggesting a revision of the rates on vegetable oils in the southwest is to bring about uniformity without reducing the present revenues of the carriers. They contend that their proposed scale will accomplish this purpose. The present rates on vegetable oils apply also when in bulk, in barrels or drums, and when solidified, in bulk in bags, boxes, barrels or drums, and shipped in ordinary equipment. The present commodity rates on vegetable oil, feet and sediments and inedible tallow are generally somewhat lower than the rates on vegetable oils. HELD, rates on vegetable oil, feet and sediments unreasonable to extent they exceed rates about 75% of the rates on vegetable oils. **Rates to and from Texas Differential Territory and Eastern New Mexico.** HELD, interstate rates on cottonseed and cotton seed and related vegetable oils, feet and sediments, cake and meals, cottonseed hulls and inedible tallow, carloads, between points in Texas differential territory and New Mexico east of and not including the line of the E. P. & S. W., extending from Dawson, N. M., through Tucumcari and Vaughn, N. M., to and including El Paso; between points in those territories and points in Texas common point territory, western Louisiana, Oklahoma, Arkansas, southern Missouri, and Mississippi river crossings, Memphis and South; and from points in those territories to East St. Louis, Cairo Thebes and Kansas City, on all class 1 carriers, are unreasonable to extent they exceed rates previously shown plus differentials. **Rates to Kansas & Missouri Illinois Western Trunk Line Territory and Colorado Common Points.** There appears to be no good reason for not extending to all points in this destination territory the distance scales of rates hereinbefore described on these commodities between points in the southwest. It is true that the levels of rates in Illinois and certain portions of western trunk line territory are as a rule somewhat lower than in the southwest, and, particularly on short haul traffic, the differences are justified by varying degrees of traffic density; but where, as here, the traffic density on all class I carriers is comparatively heavy and the hauls are as long as those to these destinations, there is ample ground for disregarding such differences in rate levels. This is true as well with respect to the oils as to cake and meal. **Rates on Vegetable Cakes and Meals and Cottonseed Hulls to Intermountain and Pacific Coast Territories.** Practically all of the cottonseed cake and meal from the southwest to points in intermountain territory, and the Pacific coast originates in Oklahome and Texas, principally in Oklahoma. HELD, present rates in the southwest to these territories unreasonable to extent they exceed the rates prescribed hereinbefore, subject to differentials to be added to the total distance. **Rates on Cottonseed Oil and Related Vegetable Oils**

from Texas to California. HELD, rates on these commodities from Texas to California on class 1 carriers unreasonable to extent they exceed 80c to Fresno, Calif., and points south, and 90c to points north of Fresno, subject to a commodity description and minimum weight the same as in connection with rates on the same commodities between points in the southwest. **Rates on Cottonseed from Arizona and New Mexico to Texas and Oklahoma.** HELD, rates on cottonseed attacked unreasonable to extent they exceed rates hereinbefore prescribed in southwest plus differentials. **Export Rates.** HELD, rates on export shipments of cottonseed and related vegetable oils, cakes, meals, feet, sediments and inedible tallow, carloads, from Oklahoma, Arkansas, western Louisiana, Texas, and Loving, N. M., to Gulf ports, Houston and Galveston to New Orleans on class 1 carriers unreasonable to extent they exceed rates hereinbefore prescribed in southwest plus differentials. **Joint Line Differentials.** It has been and is the general practice in the southwest, on intrastate as well as interstate traffic, to add differentials for joint line hauls where rates are constructed on a distance basis, and the addition of such differentials has frequently been approved by the Commission. This record does not warrant a reversal of that general practice. Accordingly, joint line differentials have been prescribed which diminish in proportion to the length of the haul, and are allowed only for distances not exceeding 500 miles. **Application of Rates under Distance Scales Prescribed.** The term class 1 carriers as used in this report, refers to all carriers in the territories described, except such financially weak lines as are now individually accorded arbitraries or rates on bases higher than standard scales or general trunk line rates in the same territories. Such carriers as are now accorded such arbitraries or higher rates may at their option apply the rates herein prescribed or add thereto the present arbitraries received by them. **Additional Charges for Mississippi River Crossings.** The addition of any allowance for crossing the Mississippi river at East St. Louis, Cairo and Thebes would be a departure from the present or past practice. The Commission has never approved allowances for the crossings at those points. The proposal to continue allowance at Memphis and crossings south thereof is not protested in this proceeding and upon this record no reason can be found for their disapproval, but the practice should not be permitted to spread to crossings north of Memphis unless and until upon a more complete record the propriety of these allowances is definitely determined. HELD, in making rates under the distances scales of rates, prescribed in this report, between points west of the Mississippi river considered in this proceeding, on the one hand, and Memphis and east bank Mississippi river crossings south thereof, on the other, bridge or ferry tolls not exceeding 2c per 100 pounds may be added to the rates based upon the distances to or from west bank points. **Group Versus Distance Rates.** The record leaves no doubt that a group system of rates from the southwest to western trunk line, intermountain and Pacific coast territories would be preferable to a strict application of distance scales. Points in the destination territory beyond the southwest may be grouped in lieu of publishing rates based strictly upon the scales, provided that rates are published to such destination groups in such manner as to produce substantially the same revenue as would result from a strict application of the scales. If a plan of grouping points of origin in the southwest can be agreed upon between the shippers and carriers, the Commission will interpose no objection to the publication of rates from such groups, subject to the condition last mentioned. **Fourth Section Relief.** Defendants will be authorized to establish and maintain routes from, to, or between points in the territories here considered the lowest rates prescribed herein as maximum rates via any route between said points, and to maintain higher rates from, to, or between intermediate points; provided that the rates from, to, or between the said intermediate points shall not exceed the rates prescribed herein and shall in no case exceed the lowest combination and provided further, that the relief herein granted shall not apply, (1) where the distance over the short line or route is 500 miles or less and the longer line or route is more than 70% circuitous; (2) where the distance over the short line or route exceeds 500 miles but does not exceed 1,000 miles and the longer line or route is more than 50% circuitous, except that where the

short line or route exceeds 500 miles and the longer line or route does not exceed 850 miles, relief will apply to such longer line or route even though the said longer line or route is more than 50% circuitous; and (3) where the distance over the short line or route exceeds 1,000 miles and the longer line or route is more than 33 1-3% circuitous, except that where the short line or route exceeds 1,000 miles and the longer line or route does not exceed 1,500 miles, relief will apply to such longer line or route even though the said longer line or route is more than 33 1-3% circuitous. No 15039. Complainant attacked rates on cottonseed from Oklahoma points to Sherman, Tex. HELD, rates attacked unreasonable to August 15, 1923 to extent they exceeded like distances the rates between Shreveport and Texas points, and subsequent thereto unreasonable to extent they exceeded rates prescribed heretofore, reparation awarded. Oklahoma Corporation Commission v. A. & S. Ry., 98 I. C. C. 183.

(uu) Complainant attacked fifth class rates charged on 60 cars of hoop steel between Oct. 29, 1918 and Feb. 20, 1920 from Pittsburgh, Pa., district to Cleveland, O., as unjust, unreasonable, unduly prejudicial and in violation of the fourth section. Shipments moved from Allegheny, Pa., to Cleveland, O., 55 via B. & O., and 5 via Pennsylvania, charged fifth class rates of 17c, there being contemporaneously in effect commodity rates of 7.5c to Youngstown and 7.5c beyond. HELD, rate attacked unreasonable to extent it exceeded 15c, reparation awarded. Greif Bros. Cooperage Co., v. Director General, 98 I. C. C. 419.

(vv) Complainant attacked sixth class rate charged of $2.40 on sand, carloads, shipped in February 1920 from Portsmouth, O., to Charleston, W. Va., as unjust, unreasonable and in violation of the fourth section. Shipments moved N. & W., to Kenova, W. Va., 39 miles thence C. & O., 58 miles. On June 25, 1918 rates of 40c to and 70c from Kenova were increased to 60 and 90c. On Feb. 21, 1920 carriers established from Portsmouth to Charleston a rate of $1.30 made by deducting 20c from each of the local rates and adding the same amount to the sum so arrived at. HELD, rate attacked unreasonable to extent it exceeded $1.30 per ton, reparation awarded. Fuller Co. v. Director General, 98 I. C. C. 468.

(ww) Complainant attacked commodity rates charged on cyanamid, carloads, from Niagara Falls, Ont., and from Suspension Bridge, N. Y., to Alexandria, Va., as unjust and unreasonable since April 8, 1922 and unduly prejudicial as compared with rates on sulphate of ammonia from Buffalo, N. Y., and as compared with rates on cyanamid from Niagara Falls to Baltimore, Md., and to Lynchburg, Richmond and Norfolk, Va. Cyanamid was and is rated sixth class in the official classification, and from Niagara Falls the sixth class rates since Nov. 1, 1922 have been as follows: to Baltimore 34c, to Alexandria 34c and to the Virginia cities 46c. The equalization of the sixth class rates to Alexandria and Baltimore is said to have occurred by error in tariff publication and was corrected Oct. 20, 1924 to the recognized basis of 5c over the Baltimore rate, or 39c. Defendants recognize that rates on cyanamid from Niagara Falls to Alexandria have been out of line and have offered to establish a rate of 33c to that point. HELD, rates attacked unreasonable to extent they exceeded 37c prior to July 1, 1922 and 33c thereafter, reparation awarded. Bryant v. M. C. R. R., 98 I. C. C. 526.

(xx) Complainant attacked sixth class rate of $3.20 charged on scrap iron, carloads from Rensselaer, Ind., to St. Joseph, Benton Harbor and Bridgman, Mich., as unreasonable unjustly discriminatory and unduly prejudicial. Six shipments originated on the C. I. & L. Those consigned to St. Joseph were delivered by the M. C., and those consigned to Benton Harbor and Bridgman were delivered by the P. M. $2.39 rate applies from Monticello, Ind., and from Chicago, Ill., to Benton Harbor, Bridgman and St. Joseph are intermediate to Benton Harbor. Complainant competes with other dealers in scrap iron located in substantially all nearby large cities. Throughout central territory there are many commodity rates on scrap iron lower than the sixth class rates. HELD, rates attacked unreasonable and unduly prejudicial to extent they exceeded $2.39, reparation awarded. Karnowsky v. C. I. & L. Ry., 98 I. C. C. 533.

(yy) Complainant attacked class rate charges on 23 cars of tomatoes shipped from St. Louis to New Orleans, La., during July and August in 1920, 1921, 1922

and 1923 as unreasonable, unduly preferential and inapplicable. All moved over I. C., 697 miles or the L. & N., 940 miles, charged third class of 81.5c and $1.43 on the 10 shipments in 1920 and 1921, respectively, and a specific commodity rate of 77c on the 18 shipments made in 1922 and 1923. In the early part of 1922 application was made to the L. & N., for a commodity rate from St. Louis to New Orleans in lieu of the third class rate. In presenting the request to the other interested carriers the L. & N., suggested a commodity rate of 85.5c the rate then applicable in the reverse direction, and that rate was established on June 5, 1922. Under the general reduction of July 1, 1922 the rate became 77c and are the present rates. HELD, rates charged in 1920 and 1921 applicable, rate charged in 1922 and 1923 not unreasonable, complaint dismissed. St. Louis Fruit & Vegetable Asso. v. L. & N. R. R., 98 I. C. C. 553.

(zz) Complainant attacked class rates charged as unreasonable and unduly prejudicial on clam shells from Illinois to points in Illinois and Iowa. The shells as received are worth generally from $10 to $80 per ton and average about $25 according to complainants. From them are cut the button blanks which are made into buttons by grinding, drilling and other processes. Complainants regard these shells as desirable traffic for the carriers. They can be loaded in box or gondola cars, are not liable to loss or damage to any considerable extent, and claims are not heavy. Only a small fraction of the total weight of the shells rereceived by the button manufacturers is suitable for button blanks and only a fraction of the weight of a button blank becomes a button. The shells become principally waste. Much of this waste is crushed or ground and sold for fertilizer purposes, stucco dash and poultry grit. Shipments made in 1921 and 1922, rates charged class E rates for distances from 115 to 239 miles. At time shipments moved a commodity rate of 9c, the same as on fertilizer, applied from all the points in the Chicago group to Davenport, Iowa, and Rock Island, Moline and Keithsburg, Ill., on the upper Mississippi river. The western trunk line exceptions, applicable in the territory here considered, provided the fertilizer basis wherever the tariffs naming commodity rates on fertilizers specify that the exceptions shall apply, and that is the situation here. The commodity rates on fertilizer are intended principally for application on the heavy traffic from the packing houses at Chicago, but in accordance with custom they are published also from the Chicago group, which is very extensive. No such rates are published from the Peoria group, as there appears to be no present or prospective movement of fertilizers. Class E basis applies to a large movement of shells. The movement of the traffic under consideration is rather sporadic, and seasonal and comparatively light. Shells are not shipped from and to the points concerned except for the manufacture of buttons. They constitute a different commodity from the crushed, ground or waste shells that are valuable only for fertilizer, stucco dash or chicken grit. HELD, class E rates not unreasonable, complaints dismissed, but the present rate structure is in a chaotic condition and defendants should promptly proceed to revise it. Mississippi Pearl Button Co. v. A. T. & S. F. Ry., 98 I. C. C. 560.

(3a) Complainant attacked sixth class rate charged on scrap iron, carloads, between March 1, 1920 and Jan. 31, 1921 from Penniman, Va., to Vandergrift, Chester and Latrobe, Pa., and Massillon, O., as unreasonable and unduly prejudicial. Penniman is a local point at the end of a branch line of C. & O., 4.68 miles from Penniman Jct. It is about 5 miles east of Williamsburg, Va., and 27 miles northwest of Newport News, Va. This commodity is of low value and loss and damage claims are negligible. Charged sixth class to Chester of $6.90. Rate prior to August 26, 1920 was $4.90. There was a contemporaneous commodity rate from Williamsburg to Chester of $4.76 which had been $3.40 prior to August 26, 1920. The sixth class rates from Williamsburg, Richmond, Newport News and other socalled Virginia cities were the same as the sixth class rates from Penniman. Distance from Williamsburg and from Penniman to Chester is about 341 miles over the C. & O., to Potomac Yard, Va., and Pennsylvania beyond. Sixth class rates charged to other points of destination, this being the rating in official territory. The contemporaneous commodity rates from Williamsburg were $4.90 prior to August 26, 1920 and $6.86 thereafter. On commodities generally the same rates ap-

plied on shipments from Penniman as from Williamsburg. HELD, rate attacked unreasonable to extent they exceeded the commodity rates from Williamsburg, reparation awarded. Briggs & Turivas v. C. & O. Ry., 98 I. C. C. 584.

(3b) In 85 I. C. C. 47 the Commission prescribed class rates to apply in lower peninsula of Michigan. Complainant asked that the higher rated zones in Michigan be abolished and that the basic c. f. a. scale be applied to the entire lower Peninsula. With respect to traffic density the evidence confirms the facts developed at the first hearing. Although it is unsatisfactory in some respects, it shows conclusively that the traffic density in the higher rated zones in Michigan is materially less than in the remainder of central territory as a whole. The value of the zone arbitraries to the Michigan carriers is considerable. HELD, the class rates, and commodity rates bearing a direct relation thereto, between points in the lower Peninsula of Michigan north of the line of the M. C., from Detroit, Mich., to Chicago, Ill., and points in central territory for the future will be unreasonable, unduly prejudicial to persons and localities in the lower Peninsula of Michigan north of said line and unduly preferential of persons and localities in central territory on and south of said line to the extent they exceed the following: To and from zone B, with the addition of the entire thumb district lying between Saginaw Bay and Lake Huron, rates exceeding the distance scale of class rates applying between points in central territory on and south of said line by not more than 2c per 100 pounds first class; to and from Zones C and D excluding the thumb district, rates exceeding the said scale by not more than the first class; rates on the lower classes to bear the same percentage relationship to first class as they do in the said scale. Michigan Traffic League v. A. A. R. R., 98 I. C. C. 660.

(3c) Sixth-class rate on coal tar, in tank-car loads from Fairmont, W. Va., to Everett (East Boston), Mass., found unreasonable as compared with lower commodity rates contemporaneously in effect from Dunbar, Pa., and other points to same destination, and to extent it exceeded lower commodity rate subsequently established. Complainant made application for establishment of commodity rates more than five months prior to movement of shipments but, due to inconsistencies in commodity rates on coal tar, carriers delayed their establishment. Reparation awarded. Barrett Co. v. B. & O. R. R. Co., 91 I. C. C. 53.

(3d) Class rates on sporadic shipments of sugar from Seattle, Wash., to Chicago, Ill., Boston, Mass., and Landisville, N. J., found not unreasonable as compared with lower commodity rates from California terminals and from sugar-producing points in California and southern Oregon. There is a considerable movement of sugar from California to the East, but character and volume of movement from Seattle does not warrant establishment of commodity rates or retroactive application thereof on shipments here involved. Armour & Co. v. N. P. Ry. Co., 91 I. C. C. 75.

(3e) Class rates applicable on scoured and pulled wool from Pacific coast terminals to eastern defined territories are apparently too high to permit any movement thereunder. Wool Rates Investigation, 1923, 91 I. C. C. 235, 267.

(3f) Following Stewart-Warner Speedometer Corp., 64 I. C. C. 541, and other cases cited, double first-class rates and ratings on speedometers, l. c. l., from New Rochelle, N. Y., to Pueblo, Colo., found unreasonable to extent they exceeded first-class rates and ratings subsequently established. Reparation awarded. Baker Steam Motor Car & Mfg. Co. v. A. T. & S. F. Ry. Co., 91 I. C. C. 381.

(3g) Sixth-class rate assessed on epsom salts moving from Atlanta, Ga., to Greensboro, N. C., found not unreasonable as compared with lower commodity rates contemporaneously maintained to Durham and Winston-Salem, N. C., farther distant points to which Greensboro is intermediate, which lower rate was subsequently established to Greensboro, or as compared with paper rates instanced by complainant to various points for greater distances. Fourth-section departure was protected by an appropriate application, sixth-class rates are generally applicable on this traffic in Southeast, and sixth-class rates instanced by defendants on shipments moving to various southeastern points compare favorably with those assessed. Proximity Mfg. Co. v. Director General, 91 I. C. C. 612.

(3h) Fifth-class rate on refined cottonseed oil from Los Angeles, Calif., to San Francisco and South San Francisco, Calif., during Federal control, found unreasonable to extent it exceeded lower commodity rate applicable in the opposite direction on cottonseed, fish, nut, seed, and soya-bean oils, in packages, c. l., and on coconut oil, in tank-car loads, which lower rate was subsequently established in both directions. Reparation awarded. Los Angeles Soap Co. v. Director General, 91 I. C. C. 691.

(3i) Complainant attacked class D rate of $1.30 per ton charged on 227 cars of coal between August 6 and Dec. 28, 1918 from Breed, Colo., to Colorado Springs, Colo., as unjust, unreasonable, unjustly discriminatory and unduly prejudicial to extent it exceeded a rate of 60c. Breed is a nonagency station on the Santa Fe, 7.7 miles north of Colorado Springs. Complainants mine is on a private spur about 0.5 miles south of Breed. About three months before complainant started shipping he requested defendant to publish rates on lump coal from his mine to points on the Santa Fe and was later informed that this had been done. When the time arrived for the shipments to begin he discovered that only a rate of $1.10 to Denver had been established. He was told, however, to start shipping and assurance was given him that when the rate to Colorado Springs was published a refund would be made on prior shipments. On Dec. 5, 1918 the rate on slack to Colorado Springs was reduced to 60c but the rate on lump coal remained unchanged. HELD, rate attacked unreasonable to extent it exceeded 60c, reparation awarded. Corley v. Director General, 100 I. C. C. 293.

(3j) Complainant attacked class rates and carload minima applicable to unfinished open model passenger automobile bodies, carloads, from Dayton, O., to Detroit, Mich., and Windsor, Ont., as unreasonable and unduly prejudicial. All are shipped wholly set up. Not more than 24 can be loaded into a 36 ft. car and not more than 32 into a 40 ft. car. The official, western and southern classifications provide a second class rating on passenger automobile bodies finished or not finished set up or partially knocked down, loose or in packages, carload minimum 10,000 pounds for 36 ft. cars, and higher graded minima for larger cars. Prior to July 1, 1922 the second class rates from Dayton were 69c to Detroit and 77.5c to Windsor, reduced on that date to 62 and 70c, respectively. The commodity rates as now maintained apply on unfinished automobile bodies and body parts, partially assembled, all steel, stamped. Prior to July 1, 1922 the second class rate from Philadelphia to Detroit, Mich., was $1.02 the reduced rate then effective being 91c. When established, the commodity rates, except to South Bend, were the equivalent of the third class rates, but as they were not reduced July 1, 1922 they are now higher than the present third class rates. Complainant asks for commodity rates of 54.5c to Detroit and 61c to Windsor, subject to minimum of 10,000 pounds, which rates represent the equivalent of the third class rates in effect prior to July 1, 1922. The commodity rates noted appear to be the only exception to the classification basis in official classification territory and apparently there is no present movement under the rate noted to South Bend. Dayton is served by the B. & O., Pennsylvania and Big Four. These lines in connection with the M. C., P. M., and D. & T. S. L., form through routes for this traffic from Dayton to Detroit. Testing undue prejudice here by the ability of the lines parties to the rates from both Philadelphia and Dayton to put an end to the preference and prejudice, it is clear that withdrawal by such defendants of their participation in the Philadelphia rate would result in no benefit to complainant, as that rate would still be available over other lines. There is no adequate basis for a finding of undue prejudice. HELD, rates and carload minima not unreasonable or unduly prejudicial, complaint dismissed. Maxwell Motor Corp. v. B. & O. R. R., 100 I. C. C. 363.

(3k) Commission instituted an investigation covering all interstate class rates within southern territory and between that territory and official territory on the north. It covers all such rates, both all rail and rail water, with certain exceptions which will later be noted, and it also covers less carload ratings provided in exceptions to the southern classification and less carload commodity rates. Its purpose is to determine whether the rates and ratings under in-

vestigation are unreasonable or are unduly prejudicial to or unduly preferential of particular localities, persons, or descriptions of traffic. It is not the primary purpose of this inquiry either to add to or subtract from the aggregate revenues of the carriers, but rather to adopt a class rate structure which will be as simple as it can be made, with due regard for the public interest, and free from undue prejudice, and which will serve the purposes that class rates ought to serve. HISTORY OF THE SOUTHERN RATE STRUCTURE. Southern territory is surrounded by navigable water. On the east is the Atlantic Ocean; on the south the Gulf of Mexico; on the west, the Mississippi river; on the north, the Ohio river. The Appalachian mountain ranges separate Virginia and the Carolinas from Kentucky and Tennessee, but dwindle into foothills in Alabama. Many navigable waterways penetrate the interior. When railroad building began, the South was almost wholly an agricultural country, the great staples being cotton and tobacco, with the natural waterways furnishing the means of transportation and the sites for the principal trading points. Some of the early railroad lines formed links between the waterways or acted as feeders, but more often they were competitors and the fight for traffic became acute. The result was that the cities upon the coast or inland navigable waters were given very low rates, while a much higher level prevailed at interior points less favorably situated. This was the origin of the famous basing point system. Since the steamboats made no distinction between carload and less carload traffic, a further result of the competition was the establishment, to a greater extent than in any other part of the country, of any quantity freight rates. It was the practice of the railroads in the case of local noncompetitive business to establish rates increasing rapidly with distance and so high that as a competitive point was approached the scale would be cut by the combination of the low rate to such point plus the local rate back. In such instances, the intermediate noncompetitive point was given the "benefit" as it was termed of the lowest combination. It thus became about that in the territory surrounding or tributary to the larger trading centers, the rates based upon these centers and they came to be known as basing points. As railroad construction continued, the competition with the steamboats was supplemented by equally keen competition between the railroad lines, with the result that depressed rates were accorded to important railroad junctions, like Atlanta, which are not situated on navigable waterways. Between central territory and the South the general basis of rates was originally, and still is to a great extent, the combination of local rates on Ohio river crossings or Virginia cities. Relatively these combination rates rate higher than the joint rates between the East and the South, and as central territory grew in importance as a manufacturing district competitive with the East, this fact caused complaint. Until quite recently, however, the lines leading south from the Ohio river were unwilling to go further in meeting eastern competition than to maintain as a key rate between Louisville, Ky., and Atlanta a rate no higher than the water-rail rate between Baltimore, Md., and Atlanta. PRESENT RATE STRUCTURE. While the number of fourth section departures has been substantially reduced, the basing point system has by no means been wholly eliminated. It still persists to a very considerable extent. Where the rates have been revised in one direction, they frequently have not been revised in the reverse direction, so that great inconsistencies prevail. All interstate class rates are governed by the southern classification, but there are separate state classifications in Georgia, Florida, Alabama and Mississippi. All the southern lines publish distance scales of class rates which apply locally in the absence of specific rates, but there is no harmony or consistency in these scales. The levels differ widely, as do the percentage relationships of classes. This is also true of the specific rates. RATES FROM CENTRAL TERRITORY. For many years the generally prevailing basis of class rates between central territory and the South has been combinations on the Ohio river or, in the case of the Carolinas, on the Virginia cities. As a rule, the factors in the combination have been local rates, although there have been and are exceptions. While the practice of publishing proportional rates has been largely discontinued, the publication of through rates lower than the combination has increased. Apparently the Illinois

Central, having large mileage in Illinois and Indiana as well as in the South, first established such through rates. At the present there are the following between points in central territory and the south: From all points in Illinois territory, including related points in Indiana, to all points in the Mississippi valley. These joint rates as now published, following the Pitt readjustment, generally conform to the fourth section. From other points in central territory, not including the Buffalo-Pittsburgh zone to Mississippi river points and Gulf ports. These joint rates do not conform to the fourth section, because similar rates are not published to intermediate interior points. They are extensively blanketed, central territory east of Illinois being largely covered by two great groups. Following the Pitt readjustment they were revised, but only on a temporary basis. Between the Buffalo Pittsburgh zone and many points in the Mississippi valley and southeast. These rates were originally combinations published as joint rates for convenience but owing to the varying percentage increases applicable in the general rate changes to interterritorial and intraterritorial rates, they are now generally lower than combination. They do not conform to the long and short haul provision of the fourth section, and in some instances exceed the aggregate of the intermediates. There are also various joint rates published between the east and the south, via Ohio river crossings, which are lower than combinations rates currently in effect from intermediate points in central territory.

RATES TO AND FROM EASTERN TERRITORY. Traffic between eastern territory and the south moves all rail and also by water and rail. The all rail gateways are the Virginia cities, Bristol, and the Ohio river crossings. The gateways of the water routes are Norfolk, the south Atlantic ports and the Gulf ports. The present rate structure is the resultant of the competition between these routes and gateways. This is also true of the proposed rate structure, which differs only in detail from the present. The water-rail routes were first in the field, and their rates form the foundation of the rate structure. Between eastern territory and a very large part of the south water-rail and rail-water-rail rates are differentially lower than the corresponding all rail rates.

DISCUSSION AND CONCLUSIONS. This proceeding is unique in its scope and in the opportunity which it affords for fundamental consideration of railroad rates. Certain general principles may well serve as a guide: Every reasonable effort should be made to simplify the structure. The present class rates in southern territory are complex and inconsistent to a degree impossible to defend. The carriers realize this, and their proposed rates are in improvement in this respect. The new class rates should look also to the future. They should, for example, be so framed as to facilitate the elimination not only of special classification exceptions but also of many commodity rates which provoke complaints of discrimination and have no other excuse than an inadequate and imperfect class rate structure. The tendency in recent years has been to give more and more consideration to the national need for a properly coordinately railroad service. This principle runs through the legislation of 1920, and is expressly declared in what is now paragraph 5 of section 15a of the act. The application of this principle will result in a greater degree of territorial uniformity in rates than would be possible if attention were concentrated on the individual railroad properties. It assumes that differences in earning power will be a material extent be cared for by adjustment of divisions or through the operations of the recapture clause. The commission is the guardian of the general public interest, and it must have in mind not only the carrier and the larger shipping interests but also the smaller communities and the great body of consumers. In rate proceedings, the smaller towns are seldom adequately represented and the consumer almost never. Yet one of the main reasons for the creation of the commission was the protection of those public interests which are rarely equipped for self-protection. Everything possible under the law and upon the record should be done to promote harmony between intrastate and interstate rates. The present lack of harmony in southern territory must be remedied. This was conceded by practically every witness, for carrier and shipper, who testified. The record contains nothing to indicate that the shippers of the south desire differences in level between the two sets of rates or that such differences can be justified, and

numerous so called Shreveport cases will surely be brought unless the situation is corrected. Most important of all, perhaps, the new rate structure should be as coherent and consistent as it can reasonably be made. Seeming inconsistencies should be susceptible of adequate defense. If the new structure is to possess any degree of permanence, it must be so constructed that it will not invite complaints of undue preference and prejudice. INTRATERRITORIAL RATES. Aside from general level, the chief issue with respect to the intraterritorial rates is whether a system of uniform distance rates, or closer adherence to the distance principle, is preferable to what the carriers term their related adjustment, i. e., rates which are based, in large part, on group or differential relationships, some of them of long standing. GROUP RATES VERSUS DISTANCE RATES. The railroad rate structure of the country is not the result of the application of socalled scientific principles. It is the product of the efforts of freight traffic managers seeking maximum revenue for their respective railroads, modified to some extent by public regulation. Where competition has made it necessary, the traffic managers have always been ready to handle freight at very low rates rather than not to handle it at all. It has been, indeed, the presence of competition at certain points and its absence at others which have caused most of the confusion in the rate structure. It is often said that railroad competition is now in service, rather than in rates, but there is only a degree of truth in this aphorism. Rate wars are less common than they once were, but the present rate structure is full of low rates made for competitive reasons and still defended on the ground of competition. HELD, no good reason has been shown for making interstate class rates between any two points in southern territory relatively high in order that corresponding rates for other hauls may be made relatively low. Stated differently, no adequate commercial or other reasons have been shown for grouping or relating interstate class rates in such a way that the rates between any two points are made substantially higher than the normal level. That the normal level of interstate class rates within southern territory should be based upon a distance scale or scales sufficiently extended so that hauls of all lengths will be covered. No reason has been shown for making the normal rate level higher than it otherwise would be made, in order to offset possible material reductions made voluntarily by the carriers below the distance scale basis. HELD, that on standard lines a single scale of distance rates should be used as the basis of maximum reasonable interstate class rates between points within southern territory, except that to and from points in Florida south of the S. A. L., Jacksonville to River Junction, there should be added to the rates so determined arbitraries likewise based upon a distance scale. That all the carriers operating within southern territory should be classed as standard lines for the purpose of the above finding, except the short lines and weak lines for which specific treatment is hereinafter found reasonable. That in applying the single scale of distance rates and also the scale of arbitraries, distances should be computed at actual mileage, except that 50 miles may be used as a constructive distance for the car float transfer on the Tennessee river in Alabama between Hobbs Island and Gunters Landing. JOINT LINE DIFFERENTIALS. Joint line differentials or arbitraries rest upon the theory that a joint line haul costs more than a single line haul. But no attempt has been made to measure or even to estimate this extra cost, and the differentials proposed are the product of unguided judgment. Nor is extra cost in physical handling always incurred. If, for instance, all lines in southern territory were consolidated under a single ownership, it does not follow that the method of operation over what are now joint line routes would in all cases, or even in most cases, be changed materially. While joint line hauls ordinarily involve switching operations at the junction point and sometimes the transfer from car to car of less carload freight, similar operations are common in the case of single line hauls. HELD, no sufficient reason has been shown for joint line differentials or arbitraries, but that the absence of such differentials is a factor which should be given some weight in determining the level of the distance scale. In this connection it should be noted that the fixing of the rate between any two points on the basis of a short route distance does not mean, necessarily, that

such route need be open for the movement of traffic. Carriers can not be required to short haul themselves when they can secure a longer haul by a reasonably direct route; but if they choose the latter alternative it does not follow that the reasonable rate must be fixed by the longer route. CLASS PERCENTAGE RELATIONSHIPS. No mathematical formula can be applied with any degree of authority to the determination of class percentage relationships. The problem is to arrive at relationships which will bring class rates to maximum usefulness and discourage the publication of all manner of special commodity rates. HELD, class percentage relationships should be uniform for all traffic, whether intraterritorial or interterritorial, which is governed by southern classification, and that these uniform percentage relationships should be as follows: first 100, 2nd, 85, 3rd, 70, fourth 55, fifth 45, sixth 40, seventh 35, eighth 30, ninth 25, tenth 22.5, eleventh 20, twelfth 17.5; that the classes should be numbered from 1 to 12 inclusive, the present classes A, B, C, D, becoming, respectively, 8, 7, 9 and 10. LESS CARLOAD CLASSIFICATION EXCEPTIONS. It is probable that changes in classification ratings may be desirable if the exceptions are eleminated. Plainly the southern classification has often been honored in the breach, and the wide variations in class percentage relationships have been an obstacle to any consistent scheme of ratings. The establishment of uniform relationships and the elimination of exceptions will so change conditions that a review of the classification will doubtless become imperative. In exceptional cases competitive conditions may lead carriers voluntarily to maintain or establish specific classification exceptions and may make this possible without undue preference. In general, however, it is clear that classification exceptions are unsound in principle and should be discouraged. HELD, nothing has been shown of record which would justify the commission in requiring the maintenance or establishment on less carload traffic of interstate exceptions to the southern classification. This should not be construed as an approval of all existing ratings under southern classification. LESS CARLOAD COMMODITY RATES. The carriers have not sought to justify the cancellation of existing less than carload commodity rates. They have given a list of such rates which they propose to maintain and, so far as the remainder are concerned state that they will consider them with care and consult with shippers before determining whether or not they should be canceled. In view of this state of the record, no finding with respect to specific rates of this character can properly be made. The record indicates that less than carload commodity rates have been widely established in southern territory, and that they are strongly favored by certain large jobbing centers which desire a wide radius of distribution. Such rates, however, mean uneconomical operation and the burden ultimately falls upon the consuming public. From this point of view, carload service should be encouraged and less than carload service discouraged. It would seem that the results which the larger jobbing centers desire might be accomplished, in large degree, without sacrifice of economy in operation, by more liberal mixtures which will permit the consolidation of small lots of freight into one carload shipment and also, even without such privileges, by the cooperation of shippers and the use, if need be, of forwarding and delivering agencies. ANY QUANTITY RATINGS. Similar observations may be made in regard to any quantity ratings. The original cause of such ratings, steamboat competition, has practically ceased to exist intraterritorially in the south. Considered apart from competition, they clearly encourage uneconomical operation. As in the case of less carload commodity rates, there are probably few, if any, circumstances under which the Commission would be justified in requiring the maintenance or establishment of any quantity ratings. But in eliminating them the carriers will clearly err if they proceed on the assumption that in all cases the change should be accomplished by assigning a higher rating to the article when it moves in less carload quantities, allowing the present any quantity rating to stand as the carload rating without reduction. THE SCALE TO BE PRESCRIBED. It is a safe conclusion that class rates are now relatively high in southern territory, at least as compared with the adjoining official territory. HELD, the maximum reasonable class rates for interstate application on standard lines between points in southern territory and

lying wholly within such territory, except between points in Virginia and points in North Carolina and except to and from points in the Florida peninsula, are, and for the future will be, rates determined by the distance scale of class rates set forth in Appendix K. That the reasonable maximum class rates for interstate application on standard lines between points in the Florida peninsula south of the S. A. L., from Jacksonville to River Junction, on the one hand, and other points in southern territory, on the other, are, and for the future will be, rates determined by the distance scale of class rates set forth in Appendix K plus arbitraries determined by the scale set forth in Appendix L for that part of the distance lying south of the aforesaid line of the S. A. L. WEAK LINES AND SHORT LINES. Certain financially weak carriers of fair size and numerous socalled short lines seek special treatment. The weak lines which made such a plea at the hearings are there: G. M. & N., B. & N. W., T. C., B. N. O. G. N., G. & S. I., Miss. Cent. and C. & G. HELD, the maximum reasonable class rates for interstate application between points on any of the weak lines or short lines indicated are, and for the future will be, rates determined by the distance scale of class rates set forth in Appendix K plus arbitraries determined by a distance scale similar to that set forth in Appendix L but not necessarily having the same level; and that the maximum reasonable class rates for interstate application within southern territory between points on such weak lines or short lines and points on standard lines are, and for the future will be, rates determined by the distance scale of class rates set forth in Appendix K plus arbitraries the same as those employed in the case of local hauls on the weak line or short line in question, for that part of the joint haul which is over the weak line or short line. Lines under common control or management with standard lines are excepted from the above finding because no good reason appears for treating them any differently than branch lines, that being their real status. While the matter of divisions of joint rates is not under consideration in this proceeding, the Commission deems it not inappropriate to express the view that where joint rates between standard lines and weak or short lines are made by the use of arbitraries in the manner above indicated, it is a fair presumption that the division of the standard line should not be greater than it would receive if it were dividing the same rate minus the arbitrary with another standard line, and that the benefit of the arbitrary should accrue wholly to the weak or short line. DETERMINATION OF MILEAGES. HELD, that in computing distances for the application of the scales set forth in Appendix K and Appendix L, the shortest routes for the interchange of carload traffic shall be used, embracing as a maximum the lines or parts of lines of not more than three carriers for distances up to 200 miles four carriers for distances from 200 to 500 miles, and five carriers for greater distances, except that where shorter routes are now in use which embrace the lines of more than the specified number of carriers such shorter routes shall be used. Connecting lines under common ownership or control shall be considered as a single line, but disconnected portions of the same railroad system shall for the purposes of this finding be counted as separate lines. In the application of this finding cases may arise where the shortest possible route to a point reached by two or more lines may be wholly or in part over the road of a weak or short line subject to finding 13. In such an event the arbitrary added by such line for the distance covered by its portion of the haul should be included in determining the rate, and if a longer route wholly over a standard line makes a lower rate such lower rate should be applied. The INTERTERRITORIAL RATE BASIS. It can not be said that the record furnishes any convincing reason for making interterritorial rates between central aud southern territories relatively higher than intraterritorial rates within southern territory, except so far as the desire to avoid too abrupt a departure from past practice may be deemed a reason. HELD, through class rates lower than the combination of local rates to and from the boundary line should be established between official and southern teritories, and that there is no sufficient reason why such through class rates should be relatively higher than the maximum class rates herein found reasonable within southern territory. MAXIMUM ALL RAIL RATES. Having determined that through class rates lower than the combination of local

rates to and from the boundary line should be established between official and southern territories, and that the basis for this new interterritorial structure should be a system of through rates governed by the southern classification and by the standard percentage relationships, the next steps are to determine the measure of these rates and, following that, to determine the extent to which this underlying basis should be modified (1) to meet the conditions created by the sudden transition at the boundary line from one system of class rates to a very different system and (2) to meet the conditions created by the coastwise water routes. HELD, a uniform and unmodified application between official and southern territories on all rail traffic of the southern territory class rate scale herein approved would in many instances result in rates which would neither be reasonable nor free from undue preference and prejudice, particularly to and from the border districts of southern territory. To correct the situation in those districts a scale of differential rates should be prescribed, applicable within southern territory to and from all gateway points, and it should be provided that the through charges upon interterritorial traffic subject within southern territory to class rates shall not exceed the lowest charges which would be produced either by the application of the appropriate through class rate based upon the southern territory scale herein approved or by combination of the applicable local rate within official territory to or from any gateway point with the applicable differential class rate within southern territory from or to such gateway point. The differential rates will serve two purposes: First, to provide a reasonable gradient between the two territories in lieu of the precipitous hump which would otherwise exist; and second, to afford some degree of proper protection to competitive relationships between communities. These differential rates should be so adjusted that they will, as a general rule, result in charges lower than those obtained by the through rates based upon the southern territory scale only in what may reasonably be regarded as border districts, but will grade into the general basis applicable to points farther south. The present rate situation in official territory is such, however, that to and from certain points in that territory any reasonable scale of differentials will result in lower charges than the through rates at many points south of the border districts. Under the existing official territory adjustment it is inevitable that this should be the result, if the purposes for which the differentials are designed are to be accomplished, for otherwise in such cases the rate hump and the undue preference and prejudice would merely be shifted from the border districts to territory farther south. The Commission has used the word "differential" rather than the word "proportional" in describing these contemplated rates south of the gateway points to avoid any presumption that they should form the basis for dividing the through charges between the official and southern carriers. The tariffs which provide for their alternative application should make it clear that the through rates constructed by the combination of local rates with these differentials, as well as the through rates based upon the southern territory scale, are joint rates. Without expressing any opinion as to the reasonable division of such joint rates, the Commission can with propriety say that no presumption exists that the divisions accruing to the southern lines should not exceed the differentials. RATES TO AND FROM EASTERN TERRITORY. The rates between southern territory and the eastern portion of official territory present what is, in many ways, the most difficult of the many difficult problems involved in the investigation. This is so because they apply not only over routes wholly by rail but also over routes which are partly by water. For a great many years no relationship in the southern adjustment was regarded as more firmly established and immutably than the parity between the all rail rates from Louisville, and the other Ohio river crossings, and the water-rail rates from Baltimore to Atlanta. The latter rates were the active force in this relationship and they were described by the carriers as a competitive influence which depressed the rates from the Ohio river below a normal and reasonable basis. This relationship continued from 1879 to 1917 when it was disrupted by the reduction in the differential between the water-rail and the all rail rates from the eastern ports, following 45 I. C. C. 303. When the differential between the all rail and the water-

rail rates from eastern ports was cut in half in 1917 under the unusual war time conditions then prevailing, it was upon a definite understanding that if, when normal times return, they (the water lines) find themselves receiving less than a fair proportion of the traffic, the present differential scale in part, or in whole, will be restored on 30 days notice from initial water lines. It never has been restored. Under the present plan, the rail water rail rates from eastern interior points are in general published on the concurrence plan, so that the water lines and the southern carriers are obliged to absorb out of the joint rates the full locals of the eastern carriers to the ports, except to the extent that the New England carriers have established proportional rates lower than the locals for the benefit of this traffic. These local rates have been increased relatively far more, under the general rate changes, than have the rail-water-rail rates. At the southern end, the rate structure seems to have been designed with an eye to the interests of the north and south rail lines which parallel the coast. The first class port to port rate from Baltimore to Savannah is now 99c, and the same rate applies from New York and Philadelphia. THE NONCONCURRENCE PLAN. This plan of publishing through rates has been in effect for many years without challenge by the Commission although never approved in a formal proceeding. On the other hand, similar plans applied to all rail routes have been condemned in several formal cases. The same question with respect to rail water rail routes is now definitely presented in this proceeding, and it becomes necessary to determine whether the nonconcurrence plan of publishing through rates over these routes should be approved, or whether joint rates should be required in lieu thereof. The Commission has power to prescribe the form of concurrence and the manner in which it may be shown in the tariffs. Clearly these rail water rail rates are not joint rates with the eastern lines nor are they combination rates. If this method of publishing through rates is to be sanctioned, there is no means of compelling the nonconcurring line to post the through tariff at its stations in a form convenient for public use. But here there are broader and more important reasons for questioning the practice. The nonconcurrence plan was originally adopted only because the eastern rail carriers would not concur in the joint rail water rail rates. By refusing to concur they made sure of their local rates for the haul to the ports. As participants in joint rates they would be entitled only to divisions, which might or might not be equal the local rates. At the other end, indeed, the southern rail carriers receive divisions which are materially lower than their locals from the ports. Yet if the rail water routes from eastern interior points are routes which ought in the public interest to be open, plainly the eastern lines should in the responsibilities and burdens by participating in reasonable joint rates; and, without prejudging the question, it is at least possible that they are not fairly entitled to divisions of such rates which are equal to their local rates. It appears that the nonconcurrence plan should be discontinued. The Commission now has the power to prescribe through routes and joint rates in a situation like this, even if the result be the shorthauling of certain rail carriers, where it is shown that such through routes and joint rates are necessary or desirable in the public interest. HELD, that the noncurrence plan of publishing rail water rates between interior points in eastern territory and interior points in southern territory should be discontinued, and that joint rail water rail class rates are necessary and desirable in the public interest and should be established and maintained between such points in all cases where maximum reasonable rail water rail rates are hereinafter prescribed. Under the special and peculiar conditions surrounding the movement of traffic between southern territory and eastern points from and to which routes partly by water furnish an economical and efficient means of transportation. HELD, that the interterritorial class rates applicable to such traffic should be determined with regard to the reasonably direct route wholly by rail and to the reasonably direct routes partly by water. In Appendix O are shown the maximum all rail and the maximum water rail or rail water rail first class rates which the Commission finds to be just and reasonable between the key points in eastern territory and the various southern groups. Since the Commission has taken into consideration both classes of routes,

those wholly by rail and those partly by rail, these maximum rates are not so high in certain cases nor so low in others as they would be if the routes were independently considered. Where, for example, from an eastern port to a certain southern group the water rail route is clearly more and the all rail route clearly less economical, the water rail rate has been made somewhat higher and the all rail rate somewhat lower than would be the case if they were separately determined. In reverse situations a reverse process has been followed, the result in all cases, however, being a certain narrowing of the spread between the two classes of rates. The fixing of rates in this way is obviously not a matter of formula but a matter of reasonable judgment. In the exercise of this judgment, the Commission has taken into consideration the given weight to the following factors, among others: present rates; rates proposed by carriers; the rates recommended in the proposed report as worked out for use in the traffic test of 1924; the average all rail rates from each key point to each southern group which would result from the application of the southern territory scale herein approved; the criticisms of the constructive mileage used in the proposed report which were offered in various exception briefs, the avoidance of fourth section departures over reasonably direct routes, whether all rail, water rail or rail water rail. HELD, the maximum reasonable and nonprejudicial class rates for interstate application all rail over standard lines between points in central territory, not including the Buffalo-Pittsburgh zone, and points in southern territory, and for similar application between points in southern territory where a part of the haul is through official territory, are and for the future will be rates governed by the southern classification and based upon the distance scale set forth in Appendix K, subject, however, to the provisions below. The maximum reasonable and nonprejudicial class rates for interstate application all rail over standard lines between points in trunk line territory, not including the Buffalo-Pittsburgh zone, or New England territory and points in southern territory not in the States of Virginia and North Carolina, and between points in the Buffalo-Pittsburgh zone and points in southern territory are and for the future will be rates governed by the southern classification and based upon the appropriate key rates, if any, shown in Appendix O, or, in the case of points in southern territory to and from which no appropriate key rate is shown in said appendix, based upon the distance scale set forth in Appendix K; subject in all cases to the provisions below. The maximum reasonable and nonprejudicial class rates for interstate application over routes partly by rail over standard lines and partly by water via Norfolk, Va., or any south Atlantic port, between points in trunk line territory, not including the Buffalo-Pittsburgh zone, or New England territory and points in southern territory not in Virginia and North Carolina, and between points in the Buffalo-Pittsburgh zone and points in southern territory are and for the future will be rates governed by the southern classification and based upon appropriate key rates, if any, shown in Appendix O. In case of points in southern territory to and from which no appropriate key rate is shown in said appendix, or to and from which the rate over all rail routes made in accordance with paragraph below is lower than the appropriate key rates, no water rail rate or rail water rail rate, as the case may be, need be published. In no case shall an interterritorial class rate over an all rail route exceed the lowest rate that may be made by combining the local class rate, applicable within official territory to the traffic in question and governed by the applicable classification or exception thereto, to or from any gateway set forth in paragraph e below with the differential class rate applicable from or to the same gateway under the scales set forth in Appendix P, said scales to be governed by the southern classification subject to the same exceptions, if any, to which the corresponding local class rates are subject. e. For the purposes of the above finding the following points shall be recognized as gateway points between official and southern territories: Cairo, Ill., Metropolis, Ill., Brookport, Ill., Evansville, Ind., New Albany Ind. Jeffersonville Ind., Cincinnati, O., Lexington, Ky., Winchester, Ky., Elkhorn City, Ky., St. Paul, Va., Bristol, Va. Tenn., Roanoke, Va., Lynchburg, Va. Alta Vista, Va., Brookneal, Va., Burkeville, Va., Meherrin, Va., Richmond, Va., Petersburg, Va., Alberta, Va., Jarret, Va., Suffolk, Va. Norfolk, Va. f. In applying the above

mentioned scales distances shall be computed in accordance with finding. 14. To and from points in Michigan, such arbitraries may be added, in determining the maximum rates under the distance scale set forth in Appendix K, as are contemporaneously recognized and applied in determining class rates within central territory. Likewise to and from points in Vermont, New Hampshire, and Maine, such arbitraries may be added in determining said maximum rates, as are contemporaneously recognized and applied in determining class rates within New England territory. To and from points in the Florida peninsula, arbitraries may be added, in determining said maximum rates, in accordance with finding 12. g. The standard lines in Southern territory to which the above finding applies are those defined in finding 5. The standard lines in official territory to which it applies are all lines except such short lines, including the Bangor & Aroostook, Ry., as do not now ordinarily participate in joint class rates with lines other than their immediate connections or which add arbitraries in the construction of such joint rates. Maximum reasonable and nonprejudicial class rates for interstate interterritorial application to and from points on lines other than those classes as standard are and for the future will be rates made in the manner indicated in the above finding but with the addition of arbitraries for such portion or portions of the joint haul as are over a line not classed as standard. In Appendix P two scales of differentials are set forth, one for use from gateways other than north bank Ohio river crossings and the other for use from such crossings. The latter is in all cases 3c higher, first class, than the former. The purpose of this difference is to compensate in some measure for the river crossings. The evidence of record is insufficient to warrant any finding with respect to the water rail rates from eastern ports via Gulf ports to points in southern territory. HELD, in the adjustment of class rates between central and southern territories Portsmouth and Ironton, O., Ashland, Ky., and Kenova and Huntington, W. Va., shall be included within a single group, distances to be figured in all cases from Ashland, a central point within the group. CLASSIFICATION EXCEPTIONS. The matter of less carload exceptions to the southern classification has already been covered, and this finding has equal application to interterritorial and intraterritorial traffic. GRAIN AND GRAIN PRODUCTS. It appears that the strictly intraterritorial movement of grain and grain products is of minor importance, since these and the related commodities originate very largely in other territories, and the transit arrangements are such that the interterritorial rates usually apply to final point of consumption, even when the commodities are stopped in transit within southern territory for various purposes such as grading, sorting, milling and the like. From the Ohio river and Mississippi river, however, the application of the new class 9 and class 10 rates intraterritorially would, it seems, disrupt the present market equalization plan. HELD, hay, straw, shucks, grain, grain products, and grain by products, now rated class C or class D in the southern classification, should be excepted for the present from the application of the class rates herein approved between official and southern territories and from Ohio river and Mississippi river crossings to points in southern territory. It will be noted that this finding is broad enough to apply to movements from eastern as well as central territory. With the exception of hay, the movements from eastern territory are of minor importance, but no reason appears why a different conclusion should be reached with respect to them than with respect to movements from central territory. OTHER EXCEPTIONS. It appears that classification differences may bring about other cases where the new through rates to points in southern territory will be lower than the local rates to the gateway point. HELD, no specific finding is necessary with respect to this or other similar proposed minor exceptions to the application of the class rates interterritorially. The carriers will be at liberty to propose such exceptions in connection with the publication of the new rates. FOURTH SECTION RELIEF. All applications for fourth section relief assigned for hearing in this case will be denied and all outstanding relief with respect to class rates in southern territory will be withdrawn, except in the case of weak lines and short lines covered by findings 14 and 17. The principal ground upon which the respondents now seek relief is circuity. In other

words, relief is sought so that circuitous routes may meet the rates at competitive points fixed by short line or rate making routes. It has been the practice of the Commission to grant such relief reasonably limited, and it is of the opinion that it should be granted in this proceeding subject to the equi-distant clause. It will be granted subject to the further condition that in establishing rates thereunder the respondents will refrain from publishing the short line rates over routes so circuitous as to result in wasteful transportation or in rates which to the more distant points are not reasonably compensatory. The carriers further urged that relief should be granted, not upon the ground of circuity, but in order that their proposed group adjustment might be maintained inviolate. The Commission has heretofore granted relief in some cases to permit group adjustments to be maintained. Under the rate plan herein approved, it is doubtful whether such relief will in many cases be necessary, but in so far as it proves necessary, applications therefor may be filed. It may be that other occasions for fourth section relief will arise in connection with the interterritorial rates made upon the differential basis. In such cases appropriate applications accompanied by full explanations of the reasons which make such relief desirable may be presented. It is expected that rates established in pursuant of the finds herein will generally conform to the provisions of the fourth section and that applications for relief other than upon the ground of circuity, will be confined to special situations where there are reasonable and substantial grounds for departing from the requirements of that section. ENTRY OF ORDER. It is highly desirable that the new rates should become effective not later than January 1, 1926 and with the cooperation of carriers and shippers there is no good reason why they should not become effective on or before that date. The basis of class rates herein approved is intended to supersede all adjustments heretofore presented by the Commission with reference to all or any of the rates in issue. That being the case, and in order to avoid possible conflicts, an order will be entered modifying, with one exception, outstanding unexpired orders relating to such extent necessary to permit the carriers to publish and apply the rates herein approved. The single exception is 64 I. C. C. 709 so far as the rates from Ohio river crossings and points beyond in central territory and the Buffalo-Pittsburgh are concerned. While it is quite possible that some modification of the order ought to be made in harmony with the general class rate readjustment herein approved, the Commission does not feel that such a modification ought to be made upon the record in this proceeding, particularly in view of the fact that the rates between official territory points and Bristol, Va., are not in issue. Appendix K, distance scale approved in the report ranges from 30c first class for 5 miles and under to 283c first class for 1,500 miles. Appendix L, scale of arbitraries to be added to rates under basic distance scale for distances south of the branch of the Seaboard Air Line from Jacksonville to River Junction, Fla., ranges from 3c first class for 10 miles and under to 16c for 540 miles, first class. Appendix O, maximum first class rates approved in report between certain eastern key points and southern groups, see attached. Differentials approved in report for use from gateways other than north bank Ohio river crossings, see attached. Appendix P. Southern Class rate investigation 100 I. C. C. 513.

1 Rates to Groups 1 to 4, inclusive, are not in issue from eastern territory, except from points in the Buffalo-Pittsburgh zone.

(31) Complainant attacked fifth class rate charged on naphtha carloads between June 5, 1922 and May 31, 1923 from Devol, Okla., to Burkburnett, Tex., as unreasonable. Prior to July 1, 1922 rate was 17c, reduced on that date to 15.5c and further reduced on Dec. 20, 1922 to 10c. Rate of $11.25 per car was established Dec. 1, 1923 following 83 I. C. C. 51. Shipments originated at Constantine refinery 2.7 miles south of Devol and moved to complainants plant 1.1 miles south of Burkburnett, a haul of 5.3 miles. The origin and destination were within the Burkburnett yard limits. HELD, rate attacked unreasonable to extent it exceeded $12.50 per car prior to July 1, 1922 and $11.25 thereafter, reparation awarded. Skelly Oil Co. v. M. K. & T. Ry. 101 I. C. C. 47.

(3m) Complainant attacked sixth class rate charged on 12 cars of broken soapstone between July 1, 1922 and Dec. 1923 from Marriottsville, Md., to Stockerton, Pa., as unreasonable. Marriottsville is on the B. & O., 26 miles west of Baltimore, Md. Stockertown is on the L. V., 10 miles north of Easton, Pa. Shipments moved B. & O., to Park Junction, Pa., P. & R., to Bethlehem, Pa., L. V., beyond charged sixth class of 26c. A commodity rate on broken ground or refuse soapstone was maintained of 18.9c from Marriottsville to Allentown, Bethlehem, and Easton, Pa., and other stations for distances ranging from 177 to 212 miles. Broken soapstone is a low grade commodity. HELD, rate attacked unreasonable to extent it exceeded $3.78 per ton, reparation awarded. Kelly & Co. v. L. V. R. R. 101 I. C. C. 49.

(3n) Complainant attacked class rates charged on paper envelope blanks in sheets, printed or lithographed, or paper wrappers in sheets, printed or lithographed, shipped since Sept. 6, 1922 from New York to Buffalo as unjust, unreasonable, unjustly discriminatory and unduly prejudicial. The finished envelopes are designed for use in packing individual hair nets for the retail trade, and each uncut envelope bears the figure of a woman's head and various printed words and phrases. Charged third class 54.5c carloads and 79.5c first class less carloads. The Commission has declined to disturb the classification as applied to particular kinds of printed matter, even where the value was less than this. If an exception were made with regard to the commodity shipped by complainant it would open up an endless field for complaint from the manufacturers of all kinds of printed matter. It would be practically impossible to distinguish between the different grades of commodities that come under the designation printed matter for the purpose of fixing specific rates on each. HELD, rates attacked not unreasonable or otherwise unlawful, complaint dismissed. American Lithographic Co. v. L. V. R. R. 101 I. C. C. 100.

(3o) Complainant attacked class rates on strawboard, in carloads, from and to points in central territory and from points in that territory to Canadian and trunk line territories as unreasonable unjustly discriminatory and unduly prejudicial. The allegation of undue prejudice grows out of the fact that relatively lower rates apply from St. Louis, Mo., Alton, Ill., Milwaukee, Wis., and other points in the socalled Illinois district than apply elsewhere in central territory. Strawboard is rated fifth class but under exceptions the rating throughout official territory is 90 per cent of sixth class. This basis was prescribed in 52 I. C. C. 84. Complainants described the manufacture of strawboard and paper, and named the principal ingredients of these products and paper boards, wall board and roofing material, and introduced evidence as to their respective values, seeking to have strawboard excepted from the general list of boards on which the rating of 90 per cent of sixth class applies. However, all these boards are so similar from the standpoint of manufacturing process, value, use, and transportation characteristics that they naturally fall into one group and should be accorded a common basis of rates. HELD, rates attacked not unreasonable, unjustly discriminatory or unduly prejudicial, complaint dismissed. Lafayette Box Board & Paper Co. v. A. C. & Y. Ry. 101 I. C. C. 273.

(3p) Complainant attacked sixth class rate charged on five cars of scrap iron shipped during Nov. 1921 from Dunbar, W. Va., to Weirton, W. Va., as unjust and unreasonable to extent it exceeded the rate subsequently established. Dunbar is on the K. & M., near Charleston, W. Va. Shipments moved via that line to Columbus, O., and Pennsylvania be-

yond, 339 miles, charged sixth class rate of $5.10. On Sept. 30, 1921 complainants requested the establishment of a commodity rate of $3.92 which applied from Dunbar to Wheeling, W. Va., and Steubenville, O. and it became effective Jan. 20, 1922. HELD, rate attacked unreasonable to extent it exceeded $3.92 per long ton, reparation awarded. Hilb & Bauer v. N. Y. C. R. R. 101 I. C. C. 621.

(3q) The evidence is directed to the reasonableness of the rates on cheese, carloads, from Wisconsin producing points and Chicago, Ill., to destinations in Arkansas, Louisiana, Oklahoma and Texas. To some of these destinations commodity rates lower than the classification basis of third class have applied for many years. To the others third class rates have been and are applicable. Cheese movement is regular throughout the year. When shipped it is packed in round wooden boxes, called hoops, loaded in the cars in solid tiers, and braced. As a perishable commodity it requires protection to some extent against heat and cold, and moves only in refrigerator equipment, under refrigeration for about 8 months in the year and under either carriers or shippers protective service, during the other four months. Rates on cheese from defined territories to the southwest are constructed by adding certain established differentials to the rates from Kansas City, Mo., and St. Louis, the principal gateways for this traffic from Wisconsin and Chicago. Commodity rates are published from Wisconsin points and from Chicago to numerous destinations in Arkansas and Louisiana. On shipments into Oklahoma they are confined to Oklahoma City and a few intermediate destinations. To all other destinations in those states and in Texas third class rates apply. Destination in eastern Texas, such as Fort Worth, are intermediate over available routes to Shreveport and other Louisiana points, and the maintenance of commodity rates to these Louisiana points and the higher third class rates to Texas gave rise to the negotiations which culminated in these proceedings. From the standpoint of distance the level of the rates should be substantially the same to Oklahoma and Arkansas. The record also warrants the conclusion that there is no justification for applying from Wisconsin to any part of the destination territory the same rates as from Chicago, except from points of origin in Wisconsin comprised in the Milwaukee group. The present record affords no reason for disturbing the present difference in rates as between the Fox River and Minneapolis-St. Paul groups on the one hand and the Chicago and Milwaukee groups on the other hand or why that difference should not be maintained in respect of traffic to all of the destination states. HELD, proposed schedules not justified, without prejudice to filing of new schedules minimum 24,000 pounds, as follows: From Wisconsin to Tulsa, Okla., 135 from Chicago 117c; Oklahoma City 142 and 124c respectively; Fort Smith, Ark., 139 and 121c, respectively; Little Rock, Ark., 133 and 115c, respectively; Texarkana, Ark., 144c and 126c; Dallas, Tex., 155 and 137c; Houston, Tex., 167 and 149c; San Antonio, Tex., 173 and 155c; El Paso, Tex., 185c and 167c; Shreveport, La., 149 and 131c; and Lake Charles, La., 158c and 140c; rates attacked not unreasonable but will be unreasonable for future to extent they exceed rates named above. Cheese from Wisconsin, 101 I. C. C. 744.

(3r) Fifth-class rate on toilet paper from Northumberland to New Hartford and South Utica, N. Y., found not unreasonable as compared with lower commodity rate from Groveton, N. H., a farther distant point to which Northumberland is intermediate. Saucquoit Paper Co. v. Director General, 92 I. C. C. 61.

(3s) In cases where there has been no prior movement, the commission has found that class rates were not unreasonable even though commodity transported was a low-grade raw material capable of heavy loading. See Grasselli Chemical Co., 66 I. C. C. 263. Atlas Portland Cement Co. v. Director General, 92 I. C. C. 171, 172.

(3t) Fifth-class rates assessed on raw sugar from Brooklyn, New York, Weehawken, and Philadelphia, to Marine City, Mich., found not unreasonable as compared with lower commodity rates to farther distant Canadian points to which there is a substantial movement. Circumstances governing application of commodity rates to Canadian points substantially differed from those surrounding movements to Marine City; former are not acceptable as a measure of reasonable rates on latter; nor is subsequent publication of lower commodity rates to Marine City sufficient ground for finding unreasonableness in absence

of other proof. Garcia Sugars Corp. v. N. Y. C., 92 I. C. C. 239.

(3u) Comparisons of rate levels in respective classification territories serve no useful purpose in a case involving reasonableness of classification rating in a particular classification territory. Coca-Cola Co. v. B. & O., 92 I. C. C. 340, 343, 344.

(3v) Fifth-class rate and rating on alkali salts, so-called potash, from Omaha to Dubuque, assessed as factor of combination from Omaha to destinations east of Mississippi River, found not unreasonable or otherwise unlawful as compared with commodity rates applicable on through shipments from complainant's plant at Lakeside, Nebr., to same destinations, or as compared with lower rate subsequently established. Ordinarily complainant ships in bulk direct to consumers, but these shipments were unusual in that they were stored at Omaha because of insufficient storage facilities at complainant's plant; furthermore, the subsequent reduction of this factor is not sufficient to warrant a condemnation of the combination rate. Standard Potash Co. v. Director General, 92 I. C. C. 337.

(3w) Upon further hearing, maintenance of class and commodity rates from points in California, Oregon, Washington, and eastern transcontinental groups to Mesa and Nogales, Ariz., relatively lower than those to points on Globe divisions of the Arizona Eastern R. R. found not unduly prejudicial to points on the Globe division. Record on further hearing shows that circumstances and conditions surrounding transportation to Mesa and Nogales are not wholly comparable with those in connection with transportation to points on the Globe division. Original report 81 I. C. C. 134, modified. Class and Commodity Rates to Mesa, 92 I. C. C. 512.

(3x) Class rates from western trunk-line, c. f a., and trunk-line territories, and rates on various commodities from same points and from Ohio River crossings and New Orleans, La., to Virginia, Minn., found not unreasonable or unduly prejudicial as compared with rates to Duluth. Location of Duluth at head of the lakes, as the principal gateway of lake-and-rail traffic has brought about a competitive rate situation at that point which is not applicable to Virginia. Virginia Chamber of Commerce v. A., T. & S. F. 92 I. C. C. 722.

(3y) Sixth-class rate assessed on lumber and fixtures from Chattanooga, Tenn., to Belhaven, N. C., found unreasonable as compared with lower rate contemporaneously in effect from Nashville, through Chattanooga to Belhaven, with rate from Chattanooga to Newbern, N. C., located in same general seaboard territory as Belhaven; and to extent it exceeded the combination based upon the aggregate of rates to and from Nashville. Reparation awarded. Walsh & Weidner Boiler Co. v. Director General, 93 I. C. C. 1.

(3z) Fifth-class rates assessed on sisal from Indianapolis to certain points in c. f. a. territory, western New York, and Ontario, Canada, found not unreasonable. Shipments here involved represented the reshipment of sisal imported via gulf ports and held in storage at Indianapolis beyond the transit period. Had they been shipped out from transit point within the transit period they would have been entitled to joint rates from the ports to ultimate destination, plus transit charge. Complainant did not attack the rating or class rates as such but in effect sought extension in some degree of the benefit of the storage-in-transit arrangement to shipments made after expiration of the transit period. Similar proposals, however, were found not justified in 73 I. C. C. 455 and 78 I. C. C. 575. Sisal Sales Corp. v. B. & O., 93 I. C. C. 297.

(4a) Class rates assessed on crushed marble found unreasonable to extent they exceeded lower commodity rates contemporaneously applicable on other kinds of stone analogous to crushed marble from a transportation standpoint, and to extent they exceeded lower commodity rate established subsequent to movement. Crushed marble is low in value, loads heavily, is not susceptible to damage, and rarely moves at class rates even for very short hauls. Musto Sons-Keenan Co. v. S. P. Co., 93 I. C. C. 447.

(4b) Upon contention that class rates are properly applicable on isolated shipments in lieu of commodity rates as latter are established to take care of sustained movements. HELD, shippers are entitled to reasonable rates, and fact that there have been relatively few shipments of a commodity between certain points is not the sole determinative factor. Parkersburg Rig & Reel Co. v. M. P., 93 I. C. C. 667, 669.

(4c) Second-class express rates on cream, in 10-gallon cans, from Albion

and Dallas Center, Iowa, to Omaha, found unreasonable to extent they exceeded commodity distance rates subsequently established. Reparation awarded. Fairmont Creamery Co. v. Am. Ry. Exp. Co., 93 I. C. C. 684.

(4d) Fifth-class rate on structural steel from Carnegie, Pa., to Richmond, Va., found unreasonable to extent it exceeded lower joint commodity rate contemporaneously in effect from Pittsburgh proper and other competing points in same rate group to same destination, which lower rate carriers subsequently established from Carnegie. Reparation awarded. McClintic Marshall Steel Supply Co. v. P., C. & Y., 95 I. C. C., 459.

(4e) Third-class rating and rates in southern classification on cocoanut oleine found not unjustly discriminatory or unduly prejudicial but unreasonable to extent they exceeded fifth-class rating and rates contemporaneously applicable on cocoanut oil. Oleine and refined cocoanut oil are analogous, are used for same purposes, the only difference between them being in the melting point. Reasonable rating prescribed and reparation awarded. Best Foods v. C. R. R. Co. of N. J., 95 I. C. C. 738.

(4f) Fifth-class rate assessed on corrugated strawboard boxes from St. Louis, Mo., to Urbanette and Green Forest, Ark., found unreasonable to extent it exceeded lower rate to Searcy, Ark., a farther distant point beyond Urbanette and Green Forest. Reparation awarded. Villines Canning Co. v. M. Ry. Co., 96 I. C. C. 3.

(4g) Joint fifth-class rates assessed on fabricated steel tank material, k. d., from Shreveport, La., to El Dorado, Ark., found unreasonable as compared with lower commodity rates subsequently established, and to extent they exceeded rates based upon distance scale prescribed in Memphis-Southwestern Investigation, 77 I. C. C. 473. Earnings which these rates yield are sufficiently remunerative for a heavy loading commodity of the character under consideration. Reparation awarded. Parkersburg Rig & Reel Co. v. C., R. I. & P., 96 I. C. C. 99.

(4h) Class rates on spelter from Trenton, N. J., to Baltimore, and Sparrow's Point, Md., Weir Branch, Cambridge, Boston and Worcester, Mass., Providence, R. I., and Stamford, Springdale, Chelshire, Bridgeport and Waterville, Conn., found not to have been unjustly discriminatory or unduly prejudicial and not unreasonable, except for a certain period when they exceeded lower commodity rates which were published subject to Rule 77 of Tariff Circular 18 A and would have been applicable upon request. Reparation awarded. Trenton Smelting & Refining Co. v. P. R. R., 96 I. C. C. 264.

(4i) Second-class rates on black powder from Quaker Falls, Pa., to various destinations in Illinois and Indiana, found unjust and unreasonable as compared with commodity rates averaging 68.4 per cent of second class, which rates are applicable from Mooar, Iowa, Pleasant Prairie, Wis., and other powder-producing points which compete with Quaker Falls in destination territory under consideration. Reasonable rates prescribed for future and reparation awarded. Grasselli Powder Co. v. A., C. & Y. Ry., 96 I. C. C. 271.

(4j) Second-class rating and rates applicable on l. c. l. shipments of printed waxed wrapping paper between points in official territory, found not unduly prejudicial but unreasonable to extent they exceeded, exceed, or may exceed third-class rating and rates contemporaneously applicable on l. c. l. shipments of waxed wrapping paper unprinted. Printed waxed paper weighs the same, occupies same amount of space in a car, and is shipped in same kind of container as unprinted waxed paper, the only difference being that the printed paper is slightly more valuable. Moreover, waxed paper, printed and unprinted, in official classification, takes same c. l., rating and in both southern and western classification the same l. c. l. rating. Reparation awarded. General Baking Co. v. P. R. R. Co., 96 I. C. C. 280.

(4k) Fourth-class rate assessed on shipments of sisal from New Orleans, La., to Mounds, Ill., during Federal control, found unreasonable as compared with import commodity rates contemporaneously in effect from New Orleans to Indianapolis, Ind., and to extent it exceeded lower import commodity rate subsequently established over route of movement. Reparation awarded. Capital Warehouse Co. v. Director General, 96 I. C. C. 293, 297, 298.

(4l) Third-class rates on butter to Fort Worth, Houston, and San Antonio, Tex., from various points and territories found unreasonable as compared with distance rates in the same general territory on various commodities as prescribed in 77 I. C. C. 473, and 57 I. C. C.

231, and to the extent they exceeded rates based on the distance scale of reasonable maximum rates on butter, eggs and dressed poultry prescribed in Butter, Eggs and Dairy Products, 96 I. C. C. 19. Reasonable rates prescribed and reparation awarded. Mistletoe Creameries v. A., T. & S. F., 96 I. C. C. 303.

(4m) Fifth-class rates assessed on brass and copper ingots from East Liberty, Pa., to Follansbee and Wheeling, W. Va.; Toronto, Youngstown, Canton, Cleveland, Newburg, Harvard Avenue, Lorain, Toledo, Wagon Works, Maryville, Springfield and Bellaire, Ohio; Detroit, Mich.; East Chicago and Gary, Ind.; Chicago and South Chicago, Ill.; Louisville and South Louisville, Ky., and St. Louis, Mo., found unreasonable to extent they exceeded rates contemporaneously in effect on brass ingots from Falls Creek and Punxsutawney, Pa., to same destinations. Reparation awarded. Duquesne Reduction Co. v. P. R. R. Co., 96 I. C. C. 351.

(4n) Class rates on burlap bags, in carloads and less than carloads, from New York, N. Y., Philadelphia, Pa., and Baltimore, Md., and points taking the same rates to Alexandria, Va., found unjust and unreasonable to the extent they may exceed the commodity rates proposed by the carriers for establishment between the same points. Bryant v. P. R. R. Co., 96 I. C. C. 564.

(4o) Third-class rates on lime-cola sirup shipped during Federal control from Montgomery to Mobile, Ala., found inapplicable. Lower commodity rates in effect on "sirup in wood or in tin cans, boxed" should have been assessed. Reparation awarded. Allen v. Director General, 96 I. C. C. 561.

(4p) Class rates on burlap bags, in carloads and less than carloads, from New York, N. Y., Philadelphia, Pa., and Baltimore, Md., and points taking the same rates to Alexandria, Va., found unjust and unreasonable to the extent they exceed or may exceed the commodity rates proposed by the carriers for establishment between the same points. Reparation awarded. Bryant v. P. R. R. Co., 96 I. C. C. 564.

(4q) Applicable fifth-class rate charged on a carload of sulphate of ammonia from Gary, Ind., to Little Rock, Ark., found unreasonable to extent it exceeded a lower combination of commodity rates contemporaneously in effect over the route of movement. Reparation awarded. Arkansas Fertilizer Co. v. Director General, 96 I. C. C. 567.

(4r) Proposed increased commodity rates on glucose products from Chicago, Ill., and certain points in Iowa, to South Dakota destinations north and west of Sioux Falls and east of the Missouri River, designed to make such rates approximately the same percentage of the contemporaneous fifth-class rates as obtains to Sioux Falls, Sioux City, Iowa; Minneapolis, Minn., and other destinations in the same general territory, found not justified, in view of the fact that the record does not disclose that the class rates afford a proper basis upon which to construct the commodity rates proposed to all of these destinations. Glucose Products to South Dakota, 96 I. C. C. 579.

(4s) As indicated in 46 I. C. C. 1, commodity rates are supposed to reflect the specific transportation conditions which prompt their establishment. They are not necessarily or usually related to class rates. Under some circumstances that method of making commodity rates may be both proper and convenient, but if it does not appear that the class rates to all of the points embraced in such an adjustment are properly related, the method ceases to be proper. Glucose Products to South Dakota, 96 I. C. C. 579, 584.

(4t) First-class and commodity rates assessed on shipments of hog bristles from Pacific Coast ports to New York, N. Y., which were washed, sorted and bunched prior to shipment, thus changing their character so that they could no longer be considered as coming within the designation "other than crude" within the meaning of the tariffs, found applicable. Cone & Co. v. Director General, 96 I. C. C. 629.

(4u) Fifth-class rates for the transportation of manufactured iron and steel articles from points in the Pittsburgh, Pa., district to St. Louis, Mo., and points in Illinois and Indiana, found unjust and unreasonable to extent they exceed or may exceed, scale prescribed. In computing distances under this scale, the shortest routes by existing connections for the interchange of carload traffic shall be used, embracing as a maximum the lines of not more than three line-haul carriers. Jones & Laughlin Steel Corp. v. B. & O., 96 I. C. C. 682.

(4vw) Class rates to Casper, Wyo., from Omaha, Nebr., Sioux City and Burlington, Iowa, Kansas City and St. Louis,

Mo., St. Paul, Minn., and Chicago, Ill., and proportional class rates from upper Mississippi River crossings found unreasonable and unduly prejudicial to the extent they exceed the rates specified, which are prescribed as reasonable and nonprejudicial rates for the future. The reduced percentage relationship of the lower class rates to first class herein prescribed should permit elimination of some higher commodity rates, and rates on other commodities should be established or revised where necessary to afford Casper a fair basis in comparison with points with which it competes, observing substantially the same relationship prescribed in connection with the class rates. Casper Chamber of Commerce v. C. & N. W. Ry. Co., 96 I. C. C. 736.

(4x) First-class rates assessed on uncompressed cotton, in bales, from Greenville, Miss., to Dyersburg, Tenn., found unreasonable to extent it exceeded lower commodity rate contemporaneously in effect on cotton, in bales, compressed or uncompressed, from Greenville to Cairo, Ill., over route of movement and the Illinois Central, subject to Rule 77 of Tariff Circular 18-A. Reparation awarded. Churchill Compresses v. C. & G. R. R. Co., 98 I. C. C. 5.

(4y) Third-class l. c. l. rates assessed on one carload of balsam wool, from Minnesota Transfer, Minn., to Tacoma, Wash., found unreasonable to extent it exceeded commodity rate, c. l., contemporaneously in effect on flaxlinum, fibrofelt, linofelt, and hair felt, analogous insulating materials which with balsam wool is competitive. Reparation awarded. Dower Lumber Co. v. N. P. Ry. Co., 98 I. C. C. 9.

(4z) On artificial silk, in carloads, from Roanoke, Va., to Marcus Hook, Pa., complainant seeks a commodity rate which is the same as that applicable on artificial-silk waste, based on released value, in lieu of the first-class rate, any quantity, based on released value. FOUND, that the first-class rate assailed is not unreasonable and that there is no justification for requiring same rate on artificial silk as on artificial-silk waste. Artificial silk is a high-grade article, and the freight charges bear a small ratio to its value, and the present rates are not shown to discourage the movement or to impose an undue burden on traffic, which is of a special character, between two of complainant's plants. The fact that the rate assailed is an any-quantity rate does not in itself prove that it is unreasonable as applied to carload shipments. U. S. Farm Sales Co., 92 I. C. C. 19. Viscose Co. v. P. R. R. Co., 98 I. C. C. 97.

(5a) Proposal to cancel interstate commodity rates on iron and steel articles from certain points on W. & L. E. in Ohio to destinations on P. & L. E. in Ohio and Pennsylvania and to apply the higher fifth-class rates in lieu thereof found not justified. The fact that the class basis is maintained over other lines from and to points involved is not controlling. Iron and Steel Articles from Ohio to Pennsylvania Points, 98 I. C. C. 151.

(5b) Exceptions to the classification and commodity rates are often founded on the conditions surrounding the transportation of the excepted commodity between particular points or in comparatively limited sections. A mere reference to certain tariffs in which such commodity rates or exceptions appear is not in itself persuasive of any impropriety in the classification. Classification of Canned Goods, 98 I. C. C. 166, 175.

(5c) Class rates on paper tablets, paper bags, and wrapping paper from Birmingham, Ala., and Atlanta, Ga., to Jackson, Miss., found not unreasonable or otherwise unlawful. The record is convincing that the class basis is reasonable and proper for these occasional carload shipments, and that complainant has suffered no undue prejudice by reason of the maintenance of unused commodity rates from Atlanta. Jackson Paper Co., v. A. G. S. R. R. Co., 98 I. C. C. 442.

(5d) Class rates on paper tablets, paper bags, and wrapping paper from Birmingham, Ala., and Atlanta, Ga., to Jackson, Miss., found not unreasonable or otherwise unlawful. No sound reason appears for prescribing rates on these articles which will reflect certain percentages of corresponding class rates as sought by complainant. Rates published in 66 I. C. C. 571 and 64 I. C. C. 306 do not bear a uniform percentage relation to first class, and those to Jackson resulting from those cases do not reflect same percentage relationships to corresponding first-class rates. Commodity rates established pursuant to last-cited case were not prescribed as reasonable maxima. The record is con-

vincing that the class basis is reasonable and proper for these occasional carload shipments. Jackson Paper Co. v. A. G. S. R. R. Co., 98 I. C. C. 442.

(5e) Class rates charged on tomatoes shipped from St. Louis, Mo., to New Orleans, La., during 1920 and 1921 found applicable under governing tariffs. Contention that lower commodity rates applied under the tariffs can not be sustained. St. Louis Fruit & Vegetable Asso. v. L. & N. R. R. Co., 98 I. C. C. 553, 555, 556.

(5f) Following 73 I. C. C. 396, and other cases cited, proposed cancellation of numerous l. c. l. and any-quantity commodity rates from points in southeastern and Carolina territories to destinations in Mississippi Valley, leaving effective generally higher-class rates, found justified, except as to such rates on marble, granite, and stone. Commodity Rates Between Points in Southern Territory, 98 I. C. C. 627.

(5g) Class rate charged on automobile heaters in l. c. l. from Chicago, Ill., to San Francisco, Calif., found applicable and not shown to be unreasonable. Under the governing tariff provision is made for a lower commodity rate on automobile parts, but heaters can not be classed as a part of an auotmobile, being more in the nature of an accessory or added feature. Neither are heaters included in the list of automobile parts specifically named in the classification, they being separately provided for under the heading "Heaters." Complaint dismissed. Western Auto Supply Agency of Los Angeles, Calif. v. C., B. & Q., 98 I. C. C. 647.

(5h) Class rates, and commodity rates bearing a direct relation thereto, between points in Lower Peninsula of Michigan north of main line of Michigan Central R. R. from Detroit, Mich., to Chicago, Ill., and points in central territory on and south of that line found unreasonable, unduly prejudicial to persons and localities in Lower Peninsular of Michigan north of said line, and unduly preferential of persons and localities in central territory on and south of said line. Reasonable and nonprejudicial bases of rates prescribed, and former report, 85 I. C. C. 47, modified accordingly. Michigan Traffic League v. A. A. R. R. Co., 98 I. C. C. 660.

(5i) Application for authority to establish rates on classes and commodities from New Orleans, La., and points taking same rates or arbitraries higher, to destinations east and north of Kansas City, Mo., and west of Indiana-Illinois line without observing the long-and-short-haul provision of fourth section of the act, granted, except as to rates on asphalt, to enable western carriers herein considered to compete with eastern carriers between Mississippi River crossings. Class and Commodity Rates from New Orleans 98 I. C. C. 673.

(5j) Class rates from St. Paul, Minneapolis, and Duluth, Minn., and Superior, Wis., and related points taking same rates, to Valley City and Jamestown, N. Dak., found unreasonable and unduly prejudicial as compared with lower contemporaneous rates from same points of origin to Fargo, N. Dak. Maximum scale of distance class rates prescribed for future. Fargo Commercial Club v. A. & W. Ry. Co., 98 I. C. C. 691.

(5k) Class rates from St. Paul, Minneapolis, Minnesota Transfer Cloquet, Duluth, and West Duluth, Minn., and Superior and South Superior, Wis., to Fargo, N. Dak., found unduly prejudicial to Fargo and unduly perfect trial of Moorhead, Minn., to extent they exceed corresponding contemporaneous rates from same points of origin to Moorhead by more than the difference that would exist between rates from said points of origin to Fargo and Moorhead under the scale of maximum distance class rates prescribed herein as just and reasonable for future. Fargo Commercial Club v. A. & W. Ry. Co., 98 I. C. C. 691.

(5l) Maintenance of class rates from St. Paul, Minneapolis, and Duluth, Minn., and Superior, Wis., to Fargo, N. Dak., lower, distance considered, than class rates contemporaneously maintained from same points of origin to Valley City and Jamestown, N. Dak., found unduly prejudicial to Valley City and Jamestown and unduly preferential of Fargo to extent that rates to Valley City and Jamestown exceed corresponding contemporaneous rates from same points of origin to Fargo by more than the differences that would exist between rates from said points of origin to Valley City and Jamestown on one hand and Fargo on the other under the scale of maximum class rates shown herein,

which are prescribed as just and reasonable rates for future. Fargo Commercial Club v. A. & W. Ry. Co., 98 I. C. C. 691.

(5m) Application by defendant carriers of commodity rates lower than corresponding class rates on various commodities from St. Paul, Minneapolis, and Duluth, Minn., Superior, Wis., and points taking same rates to Fargo, N. Dak., while contemporaneously applying the full class rates on same commodities to Valley City and Jamestown, N. Dak., found unduly prejudicial to latter points and unduly preferential of Fargo to extent that the percentage relationships between rates assailed and corresponding class rates herein prescribed under western classification applicable on same commodities to Valley City and Jamestown exceed, or may exceed, percentage relationships between the rates on such commodities and corresponding class rate to Fargo. Fargo Commercial Club v. A. & W. Ry. Co., 98 I. C. C. 691.

(5n) Class rates from Fargo, N. Dak. to destinations in Minnesota distant 150 miles and less from Fargo over short-line routes found unduly prejudicial to Fargo and unduly preferential of Moorhead, the Twin Cities, Duluth, Crookston, Fergus Falls, Thief River Falls, Detroit City, Wadena, Brainerd, Sauk Center, St. Cloud, and Willmar, Minn., to extent they exceed corresponding contemporaneous rates from said points of origin in Minnesota to same destinations by more than the differences that would exist between rates from said points of origin, on one hand, and from Fargo, on other, to said Minnesota destinations under the scale of class rates prescribed herein as just and reasonable for future. Fargo Commercial Club v. A. & W. Ry. Co., 98 I. C. C. 691, 716.

(5o) Class rates from St. Paul, Minneapolis, Minnesota transfer, Cloquet, Duluth, and West Duluth, Minn., and Superior and South Superior, Wis., to Fargo, N. Dak., and Moorhead, Minn, and from Fargo and certain Minnesota points of origin to points in Minnesota 150 miles and less from Fargo over short-line routes, found less than reasonable maximum rates, and reasonable maximum distance rates prescribed for future. Fargo Commercial Club v. A. & W. Ry. Co., 98 I. C. C. 691, 715, 717.

(5p) In the first decision in the Certain-teed Products case, the Commission did not find, as complainant here contends, 80 per cent of the contemporaneous fifth-class rate to be proper on roofing materials. The Commission found undue prejudice to the extent that the percentage of the commodity rates to the fifth-class rates to interior jobbing points exceeded or might exceed by more than 20 per cent the percentage of the commodity rates to the fifth-class rates on like traffic to border points. Fargo Commercial Club v. A. & W. Ry. Co., 98 I. C. C. 691, 719.

(5q) Class rates from Chicago, Ill., to Fargo, N. Dak., on local traffic from points east of Chicago in central, trunk-line, and New England territories, found unduly prejudicial to Fargo and unduly preferential of St. Paul and Minneapolis, Minn. Establishment of the local and proportional rates herein found reasonable will partially remove this undue prejudice, and defendant carriers will be expected to remove the remaining undue prejudice. Fargo Commercial Club v. A. & W. Ry. Co., 98 I. C. C. 691, 724.

(5r) Class rates from all points east of Chicago, Ill., in central, trunk-line, and New England territories to Fargo, N. Dak., found unreasonable to extent that the factors from Chicago to Fargo exceed those specified herein. Reasonable proportional rates from Chicago on traffic from such points prescribed for future. Fargo Commercial Club v. A. & W. Ry. Co., 98 I. C. C. 691, 724.

(5s) Class rates from Fargo, N. Dak. to points in Montana more than 900 miles from Fargo over short-line routes and to points in Montana east of Malta, Melstone, and Myers, found not unduly prejudicial, but that to Malta, Melstone, and Myers, and to all points in Montana west thereof not more than 900 miles from Fargo over short-line routes, they are, and for the future will be, unduly prejudicial to Fargo and unduly perferential of St. Paul and Minneapolis, Minn., to extent that said rates from Fargo exceed, or may exceed, rates which are less than corresponding contemporaneous rates from St. Paul and Minneapolis to same destinations by 25 cents on first class, and on other classes by amounts ascertained by applying the same percentages to first-class rates so constructed as are reflected by corresponding contemporaneous rates from

St. Paul and Minneapolis to same points. Fargo Commercial Club v. A. & W. Ry. Co., 98 I. C. C. 691, 727.

(5t) Class rates from Omaha, Nebr., and Kansas City, Mo., and points related thereto to, Fargo N. Dak., found not unduly prejudicial upon the record. Fargo Commercial Club v. A. & W. Ry. Co,. 98 I. C. C. 691, 730.

(5u) Class rates from all points in California, Nevada, and Utah, to Fargo, N. Dak., found unreasonable and unduly prejudicial to extent they exceed corresponding contemporaneous rates from same points to Duluth, Minn. Reasonable and nonprejudicial basis of rates prescribed for future. Fargo Commercial Club v. A. & W. Ry. Co., 98 I. C. C. 691, 731.

(5v) Complainant attacked sixth class rate at 18.5 c charged on wet brewers grain, carloads, between July 12 and August 6, 1923 from Philadelphia, Pa., to Newark, N. J., as unjust and unreasonable. Shipments moved as routed, P. & R., to Bound Brook Junction, N. J., Jersey Central beyond 95 miles. On July 13, defendants agreed to publish a commodity rate of 15.5c on short notice and it was made effective August 11. This later rate was in effect from Philadelphia to Newark over the Pennsylvania and over the defendants own route in the reverse direction. HELD rate attacked unreasonable to extent it exceeded 15.5c, reparation awarded. Penn. Grain & Feed Co. v. Reading Co., 102 I. C. C. 100.

(5w) Complainant attacked class rate charged on thin gum lumber, or one eighth inch veneer, 21,500 pounds, forwarded on April 7, 1920, from Smith field, N. C., to Chattanooga, Tenn., as unjust and unreasonable to extent it exceeded rate on lumber. Shipment moved A. C. L., Ga. R. R., and N. C. & St. L., charged sixth class of 54 c minimum 36,000 pounds applicable on lumber or veneer, n. o. i. b. n., exceeding one sixteenth inch, but not exceeding one eighth inch in thickness. Rate on lumber was 27 c, the item publishing a note 34 in the same tariff for list of articles taking lumber rates. This list does not include thin lumber or veneer. The tariff is specific as to what manufactured commodities are entitled to the lumber rates named therein, whereas the classification describes the size of veneer which constituted the shipment here considered. Until the specific commodity description is physically incorporated into the commodity tariff the class rate must be applied. HELD, rate charged applicable and not unreasonable, complaint dismissed. Milne Chair Co. v. A. C. L. R. R. 102 I. C. C. 165.

(5wa) Proposed increased class rates between Memphis, Tenn., and Cairo, Ill., on the one hand, and points in Kansas, Missouri, Nebraska, and Colorado, on the other hand, found not justified. The percentages of classes under the proposed rates, although substantially the same as those prescribed in 55 I. C. C. 515, are materially different from those prescribed in 100 I. C. C. 274 and other cases. The Topeka rates, if fairly related to Kansas City rates, would be higher than the latter, but the proposed differences are excessive. Moreover, if the proposed rates to and from Topeka and points grouped therewith are permitted to become effective without change in the present rates to and from various other points in Kansas, the Topeka rates on certain classes would be higher than the corresponding rates to and from Wichita and other more distant points grouped therewith. Class Rates between Memphis and W. T. L. Points, 102 I. C. C. 207.

(5wb) Class rates assessed on imported soya-bean oil, and cocoanut oil, in tank-car loads, from Wilmington, Calif., to Los Angeles, found unreasonable to extent they exceeded lower commodity rates subsequently established from and to same points. Reparation awarded. Los Angeles Soap Co. v. P. E. Ry., 102 I. C. C. 235.

(5wc) Class rates assessed on helical springs from Chicago and Waukegan to New Orleans found not unreasonable or unduly prejudicial as compared with rates on bed springs and various other commodities taking rates on iron and steel articles. Nor are present commodity rates, reflecting 78 per cent of class basis, unreasonable when applied to occasional shipments as here involved. Crescent Bed Co. v. A. & V. Ry., 102 I. C. C. 419.

(5x) Complainant attacked class rates charged on sulphuric and muriatic acids in tank cars and in carboys from Grasselli, Ind., to Sioux City, Iowa, as unreasonable and unduly prejudicial. Grasselli, Ind., is 20 miles east of Chicago and generally takes Chicago rates. From August 26, 1920 to July 1, 1922

the rates were 34 c in tank cars and 54 c in carboys. Effective on that date they were reduced to 30.5 c and 48.5 c. On May 1, 1923 the rate in carboys was reduced to 36 c. The rates on acid in tank cars were commodity rates and in carboys class A rates until May 1, 1923 when commodity rates were established. The rate to Sioux City is the same as to Omaha and Kansas City. Hawarden, Iowa, and a number points just north of Sioux City are grouped under rates on 24c in tank cars and 27.5c in carboys. On Sept. 16, 1917 the rates from Chicago on acids in tank cars were increased a 5 c to Missouri river cities, and 5.5 c to Sioux Falls, S. D., but the rates to the interior Iowa points were published in separate tariffs and were overlooked not being increased. The rates have not since been changed except that, effective April 1, 1925 the rates to the Hawarden group were increased to the Sioux Falls basis, 32.5 c in tank cars and 37.5 c in carboys, while the rates of 23 c in tank cars and 26.5 c in carboys applying to the group immediately east of Sioux City were increased to the level of the Sioux City rates. HELD, rates attacked not unreasonable and present adjustment not unduly prejudicial, complaint dismissed. Kennedy & Parsons Co., v. C. & N. W. Ry. 102 I. C. C. 591.

(5y) Complainant attacked class rate applicable on two cars of ash staves, shipped May 6 and 15, 1922 from Fort Lynn, Ark., to Gulfport, Miss., as unjust and unreasonable. Shipments moved as routed by complainant 22.9 miles south to Texarkana, Ark., over T. & P. to New Orleans, reconsigned at that point via Southern and G. & S. I., to Gulfport, Miss., 515.7 or 448.7 miles. Ash staves are generally accorded the rates on lumber products. Applicable rate class D of 67.5 c shipments undercharged. In the absence of the joint rate the charges on the shipment would have been combination rate of 41.5 c plus reconsignment charge of $2.50. HELD, rate charged unreasonable to extent it exceeded 41.5 c, reparation awarded. Hollings Co. v. T. & P. Ry., 102 I. C. C. 603.

(5z) Complainant attacked fifth class rate charged on 15 cars of built up wood, faced with veneer made from foreign woods, between June 26, 1922 and Sept. 18, 1923 from Louisville, Ky., and New Albany and Evansville, Ind., to Memphis, Tenn., as unreasonable. Charged fifth class rate of 63.5 c. Following 81 I. C. C. 227, defendants established a rate of 29 c on this commodity to Memphis from these points of origin, all of which are lower Ohio river crossings. HELD, rate attacked not unreasonable, complaint dismissed. King Haase Furniture Co., v. B & O. R. R. 102 I. C. C. 629.

(5za) Following 81 I. C. C. 227 and other cases cited, class rates on sporadic shipments of built-up wood, faced with veneer made from foreign woods, from Louisville, Ky., and New Albany, and Evansville, Ind., to Memphis found not unreasonable as compared with contemporaneous rates on like traffic from and to other points for comparable distances and with rates on lumber, chair stock, and furniture. King-Haase Furniture Co. v. B. & O., 102 I. C. C. 629.

(5zb) Class rates applied on potatoes from Naples and Lily, S. Dak., to points in Iowa found unreasonable to extent they exceeded commodity rates contemporaneously in effect from other points in the group in which Naples and Lily are located and as compared with lower rates in effect from and to other points in same general territory. Reasonable rates prescribed and reparation awarded. Naples Potato Growers Asso. v. C., M. & St. P., 102 I. C. C. 649.

(6a) Complainant attacked fifth class rates charged on six cars of frozen pig or hog skins moving during the period Oct. 16, 1923 to June 2, 1924 from St. Louis, Mo., and Mississippi river junctions to Grand Rapids, Mich., as unjust, unreasonable, unjustly discriminatory and unduly prejudicial to extent they exceeded rate of 27c applicable on green salted hides. Shipments moved under refrigeration and charged fifth class rate of 35 c from St. Louis and 35, 32.5 and 31.5 c from East St. Louis, proper rate being 35 c resulting in undercharges. There was in effect a commodity rate of 27c applicable on hides, pelts, skins, not dressed or tanned, viz., cattle, calf, goat, hog or sheep, green salted, loose or tied in bundles, in straight or mixed carloads, minimum 36,000 lbs. On this record the Commission is not convinced that the difference in rates on frozen and green salted skins constitutes undue prejudice to the former and undue preference of the latter. The fact that the frozen skins must be shipped

under refrigeration, thereby requiring special equipment and expedited service, constitutes a difference in the transportation conditions which can not be overlooked. HELD, rates charged not unreasonable or unduly prejudicial, complaint dismissed. Keifer Tanning Co. v. E. J. & E. Ry. 102 I. C. C. 721.

(6b) Complainant attacked class rate charged on metal cushion or seat spring assemblies mounted on supports, interlaced, not interlaced, and compressed in carloads, from Cincinnati, O. and received at Fort Smith on and after Oct. 12, 1922 as unreasonable, unjustly discriminatory and unduly preferential. Shipments moved B. & O. to East St. Louis, Ill., M. P. beyond. The shortline route of the B. & O., to East St. Louis and Frisco beyond is 755 miles, applicable rate fourth class of $1.185. Contemporaneously there was a commodity rate on davenport or sofa bed metallic spring assemblies, with fixtures from Cincinnati to Fort Smith. Davenport or sofa bed metallic spring assemblies, with fixtures, were and are included under the caption "furniture parts'" in the western classification and rated fourth class, carloads. Metal cushion or seat spring assemblies although rated fourth class in western classification, were and are not included under the captions mentioned. Defendants do not seriously object to applying a rate of 79.5 c minimum 30,000 pounds on cushion or seat spring assemblies from Cincinnati to Fort Smith for the future. HELD, rate attacked not unjustly discriminatory or unduly prejudicial and not unreasonable as to the past but unreasonable to extent it exceeded 79.5 c for future. Ft. Smith Couch & Bedding Co. v. B. & O. R. R. 102 I. C. C. 726.

(6c) Complainant attacked class rates charged on newsprint paper winding cores, carloads and less carloads, returned, from Washington, D. C., Baltimore, Md., Chester and Harrisburg, Pa., Detroit, Mich., and Columbus, O., to various destinations in New York the New England states, and Canada, as unreasonable, unjustly discriminatory and unduly prejudicial. In less carload shipments the cores are tied in bundles ranging from 25 to 40 pounds in weight. In carloads they are merely stacked in the cars. There is little liability to damage in transit and no such damage claims have been filed by complainant. In the three classifications paper winding cores made of compressed paper or pulp are rated fourth class in less carloads in bundles, and fifth class carloads minimum 24,000 pounds subject to rule 34. Iron or steel winding cores, lose or in packages, are subject to these ratings in the official and western classifications, but are accorded an any quantity rating of sixth class in southern classification. The classification basis generally applies to shipments of these commodities from points in official classification territory to these various destinations, although there are some departures both in carload and in less car load rates. The record discloses little analogy between newsprint paper and cores and no relationship between the rates on these commodities. The Commission is not prepared to find that the rates on returned cores should necessarily be measured by the rates on newsprint paper in the reverse direction. HELD, record affords no basis for a finding of unjust discrimination or undue prejudice or for condemning the level of the rates on less carloads. Rates applicable on carloads unreasonable to extent they exceeded sixth class reparation awarded. Washington Publishers Asso. v. A. C. & H. B. Ry. 104 I. C. C. 4.

(6d) Complainant attacked class rates charged on whiskey, in glass, in barrels or boxes, in carloads and less carloads, from eastern points to California as inapplicable and unreasonable. Effective Dec. 10, 1919 whiskey, in glass, in barrels or boxes, was rated first class, less carloads and second class carloads. On Aug. 31, 1921 these ratings were canceled and the rating on alcoholic liquors, n. o. i. b. n., became applicable. These ratings were and are one and one-fourth times first class on less carloads and second class on carloads. The transportation of whiskey under present conditions is a source of much annoyance and unusual expense to the carriers. Shipments of whiskey are under special protection of railroad police from the time they come into the possession of the carrier until they are delivered to the consignee. A guard rides the car containing them during switching movements and on the line hauls. Each division notifies the next division of the train and car number so that a relief guard may be on hand at the division

point to ride the car to the next division. At destination a constant watch is kept until delivery is effected. Protection is accorded shipments not only while in transit but also in the railroad yards and terminals and while being held at destination awaiting delivery to the consignee. When less carload shipments of whiskey are transferred from one carrier to another by truck an armed guard is assigned to follow the truck across the city. HELD, rates attacked applicable and not unreasonable, complaint dismissed. Green v. A. T. & S. F. Ry. 104 I. C. C. 24.

(6e) Respondents proposed to increase the present fourth class rating in official classification on asphalt composition battery boxes, carloads, to rule 26, and to increase the present carload minimum of 20,000 pounds in official, southern and western classification to 24,000 pounds. Asphalt composition battery boxes are used as containers for automobile and other small storage batteries and come into competition with battery boxes made of wood, rubber or impregnated fibre. Protest against the proposed increased minimum was withdrawn at the hearing. The rating on the rubber boxes is not before the Commission and it expresses no opinion as to whether that article should be rated more nearly on the same level as the other types of boxes with which it competes. But for the asphalt boxes, the facts shown in this record as to their value, weight density, and other transportation characteristics fall far short of establishing the propriety of a carload rating higher than fourth class. HELD, schedules not justified, except increased carload minimum to 24,000 pounds subject to rule 34. Classification of asphalt battery boxes 104 I. C. C. 190.

(6f) Complainant attacked class and commodity rates charged on high explosives in carloads and less carloads from Gibbstown, N. J., to Powder, W. Va., Norton, Va., and other points in Virginia and West Virginia on the N. & W., west of Roanoke, Va., as unjust and unreasonable, unjustly discriminatory and unduly prejudicial and in some cases in excess of those legally applicable. By amendment complainant attacked rates as in violation of the fourth section in that they exceed those in effect to Kenova, W. Va., and also that the class rates from New York, Philadelphia, and Baltimore to Roanoke are unjust and unreasonable to extent they exceed rates to Kenova. Gibbstown is served by the Pennsylvania and Reading. High explosives are not rated in official classification, but under exceptions thereto they generally moved in eastern territory on first class rates in carloads and double first class in less carloads. In some instances the movement is on commodity rates of equivalent amounts. Class rates between Gibbstown and points on the Norfolk & Western are made by the addition of arbitraries to the rates to and from Philadelphia, but the rates on explosives are at present the same as the first class rate and double first class rate from Philadelphia. The present record will not sufficiently support a finding that the class rates here considered are unreasonable or unduly prejudicial, as applied to explosives or other commodities. Complainants amendment, extending the scope of the complaint to include the general structure of class rates from eastern cities, was filed but 10 days before the hearing and did not bring in as additional defendants other carriers which participate in those rates. While the record shows that these class rates are inconsistent in some respects with other class rates in the same general territory, such inconsistencies are characteristic of the class rates as a whole in trunk line territory. It appears that prior to May 1, 1922 the rates applicable from complainants Gibbstown plant to the destinations here considered exceeded the general basis above referred to and to that extent were unreasonable. HELD, rates attacked prior to May 1, 1922 unreasonable to extent they exceeded first class and double first class, but otherwise rates not unlawful, reparation awarded. DuPont de Nemours & Co., v. W. J. & S. R. R. 104 I. C. C. 247.

(6g) Complainant attacked class rates charged on two shipments of bull wheel arms, cants, and pins, from Tulsa, Okla., to Bluffdale, Tex., in March and May 1919 as unreasonable, unjustly discriminatory, unduly prejudicial and illegal. Shipments moved over the Frisco and Ft. W. & R. G. Charged fourth class of 74.5 c at actual weight and class A distance rate of 65 c and a carload minimum of 36,000 pounds. An examination of the western classification in effect dur-

ing the period in question discloses that the articles under consideration were listed under oil well outfits and supplies and rated fourth class, less carloads and class A carloads. In the absence of commodity rates the class rates were applicable. HELD, complaint dismissed. Marion Machine Foundry & Supply Co. v. Director General 104 I. C. C. 265.

(6h) Complainant attacked class rates charged on three cars of scrap iron shipped on Oct. 27, 1922 from Norfolk, Va., to Washington, D. C., as illegal and unreasonable. One car was billed as miscellaneous iron and steel machinery parts; carload machinery; carload used iron and steel machinery parts. Shipments moved by car ferry through Cape Charles, Va., Pennsylvania beyond, charged fifth class rate of 38 c then applicable on second hand iron and steel machinery and machinery parts. The only evidence offered is the tender of two copies of invoices for two lots of scrap iron, made on complainants billheads to two parties more than a year after shipments were delivered. Upon the face of these copies of complainants invoices there is nothing to identify the alleged sales of scrap iron with the material comprising the shipments under consideration. In the absence of positive evidence that the description of the goods upon the face of the bills of lading and freight bills was erroneous, charges attacked not illegal. HELD, Complaint dismissed. Washington Salvage Company v. Pennsylvania R. R. 104 I. C. C. 291.

(6i) Complainant attacked class rates charged on 78 cars of tight cooperage between July 19, 1921 and Sept. 16, 1923 from St. Louis, Mo., to Los Angeles, Calif., as unreasonable and unjustly discriminatory. Fourth class rate applied prior to Sept. 30 1922 of $3.335 prior to July 1, 1922 and $3 between that date and Sept. 30, 1922; from that date to Dec. 29, 1922 a commodity rate of $2.23 was applicable. Aside from referring to the fact that tight empty barrels and kegs move at the class D rates from St. Louis to Utah common points, Colorado common points and Missouri river territory and that commodity rates the same as or slightly lower than the class D rates applied from Los Angeles to Utah common points, complainant presented no evidence to prove the applicable rate was unreasonable. Empty wooden barrels and kegs are light articles and generally move under class rates. The fact that carriers in certain territories have seen fit to apply lower bases to encourage movement can not be taken as a measure of reasonable rates. HELD, applicable rates not unreasonable or unjustly discriminatory, complaint dismissed. Coca Cola Co. v. A. T. & S. F. Ry. 104 I. C. C. 377.

(6j) Complainant attacked fourth class rates charged on flexible split leather, carloads, from Waukegan, Ill., to Natick, Mass., as unreasonable. Waukegan is on the Northwestern, 35 miles north of Chicago, Ill; also on the E. J. & E. Natick is on the B. & A., 18 miles west of Boston, Mass., distance 1,056 miles, charged 77.5 c prior to July 1, 1922 and 70 c thereafter. Complainant asked for a commodity rate on this traffic. Complainant does not attack the rating or the fourth class rate as such. In fact it asserts that it would be impossible to distinguish between the different kinds of split leather in the classification and that the rate attacked is reasonable for an average loading of around 24,000 pounds. Its claim for a special commodity rate rests primarily upon the fact that its shipments average about 67,000 pounds. Complainant estimates that the volume of its shipments will continue in the future as in the past at about one carload a week. HELD, rate attacked not unreasonable, complaint dismissed. Greiss Pfleger Tanning Co. v E. J. & E. Ry. 104 I. C. C. 464.

(6k) Complainant attacked rates charged on apple skins, apple chops, and apple pomace, carloads, from New York, Pennsylvania, West Virginia and Illinois and from St. Louis, Mo., to Topeka, Kas., since July 16, 1921 as unreasonable. Apple pomace is the residue from cull or low grade apples which have been crushed and from which the juice has been extracted in the ordinary manufacture of apple cider or vinegar. Its value ranges from $15 to $50 per ton at origin, is shipped in cheap burlap bags and will load over 40,000 pounds in a standard car. Apple pomace, carloads, is rated fifth class in official, and class B in the Illinois and western classifications, the ratings not attacked. Rates charged are combinations of fifth class rates to Mississippi river, plus class B of 39.5 c be-

yond. Effective Oct. 1, 1922 a proportional commodity rate of 30.5 c was established from the crossings to Topeka and such rates are still in effect. The rate from Olney, Ill., was 58.5 c class B 19 c to East St. Louis, Ill., and 39.5 c beyond. The combination basis of rates from points east of the Indiana-Illinois state line to points west of the Mississippi river, including Topeka, has been in effect generally since the railroads were constructed. The class rates are the normal bases on those apple products in official territory and the record does not warrant the establishment of lower commodity rates. HELD, rates attacked not unreasonable, complaint dismissed. Leo Greenwald Vinegar Co. v. B. & O. R. R. 104 I. C. C. 637.

(6l) Complainant attacked class rates charged on carload and less carload shipments of cigarettes during October, 1919 from Durham, N. C., to Brooklyn, N. Y., as unreasonable. Shipments were originally routed over D. & S. C., and N. S., to Norfolk, Va., thence Old Dominion Steamship Line, but upon arrival at Norfolk, owing to an embargo on the old Dominion, they were diverted, with complainants consent, to an all rail route embracing the N. Y. P. & N., and Pennsylvania beyond Norfolk. Charged joint second class any quantity rate of $1.04 applicable over certain all rail routes but not over the D. & S. C., as an originating line. The applicable rate was $1.13 A commodity rate of 90 c applied via the rail and water route originally selected and a commodity rate of 92.5 c via various all rail routes other than that of movement. The latter rate was made applicable over the route of movement on Dec. 31, 1919. HELD, rate of $1.13 unreasonable to extent it exceeded second class rate of $1.04 c, undercharges waived, complaint dismissed. American Tobacco Company v. Director General 107 I. C. C. 55.

(6m) Complainant attacked class rates charged on less carloads of glass lamp globes, lettered, in boxes, shipped from Cincinnati and Brighton, O., to Los Angeles, Calif., as unreasonable and inapplicable, shipments moved between March 30 and Oct. 10, 1923, charged double first class rate of $10.50 in accordance with the rating provided for glass globe signs in the western classification. Complainant asks reparation to the basis of a commodity rate of $3.45 applicable to glass lamp globes, less carloads. The distance from Cincinnati to Los Angeles is about 2,545 miles. HELD, rate attacked applicable but unreasonable to extent it exceeded $3.45, reparation awarded. Boyle Dayton Co. v. A. T. & S. F. Ry. 107 I. C. C. 151.

(6n) Complainant attacked class rate charged on a car of rough lumber from North Lewisburg, O., to Chicago, Ill., on Sept. 4, 1925 as unjust, unreasonable and unduly prejudicial. Shipment moved from North Lewisburg to Chicago as routed by complainant over Erie and Chicago & Erie, 303 miles, charged sixth class rate of 22 c. It exceeded a rate of 18.5 c from Cincinnati to Chicago, North Lewisburg being directly intermediate over the route of movement between these points, this rate being subject to rule 77 of tariff circular 18-A which provided for its establishment from intermediate points upon reasonable request therefor. HELD, rate attacked unreasonable to extent it exceeded 18.5 c, reparation awarded. Liberty Cooperage & Lumber Co. v. Erie R. R. 107 I. C. C. 165.

(6o) Complainant attacked sixth class rate of 18.5c charged on 11 cars of logs, shipped during Jan., Feb. and March 1923 from Pawpaw, Mich., to Hicksville, O., as unjust, unreasonable, unjustly discriminatory and unduly prejudicial. Two shipments originated at Lawton, Mich., on the M. C., charged sixth class rate of 17c, nine originating at Pawpaw. Lawton cars moved M. C., to Toledo, O., and B. & O., beyond, distance of 294 miles. Two of the cars originating at Pawpaw moved over K. L. S. & C., to Lawton, M. C., to Kalamazoo, Pennsylvania to Avilla, Ind., B. & O., beyond, distance 119 miles. Other seven cars originating at Pawpaw moved over K. L. S. & C., to Lawton, M. C., to Toledo and B. & O., beyond 299 miles. 65% of sixth class rate was prescribed in 85 I. C. C. 533. HELD, rates attacked unreasonable to extent they exceeded 16.5c, reparation awarded. Crook Son & Co., v. K. L. S. & C. Ry., 107 I. C. C. 379.

(6p) Complainant attacked commodity rates charged on newsprint, carloads, from Main and Vermont to Massachusetts, Rhode Island, Connecticut and New York, as unreasonable, unjustly discrim-

inatory unduly prejudicial and illegal. Shipments moved over the Maine Central, B. & M., and New Haven. Charged commodity rates on paper and paper bags when classified third class less carloads and fifth class carloads. Sixth class rates were on a lower basis. Prior to Feb. 14, 1920 when the so-called Anderson scale prescribed in 49 I. C. C. 421 was established, the commodity rates generally were lower than the sixth class rates. When the commodity rates were originally established the official classification accorded newsprint paper a carload rating of fifth class. The sixth class rates became applicable August 1, 1923 when the commodity rates were canceled. HELD, rates attacked unreasonable to extent they exceeded sixth class rates, reparation awarded. Hartford Times v. Mc. C. Ry. 107 I. C. C. 536.

(6q) Respondents proposed to cancel the application of class rates from Indiana to Minneapolis, St. Paul and Duluth, Minn., via routes across Lake Michigan. Proposed elimination developed from 66 I. C. C. 512, 88 I. C. C. 709, Indiana cases. In response to the findings of undue prejudice in these decisions respondents reduced their class rates to the Twin Cities and Duluth from Indiana and made them subject to the western classification. The revised rates are lower than many of the Michigan rates are governed by the official classification. It appears from the record that the routes through Michigan which it is proposed to cancel are, with exception of the one through Mackinaw City to the Twin Cities, reasonably direct and move a substantial volume of traffic. Their continuance is also desirable for emergencies during periods of traffic congestion. Respondents should have filed application for fourth section relief and supported it with apropriate evidence if they desired to protect the Michigan rate level during the temporary period before they anticipate a final adjustment of the rate structure in this territory. With the exception above noted, suspended schedules not justified Fourth section violations should be promptly removed by providing that the Indiana rates will apply as maximum rates at intermediate points in Michigan. Class rates to Twin Cities 107 I. C. C. 665.

(6r) Interstate class rates between Oakland, Calif., and various destinations in California and Nevada found not unreasonable or unduly prejudicial as compared with class rates between San Francisco and said points. Since it is acknowledged that Oakland's rates are based upon San Francisco's rates and that the rates really have been made from San Francisco and not from Oakland, it follows that the latter has shared the low level of rates applying from San Francisco. Viewing this whole situation, it has not been established that the present adjustment as between Oakland and San Francisco subjects complainant to undue prejudice or disadvantage. Oakland Chamber of Commerce v. S. P. Ry. Co., 100 I. C. C. 55.

(6s) Proposed increased class rates from Virginia cities and points taking same rates, or rates made differentially higher, to destinations on the Charleston division of the Baltimore & Ohio found not justified. First-class rate from Lynchburg to Grafton on the main line of the B. & O. is lower than the present first-class and the proposed rate to points on the Charleston division, and, since no restrictions upon the routing are made in the tariff, this rate is applicable over the Charleston division. Following Zelnicker Supply Co., 80 I. C. C. 651, and Dixie Portland Cement Co., 96 I. C. C. 47, respondents' contention that no increase in discrimination against intermediate points under the fourth section results because no arrangements for divisions are in effect over these routes to Grafton, and routing over this line would not be observed, can not be sustained. Class Rates from Eastern Points to Points in West Virginia, 100 I. C. C. 215.

(6t) Schedules proposing readjustment of class rates, both interstate and intrastate, between points in Missouri, and between Missouri and other sections, based upon a maximum distance scale which would result in substantial increases to some points, and reductions between points where the socalled Memphis-Southwestern scale is now in effect, found not justified. Scale of maximum reasonable rates prescribed. Recognized bridge arbitraries at Mississippi River crossings may be added wherever and to extent they now apply, and rates to and from defined territories should be based on the present differentials over the river crossings. Class Rates between Missouri and Interstate Points, 100 I. C. C. 274.

(6u) Springfield jobbers contend that the proposed readjustment of class rates between points in Missouri, and between points in Missouri and other sections will increase both their inbound and outbound rates while only outbound rates of St. Louis and Kansas City will be affected, thus causing a disruption in the parity of rates existing between these points. The fact that disparities may be created, lying outside the limits of the situation under consideration, can not be accepted as ground for not remedying undue prejudice where it has been established. Class Rates between Missouri and Interstate Points, 100 I. C. C. 274, 284.

(6v) Class rate on coal from Breed to Colorado Springs, Colo., during Federal control, found unreasonable to extent it exceeded the rate contemporaneously in effect from Pikeview, Colo., to Colorado Springs. Reparation awarded. Corley v. Director General, 100 I. C. C. 293.

(6w) Class A rates on shipments of household and office electric fans and motors, from Springfield, Ohio, to San Francisco, Calif., found not inapplicable or unreasonable. Lower combination sought, composed of a factor applicable on "sugar-making machinery" including "fans" and "motors" found not applicable to complainant's shipments which could not be put to any normal use in connection with machinery in a sugar mill. Therefore, no violation of the aggregate-of-intermediates provision of the fourth section existed. Robbins & Meyers Co. v. C., C., C. & St. L. Ry. Co., 100 I. C. C. 418.

(6x) Upon investigation by commission, on its own motion, of interstate class rates within southern territory and between southern and official territories, these rates discussed at length and a class-rate structure, designed to serve purposes class rates should serve, to be free from undue prejudice, and as simple as is consistent with due regard for public interest, adopted. Southern Class Rate Investigation, 100 I. C. C. 513.

(6y) Upon general investigation, on commission's own motion, of interstate class rates, all rail and rail-water, within southern territory, FOUND: That all such rates between points in southern territory should be not higher than a normal level based upon a distance scale or scales of such extent as to cover hauls of all lengths. Southern Class Rate Investigation, 100 I. C. C., 513, 615.

(6z) In dealing with a scale of class rates moving c. l. as well as l. c. l. traffic in southern territory, there is little evidence here with reference to c. l. costs, but the deduction is warranted that terminal costs are materially lower than in the case of merchandise traffic, and that line-haul costs are also lower. Southern Class Rate Investigation, 100 I. C. C. 513, 643.

(7a) It is believed that the new distance scale of class rates herein prescribed for application in southern territory, if applied both interstate and intrastate, will more than maintain present revenues, particularly if many of the l. c. l. exceptions and commodity rates are gradually eliminated. The possible increase in revenue, if maximum rates are uniformly applied, is believed to be justified by the fact that class-rate traffic is in general of such a character that in revising the rates upon its revenue doubts may well be resolved in favor of carriers, or, in other words, in favor of commodity rates on traffic of a more basic character, the revision of which is pending. Southern Class Rate Investigation, 100 I. C. C. 513, 649.

(7b) Through class rates lower than the combination of local rates to and from the boundary line, relatively no higher than those herein found reasonable as a maximum for application within southern territory, should be established between official and southern territories. Southern Class Rate Investigation, 100 I. C. C. 513, 664.

(7c) Commission is of opinion that class rates between official and southern territories on all-rail traffic, the uniform and unmodified application of southern territory class-rate scale herein approved would result, in many instances, in rates neither reasonable nor free from preference or prejudice, particularly to and from border districts of southern territory. This situation should be corrected by means of a scale of differential rates. Southern Class Rate Investigation, 100 I. C. C. 513, 675.

(7d) The basis of class rates herein approved for application in southern territory and between southern and official territories is intended to super-

sede all adjustments heretofore presented by the commission with reference to all or any of the rates in issue. That being the case, and in order to avoid possible conflicts, an order will be entered modifying, with one exception outstanding unexpired orders relating to such rates to the extent necessary to permit the carriers to publish and apply the rates herein approved. Southern Class Rate Investigation, 100 I. C. C. 513, 710.

(7e) Fifth-class rates on sugar from Philadelphia, Pa., and New York, N. Y. to St. Louis, Mo., found inapplicable in that a lower commodity rate was contemporaneously in effect. National Candy Co. v. P. R. R., 101 I. C. C. 43.

(7f) Class rate on broken soapstone from Marriottsville, Md., to Stockertown, Pa., found unreasonable to extent it exceeds or may exceed lower contemporaneous commodity rate on like traffic from Marriottsville to other destinations for comparable distances. Reparation awarded. Kelly & Co. v. L. V. R. R., 101 I. C. C. 49.

(7g) Class rates from Duluth, and related points taking same rates, to Watertown, S. Dak., found unreasonable to extent they exceed specific rates enumerated herein, and unduly prejudicial to Watertown and unduly preferential of Sioux Falls and Aberdeen, S. Dak., to extent they exceed rates reflecting a certain relationship to the contemporaneous rates from Duluth to Sioux Falls and Aberdeen. Reasonable maximum and nonprejudicial basis of rates from Duluth and related points taking same rates and Sioux Falls and Aberdeen to Watertown prescribed. Watertown Chamber of Commerce v. A. & W., 101 I. C. C. 427, 432.

(7h) Class rates from St. Paul, Minneapolis, and Chicago and related points taking same rates to Watertown, S. Dak. found not unreasonable, but unduly prejudicial to Watertown and unduly preferential of Sioux Falls, S. Dak., to extent they exceed the contemporaneous rates to Sioux Falls by specific differentials enumerated herein. Nonprejudicial bases of rates prescribed for future. Watertown Chamber of Commerce v. A. & W., 101 I. C. C. 427, 434.

(7i) Class rates from St. Paul, Minneapolis, and Chicago, and related points taking same rates, to Watertown, S. Dak., found not unreasonable, but unduly prejudicial to Watertown and unduly preferential of Sioux Falls, S. Dak., to extent they exceed the contemporaneous rates to Sioux Falls by specific differentials enumerated herein. Nonprejudicial bases of rates prescribed for future. Watertown Chamber of Commerce v. A. & W., 101 I. C. C. 427, 434, 436.

(7j) Class rates from points east of Indiana-Illinois State line and north of Ohio and Potomac Rivers to Watertown, S. Dak., found unreasonable to extent they exceed rates composed of contemporaneous rates, local or proportional as case may be, applicable from same points of origin to Mississippi River on traffic destined to Sioux City, Iowa, and Sioux Falls and Aberdeen, S. Dak., and of proportional rates to Watertown from Mississippi River crossings, East Burlington to East Dubuque, Ill., inclusive, not exceeding specific amount herein enumerated, and unduly prejudicial to Watertown and unduly preferential of Sioux Falls. Reasonable and nonprejudicial basis of rates prescribed for future. Watertown Chamber of Commerce v. A. & W., 101 I. C. C. 427, 439.

(7k) Class rates from Watertown, S. Dak., to points in southwestern Minnesota found not unreasonable, but unduly prejudicial to Watertown, unjustly discriminatory against interstate commerce, and unduly preferential of Sioux Falls, Sioux City, the Twin Cities, and other Minnesota points. Nonpreferential basis of rates prescribed. Watertown Chamber of Commerce v. C. & N. W., 101 I. C. C. 441.

(7l) Fifth-class rates on condensed milk from Northfield, Minn., to eastern destinations found not unreasonable or unduly prejudicial as compared with lower commodity rates contemporaneously in effect from points in Wisconsin to same destinations. Canned Goods to Eastern Points, 101 I. C. C. 502, 511.

(7m) Class rate on scrap iron moving from Dunbar, W. Va., via an interstate route, to Weirton, W. Va., found unreasonable to extent it exceeded a commodity rate subsequently established. As Weirton was not a scrap iron consuming point until about a year prior to period of movement of these shipments commodity rates generally had not been published to that point, but before making these shipments com-

plainant requested establishment of the commodity rate which applied from Dunbar to Wheeling, W. Va., and Steubenville, Ohio. The request was acted upon but due to delay in its establishment shipments were made in order to supply demands of customers. Reparation awarded. Hilb & Bauer v. N. Y. C., 101 I. C. C. 621.

(7n) Contention that fifth-class rate assessed on mixed carload shipment of billets and handle material shaved or cut to shape, not further finished, from Marengo, Ind., to Chicago, was not unreasonable because not out of line with fifth-class rates for comparable distances from and to numerous points in c. f. a. territory, not sustained. It is not shown that fifth-class rates were or are the general or usual basis on this traffic between points in this territory. Moreover, distance over route of movement is identical with distance over another route in connection with which commodity rates were in effect at time of movement, and these lower commodity rates were subsequently established over route of movement. Chicago Heights Mfrs. Asso. v. B. & O. C. T. R. R., 101 I. C. C. 675, 681.

(7o) Complainant attacked sixth class rate of 18c charged on lumber from Nashville, Mich, to Toledo, O., as unreasonable and unduly prejudicial. Lumber generally takes sixth class rates between points in central territory, but a commodity rate of 14.5c applies to Toledo from Lansing, Bay City and Saginaw, although the distances and sixth class rates are approximately the same as from Nashville. This commodity rate also applies from intermediate points. HELD, rate attacked not unreasonable but unduly prejudicial for future to extent it exceeds the rate from Saginaw to Toledo, reparation denied. Liberty Cooperage & Lumber Co. v. M. C. R. R., 109 I. C. C. 1.

(7p) Complainant attacked fifth class rates on iron and steel articles, carloads, from Buffalo, N. Y., Johnstown and Pittsburgh, Pa., Wheeling, Va., and points grouped therewith, to Cleveland, Elyria, and Lorain, O., as unreasonable, unjustly discriminatory, unduly preferential and prejudicial and in violation of section four. Fifth class rates were generally applicable on socalled long haul iron and steel shipments, such as from Pittsburgh to Cleveland, during the period of the complaint up to Sept. 1, 1924. Iron and steel traffic is able to bear a higher freight rate than may be applied to many low grade commodities such as those used by complainant. The present rates, except from Buffalo, are lower than the rates on manufactured articles taking fifth class. This would seem to be a proper alignment. HELD, rates attacked from Pittsburgh and Wheeling to Cleveland, Elyria and Lorain unreasonable to extent they exceeded 21c prior to July 1, 1922 and 19c thereafter, from Buffalo to extent they exceeded 23c after July 1, 1922 reparation awarded, present rates not unreasonable except from Buffalo to extent they exceeded 23c. Columbia Steel Co. v. B. & O. R. R., 109 I. C. C. 46.

(7q) Complainant attacked class rate charged on copper clad steel scrap, carloads, shipped since July 3, 1922 from Swissvale and Rankin, Pa., to Norfolk and West Norfolk, Va., and present rate from Rankin is unjust and unreasonable. The value of the scrap is about 2.6c per pound at Rankin, commodity moving in box cars and is not subject to damage. Swissdale is on the Pennsylvania 8 miles east of Pittsburg and Rankin is on the P. & L. E., and B. & O., 9 miles east of Pittsburgh. The commodity is rated fifth class and class of 40.5c was charged on July 1, 1922. On July 18, 1924 a commodity rate of 33.5c equal to sixth class became effective from Rankin over the P. & L. E., and connections, and via B. & O., on July 20, 1924. The rate from Swissvale was not reduced as no subsequent movement from that point was contemplated. The transportation characteristics of this scrap apparently as favorable as are those of copper and brass scrap. HELD, rates attacked unreasonable to extent they exceeded 28.5c, reparation awarded. Copperweld Steel Co. v. B. & O. R. R., 109 I. C. C. 99.

(7r) Complainant attacked class rates charged on one car of till boxes, one mixed car of till boxes and box material and one car of box material, shipped Feb. 11, March 24 and April 19, 1922 from Crystal Springs, Miss., to Walker, Doyle, and Denham Springs, La., as unreasonable and in violation of fourth section. Crystal Springs is a short distance south of Jackson, Miss., on the I. C. Three destinations are on the Y. & M. V., from Hammond, La., to Baton

Rouge, La. The normal route of movement is through Hammond. The distances are, to Hammond 106 miles, Doyle 122 miles. Walker 140 miles, Denham Springs 136 miles and Baton Rouge 151 miles. Passing now to the issue of unreasonableness of the charges it is first necessary to determine that issue to Walker and Denham Springs when the Commission can not ascertain from the record what the proper charges on those shipments would have been under the tariff. The record warrants consideration of the basis sought by complainant as the maximum reasonable basis. HELD, rates charged unreasonable to extent they exceeded those which would have accrued at rates of 22.5c to Doyle and 23.5c to Walker and Denham Springs, minimum 30,000 pounds, subject to rule 34, reparation awarded, undercharge waived. Crystal Springs Mfg. Co. v. I. C. R. R., 109 I. C. C. 177.

(7s) In 100 I. C. C. 513 the Commission gave reasons for believing that the work of preparing and publishing tariffs in accordance with the findings therein would be expedited rather than delayed if no order were entered, provided the carriers were prepared to join with the Commission and representatives of the shippers in working out, in a spirit of cooperation, the details of the system of rates proposed. The class rates of official territory are much lower than the class rates in southern territory. While transportation conditions justify some difference in level, they do not in themselves justify the difference which exists. If the class rates in southern territory were reduced to something like the level which prevails in official territory, it would be necessary to transfer much traffic from a commodity rate to a class rate basis. the class rates of the two territories are in reality based upon two differing theories of freight rate construction. The resulting wide difference in the level of the two sets of rates, therefore, has been in this proceeding a complicating factor which could not be avoided. The difficulties which it creates have been particularly troublesome in the fixing of class rates between the two territories. The finding in the original report numbered 11 at page 646 should be changed to read as follows: That the maximum reasonable class rates for interstate application on standard lines between points in southern territory and over routes lying wholly within such territory, except between points in Virginia and points in North Carolina and except to and from points in the Florida peninsula, are, and for the future will be, rates determined by the distance scale of class rates set forth in Appendix K-1 herein. The establishment of the class rates prescribed should make it possible to eliminate various carload commodity rates, to the extent at least that such rates are now published because of the inconsistencies of the present class rate structure. HELD, that the maximum reasonable class rates for interstate application on standard lines between points in the Florida peninsula south of the S. A. L., from Jacksonville to River junction, on the one hand, and other points in southern territory on the other are, and for the future will be, rates determined by the distance scale of class rates set forth in Appendix K 1 herein plus arbitraries determined by the scale set forth in Appendix L 1 herein for that part of the distance lying south of the aforesaid line of the S. A. L. SHORT AND WEAK LINES. Original finding numbered 13, at pages 653 and 654 should be changed to read as follows: That the maximum reasonable class rates for interstate application between points on any of the weak or short lines indicated below are, and for the future will be, rates determined by the distance scale of class rates set forth in Appendix K 1 herein plus arbitraries determined by a distance scale similar to that set forth in Appendix L 1 herein, but not necessarily having the same level, except in the case of the Norfolk Southern, in which instance the Appendix L 1 scale shall be used; and that the maximum reasonable class rates for interstate application within southern territory between points on such weak lines or short lines and points on standard lines are, and for the future will be, rates determined by the distance scale of class rates set forth in Appendix K 1 plus arbitraries the same as those employed in the case of local hauls on the weak line or short line in question, for that part of the joint haul which is over the weak or short line. The weak lines to which this finding applies are those listed on page 650 of the original report, excepting the Gulf & Ship Island, and adding the A. B. & A.,

so long as that company remains independent of standard line control, and the Norfolk Southern. The short lines are those listed in Appendix M of the original report, except such as are under common control or management with standard lines, and excepting also the Live Oak Perry & Gulf and the South Georgia. COMPUTATION OF DISTANCES AND JOINT LINE DIFFERENTIALS. HELD, the finding in the original report numbered 14, at page 656, should be changed to read as follows: in computing distances for the application of the scales set forth in Appendix K 1 and L 1 herein, the shortest workable routes shall be used. In applying this rule the words "shortest workable route" shall be construed in mean the shortest routes that are, irrespective of existing traffic arrangements, physically adapted to the movement of traffic without plain and serious sacrifice of economy and efficiency. FLEXIBILITY IN APPLICATION OF SCALE. In the application of the maximum measure the Commission has specifically permitted the grouping of stations which constitute a single industrial community, and it has also approved the use of territorial groups of moderate extent except in the case of the shorter hauls. The carriers may publish lower rates than the scale provides, to the extent that this can be done without creating undue preference and prejudice, or by common consent of the shippers and communities affected. INTERTERRITORIAL RATES. Between southern territory and central territory only all rail rates are involved, but to and from trunk line and New England territories the problem is complicated by the existence, in addition to all rail routes, of through routes which are partly by rail and partly by water. HELD, upon consideration the problem and all that has been said for and against the interterritorial rates prescribed in the original report, the Commission is persuaded that the differential basis set forth in Appendix P should for the present be abandoned. It is also persuaded that any attempt at a final solution of the interterritorial rate problem, at least so far as southern border territory is concerned, should be postponed pending the outcome of the Eastern Class Rate Investigation. The finding in the original report numbered 18 at page 706 should be changed: that the maximum reasonable class rates for interstate application over standard lines between points in eastern Kentucky on the C. & O., also Portsmouth and Ironton O., and Ashland, Ky., and Kenova and Huntington, W. Va., on the one hand, and points in southern territory, on the other, (1) over routes lying wholly south of the Ohio river, other than routes via Virginia city gateways, and (2) over routes crossing the Ohio river at Kenova W. Va., and thence over routes described in (1), are, and for the future will be, subject to the provisions of finding 17 (f), rates determined by the distance scale of class rates set forth in Appendix 1 herein, rates involving hauls over short and weak lines to be adjusted in accordance with finding 13; provided, however, that in adjusting said rates Portsmouth, Ironton, Ashland, Kenova and Huntington shall be included within a single group, and distance figured in all cases from Kenova. HELD, finding numbered 19 at page 707 of the original report, will be modified to read as follows: That grain, grain products and grain by-products now rated class C or class D in the southern classification, should be excepted for the present from the application of the class rates herein approved between official and southern territories and from Ohio river and Mississippi river crossings to points in southern territory. Where higher rated routes desire to meet the rates over lower rated routes, or where it is desired to establish through higher rated groups the rates applicable to or from lower rated groups, appropriate applications for fourth section relief may be presented. Appendix 1 first class ranges from 34c for 5 miles and under to 283c for 1,500 miles. Appendix 1 ranges first class 5c for 10 miles and under to 24c for over 500 miles. Southern Class Rate Investigation 109 I. C. C. 300.

(7t) Complainant attacked class rate charged on a car of manure shipped Feb. 13, 1923 from Harlem River station, New York, N. Y., to North Hatfield, Mass., as unjust and unreasonable. Shipment was delivered to New Haven without routing instructions and moved via that line to Northampton, Mass., thence B. & M., charged sixth class rate of 19.5c. Rates of 12c applied to Hatfield and 12.5c to Whately, Mass., which serves the same community as North Hatfield. The rate to North Hatfield via N. Y. C., and B. & M., was 15.5c. HELD, rate attacked unreasonable to extent it

exceeded 15.5c, reparation awarded. American Sumatra Tobacco Co. v. N. Y. N. H. & H. R. R., 109 I. C. C. 383.

(7u) Complainant attacked class rate of 48c charged on one car of building paper shipped May 21, 1923 from Downington, Pa., to Jacksonville, Fla., as unreasonable and unlawful. Shipment was routed and moved over Pennsylvania to Philadelphia thence M. & M. Steamship Line to destination. There was in effect from York, Pa., to Jacksonville a rate of 33c over defendants lines by rail to Baltimore, Md., thence by water, applicable on prepared or composition roofing paper, and including building paper. The distance of the combined rail and water movement from Downingtown via Philadelphia is greater than from York via Baltimore. Subsequently a rate of 34c was established from Downingtown. HELD, rate attacked not unreasonable or otherwise unlawful, complaint dismissed. Baker & Holmes Co. v. Pennsylvania R. R. 109 I. C. C. 396.

(7v) Complainant attacked class rates charged on excelsior cushions, mats, or pads, carloads, from Oshkosh and Rice Lake, Wis., to Fort Smith, Ark., as unreasonable and unduly prejudicial. Short line distances are 865 from Oshkosh and 1,055 miles from Rice Lake. Rates attacked are governed by the western classification, under which packing cushions of excelsior and excelsior in machine pressed bales are rated fifth class and class C, respectively, minimum 20,000 pounds, subject to rule 34. Prior to Jan. 28, 1924 the fifth class rates were $1.06 from Oshkosh and $1.125 from Rice Lake, class C rates 79.5c and 87.5c. On that date the rates became 83c from Oshkosh and 91c from Rice Lake constructed by adding an arbitrary of 3.5c to the class C rates. On July 15, 1924 the combination on Seligman, Mo., of 76c was applied from Oshkosh, no change being made in the rate from Rice Lake. Complainants attack is directed chiefly against the factor from Seligman, Mo., to Fort Smith, 103 miles, class C rate 38.5c. In 100 I. C. C. 274 the rate found reasonable for articles taking class C rating for 103 miles is 18c. Taking this rate as a fair measure of the factor beyond Seligman and adding a 3.5c arbitrary thereto and also a like arbitrary to the factor to Seligman, rates of 66c are obtained from Oshkosh and 74c from Rice Lake, which the Commission considers to be maximum reasonable rates to apply from and to the points under consideration. HELD, rates attacked unreasonable to extent they exceeded 66c from Oshkosh and 74c from Rice Lake, reparation awarded. Ballman Cummings Furn. Co. v. C. & E. I. Ry., 109 I. C. C. 413.

(7w) Complainant attacked class rate charged on car of canned fruit, shipped Oct. 22, 1923 from New Orleans, La., to Haynesville, La., as unjust and unreasonable and in violation of the fourth section. Shipment moved 505.9 miles, charged fifth class 78c, while aggregate of intermediates was 65.5c composed of 41.5c to Gibsland and 24c beyond. HELD, rate attacked unreasonable to extent it exceeded 65.5c, reparation awarded. Haynesville Provision Co. v. L. & N. W. R. R., 109 I. C. C. 451.

(7x) Complainant attacked class rate charged on four cars of lawn mowers between April 19 and June 12, 1922 from Los Angeles, Calif., to Battle Creek, Mich., as unjust and unreasonable. Charged fourth class rate of $3.585, reparation sought to basis of $1.92 contemporaneously in effect in the reverse direction. Subsequently a rate was made effective of $1.73 on Dec. 5, 1922. The Commission is not convinced that the westbound rate of $1.92 was the fair measure of a reasonable maximum rate on eastbound traffic of the character here involved. The eastbound rate on agricultural implements was $2.765. HELD, rate charged unreasonable to extent it exceeded $2.765 reparation awarded. Rich Steel Products Co. v. S. P. Co., 109 I. C. C. 465.

(7y) Complainant attacked class rate charged on four cars of green salted hides, from Moultrie, Ga., to Elsmere Jct., Del., between Sept. 16 and 26, 1921 as unreasonable. Moultrie is served by the G. N., A. B. & A., and G. & F. Shipments moved G. N., A. C. L., R. F. & P., and B. & O., at sixth class rate of $1.185, reparation being sought to basis of 66c, a commodity rate which became effective Dec. 5, 1921, distance 899 miles. HELD, rate attacked unreasonable to extent it exceeded 66c, reparation awarded. Barr & Dougherty v. G. N. Ry., 109 I. C. C. 487.

(7z) Complainant attacked fifth class rate charged on 13 cars of soya beans shipped between June 3 and 30,

1922 from Norfolk, Va., and Snowden and Gregory, N. C., to Chicago Heights, Ill., as unreasonable. Average distance from Norfolk 1,152 miles charged fifth class 51.5c minimum 36,000 pounds. On March 10, 1924 a commodity rate of 35.5c was established. The fifth class rate, as such, and the present minimum, are not attacked. To award reparation on the shipments under consideration would be tantamount to prescribing a commodity rate for application nearly a year prior to the time its establishment was requested of these defendants, with a minimum much lower than that made applicable in connection with the commodity rate they voluntarily established some two years after the movement or that at present in effect. HELD, rate attacked not unreasonable, complaint dismissed. Chicago Heights Mfrs. Asso. v. B. & O. R. R., 109 I. C. C. 545.

(8a) Complainant attacked fifth class rates charged on iron and steel articles, carloads, between March 1, 1920 and Oct., 31 1924 from Pittsburgh, Pa., and related points and Pennsylvania Ohio and West Virginia to Erie, Pa., as unreasonable and in violation of the fourth section. Rates charged exceeded the combination on Youngstown and other intermediate points. HELD, rates attacked unreasonable to extent they exceeded the aggregate of intermediates, reparation awarded. Erie Bolt & Nut Co. v. B. & O. R. R. 109 I. C. C. 590.

(8b) Complainant attacked class rates charged on two cars of iron ore shipped from Ishpeming, Mich., and on three cars from Negaunee, Mich., to Tamms, Ill., between Dec. 2, 1921 and Aug. 7, 1922 as unreasonable and unduly prejudicial. Ishpeming and Negaunee are on the Northwestern 3 miles apart. Shipments moved over Northwestern to Chicago, thence C. & E. I., to destination, charged class D rates of 42.5c prior to July 1, 1922 and 38.5c thereafter on Sept. 5, 1922 a commodity rate of $3.69 per long ton became effective. HELD, rates attacked unreasonable to extent they exceeded $6.75 per long ton prior to July 1, 1922 and $6.08 thereafter, reparation awarded. Tamms Silicia Co. v. C. & N. W. Ry., 109 I. C. C. 618.

(8c) Complainant attacked sixth class rate of 33.5c charged on five cars of crude feldspar shipped in Nov. and Dec. 1924 from De Kalb Junction, N. Y., to Cleveland, O., as unjust, unreasonable unjustly discriminatory unduly preferential and prejudicial to extent it exceeded a rate of 19c. Feldspar in either crude or ground form is rated sixth class. Crude feldspar is shipped in bulk and usually loads to marked capacity of car. In ground form it is shipped in packages, and the leading generally approximates the classification minimum. The value of crude feldspar is about one half that of ground feldspar. Loss and damage claims are negligible. On March 1, 1925 subsequent to movement defendant established the present commodity rate of 25c on feldspar, crude or ground, and defendant admits rate charged unreasonable to extent it exceeded rate subsequently established. Present rate is considerably higher relatively than are the rates from both Penland and Keene. Distance of 739 miles from Keene to Cleveland is through De Kalb Junction, from which the present rate is but 0.5c less for a distance shorter by 299 miles. HELD, rate attacked unreasonable to extent it exceeded 22.5c reparation awarded. Green Hill Mining Co. v. N. Y. C. R. R., 109 I. C. C. 643.

(8d) Complainant attacked fifth class rate of 59c charged on one car of window glass other than plate not framed or leaded shipped in Sept. 1924 over Pennsylvania and Merchants & Miners Transportation Co. from Jeanette, Pa., to Jacksonville, Fla., as unreasonable, unjustly discriminatory and unduly prejudicial to extent it exceeded 54c. Basis sought is commodity rate now applicable over route described from Jeanette and a number of other Pennsylvania points to Savannah, Ga of 54c, fifth class rate to Savannah being 57c. Complainant asked a finding both of unreasonableness and undue prejudice in the rates on window glass on basis of the fact that on certain other commodities the two ports take the same rates. It makes no showing that any of the commodities upon which there is a parity to the two ports compete with window glass or that the assessment of the class rate on window glass and a commodity rate on a competing commodity resulted in undue prejudice. HELD, rate attacked not unreasonable or unlawful, complaint dismissed. Towers Hardware Co. v. Pennsylvania R. R. 109 I. C. C. 651.

(8e) Complainant attacked fifth class rates charged on canned goods, carloads

from C. F. A., territory to river cities as unreasonable; and relation of rates from Illinois territory to the river cities on the one hand, and to Chicago and Peoria, Ill., and St. Louis, Mo., on the other as unduly prejudicial. Canned goods usually move on fifth class rates in central territory but move largely on commodity rates in Illinois territory. There is a higher level of rates to the river cities than to Chicago, Peoria and St. Louis and also a number of commodity rates that are higher than fifth class. Measured solely by the comparative adjustment in central territory any basis lower than full fifth class would have to be regarded as too low, inasmuch as the rates on canned goods in central territory are generally on the fifth class basis. Fifth class rates apply quite generally in western trunk line territory, although there are a considerable number of commodity rates from canning points on a lower basis. Fifth class rates also apply locally in Iowa although it should be stated that the fifth class rates in Iowa are lower than the fifth class rates for similar distances in central territory and in Illinois, and lower also, in some instances than the rates here prayed. This record does not establish that the conditions of transportation in Illinois territory are more favorable than those in central territory. This record tends to support the inference that the general fabric of commodity rates in Illinois territory is low and a source of difficulty in dealing with the relative adjustments in Illinois and central territories. The record does not warrant a finding that the rates attacked are unreasonable except to the extent they exceed fifth class. No definite showing is made with respect to the character or intensity of the competition with various points, nor as to the specific effect thereon of the relation of rates here considered. There is also failure to show the extent to which conditions affecting transportation to the respective jobbing points are properly comparable. HELD, rates attacked which exceed fifth class rates unreasonable to that extent but the other rates attacked not unreasonable or unduly prejudicial, reparation denied. Burlington Shippers Asso. v. A. T. & S. F. Ry., 109 I. C. C. 694.

(8f) Complainant attacked second class rate of 142c charged on one car of fresh peaches in baskets shipped Sept. 6, 1924 from Quincy, Pa., to Jacksonville, Fla., as unreasonable, unjustly discriminatory and unduly preferential. Shipment moved as routed over Pennsylvania to Hagerstown, Md., thence N. & W., Winston Salem South bound, and A. C. L., to destination, 935 miles. From Quincy and northern points generally, second class rates apply on this commodity to southern territory. HELD, rates attacked not unreasonable or otherwise unlawful, complaint dismissed. Nooney & Co. v. P. R. R., 112 I. C. C. 35.

(8g) Complainant attacked class rates charged on 18 cars of asphalt between Sept. 3, 1921 and Aug. 19, 1922 from Richmond, Calif., to Susanville, Calif., as unjust, unreasonable, unjustly discriminatory and unduly prejudicial. Shipments moved as routed S. P., from Richmond, 15 miles northeast of San Francisco to Susanville 367 miles, charged class D of 65.5c prior to July 1, 1922, thereafter 59c. On August 23, 1922 a commodity rate of 49.5c was published and remained in effect until class D rate was reduced to 46.5c on Dec. 31, 1922. During the period of movement a commodity rate of 45.5c prior to July 1, 1922 and 41c thereafter applied on petroleum road oil, also rated class D. Complainant endeavored as early as Sept 3, 1921 to have defendant publish a rate of 45.5c equal to the road oil rate, and on March 21, 1922 defendant advised it would approve a rate of 55c, its equivalent after July 1, 1922, a rate of 49.5c made effective August 23, 1922. HELD, present rates not unreasonable but were unreasonable at time shipments moved to extent they exceeded 49.5c on and after July 1, 1922, reparation awarded. Warren Brothers Co. v. S. P. Co., 112 I. C. C. 87.

(8h) Complainant alleged fifth class and sixth class rates applicable, respectively, on less carload and carloads of burlap bags, in bales, from New Orleans La., to Tuscaloosa, Ala., as unjust, unreasonable, unjustly discriminatory, unduly prejudicial and in violation of the fourth section to extent they exceed commodity rates in effect on like traffic from same point of origin to Birmingham, Ala. Complaint has been satisfied as to the carload rate by establishing the Birmingham rate to Tuscaloosa. Burlap bags are packed for shipment in

compact bales weighing from 375 to 400 pounds and damage claims are negligible. Tuscaloosa is 55 miles southwest of Birmingham and is served by the A. G. S., L. & N., and M. & O. Sixth class rate to Tuscaloosa 69.5c, commodity rate to Birmingham 49.5c. Rate attacked is unduly prejudicial of rates to Birmingham. HELD, rate attacked not unreasonable but unduly prejudicial to extent it exceeds rate to Birmingham. Dixie Peanut Mills v. A. G. S. R. R., 112 I. C. C. 168.

III. REPARATION.

§3. In general.

See Reparation.

(a) In numerous instances where class rates were charged on unusual movements the Commission has declined to award reparation in the absence of proof that the commodity was improperly classified or that the class rates as such were unreasonable. The special facts of particular cases have, however, warranted some departures from this principle. Omaha Cold Storage Co. v. C. & N. W. Ry., 98 I. C. C. 437, 440.

I. RIGHT OF CARRIER TO ESTABLISH.

§1. In General.

ALL CITATIONS

Gallaudet Aircraft Corp. v. N. Y. N. H. & H. R. R. Co., 88 I. C. C. 750.

II. BASIS OF CLASSIFICATION.

§3. In General.

(a) State of manufacture of an article is important as a guide in classification only in so far as it indicates the transportation characteristics of the article, such as its loading qualities, value, and transportation. Rates on Lumber and Lumber Products, 52 I. C. C. 598. Vitrolite Co. v. A., T. & S. F. Ry. Co., 89 I. C. C. 367, 372.

(aa) It is obvious that the varying shades of difference in classification elements can not be translated into ratings with mathematical accuracy, especially where the number of ratings in the classification is limited. The Commission has said repeatedly that no classification can be so minute as to conform to all the different varieties and conditions of traffic. It can do no more than exercise its best judgment in an effort to give proper weight to all of the evidence and with due regard to the interests of the shippers, the carriers, and the public generally. Indian Packing Corp. v. Director General, 93 I. C. C. 400, 408.

(b) There is no fixed measure for the reasonableness of a classification rating. Classification is largely a matter of comparison of all the commodities that move as freight and the assignment of ratings such that each shall bear its fair share of the transportation burden. Two especially important factors entering into the fixing of a rating for any commodity are value and weight density, but a number of other things must also be considered. Classification of canned goods, 98 I. C. C. 166, 176.

(cd) Classification, from its very nature and use, can not be so minute as to do mathematically exact justice to every variety of commerce that moves. Colorado Culvert & Flume Co. v. A. T. & S. F. Ry., 100 I. C. C. 311, 313.

(e) Evidence as to profits realized by shippers on a particular commodity is of little value in determining reasonableness of the classification rating applied to that commodity. Coca-Cola Co. v. B. & O., 92 I. C. C. 340, 343.

(fg) When articles which are identical except for a difference in density can practicably be covered by distinguishing tariff descriptions, carriers commonly accord lower ratings with higher minima to the form of article which loads more heavily. Such distinctions apply to articles set up and knocked down, nested and not nested, in bags and in machine-compressed bales, and notably to tanks and similar objects made of metal of different gauges. Aluminum Goods Mfg. Co. v. A. & V. Ry., 92 I. C. C. 346, 351.

(h) Trend of freight classification for many years, and probably since the beginning, has been toward multiplication and refinement of commodity descriptions. The consolidated classification today provides specific ratings for thousands of articles, and for most of them there are several ratings, application of which depends upon form in which the article is prepared for shipment. Many of these ratings are not precisely correct, some of them doubtless not even reasonably correct; but they were all established in the first instance with some regard for value, weight density, susceptibility to damage, and other transportation characteristics of the commodity under consideration. Parlor Frame Mfrs. Asso. v. A. A. R. R., 93 I. C. C. 506, 508, 509.

(i) In establishment of freight classifications, involving as it does the grouping of all commodities into a limited number of classes, principle that the unfinished should be rated lower than the finished article must frequently yield to other considerations. Parlor Frame Mfrs. Asso. v. A. A. R. R., 93 I. C. C. 506, 510.

(j) There is a clear distinction between making different rates for application between same point on same commodity conditioned solely upon use to which the commodity is to be put, a prac-

tice which the commission has frequently condemned, and making different rates on different commodities and taking into consideration, along with other factors, the general use to which respective commodities are put for purpose of determining the applicable rate. Lime from Eastern Trunk Line Points, 93 I. C. C. 617, 630.

(k) Fact that movement of a commodity between specific points was and is light is not conclusive that such shipments should move on the classification basis. Humble Oil & Rfg. Co. v. D.-G. C. Ry., 95 I. C. C. 435, 437.

(l) If in the establishment of rates or classifications differences in value of the respective commodities carried were reflected in rate increments only sufficient to cover cost of insurance, the rates as a whole would either be such that it would be impossible for carriers to earn what they reasonably might, and in fact what they necessarily should in order to perform their services, or the rates on many low-grade commodities would have to be such that they would be prohibitory of any movement. See 26 I. C. C. 159. Classification of Canned Goods, 98 I. C. C. 166, 172, 173.

(m) The consolidated classification case was a comprehensive proceeding dealing primarily with the numerous problems arising out of the unification of the commodity description and carload minimum weights of the three separate classifications then effective. The proposal to revise the l. c. l. ratings in the official classification on canned goods was considered in its broader aspect and as an entity. The adverse recommendation made by the commission in that case is in no sense conclusive of the question presented here, which relates only to the ratings on certain of the higher grades of canned goods. Classification of canned goods, 98 I. C. C. 166, 174.

(n) Freight classifications afford a means of grading rates according to value of the service, although other factors, such as loading characteristics and liability to damage in transit, are taken into consideration. At present three principal classifications are in use, the official southern and western. Commission has endeavored to promote uniformity in classification, and much has been done in that direction, but in truth the purpose of uniformity in classification is not fully accomplished without uniformity in number of classes and also in class percentage relationships. Southern Class Rate Investigation, 100 I. C. C. 513, 628.

(o) No classification can be so minute as to conform to the differing varieties and conditions of traffic, and to separate different grades and densities of the same article into different classes with varying rates, even if it could be accomplished, would go far to defeat the real purpose of classification. Western Paper Makers Chem. Co. v. A. A. R. R., 109 I. C. C. 133, 138.

(p) The classification generally imposes the highest rate which a particular commodity should bear under normal conditions and a commodity rate which is higher than the class rate is an abnormality which on its face requires special justification. Chevrolet Motor Co. v. C. & A. R. R., 109 I. C. C. 462, 463.

§4. Bulk or Weight of Commodity.

See Evidence §65; Express Companies §18; Loading and Unloading; Passenger Fares and Facilities §10.

(a) Weight density is a very material factor in determining the relative cost of transportation, and therefore a distinction is rating based thereon, if fairly made, can hardly be termed arbitrary. Where the other factors are substantially uniform, weight density may become the dominant factor in classification. Indiana Public Service Commission v. A. A. R. R., 92 I. C. C. 83, 86.

(b) Variations in weight density are of considerably less importance in fixing classification ratings for articles as heavy as those here under consideration than they are when light and bulky articles are under consideration. Classification of Canned Goods 98 I. C. C. 166, 173.

(ba) Rates on cylindrical cheese boxes found not unreasonable or otherwise unlawful as compared with rates on wooden drums, other wooden containers, and numerous other commodities. Considering the light loading of cylindrical cheese boxes the rates assessed do not produce earnings which may be regarded as excessive. Wisconsin Cheese Box Mfrs. v. A., T. & S. F., 102 I. C. C. 279.

(c) It is true that in rating light and bulky articles a difference in weight density of only a few pounds per cubic foot becomes a matter of first importance, but other considerations, such as the value, susceptibility to damage, and method of packing, can not be disregarded. National Commercial Fixture Mfrs. Asso. v. A. A. R. R., 109 I. C. C. 479, 482.

§4½. Knocked-down or set-up shipments.

See Knocked-down Shipments; Reduced Rates §5 (j).

(a) Complainant attacked commodity rates on wooden tanks, knocked down, carloads, from the north Pacific coast to points in western trunk line, central and trunk line territories, and from California points to eastern defined territories, which apply in connection with a transit arrangement at certain Pacific coast points, as unduly prejudicial in that transit is not allowed at Chicago and Batavia, Ill., Milwaukee, Wis., and Cincinnati, O. The rates on tanks, knocked down, from the Pacific coast are the same as the rates on lumber. A transit arrangement permits the reshipping of tank material, manufactured from rough lumber brought into certain transit points on the Pacific coast, at the through lumber rate from points of origin to final destination, plus a transit charge ranging from 1.5c to 3c, depending upon the distance from the point of origin to the transit point. Rates on lumber from the north Pacific coast are blanketed over a large area and the transit points are within that area. Complainants have no transit arrangement at their plants under which they can manufacture and reship lumber in the form of tanks, knocked down. On such tanks fifth class rates apply. The C. M. & St. P., is the only single line which serves transit points on the Pacific coast as well as the cities in which some of the complainants are located. If defendants should accord milling in transit arrangements on lumber originating on the Pacific coast to be Milwaukee, Chicago, Batavia and Cincinnati and reshipped from those points, complainants would still be at a disadvantage by being compelled to haul a wastage of 20% for a distance of more than 2,000 miles to the manufacturing point. This is a disadvantage due to geographical location. Complainants enjoy a tremendous advantage by reason of their proximity to the great consuming market. HELD, rates on wooden tanks, knocked down, carloads, including fixtures and metal parts not exceeding 20% of the weight of the entire shipment, from Chicago, Batavia, Milwaukee and Cincinnati to points in western trunk line territory are not unreasonable but to points in central trunk line territories are unreasonable to extent they exceed 110% of the lumber rates. Transit privilege denied. Tank & Tower Council v. A. & R. R. R., 91 I. C. C. 309.

(b) Complainant attacked class rate of $1.485 charged on two carloads of steel tanks, knocked down, shipped Feb. 21, 1922 from Hopewell, Va., to Oklahoma City, Okla., as unreasonable to extent it exceeded $1.095. Shipments moved over N. & W., to Cincinnati Big Four to St. Louis, M. K. & T., beyond, 1,562 miles, charged fifth class rate. Effective June 15, 1922 defendants established a commodity rate of $1.095. Effective Sept. 15, 1922 the present rate of 95.5c was established. HELD, rate attacked unreasonable to extent it exceeded $1.095, reparation awarded. Southland Cotton Oil Co. v. M. K. & T. Ry., 93 I. C. C. 213.

(c) Complainant attacked fifth class rates charged on 7 cars of fabricated steel tank material, knocked down, shipped between Jan. 18 and Aug. 3, 1921 from Shreveport, La., to El Dorado, Ark., as unreasonable, unjustly discriminatory and unduly prejudicial. There are four routes over which the shipments might have moved; the short line route by way of the V. S. & P., to Ruston, La., and Rock Island beyond, 120 miles; St. Louis Southwestern to Fordyce, Ark., and Rock Island beyond, 195 miles; L. & A., to Winfield, La., and Rock Island beyond, 198 miles; and T. & P., to Alexandria, La., and Rock Island beyond, 269 miles. Three of the shipments were routed and moved over the route via Alexandria. One shipment was delivered to T. & P. The three remaining cars were routed and moved via Winfield. Charged on all but one shipment at joint line fifth class distance rate of 52c for 120 miles. This short line distance rate by provision of the governing tariff was conditionally applicable over the longer routes, the carriers by these routes reserving the right to reject a shipment

tendered at the rate applicable over the short line route. Effective Dec. 21, 1921 a commodity rate of 29.5c was established on certain iron and steel articles including tank material of the character shipped by complainant. HELD, rates charged unreasonable to extent they exceeded 34.5c via Winfield and 41c via Alexandria, reparation awarded. Parkersburg Rig & Reel Co. v. C. R. I. & P. Ry., 96 I. C. C. 99.

(d) Rates on wooden tanks, k. d., including metal parts not to exceed 20 per cent of weight of entire shipment, from Chicago and Batavia, Ill., Milwaukee, Wis., and Cincinnati, Ohio, to points in c. f. a. and trunk-line territories found unreasonable to extent they exceed 110 per cent of rates on lumber of same species, which basis was found reasonable in Rates on Lumber and Lumber Products, 52 I. C. C. 598, and Parkersburg Rig & Reel Co., 59 I. C. C. 751; 78 I. C. C. 238. Tank & Tower Council v. A. & R. R. R. Co., 91 I. C. C. 309.

(e) Complainant attacked commodity rates charged on four carloads of fabricated tank material, knocked down, one of which contained, among other things, a quantity of steel pipe on which the fourth class less carload rate was charged, shipped between Dec. 22, 1922 and July 3, 1923 from Houston, Orange, Iowa Park, and Kosse Tex., to El Dorado and Smackover, Ark., as unreasonable and unduly prejudicial. Houston, Orange and Kosse are in Texas common point territory. Iowa Park is in the Dallas-Fort Worth group. El Dorado and Smackover are in the Little Rock-Fort Smith territory. The shipments were delivered to the carriers unrouted. Fabricated steel tank material and steel pipe are both heavy loading commodities of a similar nature and there is nothing of record to show why they should take different rates. In fact, in western classification, which governs in this territory, rates fabricated steel tank material and iron or steel pipe fifth class and provides that these articles may be shipped in mixed carloads at the highest minimum weights and class rates. There appears to be no reason, and certainly there is none shown of record, why this same principle should not apply when these articles are shipped under commodity rates. HELD, rates charged unreasonable to extent they exceeded 51c, reparation awarded. Parkersburg Rig & Reel Co. v. G. C. & S. F. Ry. 100 I. C. C. 245.

§5. C. L. and L. C. L. shipments.

See Infra §13; Advanced Rates §5 (2) (la), §15 (c); Cars and Car Supply §11⅞; Class Rates §2 (3k) (5f) (6c) (6d) (6f) (6m) (6z); Classification §10 (h), §13, §20 (c) (o); Commodity Rates §1 (d) (no), §5 (4r); Evidence §63; Express Companies §10 (a); Long and Short Hauls §4 (3i); Minimums.

(a) It is necessary, in determining whether c. l. rates to supersede the any-quantity rates on cotton, should be established, to consider commercial and economical aspects of the question and determine whether the arrangement, if established, would be in the public interest. Taylor Dry Goods Co., 28 I. C. C. 205. Mississippi Railroad Commission v. A. & V. Ry. 89 I. C. C. 47, 54, 55.

(b) The reasons that justify and require lower rates for carloads than for less carloads are not materially affected by considerations as to value of the commodity. Burroughs Adding Machine Co. v. M. C. R. R., 91 I. C. C. 378, 380.

(c) Complainant attacked ratings on kitchen cabinets, crated or boxed, less carloads, in official and southern classifications, as unjust and unreasonable and unduly preferential and prejudicial. In 48 I. C. C. 518 the official classifications ratings on kitchen cabinets shipped with tops and bases separated were considered, and it was found that in so far as they had been increased since Jan. 1, 1910, they were justified and that otherwise they were not unreasonable, unjustly discriminatory or unduly prejudicial. Ratings are one and one half times first class on tops and bases with legs attached, first class with legs detached or without legs. In western classification the rating on tops and bases is first class without regard to legs. HELD, ratings attacked not unreasonable or unduly prejudicial, complaint dismissed. Public Service Commission of Indiana v. A. A. R. R., 92 I. C. C. 83.

(d) Respondents proposed to increase from first class to 1.5 times first class the less carload ratings in the

official, southern and western classifications on automobile wheels made of wood combined with iron or steel, with or without rubber tires, and weighing each about 200 pounds. They also propose to require that such wheels be either wrapped, boxed, or crated for shipment, whereas under the existing schedules they may be shipped loose. The present item is restricted to automobile wheels while the new item also includes wheels for motor tractors, for motor platform or warehouse trucks or tractors, and for motor vehicle or tractor trailers. HELD, respondents have failed to justify the proposed increased rating, and they have not justified the proposed packing requirements unless there is added thereto a note stating that old wheels may be shipped loose. Classification of motor vehicle wheels, 92 I. C. C. 190.

(e) Complainant attacked official classification rating of second class, less carloads, and fourth class, carloads, on cocoa cola sirup, in bulk in barrels or kegs, as unreasonable, unjustly discriminatory and unduly prejudicial. This sirup is a finished sirup containing about 94% simple sirup and 6% other ingredients referred to as "characteristics elements". To protect its formula, prevent adulteration, and the probability of substitutes being served, complainant asserts it is necessary to ship its product as a finished sirup. The carload ratings on flavoring or fruit sirup in bulk in barrels in the three classifications are uniformly one class higher than the ratings on carbonated beverages. But in less carloads, taking beverages in solid sided bottle carriers, the container most frequently used as the basis for comparison, the two commodities are rated the same in the western classification, while in the southern classification the sirups are one class, and in the official classification are two classes, higher than the beverages. HELD, the fourth class rating on coca cola sirup, in bulk in barrels or kegs, carloads, if official classification not unreasonable but second class on that commodity, in bulk in barrels or kegs less carloads in official classification territory unreasonable to extent it exceeded rule 25. Coca Cola Co. v. B. & O. R. R., 92 I. C. C. 340.

(f) Complainant attacked less carload rating in western classification, and carload ratings in official, southern and western classifications on adding or computing machines, in boxes, since March 1, 1920 as unreasonable to extent they exceed first class, less carloads and third class carloads. The machines are substantially built, are packed singly in strong wooden boxes, and are not subject to damage by the ordinary shocks of transportation. Considering their many similar transportation characteristics, a less carload rating on adding machines higher than one class above speedometers does not seem warranted for the future. The second class rating on adding machines, carloads, with a minimum of 30,000 pounds, which can be easily loaded in standard equipment, does not appear unreasonable. It was voluntarily established by the carriers upon request of the record does not justify condemnation of the higher any quantity rates applicable on carloads prior thereto. HELD, rating on adding machines, less carloads, in western classification not unreasonable but are unreasonable for future to extent they exceeded one and one quarter times first class. Ratings in carloads, in official, southern and western classifications not unreasonable. Burroughs Adding Machine Co. v. M. C. R. R., 91 I. C. C. 378.

(g) Complainant attacked official classification less carload ratings on food products in glass containers, packed in barrels or boxes, as unjust and unreasonable. In 64 I. C. C. 205, Commission found second class rating on sliced dried beef, in glass, unreasonable to extent it exceeded third class, and awarded reparation. Food products in glass containers compete with the same articles in metal containers and in all instances where the classification provides a rating on these food products when shipped in metal cans packed in barrels or boxes, complainants ask for the same rating on shipments in glass packed in barrels or boxes. Commodities in glass are generally rated first class in less carloads. There is a difference in favor of the metal container from 45 to 95%. On the whole, the record indicates that, as to many of the elements proper to be considered in the classification of freight, shipments of the food products here considered in glass and in metal containers are upon a substantial parity; as to others, they differ in varying degrees. It does not established that the ratings on shipments

in metal afford a proper measure of the reasonableness per se of the ratings on shipments in glass. HELD, ratings attacked unreasonable; less carload ratings in official classification on food products in glass unreasonable to extent they are higher than the first numbered class above the less carload ratings applicable to the same articles when in metal cans, packed in barrels or boxes, reparation denied. Indian Packing Corp. v. Director General, 93 I. C. C. 400.

(h) Complainant attacked rating on furniture frames, car loads, in official classification, and less carloads, in official, southern and western classifications, as unreasonable, unjustly discriminatory and unduly prejudicial. They are usually prepared for shipment in less carloads by wrapping or crating, although the classifications do not require that this be done. In making carload shipments from 55 to 65 piece sets are usually loaded into the car loose, the chairs being placed in the seat of the davenport. The lading is braced in sections to prevent damage from shifting. Ordinary box cars are used. All of the evidence introduced related to the reasonableness of the ratings applicable on the fully set up frames in the three piece sets. Under the present rate adjustment most of the less carload shipments move by express. That service is much more expeditious and includes pick up and delivery, which is not a part of the freight service. HELD, less carload ratings on set up chair and lounge frames, loose or in bundles, not unreasonable. HELD, less carload rating in official classification on wooden chair and lounge frames, when set up, in boxes or crates, unreasonable to extent it exceeded two and one half times first class; but that the corresponding ratings in the southern and western classifications are not unreasonable. Parlor Frame Mfrs. Asso. v. A. A. R. R., 93 I. C. C. 506.

(i) Complainant attacked less carload rates charged on cases and casks, containing empty bottles, returned from Saxon, Wis., and Herman, Bergland and Hancock. Mich., to Duluth, Minn., between May and November, 1920, as unreasonable, unjustly discriminatory, unduly prejudicial and in violation of the fourth section. Shipments from Hancock moved to Houghton over Mineral Range, thence D. S. S. & A., those from Saxon and Herman moved over D. S. S. & A., direct. Charged fourth class rates, reparation being desired to one-half of such rates. Prior to Dec. 31, 1919, the tariffs authorized one-half fourth class rates on similar shipments between these points, and effective Nov. 15, 1922 this basis was restored. One-half fourth class has been applicable in western trunk line territory for many years. The rates charged from Saxon and Herman contravened the fourth section in that one-half of fourth class rates applied from points to which Saxon and Herman are intermediate. HELD, rates attacked unreasonable to extent they exceeded one-half fourth class rates reparation awarded. Fitger Brewing Co. v. D. S. S. & A. Ry., 95 I. C. C. 3.

(j) Complainant attacked ratings on cast iron toys in the official and southern classifications as unreasonable. The toys manufactured by complainant consist of various wheeled toys, such as miniature locomotives and cars, horses and wagons or carts, automobiles, cabs, tractors, sedans, fire engines and hose reels, and miscellaneous toys, such as cooking stoves and utensils, banks, pumps, cap pistols and the like. Cast iron toys, in barrels, boxes or crates in less carloads are rated second class in official and first in southern and in carloads, third class and second class. The ratings attacked have been in effect for a number of years. Cast iron toys constitute desirable traffic of heavy density not materially unlike many articles of hardware so far as a number of transportation elements are concerned. Complainants toys will load to practically the capacity of an ordinary box car, and while not being shipped to any appreciable extent in carload movement of that character might be stimulated with a proper spread between the carload and less car load ratings. No good reason appears why the ratings in the southern classification should be so much higher than in the official classification, or why the carload ratings should not be the usual two classes lower than the less carload ratings. HELD, cast iron toys n o i b n, less carload rating in official classification not unreasonable, but in southern classification is unreasonable to extent it exceeds second class; that the carload rating in both classifications is unreasonable to extent it exceeds fourth class,

minimum 30,000 pounds. Grey Iron Casting Co. v. A. & V. Ry., 96 I. C. C. 199.

(k) Complainant attacked second class rating and rates on less carloads of printed waxed wrapping paper, in rolls, in boxes or crates, from paper producing points in official territory to destinations in the same territory, as unreasonable and unduly prejudicial to extent they exceed third class rating and rates applicable on the same commodity, not printed. Waxed paper, not printed, is shipped in the same kinds of containers as waxed paper, printed, weighs the same, and occupies the same amount of space in the car. Printed Waxed wrapping paper and waxed wrapping paper not printed possess the same transportation characteristics and the only difference between the two commodities is that the printed paper is slightly more valuable. Numerous other kinds of printed paper, apparently higher in value and subject to greater risk of damage, are rated third class, in less carloads, in official classification. HELD, second class rating and rates on printed waxed wrapping paper, less carloads, between points in official territory unreasonable to extent they exceed third class rating and rates, reparation awarded. General Baking Co. v. P. R. R., 96 I. C. C. 280.

(l) Complainant attacked less carload ratings and rates on electric cooking stoves, constructed so as to be used on a table and equipped with cooking utensils, from Huntington, W. Va., to interstate destinations as unreasonable and unduly prejudicial. Until a more specific item was provided, complainants commodity clearly came within the general description of a portable electric cooking stove of the disk heater or hot plate type within the meaning of the tariff. To construe the item as not permitting reasonable variations from and additions to the simpler commodity contemplated when the item was originally framed would be impracticable and unfair to both carrier and shipper, particularly in view of the rapid changes which have been and are taking place in the electric appliance industry. It is true that the variations and additions in this instance operate to make complainants commodity more elaborate, useful and valuable, but this very fact strengthens the conclusion that its rating should be no lower than that on the simpler stove. The latter is packed in the same manner and has no greater susceptibility to damage, and obviously bears closer analogy to the former than does the large electric stove or range for the kitchen. HELD, applicable ratings of second class in official and first in southern and western not unreasonable or otherwise unlawful, complaint dismissed. Armstrong Mfg. Co. v. A. & R. Ry., 96 I. C. C. 595.

(m) Complainant attacked less carload rates charged on cream and condensed milk, in cans, from Taneytown, Md., to Hanover, Pa., and thence in carloads to Washington, D. C., Woodstock, Va., Charlotte, N. C., and Jacksonville, Fla., between April 4, 1921 and April 7, 1922 as inapplicable and unreasonable. The shipments might properly have been billed so as to make applicable the rates sought. Such rates have been accorded under the same rule on similar shipments made since April 7, 1922 upon compliance with the billing requirements thereof. No evidence was introduced to support the allegations of unreasonableness. HELD, rates charged applicable, not unreasonable, complaint dismissed. Chapin Sacks Corp. v. Pennsylvania R. R., 96 I. C. C. 706.

(n) Respondents proposed various changes, including increase and reductions, in the less carload ratings in the official classification on certain foods in inner containers packed in barrels, boxes or crates. The proposed changes would bring about the classification relationships prescribed in 93 I. C. C. 400. The primary question here is whether the respondents have justified the proposed increases from rule 26 to third class on shipments in cans in boxes. If they have, the proposed reductions on shipments in boxed glass will stand; if they have not, then the ratings on shipments in glass must be further reduced to third class to comply with the orders in Indian Packing Co., 93 I. C. C. 400. Respondents canceled from the classification the separate provision for corn sirup jelly and that commodity has since been subject to the ratings provided for edible jelly, not otherwise indexed by name. HELD, corn sirup jelly is shown to be comparatively low grade commodity. HELD, proposed increased ratings not justified. HELD, except as to proposed increased ratings on corn sirup jelly the ratings proposed have been justified.

Classification of canned goods, 98 I. C. C. 166.

(o) Although exceptions are quite common the usual spread between carload and less carload ratings is two full classes. Classification of canned goods, 98 I. C. C. 166, 170.

(p) Respondents proposed certain changes in classification which would result in increasing the freight charges on less carload shipments of jute packing in rope form. Jute packing, whether in rope form or otherwise, is now rated third class in less carloads, and fourth class, minimum 30,000 pounds in carloads, in the official, southern and western classifications, under the description of vegetable fibre packing, n. o. i. b. n. The suspended schedules would provide uniform ratings in the three classifications of second class in less carloads, and fourth class, minimum 30,000 pounds, in carloads, under the description of jute packing in rope form, tarred and not tarred. The suspended schedules will provide for the same ratings on jute packing in rope form as those applicable on oakum. Oakum is made of manila, sisal, hemp, and other socalled hard fibers, contains a considerable amount of tar, and is coarser in texture than jute. HELD, respondents have failed to justify the increased ratings proposed. Classification of jute packing, 98 I. C. C. 287.

(q) Complainant attacked class rate of $1.22 on stoves and ranges, less carloads from Nashville, Tenn., to Lynchburg, Richmond and Norfolk, Va., and other points taking same rates, as unjust, unreasonable unduly prejudicial and in violation of section four. In official, western and southern classifications stoves and ranges are rated fifth class in carloads and third class less carloads. For a number of years defendants have maintained commodity rates lower than the class rates from Birmingham, Ala., Chattanooga, Tenn., and Atlanta, Ga., to Virginia cities. Prior to Oct. 1, 1922 on carloads and to Nov. 5, 1923 on less carloads the class rates were applicable from Nashville to Virginia cities. On those dates commodity rates lower than the class rates were established and are still in effect. The carload rate from Nashville is the same as from the other originating points named but the less carload rate is 47c higher than that from the other three points. A correction of the disparity between the rates from Nashville and from Birmingham should result in the establishment of rates which will remove the cause for complaint as to the rate from the other competing points, and accordingly the finding will be confined to the relationship of the rates from Nashville and Birmingham to the Virginia cities. HELD, rates on stoves and ranges less carloads from Nashville to Virginia cities not unreasonable but unduly prejudicial to extent they exceed rates from Birmingham to same destinations. Allen Mfg. Co. v. N. C. & St. L. Ry., 98 I. C. C. 405.

(r) Complainant attacked less carload ratings in the western classification, the carload and less carload ratings in the southern classification, and carload and less carload rates of defendants in southern classification on edible flour, n. o. i. b. n., and corn meal, when contained in rope stock paper bags, as unreasonable, and, as compared with the lower ratings and rates on the same commodities in cloth bags unjustly discriminatory and unduly prejudicial. Rope stock paper bags are made principally from old manila rope, but with a certain content of old burlap bagging and wood pulp. The rating of sixth class on flour and corn meal in paper bags was established in southern classification to accord with the finding in 55 I. C. C. 209. It is shown that flour and corn meal when in paper bags will less readily absorb moisture and odors, and are less susceptible of contamination generally, than when in cloth bags. On the other hand, it appears that paper bags are somewhat more easily torn or burst, and when in that condition are less easily repaired than are cloth bags. The Commission is not convinced on the record, that the relative risk to the carrier in handling less carload shipments of flour and corn meal in paper bags would be greater than that incurred in handling less carload shipments of the same commodity in cloth bags. Under the official classification no distinction is made between the ratings on flour in cloth bags and in paper bags; and in southern territory where any quantity ratings prevail, there is no distinction in the rating on flour based upon the quantity shipped. The less carload movement of flour is important and strongly competitive with

the carload movement. HELD, carload and less carload ratings and rates not unreasonable but unjustly discriminatory to extent they exceed those in cloth bags. Rope Paper Sack Bureau v. A. & V. Ry., 98 I. C. C. 511.

(s) Complainant attacked class rates charged on two less carloads of automobile heaters, shipped during Oct. 1923 from Chicago, Ill., to San Francisco, Calif., as unreasonable. Charged first class rate of $5.10 applicable on heaters, automobile, in boxes. A commodity rate of $2.21 under the general heading of vehicle parts, self propelling, was applicable on automobile parts (metal) in straight or mixed carloads. The list under that heading does not contain automobile heaters. The tariff publishing the commodity rate on automobile parts which complainant sought to have applied provides, under rule 8, that all articles for which commodity rates are not herein specifically provided will be subject to class rates governed by classification. HELD, rate attacked applicable and not unreasonable, complaint dismissed. Western Auto Supply Agency v. C. B. & Q. Ry., 98 I. C. C. 647.

(tuv) Double first-class ratings and rates on adding machines, in boxes, l. c. l., in western classification, found not unreasonable in past, but for future found unreasonable to extent they may exceed one and one-fourth times first class. Burroughs Adding Machine Co. v. M. C. R. R. Co., 91 I. C. C. 378.

(wx) Proposal to increase from first class to 1½ times first class the l. c. l. ratings on automobile wheels made of wood combined with iron or steel, with or without rubber tires, and weighing 200 pounds or more each, found not justified. Commodity here considered is not analogous to those to which a rating of 1½ times first-class has been assigned by commission in various cases, whereas a rating of first-class has been prescribed on speed indicators and automobile sound-warning signals, commodities having a much higher value than automobile wheels. Classification of Motor Vehicle Wheels, 92 I. C. C. 190.

(y) As a general proposition no definite relationship exists between c. l. and l. c. l. rates, and use of different commodities would produce varying results. Southwest Cotton Co. v. A. E. R. R., 92 I. C. C. 563, 565.

(z) Protective-tariff rules governing l. c. l. shipments provided that carriers would furnish, or allow use of, refrigerator cars when aggregate weight of shipments was not less than 15,000 pounds, with no charge for refrigeration service unless specifically provided for in separate tariffs. Upon contention that shipments of lettuce were l. c. l shipments entitled to benefits of the rule, FOUND: As each box was not marked as required by the classification to obtain benefit of the l. c. l. rate, cars used were ordered for c. l. shipments, bills of lading and shipping orders signed by or for shippers showed minimum weights applicable to c. l. shipments, and bore notations and instructions having application only to c. l. traffic under the protective tariff, the c. l. rates, minimum, and stated refrigeration charges applicable thereto were legally assessed. Martin v. P. R. R., 92 I. C. C. 639.

(aa) Class rate on l. c. l. shipment of iron pipe fittings from Barberton, Ohio, to Duluth, destined to Virginia, Minn., found inapplicable to extent it exceeded lower commodity rate published in same tariff on "iron and steel articles, c. l.," which lower rate by tariff note applied on a list of commodities in which pipe fittings were included without limitation as to whether c. l. or l. c. l. While carriers intended to omit all reference to l. c. l. rates in connection with the lower commodity rate, through oversight this was not done. However, erroneous publication of rates does not justify a departure therefrom and intention of framers is not controlling. Reparation awarded. Murray-Egan-McLeod Co. v. P. R. R., 93 I. C. C. 79.

(bb) Application of existing classification ratings on steel files, l. c. l., to shipments of used or worn files, returned for reconditioning; found not unreasonable or otherwise unlawful. Practice of applying same rating on used as on new files extends to all other kinds of tools and machinery, such as agricultural implements, etc., and many of such articles are shipped secondhand or are returned to manufacturers for repairs or reconstruction. Moreover, in Minneapolis Traffic Asso., 23 I. C. C. 432, 437, the commission pointed out difficulties which would be encountered in the practical application of different rates on old and on new articles of same kind. Continental File Co. v. P., C., C. & St. L., 93 I. C. C. 373.

(cc) Considering the superior protec-

tion against damage which crating affords, also that furniture frames are unfinished material. FOUND, that the l. c. l. rating in official classification on wooden chair and lounge frames, when set up, in boxes or crates, is unreasonable for future to extent it exceeds 2½ times first class. Parlor Frame Mfrs. Asso. v A. A. R. R., 93 I. C. C. 506.

(dd) L. c. l. ratings on set-up wooden chair and lounge frames, when in boxes, crates, bundles, or loose, in western and southern classification, and when loose or in bundles in official classification; also the c. l. rating on such frames, loose or in packages, in official classification, found not unreasonable or otherwise unlawful. Parlor Frame Mfrs. Asso. v. A. A. R. R., 93 I. C. C. 506.

(ee) Charges resulting from use of actual weights on l. c. l. shipments of petroleum and its products, in packages, from Jacksonville to points in Georgia, found not unreasonable or unduly prejudicial as compared with lower charges based upon estimated weights applying intrastate in Georgia and Florida. Comparison was also made with tariff which provided for use of estimated weights from Jacksonville to Georgia destinations, but record establishes that such weights were for use in connection with c. l. shipments only. Moreover, actual weight of complainant's shipments exceeded estimated weight sought. Gulf Rfg. Co. v. A. & W. P. R. R., 95 I. C. C. 731.

(ff) Less-than-carload rating on n. o. i. b. n. in southern classification found unreasonable to extent it exceeds or may exceed the rating of second class contemporaneously applicable in official classification. Carload rating in both classifications found unreasonable to extent it exceeds or may exceed fourth class, minimum 30,000 pounds, the usual rating of two classes lower on c. l. than on l. c. l. ratings. Grey Iron Casting Co. v. A. & V. Ry. Co., 96 I. C. C. 199.

(gg) Answering complainant's contention that rating on cast iron toys should be same as that applicable on iron and steel hardware, n. o. i. b. n., defendants urge that a mere showing that such toys are cheaper, with similar transportation characteristics does not prove that rating should be same; that such toys are in the nature of nonessentials and properly are rated higher than general utility articles included within description of hardware, n. o. i. b. n. HELD, evidence is not persuasive that ratings on cast-iron toys in classification territories are unreasonable as compared with strikingly nonuniform ratings on hardware, nor is there any competitive reason for such rating. See Daisy Mfg. Co., 81 I. C. C. 44. Grey Iron Casting Co. v. A. & V. Ry. Co., 96 I. C. C. 199, 200, 201.

(hh) Following Channel Chemical Co., 31 I. C. C. 407, rates on less-than-carload shipments of furniture polish, in glass, boxed, and in metal cans, boxed, and mops, in bundles, from Chicago to intermediate points in transcontinental territory, since June 30, 1917, and on mop handles, in bundles, between June 30, 1917, and March 14, 1918, inclusive, found unreasonable to extent they exceeded bases herein prescribed. Reparation awarded. O-So-Ezy Products Co. v. Director General, 96 I. C. C. 220.

(ii) Second-class rating and rates applicable on l. c. l. shipments of printed waxed wrapping paper between points in official territory found not unduly prejudicial but unreasonable to extent they exceeded, exceed, or may exceed third-class rating and rates contemporaneously applicable on l. c. l. shipments of waxed wrapping paper unprinted. Printed waxed amount of space in a car, and is shipped in same kind of container as unprinted waxed paper, the only difference being that the printed paper is slightly more valuable. Moreover, waxed paper, printed and unprinted, in official classification takes same c. l. rating and in both southern and western classification the same l. c. l. rating. Reparation awarded. General Baking Co. v. P. R. R. Co., 96 I. C. C. 280.

(jj) Ratings applicable on electric table stoves, with equipment of cooking utensils in less than carloads, from Huntington, W. Va., to interstate destinations throughout the United States found not unreasonable or otherwise unlawful as compared with ratings on other similar electric appliances. Armstrong Mfg. Co. v. A. & R. Ry. Co., 96 I. C. C. 595.

(kk) Shipments of cream and condensed milk, in cans, moved from Taneytown, Md., to Hanover, Pa., in less-than-carload lots, under bills of lading naming the shipper as consignor and consignee, and thence in carloads to Washington, D. C., and other destinations under bills of lading naming the shipper as consignor and complainant as consignee. A less-than-carload rate from Taneytown to Hanover plus the carload rates on the

final destinations were charged, whereas complainant contends that in view of the fact that there was only one shipper and one consignee the contemporaneous carload rates from original point of shipment to final destinations were applicable. HELD, since different consignees were shown in the bills of lading, the rates charged, and not the rates sought, were applicable and are not shown to have been unreasonable. Complaint dismissed. Chapin-Sacks Corp. v. P. R. R. Co., 96 I. C. C. 706.

(ll) Rates assessed on l. c. l. shipments of returned empty steel drums from Sartell, Minn., and Groos and Menominee, Mich., to North Milwaukee, Wis., found applicable but found to have been unreasonable to extent they exceeded l. c. l. rates, based on a rating of one-half of fourth class, contemporaneously in effect on returned empty iron drums in same general territory, which rates and rating were subsequently made applicable on steel drums, returned empty. Reparation awarded. Vera Chemical Co. v. C., M. & St. P. 98 I. C. C. 3.

(mm) Ratings and rates on stearine coconut, in c. l. and l. c. l., from Bayonne N. J., to points in official territory, found unreasonable and unduly prejudicial to extent they exceed ratings and rates contemporaneously applicable on peanut, cottonseed, palm-kernel, and mixed stearines. Reasonable and nonprejudicial ratings and rates prescribed for future and reparation awarded. Best Foods v. C. R. R. Co. of N. J. 98 I. C. C. 331.

(nn) Less-than-carload ratings applied under southern and western classifications on portable field-pea hullers found inapplicable and applicable ratings found unreasonable to extent they exceed one and one-half times first class. Applicable l. c. l. ratings in these classifications on other types of pea hullers found not unreasonable. Star Pea Huller Co. v. C., N. O. & T. P. Co., 98 I. C. C. 357.

(oo) Rate on stoves and ranges in l. c. l. from Nashville, Tenn., to Lynchurg, Richmond and Norfolk, Va., and points taking same rates, found not unreasonable but for future unduly prejudicial to Nashville to extent it may exceed the rate contemporaneously maintained on like traffic from Birmingham, Ala., to same destinations. Undue prejudice ordered removed. Allen Mfg. Co. v. N. C. & St. L. Ry., 98 I. C. C. 405.

(pp) Rates and ratings on grain flour, edible flour, and corn meal, in rope-stock paper bags, in c. l. and l. c. l., when carried under tariffs governed by southern classification and in l. c. l., when carried under tariffs governed by western classification, found not unreasonable, but are and for future will be unjustly discriminatory, unduly prejudicial and unduly preferential of shipments in cloth bags, to extent they exceed or may exceed corresponding rates and ratings contemporaneously maintained on same commodities when in cloth bags. Rope Paper Sack Bureau v. A. & V. Ry. Co., 98 I. C. C. 511.

(qq) Fact that, as to all freight generally, conditions affecting safety in transportation are different in c. l. traffic from those in l. c. l. traffic, and that loss and damage claims are relatively more frequent and serious in latter, not overlooked, but record here involved is not convincing that the relative risk to carrier in handling l. c. l. shipments of flour in paper bags would be greater than that incurred in handling l. c. l. shipments of same commodity in cloth bags. Nor should further fact that the l. c. l. movement of flour is important and strongly competitive with the c. l. movement be ignored See. 55 I. C. C. 209. Rope Paper Sack Bureau v. A. & V. Ry. Co, 98 I. C. C. 511, 514.

(rr) Proposed increase in l. c. l. ratings on rags, "having value for purposes other than conversion into fibre," in official classification, found not justified. Under proposed schedules shippers and carriers would be required to determine in first instance, as at present, whether a given lot of material was in fact rags, and following that it would be necessary, before the legal rate could be known, to relate the rags to some standard of value or usefulness which the record here shows is quite indefinite and indeterminate, if it exists at all. Classification of Rags 98 I. C. C. 591.

(ss) Complainant attacked class rates charged on two less carload shipments of automobile crank shaft counterbalance weights on Aug. 12 and Dec. 30, 1922 from Clarinda, Ia., to Seattle, Wash. as unreasonable and illegal. Shipments moved Burlington and G. N.

Charged second class rate of $4.28 under iron or steel automobile parts, n. o. i. b. n. They were a permanent but not essential part of and are adapted solely to automobile motors. At same time western classification provided fourth class on weights, counterbalance, iron or steel, n. o. i. b. n. The specific article being indexed by name as counterbalance weights precluded the application of automobile parts, n. o. i. b. n. The rating on the latter was not applicable to these shipments. Shipments overcharged on basis of fourth class rate. HELD, rate charged illegal, shipment overcharged, reparation awarded. Western Auto Supply Co. v. C. B. & Q. R. R. 102 I. C. C. 117.

(tt) Complainant attacked third class rating on gas stoves and ranges, iron or steel, n. o. i. b. n. as applicable on Radiant-Fire heaters, less carloads as unreasonable. In 83 I. C. C. 261 the Commission found this rating applicable and that for the future fourth class rating, minimum 16,000 pounds applicable on car load shipments to be unreasonable to extent it exceeded fifth class minimum 24,000 pounds. HELD, on consideration, less carload rating not unreasonable and fourth class carloads not unreasonable or otherwise unlawful, original finding reversed. General Gas Light Co. v. A. G. S. Ry. 102 I. C. C. 181

(uu) Respondents proposed to cancel less carload commodity rates on clean rice between various points in southern territory. The issues are identical with 102 I. C. C. 79. The respondents in that case proposed to cancel less carload commodity rates generally on clean rice between points in southern territory. HELD, proposed schedules not justified but without prejudice to the establishments of rates on clean rice in less carloads between the points under consideration not in excess of the sixth class rates approved in Southern Class Rate Investigation. Rice between points in southern territory (2) 102 I. C. C. 317.

(vv) Complainant attacked ratings in the official classification and rates applicable thereunder on steam shovel dipper or bucket parts, less carloads, as unjust and unreasonable to extent they exceed ratings and rates on iron and steel castings, n. o. i. b. n. The articles here considered are cast and forged steel dipper tooth bases and points and casts steel dipper lips or fronts. Iron and steel castings are rated fourth class, and dipper parts Rule 26. The Rule 26 rating was based upon a similar rating in the consolidated classification on coal ore or stone crusher or grinder parts, n. o. i. b. n. These also are made of manganese steel and are of about the same value as the dipper parts concerned. HELD, classification rating and rates attacked not unreasonable, complaint dismissed. Erie Steam Shovel Co. v B. & O. R .R. 104 I. C C. 367.

(ww) In 92 I. C. C. 749 the Commission found the carload ratings in the official, southern, and western classifications, and the rates applicable thereunder on certain brooms manufactured and sold by complainants were not unreasonable, and dismissed the complaint. The carload rating on "brooms other than wire" in the three classifications is second class, minimum 12,000 pounds, subject to rule 34. The type of broom principally shipped under this description is brooms with heads of broom corn. The maximum loading of such brooms in 36 f 6 in cars ranges from 12,000 to 16,000 pounds. From 24,000 to 30,000 pounds of complainants brooms can be loaded in cars of that length. The heads of complainants brooms are made of a mixture of Bahia palm and bassine fibre. HELD, the difference in weight density between complainants brooms and broomcorn brooms is substantial; carload rating of second class, minimum 12,00 pounds, in the official, southern and western classification for future unreasonable to extent it exceeds fourth class, minimum 24,000 pounds, subject to rule 34. Edlund Broom Corp. v. B. & M. R. R. 104 I. C. C. 692.

(xx) Complainant attacked rating and rates on Hughes tool joints, rotary rock drill bits and parts thereof, fishing taps, milling tools, and weight indicators, shipped from Houston, Tex., to interstate destinations as unreasonable, unjustly discriminatory. Rotary tool joints, in less carloads, are carried in the oil well outfits and supplies list of the classification, rated first class in western, second in official and southern. They are shipped with the box and pin screwed together and the address of the consignee shown on the joint and on a label attached to a wire placed through the

joint. The record, although convincing that a rotary tool joint is a much higher class article than an ordinary pipe connection, shows that a rating as high as first class is not justified by the usual classification consideration of value, weight density and susceptibility to damage. ROTARY DRILL BITS. These articles are rated second class in the three classifications. FISHING TAPS AND MILLING TOOLS. They are made of high grade steel and are practically indestructible. Milling tools are used principally for displacing or grinding up metal which falls in the hole. They are made of high grade steel and can not be damaged by handling. They take less car load rating of second class in western and third class in official and southern. At present they take second class in all classifications as oil well fishing tools, n. o. i. b. n WEIGHT INDICATORS. These articles also take second class, less carloads. HELD, rating and rates on rotary tool joints, less carloads unreasonable to extent they exceed second class reparation awarded; second class rating and rates on rotary drill bits, fishing taps, milling tools and weight indicators not unreasonable or otherwise unlawful. Hughes Tool Co. v. A. & R. R. R. 107 I. C. C. 545.

(yy) Revenue of carriers discussed in connection with general investigation instituted on commission's own motion, of interstate class rates and l. c. l. commodity rates within southern territory and between southern and official territories, all-rail and rail-water, and of l. c. l. ratings in exceptions to southern classification. Southern Class Rate Investigation, 100 I. C. C. 513.

(zz) Interstate l. c. l. ratings in exceptions to southern classification, discussed somewhat at length in the investigation instituted by commission on its own motion, for purpose of determining whether such ratings are "unreasonable, or are unduly prejudicial to or unduly preferential of particular localities, persons or descriptions of traffic." Southern Class Rate Investigation, 100 I. C. C. 513.

(3a) In dealing with a scale of class rates moving c. l. as well as l. c. l. traffic in southern territory, there is little evidence here with reference to c. l. costs, but the deduction is warranted that terminal costs are materially lower than in the case of merchandise traffic, and that line-haul costs are also lower. Southern Class Rate Investigation, 100 I. C. C. 513, 643.

(3b) There is nothing of record to justify the maintenance or establishment on l. c. l. traffic of exceptions to southern classification. Southern Class Rate Investigation, 100 I. C. C. 513, 706.

(3c) Upon general investigation, on commission's own motion, of l. c. l. ratings in exceptions to southern classification, FOUND: There is not justification for requiring the maintenance or establishment on l. c. l. traffic of exceptions to southern classification. Southern Class Rate Investigation, 100 I. C. C. 513, 549, 641, 709.

(3d) Class rates as applied to plow irons, parts, and castings, in l. c. l., from Macon, Ga., to Alabama destinations, found not unreasonable, but unduly prejudicial and in violation of long-and-short-haul clause of fourth section of the act to extent they exceed or may exceed lower contemporaneous rates on plow irons, in l. c. l., in effect from Atlanta, Ga., to same destinations. Massey Gin & Machine Works v. C. of G. Ry., 101 I. C. C. 45.

(3e) Third-class and first-class rates applicable on c. l. and l. c. l. shipments of printed matter, n. o. i. b. n., assessed on shipments of paper envelope blanks or paper wrappers, in sheets, printed or lithographed, moving over interstate route from New York, N. Y., to Buffalo, found not unreasonable or otherwise unlawful. The commission has in other cases declined to disturb the classification as applied to particular kinds of printed matter, even where the value was less than that of commodity here considered, and if an exception was made in this instance it would open up an endless field for complaint from manufacturers of all kinds of printed matter. Furthermore, it would be practically impossible to distinguish the different grades of commodities that come under the designation "printed matter" for purpose of fixing specific rates on each. American Lithographing Co. v. L. V. R. R., 101 I. C. C. 100.

(3f) Carload traffic is almost invariably loaded and unloaded by the shipper, whereas on less-than-carload traffic this service is generally performed by the carrier, which adds to the cost of

handling such traffic. Class Rates via I. P. S. Co., 101 I. C. C. 189, 193.

(3g) Rates on grain and products and cottonseed meal and hulls, l. c. l. from Natchez to points in Louisiana west of the Mississippi River found unreasonably and unduly prejudicial to Natchez and shippers therefrom and unduly preferential of points in Louisiana west of the Mississippi River and shippers therefrom. Reasonable rates prescribed. Natchez Frt. & Traffic Bureau v. M. P., 101 I. C. C. 476.

(3h) The difference in l. c. l. rates on grain and grain products and cotton seed meal and hulls east and west of the Mississippi River are due in parts to difference between two divergent class-rate structures, differences between western and southern classification ratings and rules, transportation and traffic conditions, relative financial strength of principal carriers serving the two territories, and differences between rates prescribed in Meridan Traffic Bureau. 60 I. C. C. 5, and other cases. Natchez Frt. & Traffic Bureau v. M. P., 101 I. C. C. 476, 481.

(3i) There are a number of expenses incident to the handling of l. c. l. freight which are not incurred on c. l. shipments, such as handling, stowage, loading, policing, and checking at railroad warehouses or freight stations. Claims for loss are more numerous and more clerical work is entailed on l. c. l. than on c. l. shipments. Natchez Frt. & Traffic Bureau v. M. P., 101 I. C. C. 476, 484.

(3ia) Proposal to cancel l. c. l. commodity rates on clean rice from, to, and between points in southern territory, designed primarily for purpose of bringing about uniformity and to remove discriminations, leaving in effect higher class rates, found not justified. Rates on basis of those approved in Southern Class Rate Investigation, 100 I. C. C. 513, approved. Rice between Points in Southern Territory, 102 I. C. C. 79.

(3ib) Proposal of carriers to establish l. c. l. ratings on radio sets, and on talking machines and radio sets combined, of one and one-half times first class in the official and western classifications, and double first class in the southern classification; a uniform c. l. rating on both articles of second class minimum 20,000 pounds; to increase the rating on c. l. shipments of radio sets from third to second class with a reduction in the minimum; and to continue the rating of second class, but increase the minimum on c. l. shipments of talking machines and radio sets combined, found justified, except as to c. l. ratings proposed on talking machines and radio sets combined, and to extent that l. c. l. ratings proposed in southern classification exceed one and one-half times first class. Classification of Radio Sets, 102 I. C. C. 140.

(3ic) Proposed cancellation of exceptions to southern classification, under which certain commodities l. c. l. moving water-and-rail from north Atlantic ports to Lynchburg and other Virginia points take ratings one class lower than those provided in southern classification, and restoration of such ratings to the full southern classification basis applying all-rail, found not justified. Respondents offered little justification other than a statement that exceptions were erroneously published, no evidence concerning reasonableness of the rates proposed being adduced, or justification for fourth-section departures which would result thereunder offered. Moreover, a considerable volume of business has developed under the present rates which have been in effect approximately two years. Exceptions to Southern Classification, 102 I. C. C. 205.

(3id) Following 102 I. C. C. 79 in which the commission quoted its statement in Southern Class Rate Investigation, 100 I. C. C. 513, that with a reasonable level of class rates, there would appear to be little if any justification for requiring l. c. l. commodity rates in southern territory, proposed cancellation of l. c. l. commodity rates on clean rice between points in southern territory, which would result in increases, found not justified. Rice between Points in Southern Territory, 102 I. C. C. 2, 317.

(3j) Complainant attacked official classification ratings on less carloads of work boards, bar or counter, and on carload and less carloads of soda fountain counter interiors and soda fountain counters when shipped in the same package with interiors as unreasonable and unduly preferential of artificially refrigerated ice cream cabinets. The ratings sought are first class, in less carloads and third class carloads. These are the present ratings in southern and western

classifications. Defendants are correct in urging that the actual loading possibilities rather than the mathematical weight density should be considered in fixing carload ratings for light and bulky articles. On the other hand, limitations on loading, if peculiar to carload shipments, are not properly a factor in fixing less car load ratings. The evidence here shows that only two rows of fountains can ordinarily be loaded length wise in a car, and that the fountains can not well be top loaded, but it nevertheless appears practicable in loading merchandise cars with less carload freight, to place other packages alongside and on top of the fountains if the carriers desire to use this car space. HELD, less carload ratings unreasonable to extent they exceed first class, but carload rating not unreasonable or otherwise unlawful. National Commercial Fixture Mfrs. Asso. v. A. A. R. R., 109 I. C. C. 479.

(3k) Complainant attacked class rate charged on a less carload of iron and wood settees, knocked down, in bundles, shipped on July 25, 1922 from Louisville, Ky., to Warm Springs, Mont., as unreasonable. Shipment moved Big Four to Kankakee, Ill., I. C., to Chicago, Northwestern to Wyoming, Minn., C. St. P. M. & O., to Minnesota Transfer, Minn., N. P., beyond, charged $4.97, refund being made to first class rate of $4.575. When the shipment moved settees, iron or steel, or iron or steel with wooden slats, k. d., wrapped in burlap or paper or in boxes or crates were rated second class in less carloads in western classification. It was further provided that when packing requirements were not fully complied with a rating one class higher would be applied. As the shipment herein considered was unwrapped it became subject to the first class rating. The requirement was removed effective March 22, 1923. HELD, from the evidence of record it does not appear that wrapping of the articles herein considered would have served any useful purpose. In fact, wrapping in paper would probably have made them less easy to handle. HELD, rate attacked unreasonable to extent it exceeded $3.945 reparation awarded. Dow Co. v. C. C. C. & St. L. Ry., 112 I. C. C. 320.

ALL OTHER CITATIONS

Sweet Dreams Co. v. L. & N. R. R. Co., 88 I. C. C. 33; Rates to Gray's Harbor and Willapa Bay Points, 88 I. C. C. 512.

§7 Mixed carloads.

See Class Rates §2 (7n) (7r); Classification §16 (cc), §16½; Commodity Rates §5 (ee); Express Companies §16; Live Stock Shipments (p); Minimums §6, §7 (hi); Mixed Carloads; Reasonableness of Rates §28 (3x).

(a) The term "carload" ordinarily connotes a shipment occupying a car, made on one day, by one shipper, for delivery to one consignee at one destination. See rule 14 of the consolidated classification. Mississippi Railroad Commission v. A. & V. Ry. Co., 89 I. C. C. 47, 52.

(b) Rates on mixed carloads of cottonseed meal and hulls from Tallulah, La., to Vicksburg, Miss., found unreasonable as compared with rates on cottonseed meal in mixed carloads with cottonseed cake, meal flakes, hull ashes, cold-pressed cottonseed, and cotton-bur ashes, and to extent they exceeded distance scale of rates prescribed in Memphis-Southwestern Investigation, 77 I. C. C. 473, on mixed shipments of cottonseed meal and hulls between other points in same general territory. Reparation awarded. Tallulah Cotton Oil Co., v. V., S. & P. Ry. Co., 89 I. C. C. 151.

(c) Respondents proposed to restrict the commodity rates on sash, in mixed carloads with common unglazed doors and millwork, from Chicago and Rock Island, Ill., Clinton, Davenport, Dubuque and Muscatine, Iowa and Milwaukee, Wis., to eastern destinations, so as not to apply on glazed sash. In 78 I. C. C. 495 the Commission found rates on sash and doors and other items of millwork from Illinois, Iowa and Wisconsin to eastern destinations unreasonable and unduly prejudicial, and required the carriers to establish rates 125% of those applicable on lumber. It is now proposed to amend the descriptions by inserting after the word "sash" the limitation "common unglazed" thus restricting the rates so as not to apply on mixed shipments including glazed sash, leaving the fifth class rate to apply. Increases range from 7.5 to 13.5c. The fair interpretation of the order would require defendants therein to establish on doors common unglazed and sash, set up or knocked down, the rates therein prescribed, and this was the interpretation placed upon the order by respondents when

the rates were first established. Nowhere in the report did the Commission refer to common unglazed sash. HELD, suspended schedules not justified. Glazed sash to trunk line and New England territories, 91 I. C. C. 731.

(d) Respondents proposed to eliminate wire, nails, and staples from the list of iron and steel articles permitted to be shipped in mixed carloads at commodity rates from St. Louis, Mo., other defined territories, and Shreveport, La., to Texas, Oklahoma, and New Mexico points, and between points in Texas on interstate traffic. Wire, nails and staples were included in the list of iron and steel articles to Texas points from defined territories effective June 16, 1922, and from Shreveport March 1, 1924. This mixture was established to adjust the through rates in many instances to meet combinations on Texas border points, to secure to the Texas carriers some of the business that was moving from the east principally by water through the Gulf ports, and generally to stimulate building and industry. Notes are contained in the proposed schedules: "Five hundred (500) pounds of nails and iron or steel washers may be included with shipments of articles making reference to this note." The proposed elimination of wire, nails and staples from the commodity items in issue would result in materially increased charges on shipments of iron and steel articles containing more than 500 pounds of wire, nails and staples. The facts upon which respondent principally rely to justify the proposed schedules may or may not lead to uniformity of tariff provisions in the Southwest. But irrespective of this representation increased rates can not be justified solely upon such a showing. Pictures to meet the demands of trade may to a great extent actuate the carriers in initiating tariffs, but in these proceedings it is shown that the proposed schedules would be injurious to a large number of shippers and dealers without the necessary justification for the increased rates and charges that would result on shipments of the mixtures now provided in the tariffs. Numerous shippers or dealers, whose interests are not to be considered subordinate to others, can and do avail themselves of the mixtures now in effect and the desire of certain dealers to bring about purchases from them is no warrant for increasing the transportation burden to be borne by the consumer. HELD, schedules not justified. Iron and steel articles to southwest, 93 I. C. C. 31.

(e) Complainant attacked rates charged on mixed carload and less carload shipments of furniture polish in glass, boxed, and in metal cans, boxed, mops and mop handles, in bundles, from Chicago, Ill., to Arizona, British Columbia, California, Colorado, Idaho, Mexico, Montana, New Mexico, Nevada, Oregon, Utah, Washington and Wyoming. The Commission has prescribed the measure of reasonableness in the rates to the coast during the periods from August 4, 1914 to August 3, 1916; Jan. 1, 1918 to Feb. 29, 1920; and Jan. 23, 1922 to the present time. Upon this record the Commission does not feel warranted in entering an order for the future as to shipments in mixed carloads, but defendants will be expected to establish a rule providing that such shipments will be charged on the basis of the highest rate and highest minimum weight applicable on straight carloads of any of the articles in the mixture. The rule should also provide that any mop handles included in the shipments will be subject to less carload rates. HELD, rates attacked unreasonable, reparation awarded. O-SO-EZY Products Co. v. Director General, 96 I. C. C. 220.

(f) Fifth-class rate charged on two carloads of dump cars found applicable and not unreasonable as compared with lower sixth-class rate on contractors' outfits, in mixed carloads. Sixth-class item covering mixed carloads of miscellaneous equipment was provided as an approximation for convenience of shipper and carrier, in order to avoid separate weighing and rating of various articles of equipment shipped, and mixing requirement is a convenient and reasonable test for application of item and to prevent its abuse. Complainant is not a contractor moving equipment from job to job, and no reason appears why straight carloads of designated articles under mixing provision should take sixth-class rates. Johnson-Porter Clay Co. v. C., B. & Q. R. R. Co., 91 I. C. C. 71.

(g) Distinction dependent on whether articles are nested or not nested for shipment would not be practicable in establishing c. l. ratings on aluminum articles, as nested and not-nested articles are usually shipped in mixed car-

loads. Nor can a distinction be based on thickness of the articles, because different parts of same articles are frequently made of metal of different gauges. Aluminum Goods Mfg. Co. v. A. & V. Ry., 92 I. C. C. 346, 351.

(h) Proposed elimination of wire, nails and staples from list of iron and steel articles permitted to be shipped in mixed carloads, for purpose of making tariffs in southwestern territory uniform, found not justified. Respondents' endeavor is prompted by requests of parties who desire an adjustment that will force movements through Texas jobbers. Increased rates can not be justified solely upon showing of desire for uniformity in tariff provisions. Moreover, shippers or dealers, whose interests are not to be considered subordinate to others, avail themselves of mixtures now in effect, and desire of other dealers to bring about purchase from them is no warrant for increasing transportation burden to be borne by consumers. Iron and Steel Articles to Southwest, 93 I. C. C. 31.

(i) Rates on grapefruit in mixed carloads with oranges, from Jacksonville to Montana points, found not unreasonable. In the Lindsay & Co. cases, 25 I. C. C. 424 and 33 I. C. C. 150, reasonable rates on oranges and grapefruit were prescribed which if subjected to general advances and reductions would result in rates materially higher than present rates. Complainant contended for lower rate established by director general when a group rate applicable on commodities in general from north Atlantic coast was extended to include Florida. But no special thought was given to reasonableness of the rate on oranges from Florida when that basis was established and it can not be accepted as a reasonable basis on grapefruit and oranges from Jacksonville. Devine & Asselstine v. A. C. L., 93 I. C. C. 174.

(j) Charges on second hand carbon-black houses, iron or steel, k. d., second-hand iron and steel articles and second-hand machinery, in mixed carloads, from Wilsonburg, W. Va., to Guthrie and Swartz, La., based upon the highest c. l. class rate applicable on the various articles, found not unreasonable as compared with rates on iron and steel articles from and to same points. Ton-mile earnings under rates assailed yield less than those under rates found reasonable on similar shipments in 73 I. C. C. 123; moreover, record does not show that there has been or will be a substantial movement of any articles included in shipment between points here involved. Peerless Carbon Black Co. v. A. & L. M. Ry., 95 I. C. C. 696.

(k) Combination rates on mixed carloads of fruit and vegetables from Los Angeles, Calif., to Globe, Ariz., found inapplicable inasmuch as lower combination contemporaneously applied over route of movement. Tariff publishing one factor of the lower combination did not publish rates on vegetables, but provided for application of highest rate and minimum to mixed carloads of fruits and vegetables. Fact that rates on vegetables were named in another tariff did not operate to make the mixture rule inapplicable. Refund of overcharges required. Mauk Produce Co. v. Director General, 95 I. C. C. 728.

(l) Applicable rate on mixed shipment of various canned goods, including chili sauce, found unreasonable to extent it exceeded lower rate on all commodities included in the shipment, in straight or mixed carloads, except chili sauce, that commodity having been added to list taking the lower rate subsequent to movement. Waiver of undercharges authorized. Oakes & Co. v. O. S. L., 96 I. C. C. 95.

(m) Following Channel Chemical Co., 81 I. C. C. 407, rates on mixed carload shipments of furniture polish, in glass, boxed, and in metal cans, boxed, and mops and mop handles, in bundles, from Chicago to intermediate points in transcontinental territory, since June 30, 1917, found unreasonable to extent they exceeded charges based upon the highest rate and the highest minimum weight applicable to straight carloads of any articles in the car, plus charges for mop handles, in bundles, on less-than-carload basis. Reparation awarded. O-So-Ezy Products Co. v. Director General, 96 I. C. C. 220.

(n) Following 43 I. C. C. 291, mixed carload rule, made in accordance with findings in Pocahontas Farmers Asso., 19 I. C. C. 514, governing rates and minimum weights on mixed carloads of fruit and vegetables from producing points in Mississippi to interstate destinations, found not unreasonable. Mississippi R. R. Commission v. A. & R. R. R. Co. 98 I. C. C. 55, 66.

(o) Rates on shingles, in mixed carloads with lumber shipped from Pacific

coast points and Stoltz Mill, B. C., to Toledo, Ohio, and later reconsigned to other destinations, found not unreasonable as compared with lower rate subsequently established over route of movement. Mauk Lumber Co. v. Director General, 98 I. C. C. 599.

(p) Rate on a mixed carload of beets, carrots, turnips, and cabbage, from San Fernando, Calif., to St. Paul, Minn., applicable on fresh or green vegetables, found unreasonable to extent it exceeded lower contemporaneous rate on beets, carrots, and turnips, in mixed carloads, and on cabbage in straight carloads, which latter rate was subsequently reduced and made applicable on beets, carrots, turnips, in bags, and cabbage in crates, in mixed carloads. In view of the conclusion, it became unnecessary to determine what rate applied. Reparation awarded. August Ammon v. S. P. Co., 101 I. C. C. 37.

(q) Rates on wrapping paper, in straight and mixed carloads with toilet paper and paper towels, from Wisconsin and Michigan points to Wichita, Kans., found unreasonable to extent they exceeded basis prescribed in the Paper case, 66 I. C. C. 571. Reparation awarded. Wichita Chamber of Commerce v. A., T. & S. F., 101 I. C. C. 55.

(r) Rates on handle material, not further finished than shaved or cut to shape, in straight carloads, or in mixed carloads with handle material not further finished than sawed square, rived or split from bolts, found unreasonable to extent they exceeded rates contemporaneously in effect on lumber manufactured from the same kind of wood. Reasonable basis of rates prescribed and reparation awarded. Chicago Heights Mfrs. Asso. v. B. & O. C. T. R. R., 101 I. C. C. 675.

(s) Contention that fifth-class rate assessed on mixed carload shipment of billets and handle material shaved or cut to shape, not further finished, from Marengo, Ind., to Chicago, was not unreasonable because not out of line with fifth-class rates for comparable distances from and to numerous points in C. F. A. territory, not sustained. It is not shown that fifth class rates were or are the general or usual basis on this traffic between points in this territory. Moreover, distance over route of movement is identical with that over another route in connection with which commodity rates were in effect at time of movement, and these lower commodity rates were subsequently established over route of movement. Chicago Heights Mfrs. Asso. v. B. & O. C. T. R. R., 101 I. C. C. 675, 681.

(sa) Where a radio set is designed for the reception of tubes or a loud speaker, or both, and those parts, or either of them, are shipped with the set, whether installed or separately packed, the whole constitutes a single electrical appliance, and must be rated as such. Classification of Radio Sets, 102 I. C. C. 140, 141.

(sb) Upon further hearing, minimum-weight rule applicable on mixed carload shipments of cottonseed meal and cottonseed hulls between Memphis and points in Arkansas found unreasonable for future. Reasonable rule prescribed and findings in 77 I. C. C. 473 and 98 I. C. C. 183 modified. Memphis-Southwestern Investigation, 102 I. C. C. 227.

(sc) Rates on paper and paper articles, in mixed carloads, from New Orleans to Dallas found unreasonable to extent they exceeded lower rates subsequently established. An analysis of revenues per car-mile under rates assailed shows such rates to be excessive. Reparation awarded. Palmer & Co. v. H. & T. C. R. R., 102 I. C. C. 372.

(t) Complainant attacked fourth class rate charged on five mixed cars of tin cans and tin pails shipped in Jan. Feb. and May 1923 from Norwood, O., to Nashville, Tenn., as unreasonable and unlawful. In its statement of facts complainant offered no evidence as to unreasonableness under section 1. Charged 66.5c prior to April 19, 1923 and 66c thereafter. Fifth class was applicable on tin cans subject to rule 34 and fourth class on tin pails or mixed with tin cans. HELD, rates charged applicable, complaint dismissed. Neuhoff Packing Co. v. L. & N. Ry., 112 I. C. C. 223.

Swift & Co. v. T. & P. Ry. Co., 88 I.. C. C. 610.

§9. Risk.

See Evidence §52.

(a) In establishing reasonable rates value of commodity to be rated and its liability to damage incident to trans-

portation must be considered. Jackson Traffic Bureau v. B. & O., 93 I. C. C. 342, 343.

§10. Use or process of making commodity.

See Reasonableness of Rates §22, §23; Restricted Rates.

(a) When a commodity is not distinctly within some common designation, its use and the ratings of competitive products are important factors with its transportation characteristics in determination of what rating is appropriate for it. Procter & Gamble Co., 9 I. C. C. 440, 482; Drake Marble & Tile Co., 37 I. C. C. 512. Vitrolite Co. v. A. T. & S. F. Ry. Co., 89 I. C. C. 371.

(b) The use of a commodity is a basis upon which the Commission has refused to sanction different rates, rather than pointing out any substantial difference in the character, value, and transportation characteristics of the compared commodities. Musto Sons-Keenan Co. v. S. P. Co., 93 I. C. C. 447, 448.

(c) The use of an article is a basis upon which the Commission has repeatedly refused to sanction different rates. Pioneer Pearl Button Co. v. St. L. S. F. Ry., 93 I. C. C. 599, 601.

(d) There is a clear distinction between, on the one hand, making different rates for application between the same points on the same commodity conditioned solely upon the use to which the commodity is to be put, a practice which the Commission has frequently condemned, and, on the other hand, making different rates on different commodities, and taking into consideration, along with other factors, the general use to which the respective commodities are put for the purpose of determining the applicable rate. Lime from Eastern trunk line points, 93 I. C. C. 617, 630.

(e) "Naphtha" is a generic term, and embraces the lighter or more volatile part of crude oil down to, and sometimes including kerosene, and takes in all the elements of finished gasoline; the words "naphtha" and "gasoline" being often used interchangeably to include the unfinished product of which the gasoline of commerce is made. U. S. v. Gulf Refining Co., 45 Sup. Ct. 597.

(fg) The commission has repeatedly refused to sanction different rates based upon use to which a commodity is put. Lockport Paper Co., 87 I. C. C. 347, 349. Musto Sons-Keenan Co. v. S. P. Co., 93 I. C. C. 447, 448.

(h) Proposed increase in l. c. l. ratings on rags, "having value for purposes other than conversion into fibre," in official classification found not justified Under proposed schedules shippers and carriers would be required to determine in first instance, as at present, whether a given lot of material was in fact rags, and following that it would be necessary, before the legal rate could be known, to relate the rags to some standard of value or usefulness which the record here shows is quite indefinite and indeterminate, if it exists at all. Classification of Rags, 98 I. C. C. 591.

(ha) Laundry: First-class rating on, in official express classification, found not unreasonable, discriminatory, or unduly prejudicial. If second-class rates, pound basis, as sought by complainant, were prescribed, it would be difficult to deny like classification and rates to various articles comprised in the laundry package or hamper when shipped by express from manufacturer to retailer, for ratings and rates can not be made to depend upon use to which an article is put. Thus the simple grouping of commodities moving by express into two general divisions would be disrupted.. Moreover, no similarity in transportation conditions is shown with respect to commodities used for comparisons with rates on laundry, and none of them is shown to compete with laundry. Laundry Owners' Nat'l Asso. v. Am. Ry. Ex. Co., 102 I. C. C. 36.

(i) Ratings and rates can not be made to depend upon the use to which an article is put. Laundry Owners National Asso. v. Am. Ry. Ex. Co. 102 I. C. C. 36, 39.

(j) It is the nature of the article shipped not the price at which it is sold or the use to which it is put, which determines whether the rate on scrap iron applies. Simon v. Southern Ry. 102 I. C. C. 325, 326.

(k) Rates may not be based upon the use to which a commodity is put. Brass, bronze and copper articles 109 I. C. C. 351, 357.

ALL OTHER CITATIONS

Lehigh Lime Co. v. A. C. & Y. Ry. Co., 85 I. C. C. 341; Manglesdorf Co. v. A. & R. R. Co., 88 I. C. C. 120; Armour & Co. v. Director General, as Agent, 88 I. C. C. 569; Hollingshead Co. v. A. T. & S. F. Ry. Co., 88 I. C. C. 191; Cutler-Hammer Mfg. Co. v. Director General, as Agent, 88 I. C. C. 600.

§11. Value.

See Advanced Rates §18 (5); Evidence §61; Reasonableness of Rates §38.

(a) Value constitutes only one of a number of elements entering into a proper classification. United States Farm Sales Company v. A. T. & S. F. Ry., 92 I. C. C. 19, 22.

(b) Differences in value are frequently disregarded in rate making where the articles are essentially of the same nature and highly competitive. Chloride of Zinc to Texarkana, 92 I. C. C. 568, 572.

(c) In the establishment of freight classifications, involving as it does the grouping of all commodities into a limited number of classes, the principle that the unfinished should be rated lower than the finished article must frequently yield to other considerations. Parlor Frame Mfrs. Asso. v. A. A. R. R., 93 I. C. C. 506, 510.

(d) Complainant attacked first class rate charged on artificial silk, carloads, from Roanoke, Va., to Marcus Hook, Pa., as unjust and unreasonable. The commodity rate sought is the same as that applicable on artificial silk waste, carloads, from Roanoke to Marcus Hook, when released at a value of 10c per pound. The Commission thinks it clear that there is no justification for requiring the same rate on artificial silks as on artificial silk waste. Because the value of the shipments is large, and it is desired to reduce to a minimum the danger of loss, damage or theft, the Virginian traces all of complainants shipments by wire while they are on that line, and delivery from Roanoke to Marcus Hook usually is accomplished in 72 hours. Artificial silk is a high grade article and the freight charges bear a small ration of its value. The present rates are not shown to discourage the movement or to impose an undue burden on the traffic, which is of a special character, between two of complainants plants. HELD, rates attacked not unreasonable, complaint dismissed. Viscose Company v. Pennsylvania R. R., 98 I. C. C. 97.

(e) If in the establishment of rates on classifications differences in value of the respective commodities carried were reflected in rate increments only sufficient to cover the cost of insurance, one of two results would of necessity follow. The rates as a whole would be such that it would be impossible for the carriers to earn what they reasonably might, and in fact what they necessarily should in order to perform their services; or that the rates on many low grade commodities would have to be such that they would be prohibitory of any movement. Classification of canned goods, 98 I. C. C. 166, 172.

(f) Rates on crude oil should be relatively lower than on refined oil. Barnett Oil & Gas Co. v. Director General, 93 I. C. C. 85, 87.

(g) The fact that the rates on the products of livestock are higher, even materially higher, than the rates on livestock does not warrant a finding that the rates on the products are unreasonable. Ogden Packing & Provision Co. v. D. & R. G. R. R., 101 I. C. C. 258, 269.

(h) Handle material not further finished than shaved or cut to shape is not in any more advanced stage of manufacture than handle material not further finished than turned to shape, the only difference between the two being that one is produced by hand and the other by machinery. Chicago Heights Mfrs. Asso. v. B. & O. C. T. R. R., 101 I. C. C. 675, 677.

III. CLASSIFICATION REGULATIONS.

§11¾. In General.

(a) Proposed elimination of requirement that description of contents be shown on outside of fiber boxes in official classification territory, together with penalty charge in connection therewith, found justified. The requirement is an inducement to pilferage and its elimination is designed for purpose of reducing loss and damage claims. Penalty Charge on Shipments in Fiber Boxes, 95 I. C. C. 528.

§12¼. Description.

(a) Absorption-process gasoline of a

vapor pressure at 100 degrees F. not exceeding 10 pounds per square inch must be described in tariffs as gasoline or casing-head gasoline. Standard Oil Co. v. Director General, as Agent, 89 I. C. C. 7, 9.

(b) Respondents proposed to eliminate the classification rule requiring that fiberboard, pulpboard, and double faced corrugated strawboard boxes, show description of contents on shipments between points in official classification territory. HELD, schedules justified. Penalty charge on shipments in fiber boxes, 95 I. C. C. 528.

(c) Failure of tariffs to impose upon initial carrier the duty of directing shipper's attention to tariff requirement that a certificate be made on bill of lading that packages used conform to packing requirements and specifications, found not unreasonable. Complainant here was fully advised of the tariff provision and while containers used fully complied with tariff requirements, through oversight its shipping clerk neglected to stamp the necessary certificate so stating on the bill of lading, resulting in the collection of penalty charges. American Licorice Co. v. C., M. & St. P., 95 I. C. C. 525.

(d) Proposed elimination of requirement that description of contents be shown on outside of fiber boxes in official classification territory, together with penalty charge in connection therewith, found justified. The requirement is an inducement to pilferage and its elimination is designed for purpose of reducing loss and damage claims. Penalty Charge on Shipments in Fiber Boxes, 95 I. C. C. 528.

§12⅞. Empty Equipment and Returned Containers.

See Cars and Car Supply §31; Reduced Rates §5.

(a) Respondents proposed by restricting the application of exceptions to the western classification to increase the rating on acid carboys, returned empty, from points in western trunk line territory west of the Missouri river to points in this territory east thereof. Acid carboys, returned empty, between points in western trunk line territory on and west of the Missouri river and from points west of that river to points east thereof in said territory, are rated one half fourth class, any quantity, under exceptions to the western classification. The proposed schedules would increase the rating from points west of the Missouri river to points east thereof to fourth class, which is the rating applicable from points on the Missouri river to Chicago, Ill., and other points east of the Mississippi river; between points east of the Mississippi river; and from points in that territory to points west of the Missouri river. The proposed rating does not appear to be unreasonable and it is not shown that it would result in any undue prejudice or preference. HELD, proposed schedules justified. Carboys, returned empty, in western territory, 93 I. C. C. 672.

§13. Loading and unloading.

See Facilities and Privileges §10; Loading and Unloading; Transportation §10.

(a) Upon arrival at Nashville, Tenn., cars were placed for unloading. Some were forwarded after being partly unloaded and reloaded with identical materials and loading of others were charged by substitution of commodities from complainant's stock. Separate bills covering inbound and outbound movements were rendered and paid. HELD: Reconsignment charges found inapplicable since shipments plainly fell within definition of reshipments as defined in governing tariffs. Chestnutt Lumber Co. v. Director General, as Agent, 89 I. C. C. 236.

(b) The stage of manufacture of an article is important as a guide in the classification only in so far as it indicates the transportation characteristics of the article, such as its loading qualities, value and transportation. Vitrolite Company v. A. T. & S. F. Ry., 89 I. C. C. 367, 372.

(c) Complainant attacked classification rating on bahia and bassine fiber brooms, carloads, from Burlington, Vt., to points in official, southern and western classifications as unreasonable. Brooms, other than wire, are rated second class in carloads, minimum 12,000 pounds, subject to rule 34, in all territories. The evidence does not establish that brooms made by other manufacturers out of materials other than broom corn will load as heavily as 24,000 pounds. It is well settled that the absence of differentiating transportation conditions competitive articles such as these should be accorded a parity in

rates and ratings. Clearly if experience showed that most shippers of this commodity were able to and did load more than the prescribed carload minimum, a rating compatible with the higher loading would be proper. But complainants are the only shippers who would profit by an increased minimum. They alone would be in position to ship in amounts of 24,000 pounds or more, and their competitors, due to commercial necessity, would be compelled to ship in smaller quantities and pay for the deficiency in weight. HELD, rating attacked not unreasonable, complaint dismissed. Edlund Broom Corp. v. B. & M. R. R., 92 I. C. C. 749.

(d) Variations in weight density are of considerably less importance in fixing classification ratings for articles as heavy as those here under consideration than they are when light and bulky articles are under consideration. Classification of Canned Goods, 98 I. C. C. 166 173.

§14. Marking and addressing.

See Supra §11¾ (a).

(a) Complainant sought insertion in the classification of the name "Vitrolite" in order that the material may be so designated in billing. This term is a registered trade-mark, which no other manufacturer may use, even though his product be substantially identical, and since each manufacturer has a different name for his commodity, the inadvisibility of requiring this to be done is apparent. Vitrolite Co. v. A., T. & S. F. Ry. Co., 89 I. C. C. 367, 369.

(b) Proposed elimination of requirement that description of contents be shown on outside of fiber boxes in official classification territory, together with penalty charge in connection therewith, found justified. The requirement is an inducement to pilferage and its elimination is designed for purpose of reducing loss and damage claims. Penalty Charge on Shipments in Fiber Boxes, 95 I. C. C. 528.

§15. Minimum charge and weight.

See Passenger Fares and Facilities §6½; State Rates and Regulations (g).

(a) Complainant attacked ratings in western classification on aluminum articles, n. o. i. b. n., not decorated, less first class, not nested, and first class nested, as unreasonable, unjustly discriminatory, unduly prejudicial and preferential of tinned, galvanized, enameled, and plain sheet iron or sheet steel ware. Defendants suggest one and one quarter times first class as appropriate on articles not nested. HELD, rating unreasonable to extent it exceeded one and one quarter first class. The carload minimum proposed of 14,000 pounds by complainant is about 2,000 pounds greater than the average of their carload shipments in standard 36 foot cars. The present minimum of 20,000 pounds is admittedly reasonable for interveners product, but is so far in excess of the highest weight to which complainants are able to load that it is manifestly too high for the lighter ware. It would be unfair to the intervener to reduce the minimum to a figure reflecting the actual loadings of complainants shipments with a compensating increase in the carload rating. HELD, present carload ratings not unreasonable if the existing minimum of 20,000 pounds is retained, and second class in all three classifications would be reasonable in connection with a minimum of 12,000 pounds. When articles which are identical except for a difference in density can practicably be covered by distinguishing tariff descriptions, the carriers commonly accord lower ratings with higher minima to the form of the article which loads more heavily. HELD, present carload ratings, minimum 20,000 pounds result in freight charges that are unjust and unreasonable, and defendants should establish for alternative application a carload rating of second class, minimum 12,000 pounds, subject to rule 34, making the latter rating applicable when it would result in lower charges. Aluminum Goods Mfg. Co., v. A. & V. Ry., 92 I. C. C. 346.

(b) Complainant attacked charges collected on 60 shipments of fresh meat and packing house products, in peddler cars, between August 29, 1920 and Dec. 13, 1921, from East St. Louis, Ill., to points on the I. C., Effingham to Bloomfield, Ind., as unreasonable. Cars moved through Decatur and Newton, Ill., to Bloomfield, 254 miles where bulk was broken, then back hauled over the same route to Newton and thence to Effingham, consignments being delivered at the designated intermediate points. Charged less carload rates on the actual

weight of each consignment to the respective destinations, plus charge based upon the difference between the combined weight in each car and the minimum of 15,000 pounds at the third class rate of 56c to Bloomfield, resulting in a minimum charge of $84 on each car. On Dec. 14, 1921 defendant revised its rule respecting the rate and minimum weight applicable on fresh meat and packing house products in peddler cars to provide that the minimum charge per car shall not be less than the carload rate on dressed beef, minimum 20,000 pounds from original point of shipment to final destination of the car. The minimum charge attacked exceeded that applying generally throughout central territory, particularly over the lines operating from East St. Louis, and that the minimum charge subsequently established was the same as that generally in effect in central territory. HELD, minimum charge attacked unreasonable to extent it exceeded that subsequently established. Armour & Co. v. I. C. R. R., 96 I. C. C. 678.

(c) In 87 I. C. C. 1 the Commission found the minimum charge on lumber, carloads, from East San Pedro, Calif., to Wilmington, Calif., during federal control as not unreasonable. Complainant shipped about 704 cars of lumber from East San Pedro to its yard at Wilmington over L. A. & S. L., rate charged 10c per ton, minimum $15 per car. Reparation is sought to basis of 1.5c per 100 pounds, minimum $6.50 per car, effective May 26, 1919. Practically no evidence was offered by complainant as to the cost of operation of trains from East San Pedro to Wilmington. HELD, rate attacked not unreasonable, complaint dismissed. Consolidated Lumber Co. v. Director General 101 I. C. C. 284.

(d) Minimum charge of $15 per car, applicable on freight generally collected on intrastate shipments of pine stumps, boughs, limbs, and wood fragments, moving during Federal control, found assessed without tariff authority. Shipments were billed as wood and were used in the extraction of oil, rosin, and turpentine. No specific rates were applicable and while governing classification carried the so-called analogy rule the practically refuse material comprising the shipments finds no analogy in lumber which embraces a prepared, sawed product of the forest. Nor can analogy be found in tariff item on fuel wood since applicable rates thereon were measurable in cords and shipments here in question could not be corded. Charges based upon those applicable on lumber, without regard to minimum charge per car, found reasonable and reparation awarded. National Reduction Corp. v. Director General, 95 I. C. C. 284.

(e) Minimum rules applicable on shipments of asphalt rock from Dougherty, Okla., to Kansas City, Mo.-Kans., found to have been, and for present and future to be, unreasonable to extent of their failure to provide for assessment of charges on actual weight of shipment when car is loaded to full visible capacity. Roudebush v. A., T. & S. F., 96 I. C. C. 319.

(f) Rates on apples, in bulk, in carloads, from the Yakima Valley to various interstate destinations found unreasonable and unduly prejudicial to the extent that such rates exceed the contemporaneous rates from and to the same points on apples in boxes, in carloads. Kloeber v. N. P. Ry. Co., 96 I. C. C. 437.

(g) Rule 29 of the southern and western classifications prescribing a minimum charge for shipments containing bulky articles found applicable to certain types of pea hullers. In readjusting charges the provisions of this rule should be observed. Star Pea Huller Co. v. C., N. O. & T. P. Ry. Co., 98 I. C. C. 357.

(h) Shipments of returned empty fruit boxes from Los Angeles, Calif., to various intrastate destinations, during Federal control, found overcharged to extent that charges assessed exceeded the lowest charges under tariff rules providing that the charge for a car fully loaded must not exceed the charge for same lot of freight if taken as a l. c. l. shipment, subject to a minimum charge per car. Reparation awarded. Klein-Simpson Fruit Co. v. Director General 98 I. C. C. 547.

(i) In 77 I. C. C. 473, the commission prescribed, among other things, reasonable maximum rates designated as table 6 and 3 of Appendix 8 for application, respectively, on cottonseed meal and cotton seed hulls, carloads, between Memphis, Tenn., and Arkansas, and that the rates between Memphis and Arkansas should not exceed for similar distances intrastate rates on like traffic between points within Arkansas by more than the

bridge toll there provided. Between certain points in Oklahoma and Arkansas a sale of rates applies on corn and articles taking the same rates, including cottonseed meal, cake, hulls and mixed feeds, in mixed carloads, subject to actual weight as minimum on cars loaded to full space capacity, or in the case of mixed feed to within 24 inches of the roof at sidewalls, and on cars not so loaded a minimum of 40,000 pounds. The minimum charges per car under the Arkansas rule, while materially lower than under the existing rule, compare favorably with minimum charges resulting from the rules in force in adjacent states and Memphis to Arkansas. HELD, the minimum weight rule applicable on mixed carload shipments included in the original report on cottonseed meal and hulls unreasonable to extent that such rule is in conflict or inconsistent with the following minimum rule, and finding in 98 I. C. C. 183 modified accordingly. Mixed carload shipments of cottonseed meal and cotton seed hulls subject to the carload rate applicable on each commodity and a minimum weight of 30,000 pounds, provided the weight of the cottonseed meal contained in the car does not exceed one-third of the actual aggregate weight in the car. If the total actual weight of the mixture does not equal or exceed 30,000 pounds, the deficiency will be charged for at the rate applicable on cottonseed hulls. Memphis Southwestern Investigation, 102 I. C. C. 227.

(j) Upon further hearing, original report 81 I. C. C. 1, finding that minimum charge of $15 per car established under General Order No. 28 of director general, and assessed on lumber from San Pedro, Calif., to Wilmington, Calif., during Federal control, was not unreasonable as compared with lower minimum charge subsequently established, or as compared with charges for similar movements in immediate vicinity, affirmed. Service rendered was a short road-haul, although a switch engine furnished the power. Subsequent establishment of lower charge can not be taken as an admission that former charge was unreasonable. Nor can lower charges for switching service elsewhere lead to conclusion that this charge was not reasonable for local nonswitching service. Consolidated Lbr. Co. v. Director General, 101 I. C. C. 284.

§15½. Nesting.

(a) Rating of first class, l. c. l., on nested aluminum articles found not unreasonable, discriminatory, or unduly prejudicial as compared with ratings on tinned, galvanized, enameled, and plain sheet-iron or sheet-steel ware. Aluminum ware is much lighter and more valuable than sheet-iron or sheet-steel ware, and properly takes higher ratings. Aluminum Goods Mfg. Co. v. A. & V. Ry., 92 I. C. C. 346.

(b) A distinction dependent on whether articles are nested or not nested for shipment would not be practicable in establishing c. l. ratings on aluminum articles, as nested and not-nested articles are usually shipped in mixed carloads. Nor can a distinction be based on thickness of the articles, because different parts of same articles are frequently made of metal of different gauges. Aluminum Goods Mfg. Co. v. A. & V. Ry., 92 I. C. C. 346, 351.

§16. Packing.

See Class Rates §2 (6d); Classification §5 (e) (g) (cc) (dd), §7 (g), §20 (c); Reasonableness of Rates §2.

(a) Respondents proposed to increase the rating in the official classification on soap, n. o. i. b. n., in pails or tubs, in less carloads, from fourth class to rule 26. Under the general rules of the consolidated classification, freight in drums and other containers named and described can be shipped at the rating applicable on freight in barrels. Rule 40, section 5, provides that iron and steel containers of drum construction and of less than 5 gallons capacity are subject to the classification provisions for cans and pails unless the gross weight is 50 pounds or more. Under these rules, protestant would be entitled to the fourth class rating if the handles, which are an advantage in handling were removed from the pail. HELD, respondents are not warranted in disrupting the long existing parity in less carload rating in the official classification, schedules not justified. Classification of soap, 92 I. C. C. 353.

(b) Complainant attacked charge of 50% assessed in addition to the rate of $1.50 for alleged improper bracing in the packing of two cars of glass water bottles shipped in bulk on Oct. 11 and Nov. 19, 1921 from Fort Smith, Ark., to San Francisco, Calif., as illegal and

unreasonable. Glass bottles are very fragile. The packing and bracing requirements provided in the western classification for shipments of bottles loose or in bulk were decided upon after consultation between representatives of the carriers and manufacturers of glassware. It may be considered as in the nature of a concession to permit the shipment of so fragile an article as a glass bottle without requiring a separate container therefor. If complainant desired the benefit of the rate provided for bottles in crates, on its shipments of bottles, in bulk, it should have complied with the specifications as to the proper packing and bracing. Not having done so, the Commission is not convinced that, considering the character of the shipments, the 50% charge assessed in addition to the rate of $1.50 was unreasonable. HELD, charges attacked applicable and not unreasonable, complaint dismissed. Radiant Glass Co. v. M. P. R. R., 95 I. C. C. 165.

(c) Carriers have a right to insist upon proper packing but they have no right to force the use of expensive containers by imposing upon shipments less substantially packed rates which are materially higher than is warranted by the additional risk assumed when such inferior containers are used. Classification of canned goods, 98 I. C. C. 166, 177.

(d) Complainant attacked class rates charged on two cars of dressed poultry, between Nov. 19 and 26, 1922 from Lander and Wheatland, Wyo., to Omaha, Neb., as unreasonable. Dressed poultry in carloads in barrels or boxes or in barrels with cloth tops, was rated third class in western classification. Complainants shipments were loaded in bulk in straw. There was no specific rating for shipments loaded in that manner. Rule 5 of the classification provided that articles tendered for transportation must be in the form prescribed in the separate descriptions; that articles would not be accepted unless in such condition and so prepared for shipment as to render the transportation thereof reasonably safe and practicable; and that articles when tendered for transportation which did not in all respects conform to these requirements, would be refused shipment. The record is not clear as to whether or not defendants agents at the points of origin were appraised of the manner in which the shipments were loaded, but it seems probable that they were. The rule further provided for higher ratings on articles which came into the carriers possession in containers of a kind the use of which was not specified in the description of the article; and provided specifically that when articles for which the classification description specified barrels or boxes were shipped loose the rating would be three classes higher. Under this rule the applicable rates, were one and one fourth times first class or $3.75 from Lander and $3.04 from Wheatland. Complainants shipments were the first carload movements of dressed turkeys from Wyoming. So far as the record shows the carriers nowhere maintain a lower basis of rates on dressed poultry shipped in bulk in straw than that applied to complainants shipments. Although these shipments were carried safely, the Commission is not convinced upon the record that the method of loading employed is as safe under all conditions as is the use of boxes or barrels specified in the classification. Lower rates were provided, of which complainant could have availed themselves if the shipments had been packed in accordance with the provisions of the classification. HELD, rates attacked not unreasonable, complaint dismissed. Omaha Cold Storage Co. v. C. & N. W. Ry., 98 I. C. C. 437.

(e) Complainant attacked class rates charged on four cars of bed sacks from Atlanta, Ga., to New York on or about May 2, 1922 as unjust, unreasonable, unduly prejudicial and in excess of applicable tariff rates. Shipments were of secondhand bed sacks sold by the Army as surplusage, value new, 72c but sold to complainant at 17.25c. The classification then in effect named an any quantity rating of first class on bags, bedding, blanket or clothing, in boxes. A rule of the classification prescribed that when commodities required to be boxed were received for transportation in machine pressed bales, the rating next higher than that provided for the article when in boxes would be applied. These socalled bed sacks, otherwise known as bed ticks, are not bedding, blanket or clothing bags, and can not be regarded as bags at all. They are simply cloth articles for which specific provision was not made either in the classification or in the commodity tariffs. Shipments

were subject to rating of dry goods, n. o. i. b. n., which was first class any quantity either in boxes or bales. In view of the sporadic nature of this traffic the failure of defendants to have in force a commodity rate was not unreasonable. The real question is as to the reasonableness of the classification rating. HELD, rate attacked not unreasonable or otherwise unlawful, complaint dismissed. Triad Corp. v. C. of Ga. Ry. 101 I. C. C. 687.

(f) Proposal to require that automobile wheels made of wood combined with iron or steel, with or without rubber tires, and weighing 200 pounds or more each, be either wrapped, boxed, or crated for shipment found not justified. Respondents made no contention that old wheels may not safely be transported loose, but merely stated that some packing protection for new wheels is essential, and that it is the practice of manufacturers to wrap, crate, or box l. c. l. shipments, although the classification does not require it. However, movement of old wheels, which would be affected by the proposed requirement, represents a different character of traffic from movement of new wheels, the former being confined largely to shipments to and from points where tire presses are maintained, whereas latter generally move from automobile and wheel factories or from points where manufacturers maintain distributing agencies. Classification of Motor Vehicle Wheels, 92 I. C. C. 190.

(g) Rating on, Coca-Cola syrup in bulk, in barrels or kegs, in official classification territory, found not unreasonable as compared with lower ratings on various carbonated beverages which move mainly in glass. Coca-Cola sirup and other flavoring and fruit sirups are more valuable than commodities diluted with carbonate water; moreover, ratings on former in three classifications are uniformly one class higher than on latter. Coca Cola Co. v. B. & O., 92 I. C. C. 340, 344.

(h) Proposed increased ratings in official classification on soap, n. o. i. b. n., in pails or tubs, l. c. l., from fourth class to rule 26 found not justified. Ratings on soap in pails or tubs and on soap in barrels or boxes have been maintained on a parity in official classification for many years and carriers are not warranted in disrupting this long-existing parity. It is not shown why a box could be more easily or cheaply handled than a pail, and under general rules of the consolidated classification, freight in drums and other containers can be shipped at rating applicable on freight in barrels. Classification of Soap, 92 I. C. C. 353.

(i) Upon further consideration, official classification rating of third class l. c. l., on floor-sweeping compound, in bulk, in barrels, found unreasonable to extent it exceeds fourth class. The commodity is of low grade and heavy density and is not easily damaged, from a transportation standpoint it is desirable traffic, and no explanation was offered by carriers for according it higher ratings in official than in southern or western classifications. Former report, 85 I. C. C. 416, reversed. Fitch Dustdown Co. v. A. A. R. R. Co., 92 I. C. C. 359.

(j) Differences in transportation conditions between salt in bulk and salt in containers found insufficient to justify differences in commodity rates, and such differences are unduly prejudicial and preferential. Salt Cases of 1923, 92 I. C. C. 388, 392.

(k) Second-class rates on sheep and goat pelts and skins, loose, in bundles, or in bales not machine pressed, in mixed carloads with cattle or horse hides, loose or in packages, from points in Utah, Wyoming, Idaho, Montana, and Washington to Portland, found unreasonable to extent they exceeded fourth-class rates. Reasonable basis of rates prescribed and reparation denied. Bissinger v. G. N. Ry., 92 I. C. C. 577.

(l) If a commodity is fairly uniform in value, so that carrier knows with reasonable degree of certainty the liability it assumes when it accepts a shipment for transportation, it should establish reasonable tariff regulations relative to packing and loading with a view to minimizing loss and damage claims, and, having done so, should then publish a single rate based on known transportation characteristics of the commodity. Released Rates on Stone in Southeast, 93 I. C. C. 90, 93.

(m) Rates on linseed oil, in tank cars, found unreasonable to extent they exceeded lower rates on same commodity, in packages. Reparation awarded. Fuller & Co. v. S. P. Co., 93 I. C. C. 154.

(n) Contention that cucumbers in brine were not pickles but were only packed in salt solution to facilitate trans-

portation to a point where they could be manufactured into pickles not sustained, since some shipments moved several months after the gathering season and must have been in brine sufficiently long to remove them from category of fresh cucumbers. Haarmann Vinegar & Pickle Co. v. C. B. & Q., 93 I. C. C. 251, 252.

(o) Considering superior protection against damage which crating affords, also that furniture frames are unfinished material, FOUND, that l. c. l. rating in official classification on wooden chair and lounge frames, when set up, in boxes or crates, is unreasonable for future to extent it exceeds 2½ times first class. Parlor Frame Mfrs. Asso. v. A. A. R. R., 93 I. C. C. 506.

(p) Penalty charge of 50 per cent assessed in addition to the rate for improper bracing in the packing of two carloads of 5-gallon glass water bottles in bulk found not illegal or unreasonable. Glass bottles are fragile, loss and damage claims are high and when shipped in bulk extremely hazardous. Packing and bracing requirements provided in governing classification were decided upon after consultation between carriers and glassware manufacturers, and to permit such shipments without requiring a separate container is in the nature of a concession. If complainant desired benefit of the rate provided for bottles, in crates, on its shipments, in bulk, it should have complied with specifications as to proper packing and bracing. Radiant Glass Co. v. M. P., 95 I. C. C. 165.

(q) Failure of tariffs to impose upon initial carrier the duty of directing shipper's attention to a tariff requirement that a certificate be made on bill of lading that packages used conform to packing requirements and specifications, found not unreasonable. Complainant here was fully advised of the tariff provision and while containers used fully complied with tariff requirements, through oversight its shipping clerk neglected to stamp necessary certificate so stating on the bill of lading, resulting in collection of penalty charges. American Licorice Co. v. C., M. & St. P., 95 I. C. C. 525.

(r) Proposed elimination of requirement that description of contents be shown on outside of fiber boxes in official classification territory, together with penalty charge in connection therewith, found justified. The requirement is an inducement to pilferage and its elimination is designed for purpose of reducing loss and damage claims. Penalty Charge on Shipments in Fiber Boxes, 95 I. C. C. 528.

(s) Rates on fresh vegetables, not otherwise specified, in certain packages, from producing points in South Carolina to New England, eastern trunk line, and central territories found unreasonable to extent the rates on the 1 and 1.5 bushel packages exceed one-third and one-half, respectively, of the present rates on similar traffic in 3-bushel packages, in connection with a carload minimum of 600 bushels in each case. Revenues would be the same on a carload minimum regardless of the size of the package used, and while there is probably some additional service by and expense to defendants in connection with handling of shipments in smaller packages, it is not such as to warrant a difference in the rates. Reasonable rates prescribed for the future. South Carolina Produce Asso. v. A. & R. R. R., 96 I. C. C. 107.

(t) Proposed changes, including increases and reductions, in l. c. l. ratings in official classification on various canned food products packed in barrels, boxes, or crates, the effect of which will bring about the classification relationship prescribed in Indiana Packing case, 93 I. C. C. 400, in purported compliance with which proposed schedules were filed, found justified, except proposed increases on corn-sirup jelly. Classification of Canned Goods, 98 I. C. C. 166.

(u) A box is a safer container than a crate. But presumably a crate is a cheaper container. Carriers have a right to insist upon proper packing, but they have no right to force the use of expensive containers by imposing upon shipments less substantially packed rates which are materially higher than is warranted by the additional risk assumed when such inferior containers are used. Classification of Canned Goods, 98 I. C. C. 166, 177.

(v) Proposal to increase rating on jute packing, in official, southern, and western classifications, designed to provide same ratings as those applicable on oakum and to prevent shippers from obtaining lower rates by billing this commodity as rope, found not justified. Jute packing in rope form is not, in fact, oakum or rope, and it is not evident how

the proposed specific classification rating would serve to stop the practice of shipping this commodity as rope. Classification of Jute packing, 98 I. C. C. 287.

(w) Two carload shipments of dressed turkeys moved from Lander and Wheatland, Wyo., to Omaha, Nebr., loaded in bulk in straw, and were charged a rate higher than if the shipments had been packed in barrels or boxes or in barrels with cloth tops, in accordance with the provisions of the classification. FOUND, rates charged were not unreasonable, as shipments were not entitled to same rating and rates as would have applied if the packing specifications had been complied with. Omaha Cold Storage Co. v. C. & N. W. Ry. Co., 98 I. C. C. 437.

(x) Shippers are entitled to reasonable rates upon whatever traffic they ship. But in a situation of the kind here involved, where the packing specifications were not complied with, resulting in a higher rate and rating than would otherwise have obtained, the earnings are not necessarily controlling. The nature of the commodity, as bearing upon its adaptability to shipment in a particular form, and the practices of carriers with respect to the rates on the same or similar commodities are of equal if not greater importance. Kloeber v. N. P. Ry. Co., 98 I. C. C. 437, 441.

(y) Rates and ratings on grain flour, edible flour, and corn meal, in rope-stock paper bags, in c. l. and l. c. l., when carried under tariffs governed by southern classification, and in l. c. l. when carried under tariffs governed by western classification, found not unreasonable, but are and for future will be unjustly discriminatory, unduly prejudicial and unduly preferential of shipments in cloth bags, to extent they exceed or may exceed corresponding rates and ratings contemporaneously maintained on same commodities when in cloth bags. Rope Paper Sack Bureau v. A. & V. Ry. Co., 98 I. C. C. 511.

(z) Fact, that, as to all freight generally, conditions affecting safety in transportation are different in c. l. traffic from those in l. c. l. traffic, and that loss and damage claims are relatively more frequent and serious in latter, not overlooked, but record here involved is not convincing that the relative risk to carrier in handling l. c. l. shipments of flour in paper bags would be greater than that incurred in handling l. c. l. shipments of same commodity in cloth bags. Rope Paper Sack Bureau v. A. & V. Ry. Co., 98 I. C. C. 511, 514.

(aa) The protection of the public against fire requires that the receipt as freight of rags and waste paper should be limited to dry materials, so baled as to prevent loss of pieces (sifting) from the bales, and reasonably free from loose edges, strips, pieces, fibres, or other parts protruding from the bales or surrounding them. National Asso. Waste Material Dealers v. D., L. & W. R. R. Co., 98 I. C. C. 606, 612.

(bb) Complainant apparently deduces that any special feature or attachment which some manufacturer might include as a part of regular equipment, even though not ordinarily considered as essential to the operation of a motor car, should, when shipped by itself, be regarded as an automobile part, and so rated. In practical effect this would nullify the classification which is intended to govern the rates on articles listed therein, except specific commodity rates or exceptions are provided. Western Auto Supply Agency of Los Angeles, Calif., v. C., B. & Q. 98 I. C. C. 647, 648.

(cc) Complainant attacked class rates charged on unfermented grape juice, in glass, in boxes, and in bulk, in barrels, in straight and mixed carloads, shipped between Oct. 4, 1922 and April 9, 1924, from Melvin, Calif., to Portland Ore., Aberdeen, Tacoma and Seattle, Wash., as unjust, unreasonable, unjustly discriminatory, unduly prejudicial, and in violation of section four. Melvin is on the S. P., 12 miles northeast of Fresno, Calif. Aberdeen is on a branch of the U. P., 54 miles from Centralia, Wash., the junction point. This commodity is rated in western classification fourth class. The rates on the juice in boxes are higher to Portland than to Tacoma, Seattle or Aberdeen and that the rates in bulk in barrels to the latter points are considerably higher than the rates in glass, in boxes. The water rate on grape juice, in glass, in packages or in bulk, in barrels, from San Francisco to Portland was 20c prior to April 3, 1924 on which date it became 22c. To Tacoma the water rate from San Francisco on grape juice, in glass, in packages, or in bulk in barrels is 25c. Al-

though the rate to Portland is $1.03 the rate through Portland from Melvin to points on the U. P., 98 miles east of Portland is 86c. Defendants admit that there is no inherent reason why this commodity should take a higher rate in bulk, in barrels, than in glass, in boxes, aside from the fact that when moving in glass, in boxes, it does not move under refrigeration. But the refrigeration charges are separate, and it would appear that refrigeration is not essential. The present rate to Portland is lower than to intermediate points, a departure from the fourth section which is protected by an appropriate application. The fourth section violation with respect to the rates to destinations in eastern Oregon and Montana must be removed. Complainant did not show damage because of any undue prejudice as between destinations. HELD, rates to Tacoma, Seattle and Aberdeen not unreasonable; to Portland unreasonable to extent they exceeded 93c and rates to Tacoma Aberdeen and Seattle on grape juice, in bulk, in barrels, unreasonable to extent they exceeded $1 to Tacoma, and $1.04 to Aberdeen and Seattle, reparation awarded. Joseph v. O. W. R. R. & N. Co. 104 I. C. C. 477.

(dd) Complainant attacked as unreasonable, rates charged during 1921 on apples received at Detroit, Mich., which had originated at Watsonville, Calif., and other points in California, delivered Oct. 7, 1921 and later dates, actions at law brought Oct. 9, 1924 and later dates and complaint filed Jan. 2, 1925 within 90 days from the times such actions by the carriers were begun. Apples were contained in lug boxes and were of medium size and fair quality; that the boxes had no tops, but when loaded in the car, the bottom of one box resting on another provided a cover for the box beneath; charged $1.50, alleged proper rate $2.25. The rate of $1.50 collected was applicable on apples in crates. It was not applicable on apples in bulk or in packages without tops. Shipments in bulk, or in packages without tops, were subject to a penalty charge of 50%, or to a rate of $2.25. This case is similar to 96 I. C. C. 437, in which the Commission found rates of $2.25 unreasonable to extent they exceeded $1.50. HELD, rate attacked unreasonable to extent it exceeded $1.50, undercharges waived. Lane v. S. P. Co. 107 I. C. C. 253.

(ee) Complainant attacked rates on ginger ale, root beer, and mineral water in glass bottles, packed in bottle carriers, in boxes and in barrels, less carloads, from Tazewell, Va., to destinations in West Virginia on the Virginian Ry. and K. G. J. & E., and on empty bottles, packed in the same containers, less carloads, from those points to Tazewell, as unjust and unreasonable and unduly prejudicial. Tazewell is 19 miles west of Bluefield, Va., on the N. & W., extending from Bluefield to Norton, Va. Shipments are made to and from points in West Virginia on the Virginian through Matoaka, W. Va., and to and from points on the Glen Jean through Matoaka and over the Virginian by way of Pax, W. Va. The distance over the N. & W., to Matoaka is 49 miles. Under exceptions to the official classification, the combination of fourth class rates to and beyond Matoaka are applied on beverages, and on returned empty bottles. The fourth class rates applied to Tazewell which are applicable on the return bottles are in some instances 3c less than the fourth class rates in the reverse direction applicable on beverages, HELD, class rates applicable unreasonable to extent they exceed 35c for 60 miles and less to 50c for 130 miles. Was-Cott Corp. v. K. G. J. & E. R. R., 109 I. C. C. 468.

(ff) Complainant attacked additional charges on a car of canned fruit from Canon City, Colo., to San Francisco, Calif., on June 1, 1922 as unreasonable. The fruit was in cans in fiber boxes. When so packed the applicable rate was $1.175 provided the boxes agreed with certain specifications published in the governing western classification. Among these was a provision that boxes must also show a description of contents. The tariff naming the rate provided that when fiber boxes not meeting all of the classification specifications were used the freight charges would be increased 25 per cent. The boxes used for these shipments were not marked with a description of the contents, and accordingly defendants increased freight charges 25 per cent. A description of the contents on the outside of fiber boxes doubtless facilitates policing of the special packing requirements in connection with particular articles or class-

es of articles. But as a practical matter, considering the large amount of traffic to be policed, it is probable that where articles liable to break, sift or leak are enclosed in fiber boxes, inspections to determine whether the packing requirements have been met should be limited to instances where the boxes show external evidence of breaking, sifting or leaking. Defendants do not explain what aid a knowledge of the contents of a fiber box affords in determining whether the weight or dimension limits have been exceeded. HELD, tariff rule requiring that fiber boxes be marked with a description of the contents is unreasonable, reparation awarded. Ball & Company v. D. & R. G. W. Ry., 109 I. C. C. 759.

Cotton and Cotton Linters to Louisiana and Texas Ports, 85 I. C. C. 5; O-So-Ezy Products Co. v. Director General, as Agent, 85 I. C. C. 187; Fitch Dustdown Co. v. A. R. R. Co. 85 I. C. C. 416; Gallaudet Aircraft Corp. v. N. Y. N. H. & H. R. R. Co., 88 I. C. C. 750.

§16a. Penalty Charges.

See Passenger Fares and Facilities §4¼; Penalty Charges.

(a) Complainant attacked commodity rates and penalty charge on one car of stick licorice shipped Feb. 23, 1922 from Healy, Ill., to Los Angeles, Calif., as unreasonable. Shipment charged commodity rate of $2.755 plus penalty of 69c, or 25%. The governing tariff provides that the rate will be increased 25% if the requirements and specifications of rule 41 of the western classification are not fully complied with. The fiber boxes containing the licorice fully complied with all the specifications of rule 41, but the certificate described in section 8 (c) of that rule was not placed on the bill of lading. HELD, failure of the tariffs to impose upon the initial carriers agent the duty of calling the shippers attention to the certificate required does not establish the unreasonableness of the charges collected. No attack is made upon the penalty as such. Complaint dismissed. American Licorice Company v. C. M. & St. P. Ry., 95 I. C. C. 525.

(b) The penalty rule in the classification must be regarded as having some bearing upon the propriety of the rates assessed thereunder, and in the absence of complaint and proof that it was unreasonable its provisions should not be set aside in particular instances except upon evidence which would support the view that the commodity, as shipped, was entitled to a lower specific rating. Omaha Cold Storage Co. v. C. & N. W. Ry., 98 I. C. C. 437, 441.

IV. COMPARATIVE RATINGS.

See Infra §22; Supra §6, §16; Advanced Rates §5 (3); Class Rates §1 (p), §2 (4a) (4e) (4j) (4n) (4o); Commodity Rates II, §5 (5n); Comparative Rates; Differentials §2½a; Evidence §12, §31; Live Stock Shipments; Reasonableness of Rates §28; Tank Car Shipments (p).

A. Analogous Articles.

§17. In General.

(a) Complainants sought to demonstrate intrinsic unreasonableness by comparing rates and revenues derived from cotton with rates and revenues derived from other commodities, but the well-settled rule is that the most helpful evidence in determining reasonableness of rates is to compare them with rates on like traffic, moving under like circumstances, in the same general territory. Mississippi Railroad Commission v. A. & V. Ry. Co., 89 I. C. C. 47, 61.

(b) There is no reason, from a transportation standpoint, for maintaining higher rates on oat flour than on rolled oats, oat groat, and oatmeal. Atlas Cereal Co. v. A. T. & S. F. Ry. Co., 89 I. C. C. 212, 214.

(c) Rates on rolled oats, oat groats, oatmeal, and oat flour, in straight or mixed carloads, or in mixed carloads with corn meal and hominy, found not unreasonable or unjustly prejudicial as compared with rates on wheat flour. Volume of movement of wheat flour is much greater than that of oat products; rates on wheat flour are affected by competitive and market conditions not related in any way to oat products; and there is no evidence on this record to find that there should be any fixed relationship between wheat flour rates and oat products rates. Atlas Cereal Co. v. A., T. & S. F. Ry. Co., 89 I. C. C. 212.

(d) Rates on nitrate of soda found not unduly prejudicial, but found unrea-

sonable as compared with rates on fertilizer. Distance scale of rates prescribed for future. New Orleans Joint Traffic Bureau v. A. & V. Ry. Co., 89 I. C. C. 223.

(e) Upon further hearing, previous reports, 69 I. C. C. 753, and 77 I. C. C. 242, rates on linseed-oil meal found unreasonable to extent they exceeded rates contemporaneously applicable on gluten feed. Reparation awarded. Midland Linseed Products Co. v. Director General as Agent, 89 I. C. C. 260.

(f) A mere statement of rate comparisons without a showing of conditions under which rates were established, volume of movement thereunder, or that transportation circumstances and conditions are substantially similar, are not very helpful in determining the reasonableness of rates. New York Commission of Highways, 55 I. C. C. 619, 623. Atlantic Refining Co. v. A., B. & A. Ry. Co., 89 I. C. C. 279, 280.

(g) Classification ratings on vitrolite slabs and table and counter tops in excess of five-sixteenths inch in thickness found unreasonable and unduly prejudicial to extent they exceed ratings contemporaneously applicable on marble slabs and table and counter tops, and on vitrolite scale platters to extent they exceed ratings greater than one class higher than on vitrolite slabs and counter and table tops. Vitrolite Co. v. A., T. & S. F. Ry. Co., 89 I. C. C. 367.

(h) Complainant attacked classification ratings on vitrolite, carloads and less carloads and rules, regulations, and practices, applicable to its transportation as unreasonable, unjustly discriminatory and prejudicial. Vitrolite is opaque and closely resembles porcelain in appearance. In structural work, it is used extensively as store fronts, wainscoting, on walls and ceilings, and as partitions in lavoratories and shower baths. It is packed in barrels, boxes or crates, ordinary box car equipment is used. The evidence tends to confirm the statement that the uses in general are not those of glass but of marble and tile, and that competition is confined almost wholly to the last named articles. Marbleized slabs take the same carload ratings as marble slabs and differ in less carloads ratings only in being third class in western instead of fourth class. Present ratings on vitrolite slabs are 22% higher than those on marble in car load quantities and 20% higher in less carloads, as measured by class rates for typical hauls. Less carload on both vitrolite and marble move at class rates. Competition in use is almost entirely with articles classified as natural and perhaps artificial stone. There is no reason why vitrolite should take a higher rating. Since the transportation characteristics of vitrolite and marble slabs are substantially identical, the various properties and uses of vitrolite and the ratings accorded its competitors are elements entitled to considerable weight. HELD, rate attacked unreasonable to extent they exceed that applicable on marble slabs. Vitrolite Company v. A. T. & S. F. Ry., 89 I. C. C. 367.

(i) A vitreous commodity, manufactured and shipped in slab form, is opaque and resembles porcelain. It is used as store fronts, wainscoting, on walls and ceilings, as partitions in lavoratories and shower baths, and for table and counter tops and analogous purposes. The ingredients are sand, feldspar, fluorspar, cryolite, lepidolite, manganese, arsenic, borax, antimony, china clay or kaolin, soda ash, and nitrate of soda. Vitrolite Co. v. A., T. & S. F. Ry. Co., 89 I. C. C. 367, 368.

(j) Analogous products having identical uses should take same ratings. Vitrolite Co. v. A. T. & S. F. Ry. Co., 89 I. C. C. 367, 369.

(k) When a commodity is not distinctly within some common designation, its use and the ratings of competitive products are important factors with its transportation characteristics in the determination of what rating is appropriate for it. Vitrolite Company v. A. T. & S. F. Ry., 89 I. C. C. 367, 371.

(l) The Commission sees no reason why rates on casinghead gasoline produced from natural gas as distinguished from gasoline obtained through distillation of crude petroleum should vary. Atlantic Refining Co. v. Director General, as Agent, B. & O. R. R. Co., 89 I. C. C. 391, 394.

(m) Rate on oil, petroleum gas in tank-car loads, found not unreasonable or otherwise unlawful because in excess of the rate on crude and fuel oils. While crude, fuel, and gas oils generally take same rates, the crude and fuel oil

rates herein considered were depressed by carrier competition. Moreover, earnings under rates charged are not excessive in comparison with many rates prescribed by the commission. Standard Oil Co. v. M.-K.-T. R. R. Co., 89 I. C. C. 463.

(n) Rates on finely crushed greenstone found not unreasonable or otherwise unlawful as compared with rates on other crushed stone. Crushed Stone from Maryland and Pennsylvania, 89 I. C. C. 681.

(o) Complainant attacked commodity rates charged on fruit, vegetable and grape packages, carloads, from Burlington, Iowa, St. Louis, Mo., and Marshall and Rusk, Tex., to points on the O. S. L., in Idaho and eastern Oregon, as unjust and unreasonable. Charged lumber rates plus 7c. Prior to August 26, 1920 the rate was 5c over the lumber rate when the latter exceeded 23.5c. On that date this arbitrary was increased 35% or to 7c east of Colorado common points and 6.5c or 33 1-3% to points west of Colorado common points. Effective April 15, 1922 a flat arbitrary of 7c was provided without restriction as to territory. HELD, defendants have not justified the increase, repartion awarded to extent they exceeded 6.5c prior to July 1, 1922 and 6c thereafter over the lumber rate. Package Sales Corporation v. U. P. R. R., 91 I. C. C. 697.

(p) Complainant attacked commodity rate charged on imitation leather, carloads, between Nov. 24, 1917 and Feb. 7, 1920, from Fairfield, Conn., and Newburg, N. Y., to Oakland, Calif., as unjust, unreasonable and unjustly discriminatory to extent they exceeded rates on leather. Charged rates of $2, contemporaneously a rate of $1.40 was applicable on leather. On Feb. 8, 1920 the rate on leather became applicable on imitation leather. The two articles are rated the same in the different classifications. No reason was offered from a transportation standpoint why the rate on imitation leather should have been higher than that on leather. HELD, rate attacked unreasonable to extent it exceeded rate on leather, reparation awarded. Chevrolet Motor Co. v. Director General, 93 I. C. C. 544.

(q) Complainant attacked class rates charged on oleomargarine, carloads, from Chicago, Ill., to South Bend, Ind., Syracuse and New York, N. Y., and Pittsburgh, Pa., and Philadelphia, Pa., between Jan. 1 and June 30, 1922 as unreasonable to extent they exceeded rates on butter. Prior to Jan. 1, 1922 third class rates were applicable on oleomargarine, butter, cheese, dressed poultry and eggs in the shell. On that date rates on the commodities named, except oleomargarine, were reduced 10% as a part of a voluntary reduction made by the carriers in rates on many products of the farm, garden, orchard and ranch. The reduced rates were in the nature of emergency rates published to expire June 30, 1922. On July 1, 1922 rates on butter, cheese, dressed poultry and eggs in the shell were restored to the full third class basis simultaneously with the general 10% reduction in rates. HELD, rates attacked not unreasonable, complaint dismissed. Jelke Company v. C. & N. W. Ry., 95 I. C. C. 643.

(r) Complainant attacked third class rating and rates on coconut oleine, carloads, from Bayonne, N. J., to Suffolk, Va., and other points of southern classification territory as unreasonable, unjustly discriminatory and unduly prejudicial to extent they exceeded class B rating on lard substitutes and compounds and fifth class rating and rates on coconut oil. HELD, rating and rates charged not unjustly discriminatory or unduly prejudicial but unreasonable to extent they exceeded fifth class, reparation awarded. Best Foods v. C. R. R. of N. J., 95 I. C. C. 738.

(s) Complainant attacked class rates charged on carloads of linseed oil meal and oil cake from Edgewater, N. J., to Toledo, O., and Waukegan, Ill., during March and April 1920 as unreasonable, unjustly discriminatory and unduly prejudicial. Charged sixth class rates of 37.5c to Waukegan and 29.5c to Toledo. HELD, rates attacked unreasonable to extent they exceeded rates on gluten meal of 23c and 29.5c, reparation awarded. Midland Linseed Products Co. v. N. Y. C. R. R., 96 I. C. C. 447.

(t) Complainant attacked commodity rates charged on crude, fuel and gas oils carloads from Clay Spur and Osage, Wyo., to South Dakota, Iowa, Minnesota and Wisconsin, as unjust and unreasonable to the extent they exceeded a basis 6c lower than the rates on refined oils from and to the same points, and otherwise unauthorized and unlawful. Clay

Spur and Osage are on the Burlington. Same rates appiled on refined and low grade oils from these points to the destinations in question. Rates from Clay Spur and Osage to these destinations were established in 1921, 1922 and 1923 and were made the same as those from Casper, Wyo. HELD, rates attacked not unreasonable or otherwise unlawful, complaint dismissed. Barber Co. v. C. & N. W. Ry., 96 I. C. C. 516.

(uv) Complaint attacked class rate charged on one car of balsam wool shipped Oct. 25, 1922 from Minnesota Transfer, Minn., to Tacoma, Wash., as unreasonable to extent it exceeded subsequently established rate of $1.22. Being a comparatively new article, commodity rates were not in effect, and it was rated by analogy to other insulating articles named in the classification. Charged third class rate. Rate on flaxlinum, fibrofelt, Linofelt and hair felt was $1.39. HELD, rate attacked unreasonable to extent it exceeded $1.39, reparation awarded. Dower Lumber Co. v. N. P. Ry., 98 I. C. C. 9.

(w) Complainant attacked commodity rates charged on unfinished wallpaper, oatmeal or ingrain, from North Hoosick and Walloomsac, N. Y., and Appleton and Neenah, Wis., to Jersey City and Philadelphia as unreasonable and unduly prejudicial. Defendants publish lower rates on unfinished wall paper than fifth class by exceptions. The exceptions or commodity rates provide for paper, blank wall, unfinished, in rolls weighing 70 pounds or over per single roll, minimum 40,000 pounds. The value of oatmeal paper is shown to be no higher than that of many unfinished wall papers and an inexperienced person has difficulty in distinguishing between oatmeal papers and certain unfinished wall papers. HELD, rates attacked not unreasonable but should not be higher than on unfinished wall paper. Becker Smith & Page v. B. & M. R. R., 98 I. C. C. 337.

(x) Complainant attacked class E rates charged on 23 cars of ground limestone from Ralston and Omaha, Neb., to Chicago, Ill., St. Louis, Mo., Kansas City, Mo., Detroit, Mich., Toledo, O., and Minneapolis, Minn., between July 14, 1919 and Sept. 1, 1920 as unreasonable. The rate to which reparation is asked was subsequently established. At the time of the application for these rates there were in effect commodity rates on ground limestone, from Chicago, Minneapolis, and St. Louis to Omaha, Ralston and Seymour Park, those rates were subsequently established in the reverse direction between these points. There were no shipments under the westbound commodity rates. The commodity was not plain limestone such as might be shipped in any kind of available car. It was shipped in sacks or barrels, in water tight cars. It was more analogous to whiting than to common limestone in its transportation characteristics. The rates charged were considerably lower than those subsequently published on whiting. But aside from the comparison with whiting neither the ton mile nor the car mile yields seem unreasonable for these shipments. HELD, rates charged not unreasonable or otherwise unlawful, overcharges ordered refunded complaint dismissed. Barker Evans Paint Co. v. Director General, 98 I. C. C. 414.

(y) Complainant attacked commodity rates charged on five cars of steel plates, gauge No. 11 or heavier from Johnstown, Pa., to Portland, Ore., between July 29 and Sept. 9, 1920 as unreasonable to extent they exceeded rates on plates, ship, and asked reparation. In 85 I. C. C. 629, Commission found rates charged not applicable and that lower rates on ship plates were applicable and awarded reparation. The term ship plates can mean only plates which might have been used in the construction of ships, and the records in both cases leave no room for doubt that complainants shipments consisted of plates all of which could have passed Loyds test for hull construction if such test had been made, and therefore all of the plates in these shipments might have been used in ship construction. HELD, rate on ship plates applicable, reparation awarded. Sabin v. S. P. & S. Ry., 98 I. C. C. 471.

(z) Complainant attacked joint commodity rate charged on two cars of wooden wagon bows, shipped April 11 and 12, 1923 from Columbus, O., to Sherman and Stamford, Tex., as unjust, unreasonable unduly discriminatory and preferential to extent they exceeded the rates on lumber. Both cars were routed and moved over B. & O., to St. Louis, Mo., M. K. & T., beyond, distances of 1,127 miles to Sherman and 1,526 miles to Stamford, applicable rate $1.21. The 94.5c rate applicable on wagon wood, n.

o. s., applies also on various vehicle parts, including wooden axles, coupling poles, double trees, plow beams and handles, rims, singletrees and spokes. HELD, rate attacked unreasonable to extent it exceeded 94.5c reparation awarded. Fort Smith Rim & Bow Co. v. B. & O. R. R., 98 I. C. C. 536.

(aa) Cereal-food rates on Cream of Wheat found applicable and not unreasonable or unduly prejudicial as compared with rate on flour. Complainant failed to establish that there is substantial competition between Cream of Wheat and flour, notwithstanding that in some of its secondary uses, such as making of pancakes and waffles, Cream of Wheat displaces and to that extent competes with flour. Cream of Wheat Co. v. A., T. & S. F. Ry. Co., 91 I. C. C. 45.

(bb) Frequently canned milk and canned goods are similar in character, so far as transportation is concerned, and ordinarily the rate should be the same. Carnation Milk Products Co. v. A. T. & S. F. Ry. 100 I. C. C. 254, 257.

(cc) Complainant attacked commodity rates on peanuts, in carloads, from Suffolk, Norfolk, Franklin, and Petersburg, Va., to Oklahoma City and Shawnee, Okla., as unreasonable; that rates on peanuts, carloads, from Suffolk and Petersburg and other points taking Group A rates to McAlester, Okla., were unreasonable. The shortest distance from Suffolk to Memphis, Tenn., is 926 miles, but this is over three lines. The distances from Suffolk, to McAlester, Shawnee, and Oklahoma City, via Memphis and Rock Island are 1,307, 1,387 and 1,426 miles, respectively. Over this route McAlester and Shawnee are intermediate to Oklahoma City. On July 1, 1922 the rate on peanuts from Suffolk to Memphis was reduced from 64.5c to 58c. On the same date the joint rate from Suffolk to McAlester, Shawnee and Oklahoma City was reduced from $1.86 to $1.675 and the rate to Dallas, Fort Worth and Waco, Tex., from $1.92 to $1.73. On June 11, 1923 the rate to the Oklahoma points named became $1.43. On Aug. 15, 1924 the carriers reduced the rate on shelled peanuts to Oklahoma City to $1.23 but left the rate on unshelled peanuts at $1.43. No reason for the maintenance of a higher rate on unshelled than on shelled peanuts to Oklahoma City was given. HELD, rates attacked unreasonable to extent they exceeded $1.365 prior to July 1, 1922 and $1.23 subsequent thereto, reparation awarded. Oklahoma Traffic Asso. v. C. R. I. & P. Ry., 100 I. C. C. 307.

(dd) Complainant attacked commodity rates on pecans, carloads, from Texas, Oklahoma, Louisiana, Florida, Georgia and Mississippi to St. Louis and Chicago as unjust, unreasonable, unjustly discriminatory, and unduly prejudicial as compared with rates on peanuts and hickory nuts from and to the same points, and unduly prejudicial with respect to the import rates on pecans from the Pacific coast to the same destinations. The record deals primarily with the rates from Texas and Oklahoma and to a less extent with those from Louisiana and from Natchez and Vicksburg, Miss. No showing was made of any movement of pecans from Pacific coast points. From Texas common points the commodity rate on pecans, carloads, is 129.5c to St. Louis and 142.5c to Chicago, as compared with commodity rates on peanuts of 69 and 79c respectively. From Oklahoma points the Commodity rates on pecans to St. Louis and Chicago are 129.5c and 140.5c as compared with 76 and 87c on peanuts. The general basis on pecans and hickory nuts, unshelled and on peanuts, shelled or unshelled, carloads, in official and western classifications is fourth class. It is a fair deduction from the mass of inconsistent testimony presented that pecans constitute a much higher grade of traffic than peanuts, and that the competition, if any, between these products is with pecans in their expensive shelled state, the rates on which are not before the Commission. Present rates were prescribed in 47 I. C. C. 542 allowing for the subsequent general increases and decreases. HELD, rates attacked not unreasonable or otherwise unlawful, complaint dismissed. Funsten & Co. v. A. & V. Ry., 100 I. C. C. 357.

(ee) Complainant attacked class rates charged on five cars of wood flour from Hercules, Calif., to Bacchus, Utah., from Oct. 8, 1918 to June 11, 1919, as unreasonable. Wood flour is made by grinding wood particles and sifting the product into the desired degree of fineness and is used as an absorbent in the manufacture of dynamite. Charged class C rate of 80c, later changed to fifth

class of $1.145 on the ground they consisted of ground walnut shells, which are also used as an absorbent in the manufacture of dynamite. The rate prayed is 48c, applicable on wood pulp, and this basis, increased to 60c, was made effective, on Oct. 30, 1920 on wood flour. Distance is 816 miles. HELD, commodity rate of 48c on wood pulp not applicable on wood pulp, applicable rate of 80c unreasonable to extent it exceeded 48c, reparation awarded. Hercules Powder Co. v. Director General, 100 I. C. C. 393.

(ff) Respondents proposed a general readjustment of the rates on various vegetable, fish, and sea animal oils, and the foots or sediments of these oils, in carloads between points in trunk line territory and from points in trunk line territory to destinations in central territory. Respondents have divided the oils into two groups, the paint oils and the soap oils. In the paint group are linseed, perilla, Chinawood, soyabean, and cottonseed oil; and in the soap group, are coconut (copra) peanut, palm, palm-kernel, fish, sea-animal, and sesame oil. Fifth class rates are proposed on the paint oils, and sixth class rates on the soap oils and on the foots or sediments of the oils in both groups. It was disclosed at the hearing that the proposed groupings at the fifth and sixth class rates had not been carried out in the tariffs naming rates between points in trunk line territory, and respondents therefore did not attempt to justify any of the proposed rates between points in that territory. The tariffs in which those rates appear should be cancelled. This readjustment is now proposed to correct the chaotic conditions into which the rates have fallen. The two principal questions presented are whether the proposed rates are reasonable, and whether the establishment of less than maximum reasonable rates on certain of the oils will unduly prefer those oils and unduly prejudice the others which are not accorded such treatment. In general the testimony respecting competition is that the paint oils can not economically be used in soap manufacture, but that the soap oils can be and are used in paint manufacture. It is established that the manufacturers of paint have been successful, through alterations of the mixing and boiling processes, in combining the paint oils with the cheaper soap oils in the production of paints for general purposes and that experimentation is constantly proceeding with a view to increasing the content of the cheaper oils without impairing the drying qualities of the paint. HELD, respondents have not justified the proposed rates as reasonable maxima, nor have they justified the proposal for a different basis of rates on the socalled paint oils and soap oils. Vegetable oils from trunk line points 100 I. C. C. 736.

(gg) Complainant attacked rates charged on wheat bran, car loads, from Colorado, Utah, Idaho, Wyoming, Montana, Nebraska, Kansas, Iowa, Missouri, Oklahoma, Texas and New Mexico, to New Mexico, Texas and Louisiana, since Jan. 7, 1923 as unreasonable and unjustly discriminatory and unduly prejudicial as compared with rates on wheat shorts and coarse grain products. Wheat bran is the coarse, fibrous outer covering of the wheat grain after the flour and middlings or shorts have been removed in the ordinary process of milling. Wheat bran and screenings, mixed, is the lowest grade of wheat product obtained from milling and is almost exclusively used as a stock or poultry food. Prior to June 25, 1918 the rates on wheat bran from the origin to the destination territory were on the wheat basis, which was higher than on coarse grain, including shorts and middlings. On that date the director general increased the rates on wheat 25 per cent subject to maximum of 6c, and rates on coarse grain same as the new wheat rates. On Jan. 7, 1922 the rates on wheat were reduced to the equivalent of the rates on August 25, 1920, plus one half of the general increase authorized in 1920, and the rates on coarse grain were revised so as to be 10 per cent lower than rates on wheat. Complainants produce wheat shorts and all of the coarse grain products. Their wheat bran comes in active competition with wheat shorts and coarse grain and products thereof, shipped from the territory of origin, and with that produced throughout the territory of destination. Wheat bran is considerably less valuable than wheat or wheat flour and based on value should properly be grouped with wheat shorts and coarse grain and products thereof. No explanation is offered why Louisiana, Texas, and New Mexico should be separated from other portions of the United States with rates on wheat bran higher than on wheat

shorts and coarse grains and products. HELD, rates not unreasonable in past but for future rates attacked unreasonable and unduly prejudicial to extent they exceeded rates on wheat shorts, coarse grain and products from and to same points. Abilene Flour Mills Co. v. A. & S. Ry., 101 I. C. C. 14.

(hh) Complainant attacked as unreasonable and unduly prejudicial commodity rates on various cars of bull wheel arms, cants and pins, from Tulsa, Okla., to Breckenridge and Graham, Tex. Shipments moved between February 1922 and May 1923. The rates attacked to Breckenridge over route of M. K. & T., to Cisco and C. & N. E., beyond were not higher than on common lumber except that effective July 1, 1922 and until Jan. 29, 1923 the rate on bull wheel material in the rough manufactured from common lumber, was 40c while the rate on common lumber was 39c. HELD, rates attacked not unreasonable or unduly prejudicial except shipments moving via M. K. T., and C. & N. E., unreasonable to extent they exceeded lumber rate, reparation awarded. Marion Machine Foundry & Supply Co. v. C. & N. E. Ry. 101 I. C. C. 71.

(ii) Complainant attacked commodity rates charged on peanuts, shelled carloads, from Alabama, Florida, Georgia, South Carolina, and Tennessee to Chicago. South Bend, Ind. Dubuque, Iowa, Atchison, Kas., St. Louis Mo. Milwaukee, Wis. and Canton and Cleveland, O., as unreasonable and that the failure to maintain a precise relationship between the rates on peanuts and those on peanut oil from and to the points named results in undue prejudice. Shelled peanuts are shipped in burlap bags which contain from 100 to 130 pounds of peanuts, shipments averaging 30,000 pounds. They do not require special equipment, except that they may not be made in box cars which have leaky roofs. There are no joint rates from the origin territory involved to any of the destinations except St. Louis. Rates to Chicago, Milwaukee, Dubuque and Cleveland are the combinations of proportional commodity rates to and from Ohio river and Mississippi river crossings. Rates to South Bend, Canton and Atchison are constructed on the basis of the proportional commodity rates to the rivers plus fourth class rates beyond. The rates to Cincinnati are at present 51c used as a factor in constructing the through combination rates on shipments via this crossing. While peanut oil is derived from peanuts its transportation characteristics are dissimilar from those of peanuts. It does not appear that any plant making peanut oil at any of the destinations concerned is prejudiced by the rates complained of or by the maintenance of a greater uniformity of rates between peanuts and peanut oil from the river crossings to St. Paul than to the destinations here involved. The real attack is directed against the factors for the movements beyond the river crossings. HELD, rates attacked to St. Louis not unreasonable, unjust or otherwise unlawful. Rates from points of origin unjust and unreasonable to extent they exceed 27c to Chicago, Milwaukee 30c, Canton 26c, Cleveland 26c, South Bend 27c and Dubuque 32.5c, reparation denied. United Fig & Date Co. v. A. C. L. R. R. 101 I. C. C. 138.

(jj) In 93 I. C. C. 689 the Commission found rate charged on two cars of bicycles from Middleton, O., to Los Angeles, Calif., applicable. Charged joint first class rate of $5.835. Contemporaneously there was a joint commodity rate of $2.765 on vehicles, non self propelling except as otherwise provided, and parts thereof, via: vehicles, light and heavy, freight or passenger, and finished parts thereon and a note provided: "Note 1. Rates named will not apply on self propelling vehicles nor on pneumatic rubber tires". The question is whether the description "light non-self-propelling passenger vehicles" comprehends bicycles. Effective Sept. 30, 1922 defendants established a commodity rate on bicycles from and to these points higher than the rate then in effect on vehicles as described in western classification under the heading "vehicles, horse-drawn." The Commission is of the opinion that the terms "passenger" and "freight" as used in this description are merely designations of the means of conveyance for persons and things, respectively; and that a bicycle is a means of conveyance or travel for persons, is non-self propelling and therefore comes within the definition of a "light non self propelling passenger vehicle." HELD, commodity rate of $2.765 applicable on these shipments, reparation awarded. United

Cycle & Supply Co. v. B. & O. R. R., 101 I. C. C. 334.

(kk) Complainant attacked class and commodity rates charged on three cars of scrap iron shipped from Mobile, Ala., to Birmingham, Ala., during March, April and May 1923 as illegal and unreasonable. During the early part of 1923 complainant shipped 10 cars of what it terms scrap iron from Mobile to Birmingham. The shipments moved over G. M. & N., and Frisco, partly through Mississippi. On 7 of the shipments complainant was charged scrap iron rate of $2.48 per ton, and on the other three iron bar rate of 27c per 100 pounds was assessed. Shipments consisted of strips of bar iron from 1.125 to 1.5 inches in diameter, ranging in length from 10 to 27 feet, which had been used for reinforcing concrete. They were cut from an old concrete ship which had been sold by the Government as scrap. The material was bought in the open market as scrap iron and sold as such. As the metal was originally billed as scrap iron, and was subsequently changed to iron bars by defendants, the burden rests upon them to justify the change. This they have failed to do. It follows that the application on these shipments of the rate on iron bars has not been justified. HELD rate attacked inapplicable, applicable rate $2.48 per ton, overcharge to be refunded, complaint dismissed. Knight Iron & Metal Co. v. G. M. & N. Ry., 101 I. C. C. 623.

(ll) Commodities of same nature and used chiefly for same purposes usually take same rates, and differences in value of same commodity shipped in different forms are frequently disregarded in rate making when articles are essentially of same nature and highly competitive. Chloride of Zinc to Texarkana, 92 I. C. C. 569, 572.

(mm) Rate on tank or furnace blocks found unreasonable to extent it exceeded rate on fire brick. Tank or furnace blocks are fire brick of large size, they move on fire-brick rates in and between various territories, and rating in the three major classifications is the same on both commodities. Reasonable basis of rates prescribed and reparation awarded. Chattanooga Bottle & Glass Mfg. Co. v. S. Ry., 93 I. C. C. 71.

(nn) Rates on solvent naphtha, a coal-tar product, l. c. l., found not unreasonable or otherwise unlawful as compared with rates on petroleum naphtha (not coal-tar naphtha). California Rand Silver v. C. & W., 93 I. C. C. 197.

(oo) Rates on wire-bound box material found unduly prejudicial to extent they exceed rates contemporaneously applicable on box shooks. Lange & Crist Box & Lbr. Co. v. B. & O., 93 I. C. C. 207.

(pp) Rates on cabbage, in bulk, found not unreasonable or unduly prejudicial as compared with rates on potatoes or on mixed carloads of potatoes and other class C vegetables, including cabbage. Rates on cabbage and other class C vegetables in territory here involved are uniformly higher than on potatoes; no instance is cited where rates from point here involved are as low on cabbage as on potatoes; cabbage is more valuable, loads lighter, and is more difficult to protect from freezing; and rates assailed compare favorably, distance considered, with rates heretofore found not unreasonable or prescribed by commission. Anderson Commission Co. v. C., R. I. & P., 93 I. C. C. 241.

(qq) The so-called analogy rule has no application where a commodity is clearly and definitely covered by a provision of the classification. Friedlander case, 85 I. C. C. 465. Toledo Cooker Co. v. N. & A. Ry., 93 I. C. C. 271, 272.

(rr) Rates on common pottery insulators, in barrels, found not unreasonable as compared with rates on wire nails, fruits and vegetables, glassware, and other commodities, the rates and earnings on which are not comparable with those on insulators. Jackson Traffic Bureau v. B. & O., 93 I. C. C. 342.

(ss) Complainant contended that class rate assessed under analogous article rule of the classification was inapplicable, and that under terms of that rule lower commodity rate should have been charged. HELD, language of analogous article rule definitely restricts its application to classification of commodities, and can not be used to determine application of commodity rates carried in commodity tariffs. Moreover, rule 6(b) of Tariff Circular 18-A provides that "Commodity rates must be specific and must not be applied to analogous articles." Cullum & Boren Co. v. C., B. & Q., 93 I. C. C. 354, 355.

(tt) Rates on ground iron ore found

not unreasonable as compared with rates on crude iron ore. Crude iron ore is iron ore as it is mined, whereas ground iron ore is a manufactured product which when ground in oil becomes paint. Crude iron ore moves in open-top equipment, ground iron ore is shipped in paper sacks, and, in order to avoid damage in transit, is loaded in water-tight box-car equipment, free from nails and slivers. Circumstances and conditions surrounding transportation of these commodities are so dissimilar as to warrant lower rates on crude than on ground iron ore. Winters Metallic Paint Co. v. C., M. & St. P., 93 I. C. C. 427.

(uu) Rate on petroleum oil, in tank cars, found not unreasonable or otherwise unlawful as compared with lower rates on liquid asphalt, ice, lumber, bottles, and sand and gravel. Huber v. C. R. R. Co. of N. J., 93 I. C. C. 539.

(vv) Applicable class rates assessed on electrical heating and cooking appliances from Marion, Ind., to San Francisco, found not unreasonable, discriminatory, or unduly prejudicial as compared with lower commodity rates contemporaneously in effect on water heaters and other articles of a like or competitive nature, or with commodity rate subsequently established at complainant's request to assist it in competing with Pacific coast manufacturers. Rutenber Electric Co. v. C., C., C. & St. L., 93 I. C. C. 541.

(ww) Rates on imitation leather found unreasonable to extent they exceed contemporaneously applicable rate on leather. Reparation awarded. Chevrolet Motor Co. v. Director General, 93 I. C. C. 544.

(xx) Contention that whole shells used in making buttons may properly take higher rates than crushed shells, a waste product used principally for mixing in poultry feed, not sustained. Such contention lays emphasis on use made of an article, a basis upon which the commission has repeatedly refused to sanction different rates. Pioneer Pearl Button Co. v. St. L.-S. F., 93 I. C. C. 599, 601.

(yy) Rate on returned paper-winding cores found unreasonable to extent it exceeded the rate contemporaneously in effect on newsprint paper. Subsequent to movement carrier provided in its tariff that rate on cores returned to mill point from which originally shipped wound with paper would not exceed rate on newsprint paper in reverse direction. Reparation awarded. Nelson Estate v. C., M. & St. P., 93 I. C. C. 607.

(zz) Rates on munition lint found unreasonable to extent they exceeded rates on cottonseed-hull shavings. Transportation characteristics of the two commodities are practically identical, and aside from the manufacture of munitions they are used for substantially similar purposes. Reparation awarded. Pearson & Co. v. S. L., B. & M., 93 I. C. C. 681.

(3a) Class rate on woven paper fabric bags found unreasonable as compared with rates on numerous paper articles and to extent it exceeded lower commodity rate contemporaneously in effect on paper bags. Reparation awarded. Cleveland Akron Bag Co. v. W. & L. E., 93 I. C. C. 694.

(3b) Rates on vehicles, assessed on army escort wagons, found applicable and not unreasonable as compared with rates on farm wagons. Further than to show that shipments loaded in excess of the minimum weight applicable to farm wagons and that no special type of equipment was required, complainant submitted no evidence in support of its contention that rates charged were unreasonable, discriminatory or unduly prejudicial. Neither is there any showing of further movement of escort wagons between points concerned in order to justify establishment of rates for the future. Taylor v. I. & G. N., 95 I. C. C. 55.

(3c) Rates on scrap brass and brass ingots or pigs found unreasonable to extent they exceeded rates on scrap copper and copper ingots or pigs. Reasonable rates for future prescribed and reparation awarded. Union Smelting & Rfg. Co. v. C. R. R. Co. of N. J., 95 I. C. C. 104.

(3d) Rates on wire rods from Acme and Peoria, Ill., Harriet, N. Y., and Johnstown, Pa., to Kansas City, Mo., found not unreasonable or otherwise unlawful. Complainants submitted comparisons with rates on billets and other commodities taking rates the same as on billets east of the Mississippi and showed that wire rods generally take rates equal to those on billets in eastern trunk line, c. f. a., and southern territories. Defendants, however, showed that density of traffic and element of competition produce a lower level and different basis of

rates in c. f. a. than in territory west of the Mississippi; also that wire rods are farther advanced in stage of manufacture than billets, can not be distinguished from other kinds of rods manufactured from billets, and that it is practically impossible from a classification standpoint to draw a line between the different commodities after they have passed the billet stage. Black Steel & Wire Co. v. A., T. & S. F., 95 I. C. C. 161.

(3e) Rates on lard substitutes, cottonseed, and other cooking oils, in peddler cars, found unreasonable and unduly prejudicial to extent they exceed the contemporaneous rates on lard, in peddler cars, for equal distances. From transportation and commercial standpoints lard substitutes are closely related to lard and in 32 I. C. C. 192, the commission prescribed same rate on lard substitutes as applied on packing-house products, in which group lard is included. Moreover, in important particulars lard substitutes have more favorable transportation characteristics as they do not require icing and may move in ordinary channels, whereas lard requires refrigeration. Interstate Cotton Oil Rfg. Co. v. A., T. & S. F., 95 I. C. C. 171.

(3f) Contention that rig irons are analogous to and should be accorded same commodity rate as iron and steel articles, not sustained. While some parts of rig irons are listed in tariffs as iron and steel articles, other parts such as wooden bull wheels and calf wheels, arms, clamps, and pins, are not included in that list. Moreover, it is probable that with possible exception of lumber there are no manufactured articles transported which move in the volume or cover so wide a field of distribution as iron and steel articles. Parkersburg Rig & Reel Co. v. C., R. I. & P., 95 I. C. C. 181, 187.

(3g) Rate on crushed asphalt rock from Dougherty, Okla., to Kansas City, Mo.-Kans., assessed under distance scale, found unreasonable as compared with rates contemporaneously in effect on similar commodities for comparable distances in same general territory. Reparation awarded to basis found reasonable and reasonable rate prescribed for future. Roudebush v. A., T. & S. F., 95 I. C. C. 319.

(3h) Rates on feldspar found unreasonable as compared with rates on brick, ice, cement, pig iron, iron ore, marble blocks, rough, dressed, or sawed sandstone, and iron and steel borings and turnings. Oxford Soap Co. v. B. & M., 95 I. C. C. 615, 616.

(3i) Third-class rates on oleomargarine found not unreasonable as compared with rates on butter. Both before and after shipments here involved moved, same rates applied on oleomargarine, butter, cheese, dressed poultry and eggs, but during period of movement lower emergency rates on all these commodities, except oleomargarine, were in effect, having been established by carriers as a temporary relief for farmers. Oleomargarine was not included in the reductions as it was not considered a direct product of the farm or ranch, but purely a manufactured product. Moreover, in Kansas Car-lot Egg Shippers' Asso., 53 I. C. C. 59, third-class rates were found by the commission to be just and reasonable maximum rates on butter, butterine, oleomargarine, dressed poultry, and eggs. Jelke Co. v. C. & N. W., 95 I. C. C. 643.

(3j) Rate on sporadic shipments of ferromanganese found not unreasonable as compared with lower rates on other raw materials used in the manufacture of steel, or with rates on various commodities which for similar distances yielded earnings in excess of those under rate assailed. Bush v. Director General, 95 I. C. C. 661.

(3k) Rates on talc found not unjustly discriminatory or unduly prejudicial, but unreasonable as compared with rates on ground and crude barytes, feldspar, and clay. Reparation awarded. Standard Mineral Co. v. N. S. R. R., 95 I. C. C. 704.

(3l) The competitive situation as to rates on green coffee is in many respects similar to that as to sugar. Coffee from Galveston and Other Gulf Ports, 58 I. C. C. 716. Omaha Chamber of Commerce v. A., T. & S. F., 95 I. C. C. 713, 716.

(3m) Shippers stressed fact that fresh meat, fruits and vegetables and dairy products all move in refrigerator cars and have like transportation characteristics, except as to volume of movement, and urged the establishment of rates on dairy products on basis of either the fruit and vegetable or fresh meat rates, preferably the latter. FOUND, same contentions have been urged in other cases wherein rates on dairy products have been in issue, but the commission has never been impressed with the

cogency of this reasoning. Butter, Eggs, Dairy Products, and Poultry, 96 I. C. C. 19, 29.

(3n) Shipper claimed that relationship between dressed and live poultry is analogous to that which exists between a manufactured product and its raw material, and directed attention to rates on livestock which in many instances are lower than those on fresh meat and packing-house products. Considered from this standpoint it contended that live poultry should be entitled to rates at least as low as those on dressed poultry. FOUND, even if dressed poultry should be regarded as a manufactured product of the live fowl as raw material, the latter need not necessarily take as low a rate; moreover, live and dressed poultry are not analogous from a transportation standpoint nor are the conditions surrounding their shipment substantially similar. Butter, Eggs, Dairy Products, and Poultry, 96 I. C. C. 19, 35.

(3o) Applicable rate on mixed shipment of various canned goods, including chili sauce, found unreasonable to extent it exceeded lower rate on all commodities included in the shipment, in straight or mixed carloads, except chili sauce, that commodity having been added to list taking the lower rate subsequent to movement. Waiver of undercharges authorized. Oakes & Co. v. O. S. L., 96 I. C. C. 95.

(3p) Following Wright & Wimmer, 81 I. C. C. 685, rates on cullet (broken glass) found not unreasonable or otherwise unlawful as compared with lower rates on oyster shells. While oyster shells are used to certain extent as a stucco finish and therefore come into competition with cullet they are used also in the manufacture of fertilizer material and chicken feed and move more extensively and regularly than cullet. Moreover, there is no showing that any of complainant's competitors are unduly preferred by the rates on oyster shells. Marion Glass Dash Co. v. P. R. R., 96 I. C. C. 172.

(3q) Rates on seed potatoes found not unreasonable as compared with rates contemporaneously applicable on wheat in same general territory. Wheat moves in box cars and loads on an average of 83,600 pounds, while potatoes move in refrigerator cars and load on an average 38,123 pounds, which is as heavy as proper ventilation will permit. Northwest Potato Exchange v. G. N., 96 I. C. C. 187, 189.

(3r) Fifth-class rates on brass and copper scrap from New York City to New England destinations, found not unreasonable, discriminatory, or unduly prejudicial, as compared with lower commodity rates accorded other commodities of a similar nature for same measure of service. Evidence introduced found too meager to warrant finding sought. Moreover, rates assailed are the basis in effect, without exception, on scrap brass and copper within New England territory and were approved by commission in 49 I. C. C. 421. Lissberger & Co. v. N. Y., N. H. & H., 96 I. C. C. 231.

(3s) Second-class rating and rates applicable on l. c. l. shipments of printed waxed wrapping paper between points in official territory, found not unduly prejudicial but unreasonable to extent they exceeded, exceed, or may exceed, third-class rating and rates contemporaneously applicable on l. c. l. shipments of waxed wrapping paper unprinted. Printed waxed paper weighs the same, occupies same amount of space in a car, and is shipped in same kind of container as unprinted waxed paper, the only difference being that the printed paper is slightly more valuable. Moreover, waxed paper, printed and unprinted, in official classification takes same c. l. rating and in both southern and western classification the same l. c. l. rating. Reparation awarded. General Baking Co. v. P. R. R. Co., 96 I. C C. 280.

(3t) Rates on peaches, pears, and plums, in baskets, in carloads, from points in the Yakima Valley to various interstate destinations found unreasonable and rates on apples, in bulk or in baskets, in carloads, between the same points found unreasonable and unduly prejudicial, to the extent in each case that such rates exceed the contemporaneous rates on those fruits from and to the same points in boxes, in carloads. Kloeber v. N. P. Ry. Co., 96 I. C. C. 437.

(3u) Rates on linseed-oil meal and oil cake from Edgewater, N. J., to Toledo, Ohio, and Waukegan, Ill., following finding in 89 I. C. C. 260, found to have been unreasonable to the extent they exceeded rates contemporaneously applicable on gluten feed and glucose feed. Reparation awarded. Midland Linseed Products Co. v. N. Y. C. R. R. Co., 96 I. C. C. 447.

(3v) Rates on linseed oil from New York Harbor points to Black Rock and Buffalo, N. Y., and Bridgeburg, Ont., following finding in 68 I. C. C. 522, found to have been unreasonable to the extent they exceeded the rates contemporaneously applicable from and to the same points on cottonseed oil. Reparations awarded. Pratt & Lambert v. N. Y. C. 96 I. C. C. 460.

(3w) Rates on crude, fuel and gas oils from Clay Spur and Osage, Wyo., to points in South Dakota, Iowa, Minnesota, and Wisconsin, found not unreasonable or otherwise unlawful. Although equal to rates contemporaneously maintained on refined oils to and from same points, such rates compare favorably with the rate on crude oil from Lander, Wyo., to Ardmore, S. Dak., found not unreasonable in 91 I. C. C. 563. Complaint dismissed. Barber Co. v. C. & N. W. Ry., 96 I. C. C. 516.

(3x) Rates and ratings applicable on electric table stoves, with equipment of cooking utensils, in less than carloads, from Huntington, W. Va., to interstate destinations throughout the United States found not unreasonable or otherwise unlawful as compared with rates and ratings on other similar electric appliances. Complaint dismissed. Armstrong Mfg. Co. v. A. & R. Ry. Co., 96 I. C. C. 595.

(3y) First-class and commodity rates assessed on shipments of hog bristles from Pacific coast ports to New York, N. Y., which were washed, sorted, and bunched prior to shipment, thus changing their character so that they could no longer be considered as coming within the designation "other than crude" within the meaning of the tariffs, found applicable. Cone & Co. v. Director General, 96 I. C. C. 629.

(3z) Rate charged on one carload of dried beet pulp from Bayard, Nebr., to Jackson, Miss., was unreasonable to the extent it exceeded the then existing rate on corn between same points, but present rate held not unreasonable. Complaint dismissed. Jackson Traffic Bureau v. C., B. & Q. R. R. Co., 96 I. C. C. 763.

(4a) Rates on hollow building tile from Alberhill, Calif. to Saticoy, Edfu, and Santa Paula, Calif. moving during Federal control, found unreasonable to extent they exceeded the rate contemporaneously in effect on fire and wirecut face brick between the same points following National Paving Brick Mfrs. Asso. 68 I. C. C. 213, and the Memphis-Southwestern Investigation, 77 I. C. C. 474. Reparation awarded. Los Angeles Pressed Brick Co. v. Director General 98 I. C. C. 45.

(4b) Hollow building tile is comparable with lime, cement, and plaster from the standpoint of value and transportation hazards. Los Angeles Pressed Brick Co. v. Director General, 98 I. C. C. 45, 46.

(4c) Complainant seeking a commodity rate in lieu of first-class rate on artificial silk made comparisons with various commodities rated first class, any quantity on which commodity rates between specific points are published. FOUND, that the commodity rates on these nonanalogous articles were established because of the volume of the movement and competitive and other conditions having no relation to the movement of artificial silk, which is not competitive with any of the articles named. Viscose Co. v. P. R. R. Co., 98 I. C. C. 97, 99.

(4d) Proposal to increase rating on jute packing in official, southern, and western classifications, designed to provide same ratings as those applicable on oakum and to prevent shippers from obtaining lower rates by billing this commodity as rope, found not justified. Jute packing in rope form is not, in fact, oakum or rope, and it is not evident how the proposed specific classification rating would serve to stop the practice of shipping this commodity as rope. Classification of Jute Packing, 98 I. C. C. 287.

(4e) The classification rule of analogy by its own terms can not be invoked to rate any commodity embraced in the classification as an article not otherwise indexed by name. See 85 I. C. C. 383. Classification of Jute Packing, 98 I. C. C. 287, 288.

(4f) Rates on coconut stearine, in c. l. and l. c. l., from Bayonne, N. J., to points in official territory, found unreasonable and unduly prejudicial to extent they exceed rates contemporaneously applicable on peanut, cottonseed, palm-kernel and mixed stearines. Reasonable and nonprejudicial rates prescribed for future and reparation awarded. Best Foods v. C. R. R. Co. of N. J., 98 I. C. C. 331.

(4g) Rates on, wall, oatmeal, ingrain paper, from North Hoosick and Walloomsac, N. Y., and Appleton and Neenah, Wis., to Jersey City, N. J., and Philadelphia, Pa., found not unreasonable as compared with corresponding contemporaneous rates on unfinished wall papers from and to same points. Becker, Smith & Page, Inc., v. B. & M. R. R., 98 I. C. C. 337.

(4h) Rates on tanning extract, from Newport, Tenn., to Olean, N. Y., found not unreasonable or unduly prejudicial as compared with lower contemporaneous rates on cottonseed oil from numerous southern points to Pittsburgh and Philadelphia, Pa., and New York, N. Y. Cottonseed oil is a liquid, moves in tank cars, and from a transportation standpoint is said not to differ materially from tanning extract. England Walton & Co. v. Sou. Ry. Co., 98 I. C. C. 449.

(4i) Rate on wooden wagon bows, from Columbus, Ohio, to Sherman and Stamford, Tex., specifically named in the tariff on this commodity, found unreasonable to extent it exceeded and exceeds lower contemporaneous rate on "Wagon wood, not otherwise specified," which latter rate is prescribed as reasonable for future. Reparation awarded. Fort Smith Rim & Bow Co. v. B. & O. R. R. Co., 98 I. C. C. 536.

(4j) Rates on clam and mussel shells, valuable for button manufacture, from points in Illinois to points on the Mississippi River in Illinois and Iowa, found not unreasonable or unduly prejudicial as compared with rates on fertilizer and on crushed, ground, or waste shells, valuable for fertilizer, stucco dash, and chicken grit, between points in same general territory for similar distances. Mississippi Pearl Button Co. v. A., T. & S. F. Ry. Co., 98 I. C. C. 560.

(4k) Complainant attacked classification rates charged on Chero Cola sirup shipped between Feb. and Sept. 1922 from Columbus, Ga., to Montgomery, Ala., as inapplicable and unreasonable in violation of section 1. Third class rates of 65.5c prior to July 1, 1922 and the less carload shipments and fifth class 59c subsequent thereto were charged on rate of 40.5c prior to July 1, 1922 on one carload, applicable in connection with the description and rating provided in the southern classification on flavoring sirup. The tariff in effect at time of movement provided lower commodity rates on molasses and sirup (except fountain and coloring.) While Chero Cola in a narrow sense may not be dispensed over fountains, nevertheless it is similar to Cocoa Cola and other fountain beverages and would come under the general classification of fountain sirups. HELD, applicable rates charged and not unreasonable complaint dismissed. Chero Cola Bottling Co. v. C. of Ga. Ry. 107 I. C. C. 355.

(4l) Rate on wood pulp found not applicable also on shipments of wood flour from Hercules, Calif., to Bacchus, Utah, at time shipments moved, and applicable rate on such shipments found unreasonable to extent it exceeded rate applicable on wood pulp, which was subsequently established on wood flour. Reparation awarded. Hercules Powder Co. v. Director General, 100 I. C. C. 393.

(4m) Unless contrary to decision in the Midland case, 68 I. C. C. 522, there is no substantial competition between the oils classed by the carriers as paint oils and those classed as soap oils, respondents' proposal to establish different rates on the soap oils between points in trunk-line territory and from such points to destinations in central territory is necessarily within the prohibition of section 3 of the act. Vegetable Oils from Trunk Line Points, 100 I. C. C. 736.

(4n) While peanut oil is derived from peanuts its transportation characteristics are dissimilar from those surrounding the movement of peanuts, and there is no sufficient showing in this record to justify the prescription of rates on peanuts that bear any fixed relationship to rates on peanut oil, nor are rate comparisons between commodities of such diverse transportation characteristics particularly helpful. United Fig & Date Co. v. A. C. L., 101 I. C. C. 138.

(4o) Complainants describe manufacture of strawboard and paper and name principal ingredients in these and various other like products; introduce evidence as to relative values and seek to have strawboard excepted from the general list of boards on which a rating of 90 per cent of sixth class, prescribed in 52 I. C. C. 84, applies, and given a rating of 80 per cent of sixth class, minimum 40,000 pounds. HELD, All these boards are so similar from standpoint of

manufacturing process, value, use, and transportation characteristics, that they naturally fall into one group and should be accorded a common basis of rates. This has been previously thoroughly established in Schulz Co., 20 I. C. C. 403, and other cited cases. Lafayette Box Board & Paper Co. v. A., C. & Y., 101 I. C. C. 273, 274, 278.

(4p) Rates on cedar pencil slats found unreasonable to extent they exceeded 120 per cent of the rates on lumber of same species. Reasonable rates prescribed for future and reparation awarded. Dixon Crucible Co. v. P. R. R., 101 I. C. C. 415.

(4q) Shippers contended that cheese throughout its transportation history had been improperly associated with butter, eggs, and dressed poultry, and that rates on cheese should not exceed 80 per cent of the rates on those commodities. FOUND: Record as a whole does not warrant a lower level of rates on cheese than would result under the scale prescribed on butter in the Dairy Products case, 96 I. C. C. 19. Cheese from Wisconsin, 101 I. C. C. 744, 754.

(4r) Complainant attacked first and fourth class ratings on metal columns, less carload and carload, in official classification as unreasonable and unduly prejudicial to extent such ratings exceed third and fifth on hollow wooden columns. Metal columns are listed in the classification under the heading of building sheet metal work. They are shipped in crates and almost exclusively in less carload lots inclosed equipment. The claims for loss and damage are negligible. Hollow wooden columns are made in the same sizes as metal columns and are used for substantially the same purposes and are sold in competition therewith, at least to some extent. The fact that they take lower ratings is not shown to have operated in any way to complainants injury or prejudiced the marketing of its commodity. Metal columns take the same rating in all three classifications, have a considerably lower weight per cubic foot and higher value per pound than other building sheet metal work or hollow wooden columns. The mere fact that they compete with the latter to some extent does not entitle them to the same ratings. HELD, ratings attacked not unreasonable, unjustly discriminatory or unduly prejudicial, complaint dismissed. Union Metal Mfg. Co. v. A. C. & Y. Ry., 109 I. C. C. 490.

(4s) The classification contains a limited number of ratings, and commodities possessing somewhat different transportation characteristics must often of necessity be assigned to the same class. French Battery & Carbon Co. v. C. & N. W. Ry., 112 I. C. C. 128, 131.

(4t) Complainant attacked commodity rates charged on canned evaporated milk, in cases, in carloads and less carloads, shipped between March 3, 1923 and Jan. 31, 1925 from Greensboro, Md., to Wilmington, Del., Chester and Philadelphia, Pa., Norfolk, Va., and Baltimore, Md., as unjust and unreasonable to extent they exceed the rates on canned goods. By exceptions to the classification the carload rating on evaporated and condensed milk is fifth class, and in less carloads, rule 26. On Dec. 1, 1916 commodity rates lower than the class rates were established and have since been maintained on canned goods, in carloads and less carloads, but not on canned goods. The rates on evaporated milk from Greensboro are on the same basis as all other rates on that commodity from Pennsylvania Railroad shipping points in trunk line territory. In no instance is there a commodity rate on evaporated milk. It is not in competition with canned goods. In previous cases the Commission has found the rates on condensed milk should be on the same basis as canned goods. HELD, rates attacked unreasonable to extent they exceeded rates on canned goods, reparation awarded. Pet Milk Co. v. P. R. R., 112 I. C. C. 155.

(4u) The Commission has frequently found that the rates on canned, condensed or evaporated milk should not exceed the rates on canned fruits and vegetables. Pet Milk Co. v. P. R. R., 112 I. C. C. 155, 157.

(4v) Complainant attacked rates charged on gum cigar box lumber, carloads, shipped between April 27, 1921 and Nov. 8, 1923 from Magazine, Ala., to Omaha, Neb., as unreasonable and in violation of the fourth section. Charged 56c and 50.5c, being joint commodity rates applicable on cigar box lumber, carloads. Rates of 45.5c and 41c were maintained on lumber, except cedar, cherry, mahogany and walnut and cigar box material and the tariffs also pro-

vided that lumber rates would apply on box and crate material, wood, wired, loose or in bundles. While the earnings were slightly higher than the earnings on the rates on lumber, such fact alone does not demonstrate that the rates attacked were or are unreasonable. The rates charged do not exceed the aggregate of intermediates, complaint dismissed. Eggerss O'Flyng Co. v. A. G. S. Ry., 112 I. C. C. 218.

(4w) Complainant attacked combination rates charged on 42 cars of composboard, shipped between May 26, 1921, and August 27, 1923 from Minneapolis, Minn., to New Rochelle and New York as unjust, unreasonable unjustly discriminatory to extent the rates charged exceeded the rates maintained on wallboard. Applicable rates prior to March 15, 1922 was 97c made up of 34c to Chicago and 63c beyond. Effective March 15, 1922 and until June 30, 1922 a combination rate of 86c was applicable and on that date reduced to 77c, and on Aug. 27, 1923 when a joint rate of 63.5c was established. Rates were on wall board prior to July 1, 1922 70.5c and subsequent thereto 63.5c. HELD, rates attacked not unreasonable but unduly prejudicial to extent they exceeded rates on wall board, reparation denied, complaint dismissed. Wright Lumber Co. v. A. A. R. R. 112 I. C. C. 337.

C. C. 588; Cutler-Hammer Mfg. Co. v. Director General, as Agent, 88 I. C. C. 600.

§18. Specific Comparisons.

See Supra §17; Comparative Rates.

(a) Where the classification provides a specific rating on an article, a broad description used in connection with a lower commodity rate under which such article may be included does not take it out of the classification. Cleveland Akron Bag Co. v. W. & L. E. Ry., 93 I. C. C. 694, 695.

§20. Different classification territories.

See Class Rates §2 (3k) (3w); Through Routes and Joint Rates §20¾.

(a) The commission has recognized that greater traffic density and more favorable operating conditions north of Ohio River than south thereof warrant lower rates north of the river. Commercial Club of Carrollton, 55 I. C. C. 697. Cincinnati Asso. of Purchasing Agents, v. L. & N. R. R. Co., 89 I. C. C. 285, 294.

(b) General level of rates in the southwest is higher than in c. f. a. territory. Liberty Glass Co. v. M. P. R. R. Co., 89 I. C. C. 362, 364.

(c) Respondents in the three general classification territories proposed some changes in their ratings and minimum weights on automobile fenders. The proposal contemplated absolute uni-

formity in less than carload ratings and practical uniformity in carload ratings. The entire set of classification items covering automobile fenders has been rewritten and a number of changes have been made, but the one to which the parties principally directed their evidence is that which provides an increase in the carload rating on finished fenders, nested, in boxes or crates. In this item respondents proposed to increase the rating from fourth class, minimum 30,000 pounds, to second class minimum 12,000 pounds, subject to the graded minimum rule for cars in excess of 36 ft. 6 inches in length. Finished fenders. nested and packed, weigh on the average about 7 pounds per cubic foot, and have an average value of about 10c per pound. Comparatively speaking, they do not constitute a commodity of very high value and are rather light and bulky. The classification provides fifth class rating in official and southern territories and class A in western territory on unfinished fenders, in carloads, minimum 30,000 pounds and no change in rating is proposed. A carload of finished fenders is considerably less valuable than a carload of unfinished, mainly because the former contains fewer fenders, more space being used per fender on account of the method of packing and loading. On finished fenders, nested, in boxes or crates, in less carloads, an increase from second to first class is proposed. On unfinished fenders, nested, in boxes, bundles or crates, in less carloads, an increase from third to second class is proposed in official classification, which would make the rating the same as that obtaining at present in the two other classifications. On unfinished fenders, not nested, less carloads, an increase from third to second class is proposed in official classification, which would make the rating the same as that obtaining at present in the two other classifications. On unfinished fenders, not nested, less carloads, a reduction from double first class to 1.5 times first class is proposed in western classification. HELD, suspended schedules justified except as to finished fenders, carloads. On such fenders, when loose or in bundles the rating should not exceed second class, minimum 10,000 pounds, and when nested, in boxes or crates, third class, minimum 14,000 pounds, in each instance subject to rule 34. Classification of automobile fenders, 92 I. C. C. 223.

(d) Complainant attacked fifth class rate of 63c charged on 22 cars of cottonseed hull shavings in compressed bales shipped during October and November 1922 from East St. Louis, Ill., to Hopewell, Va., as unreasonable to extent it exceeded the subequently established rate of 33.5c. Between December 21, 1919 and Nov. 20, 1922 rates on shavings from Cairo, Ill., Louisville, Ky., and Cincinnati, O., to Hopewell were uniformly the same as rates on hulls and that East St. Louis alone was singled out for a different rate basis. HELD, rate attacked unreasonable to extent it exceeded 36c, reparation awarded. East St. Louis Cotton Oil Co. v. B. & O. R. R., 92 I. C. C. 633.

(e) Higher unit cost of transportation and generally higher level of rates on all commodities in western territory as compared with c. f. a. territory is due to comparative traffic densities of the two territories. Rates and Charges on Grain and Products, 91 I. C. C. 105, 131.

(f) Differences in transportation conditions and density of traffic justify relatively higher rates in western territory than in the East. Wool Rates Investigation 1923, 91 I. C. C. 235, 272.

(g) Proposed changes in ratings and minimum weights on automobile fenders in the three general classification territories, involving both increases and reductions, for purpose of establishing absolute uniformity in l. c. l. ratings and practical uniformity in c. l. ratings, found justified, except as to finished fenders in carloads. Classification of Automobile Fenders, 92 I. C. C. 223.

(h) Comparisons of rate levels in the respective classification territories serve no useful purpose in a case involving reasonableness of a classification rating in a particular classification territory. Coca-Cola Co. v. B. & O., 92 I. C. C. 340, 343, 344.

(i) When an article is produced in two separate classification territories and there is competitive interterritorial distribution of the article, the base rates should be the same in opposite directions. See Houston Packing Co. 37 I. C. C. 584. Salt Cases of 1923, 92 I. C. C. 388, 422, 423.

(j) Quite generally the rate levels in the Southwest are somewhat higher than in the Southeast. Horse and Mule Rates in the Southwest, 1924, 93 I. C. C. 479, 489.

(k) Traffic density as a whole in southern district exceeds that in the western district, but general rate levels in western district are higher than in southern; also operating expenses of carriers in western district are proportionately higher than those of carriers in southern district and latter have been, and are, yielding a higher return on investment than the former. Alabama & Mississippi Ry. Co. v. A., T. & S. F., 95 I. C. C. 385, 402, 403.

(l) What would be a reasonable rate for a haul in a territory with no adverse transportation conditions would not be adequate to compensate carriers operating in another section of the country under adverse conditions. Carter Oil Co. v. C., B. & Q., 96 I. C. C. 217, 218.

(m) Joint rates from central, trunkline, and New England territories to the Twin Cities are published in tariffs subject to the official classification, while the rates from Chicago to Fargo are published in tariffs subject to western classification. Traffic moving on class rates to Fargo from points east of and basing on Chicago is entitled to proportional rates from the latter point which are somewhat lower than reasonable class rates on local traffic from Chicago. This is desirable in order to remove the present discrimination brought about by the existing differences in the classifications east and west of Chicago. Fargo Commercial Club v. A. & W. Ry. Co., 98 I. C. C. 691, 720, 724.

(n) The Commission can not consent to the proposition that the lower rate level in official classification territory can properly be offset by higher classification ratings. Classification of radio sets and talking machines 107 I. C. C. 175, 177.

(o) Protestants' conclusion with regard to proposed revision of all-rail and rail-and-water rates, c. l. and l. c. l., on furniture from southern district to eastern points, are based upon premises open to serious criticism. The assumption that capital cost and operating expense may be charged entirely to freight, for purpose of this case, disregards the immensely greater expense of passenger terminals in the eastern than in the southern district and entirely omits consideration of the fact that interterritorial traffic moving largely in eastern district and not furniture rates within southern district is under consideration. Whatever weight might be given to such evidence with regard to portions of the hauls in southern district is largely neutralized when considering hauls beyond. Ton-mile earnings should ordinarily decrease with increasing distance, but it must be borne in mind that the average number of miles hauled in the southern district is approximately one-third greater than in eastern district. Furniture from Southern Points, 100 I. C. C. 127, 144.

(p) The rate structure of official territory is very different from that of southern territory, and no concession in class rates for benefit of Kentucky or North Carolina which record herein would justify would be of material importance in reducing discrepancy between class rates in those States and those which prevail in official territory. Southern Class Rate Investigation, 100 I. C. C. 513, 623.

(q) The commission has condemned, expressly or in effect, in several recent important rate cases cited, the practice of basing interterritorial rates upon the combination of local rates to and from border points. Southern Class Rate Investigation, 100 I. C. C. 513, 661.

(r) So far as operating conditions are concerned, it appears that the only distinction which can be drawn with any degree of validity between interterritorial service between central and southern territories and intraterritorial service within southern territory to the disadvantage of the former is the fact that at the boundary line there is ordinarily a change of carriers. Southern Class Rate Investigation, 100 I. C. C. 513, 662.

(s) Commission is of opinion that a uniform and unmodified application between official and southern territories on all-rail traffic of southern territory class-rate scale herein approved would in many instances result in rates which would neither be reasonable nor free from undue preference and prejudice, particularly to and from border districts of southern territory. The situation should be corrected by means of a scale of differential rates. Southern Class Rate Investigation, 100 I. C. C. 513, 675.

(t) Interterritorial all-rail class rates from or to points on other than standard lines, as defined herein, may be made by

addition of arbitraries for that portion of the joint haul over a line not classed as standard. Southern Class Rate Investigation, 100 I. C. C. 513, 704.

(u) Percentage rates on strawboard from and to points in central territory and from points in that territory to Canadian and trunk-line territories found not unreasonable, unjustly discriminatory or unduly prejudicial as compared with lower rates prescribed for application on certain papers and paper articles to and within western territory in Certain-teed Products Corp., 73 I. C. C. 82, and other cited cases. Lafayette Box Board & Paper Co. v. A., C. & Y., 101 I. C. C. 273, 275.

(v) Contention that rates on strawboard between c. f. a. and trunk-line territories are unreasonable because they exceed rates based on scale prescribed in C. F. A. Class Scale Case, 45 I. C. C. 254, not sustained. That scale was not intended as a measure of interterritorial rates, it being recognized that c. f. a. rates would not entirely harmonize with rates between central and trunk-line territories. Lafayette Box Board & Paper Co. v. A. C. & Y., 101 I. C. C. 273, 276.

(w) The differences in l. c. l. rates on grain and grain products and cottonseed meal and hulls east and west of the Mississippi River are due in part to difference between two divergent class rate structures, differences between western and southern classification ratings and rules, transportation and traffic conditions, relative financial strength of principal carriers serving the two territories, and differences between rates prescribed in Meridian Traffic Bureau 60 I. C. C. 5, and other cases. Natchez Frt. & Traffic Bureau v. M. P., 101 I. C. C. 476, 481.

(x) Between points in c. f. a. territory crude sulphur takes 75 per cent of sixth-class by exception to the official classification. For movements within trunk-line territory, 80 per cent of sixth class is a reasonable basis. See 89 I. C. C. 383; 87 I. C. C. 613. Detroit Chemical Works v. C. R. R. Co., 101 I. C. C. 671, 672.

(xa) Transportation conditions are more favorable in Mississippi Valley than in the Southwest. Miss. R. R. Comm. v. A. & V., 102 I. C. C. 540, 545.

(y) It is well known that the level of rates not only on grain but on all traffic is much lower in western trunk line territory than in the southwest. Ballman Cummings Furn. Co. v. C. & E. I. Ry., 109 I. C. C. 413, 415.

(z) Manifestly it would be improper to attempt to overcome differences in rate levels by rating articles higher in the official than in the western and southern classifications. National Commercial Fixture Mfrs. Asso. v. A. A. R. R., 109 I. C. C. 479, 483.

(aa) Fact that level of rates on commodities generally is somewhat lower north and south of Ohio and Potomac rivers can not be accepted as basis upon which to build a special case under the fourth section, more especially where hauls involved are of great length and where substantial portions of rate-making routes are in same territory as major portions of petitioning routes. North Carolina Pine Asso. v. A. C. L. R. R. Co., 85 I. C. C. 270, 303.

ALL OTHER CITATIONS

O-So-Ezy Products Co. v. Director General, as Agent, 85 I. C. C. 187; Lehigh Lime Co. v. A. C. & Y. Ry. Co., 85 I. C. C. 341; Indiana Public Service Commission v. A. A. R. R. Co., 85 I. C. C. 533; Diamond Match Co. v. Director General, as Agent, 88 I. C. C. 435.

V. REASONABLENESS AND DISCRIMINATION.

See Supra §15 (a), §17; Advanced Rates §3 (m); Any Quantity Rates (g) (s); Commodity Rates §3.

§22. In general.

(a) In comparative rate adjustments consideration may and should be given to economic conditions surrounding the traffic, so that an adjustment may result which will reflect as high a degree of uniformity as is practicable and at the same time accord to all interested the fair opportunity to which the law entitles them. Southwestern Coal Operators' Asso. v. A. & W. Ry. Co., 89 I. C. C. 73, 82.

(b) Fact that carriers in the southeast have accorded to nitrate of soda the fertilizer basis of rates does not establish that in the southwest rates on nitrate of soda higher than on fertilizer are unreasonable. New Orleans Joint Traffic Bureau v. A. & V. Ry. Co., 89 I. C. C. 223, 227.

(c) Second-class rating in western classification territory on steam superheaters and parts thereof, found unreasonable to extent it exceeded third class rating applicable in official and southern classifications. Power Specialty Co. v. D. & M. M. R. R. Co., 89 I. C. C. 251.

(d) Third class rating in official and southern classification territories on steam superheater and parts thereof, found not unreasonable as compared with lower fourth class rating applicable to boiler parts. Second-class rating in western territory found unreasonable to extent it exceeded third class. Reparation awarded. Power Specialty Co. v. D. & M. M. R. R. Co., 89 I. C. C. 251.

(e) Rates on gas oil, fuel oil, and gasoline, in tank-car loads, from Brunswick, Ga., to Charleston, S. C., found not unreasonable. While the commission has condemned application of same rate on refined and crude oils, it does not follow that because they carry the same rate that the crude oil rate is unreasonable, for it may be that the refined oil rate is too low. Rate comparisons submitted merely cited lower rates for similar distances without showing of conditions under which established, volume of movement, or similarity of transportation conditions. Moreover, route traversed is through an area of low productivity, largely swamp lands, and ton-mile yield returned by rates between points in other territories is not persuasive as to what should be reasonable for haul here involved. Atlantic Refining Co. v. A., B. & A. Ry. Co., 89 I. C. C. 279.

(f) Classification ratings on vitrolite slabs and table and counter tops in excess of five-sixteenths inch in thickness found unreasonable and unduly prejudicial to extent they exceed the ratings contemporaneously applicable on marble slabs and table and counter tops, and on vitrolite scale platters to extent they exceed ratings greater than one class higher than on vitrolite slabs and counter and table tops. Reasonable and nonprejudicial ratings prescribed. Vitrolite Co. v. A., T. & S. F. Ry. Co., 89 I. C. C. 367.

(g) Present rates on tin cans, c. l. and l. c. l., from Buchanan, Va., to destinations in southern classification territory found not unreasonable or otherwise unlawful, but prior to voluntary establishment by carriers of present differential basis, Buchanan over Virginia cities group, c. l. rates found unreasonable and unduly prejudicial in favor of Bedford, Va., a competing point located within Virginia cities group. Reparation awarded. Virginia Can Co. v. A. & V. Ry. Co., 89 I. C. C. 558.

(h) Complainant attacked as unreasonable fifth class rates charged on linseed oil from Philadelphia, Pa., to Buffalo, N. Y., Pittsburgh, Pa., between May 1, 1922 and May 10, 1923, and to other points in trunk line and central territory between May 1, 1922 and Dec. 15, 1923. Effective May 10, 1923 commodity rates on linseed oil were established on the same basis as the rates on copra, peanut, soya bean oils, carloads. HELD, rates attacked unreasonable to extent they exceeded rates on copra, peanut, and soya bean oils, reparation awarded. Bisbee Linseed Company v. P. R. R., 91 I. C. C. 55.

(i) Complainant attacked joint fifth class rate of 68.5c charged on two cars of second hand side dump cars, shipped from Clyde, Ill., to McKenzie, Tenn., in March 1923, as illegal and unreasonable to extent it exceeded sixth class rate of 56.5c. Shipments moved over Burlington to Metropolis, Ill., P. & I., to Paducah, Ky., N. C. & St. L., beyond. Cars, railway, not moved on own wheels are rated fifth class. Outfits, bridge builders, contractors or graders, n. o. i. b. n., are rated sixth class. HELD, joint fifth class rate applicable and not unreasonable complaint dismissed. Johnson Porter Clay Co. v. C. B. & Q. R. R., 91 I. C. C. 71.

(j) Complainant attacked combination class rates charged on speedometers, less carloads, from New Rochelle, N. Y., to Pueblo, Colo., in November, 1920, as unjust and unreasonable. Speedometers and parts less carloads, were rated double first class in western territory and first class in official, charged $5.47 double first class west of the Mississippi river and $1.84 east thereof, first class. First class rates were subsequently established both east and west of the river, following 64 I. C. C. 541. HELD, rates attacked unreasonable to extent they exceeded first class, reparation awarded. Baker Steam Motor Car & Mfg. Co. V. A. T. & S. F. Ry., 91 I. C. C. 381.

(k) Complainant attacked fourth class rates charged on 10 cars of bichro-

mate of potash from Jersey City, N. J., to Waukegan and Chicago, Ill., between June and December, 1922, as unreasonable. Charged fourth class rate of 73.5c prior to July 1, 1922 and 66c thereafter. Bichromate of soda under exceptions takes sixth class rates, being 52.5c prior to July 1, 1922 and 47.5c thereafter. The value of bichromate of potash admittedly is greater than that of bichromate of soda. Bichromate of soda is produced much more extensively than bichromate of potash. Complainant uses less than one carload a month at its Waukegan and Chicago tanneries. No evidence introduced indicating that the earnings on this traffic are excessive, and the record does not warrant a finding that the fourth class rates are unreasonable per se. HELD, rates attacked not unreasonable, complaint dismissed. Griess Pflieger Tanning Co. v. C. R. R. of N. J., 91 I. C. C. 566.

(l) Complainant attacked class rates charged on 32 cars of Epsom salts from Atlanta, Ga., to Greensboro, N. C., during federal control as unreasonable. Shipments moved via Southern, applicable sixth class rate of 41.5c. There was a commodity rate of 31.5c on Epsom salts from Atlanta to Durham and Winston-Salem, N. C., to both of which Greensboro is intermediate over the Southern and on March 13, 1921 the Southern voluntarily reduced the rates to Greensboro to the basis applicable to the above named points, and that adjustment has since been maintained. No shipments moved to either destination from June 25, 1918 to the end of federal control, and none from Atlanta to any of the points named except to Greensboro. Sixth class are generally applicable on this traffic in the southeast. HELD, rates attacked not unreasonable, complaint dismissed. Proximity Mfg. Co. v. Director General, 91 I. C. C. 612.

(m) Complainant attacked second class rating in official classification on tinners snips or shears as unjust, unreasonable, and unduly prejudicial. These articles are shipped at any quantity rates. Effective Dec. 30, 1919 they were specifically rated third class and so remained until June 10, 1923 when they were increased to second class. They are rated second class in the southern and western classifications and have been so rated for some years. HELD, second class rating not unreasonable or unduly prejudicial, complaint dismissed. Peck Stow & Wilcox Co. v. N. Y. N. H. & H. R. R., 91 I. C. C. 747.

(n) Complainant attacked third class rate of $2.52 charged between May 1917 and March 1918 on automobile gear frames, carloads, from Detroit, Mich., to Oakland, Calif., as improper, unjust and unreasonable. The commodity shipped was the same as that considered in 78 I. C. C. 297. Gear frames, without attachments, are rated third class. There was a commodity rate of $2.15 on vehicle parts, self propelling, viz., automobile parts (metal), minimum 30,000 pounds. There is provision in the tariff for alternate application of these rates. HELD, third class rate applicable, subject to lower commodity rate and higher minimum as maxima. Rates attacked not unreasonable, complaint dismissed. Chevrolet Motor Co. v. Director General, 92 I. C. C. 73.

(o) Respondents proposed a change in the commodity description of beets, carrots and parsnips, carloads, from Texas points to eastern destinations. Rates on beets, carrots and parsnips from Texas points to destinations east of the Mississippi river are constructed by the addition of certain arbitraries to the base rate from point of origin to the Mississippi river. East of the river there are two sets of arbitraries to be added, the higher applying on beets with tops and the lower on beets without tops. To the present description beets with tops the proposed schedules add "or clipped tops". Fresh beets from other producing territories are generally shipped with the tops on, while the tops are cut from matured winter beets before shipment. The record shows that the lines serving the territory west of East St. Louis have always interpreted the present tariff description of "beets without tops" to include the beets as shipped from Texas, and are willing to continue to do so, but the eastern carriers, except the B. & A., are insisting upon the proposed changes. It is clear that beets shipped by these Texas growers are green vegetables, with their tender leafy tops removed, and are within the description of beets without tops. The suspended schedules provide a description of beets with clipped tops to take the same rates as beets with tops. This would effect increases in the rates properly applicable under the present tariff description. Respondents offered

no evidence in justification of any increases in the rates on beets shipped from Texas. HELD, schedules not justified. Beets and carrots from Texas, 92 I. C. C. 141.

(p) Complainant attacked class A rate of $1.48 charged on four cars of boilers shipped in January and February 1922 from Muncie, Ind., to Houston and Orange, Tex., as unreasonable and unjustly discriminatory to extent it exceeded subsequently established rate of $1.225. Boilers were included in the list of articles under the heading "machinery and machines" in western classification prior to Dec. 30, 1919, when boilers were removed from that list. This resulted in making commodity rates on machinery and machines inapplicable to boilers, leaving the full classification basis to apply. On Oct. 25, 1922 boilers were restored to the machinery commodity basis. HELD, rate attacked unreasonable to extent it exceeded $1.225, reparation awarded. National Supply Company v. C. C. C. & St. L. Ry., 92 I. C. C. 295.

(q) Complainant attacked fifth class rate of 32c on solder in pigs, slabs, or bars, carloads, from Newark, N. J., to Buffalo, Black Rock and other points in Buffalo district as unreasonable, unjustly discriminatory or unduly prejudicial. Rate attacked fifth class on solder, n. o. i. b. n., loose or in packages. With the exception of brazing solders, the classification rating on solder, n. o. i. b. n., comprehends all class of solders, many of which contain various components other than tin and lead. In many cases, these other components are of much greater value than either tin or lead. HELD, rates attacked not unreasonable, unjustly discriminatory or unduly prejudicial, complaint dismissed. Union Smelting & Refining Co. v. C. R. R. Co., of N. J., 92 I. C. C. 319.

(r) Complainant attacked third class rating, less carloads, in official classification territory on flour compound, in bulk, in barrels, as unreasonable to extent it exceeded fourth class. Original report found in 85 I. C. C. 416. From a transportation standpoint it is considered a desirable traffic. In 54 I. C. C. 1, Consolidated Classification case, the experts of the Commission recommend that a fourth class rating be established in all three classification territories. No explanation was offered by defendants for according higher ratings to floor sweeping compounds in official classification than in the southern or western classifications. HELD, rating of third class unreasonable to extent it exceeded fourth class in official classification. Fitch Dustdown Co. v. A. A. R. R., 92 I. C. C. 359.

(s) In 85 I. C. C. 753, the Commission found rates charged on 3 cars of pipe from Gahagan, South Mansfield and Harmon, La., and two cars of oil well supplies from Gahagan and Mansfield, La., to El Dorado, Ark., during Jan. and Feb. 1921 not unreasonable. Pipe and oil well supplies are rated fifth class and class A in western classification. Charged class rates of 64c from Gahagan and 63c from South Mansfield and Harmon on the pipe and 69.5c from Gahagan and 67.5c from South Mansfield on the oil well supplies. It appears from the record that there was no movement of these commodities from these particular points to El Dorado before or after these shipments. Shipments of pipe and oil well supplies from one oil field to another in the southwest are not infrequent; also that the rates attacked were excessive as compared with numerous rates fixed by the Commission in the southwest. HELD, rates attacked unreasonable to extent they exceeded 33c on pipe from South Mansfield, 34c on pipe from Gahagan and Harmon, 50c on oil well supplies from Mansfield and 51.5c from Gahagan, reparation awarded. Crawford & Sebastian v. C. R. I. & P. Ry., 92 I. C. C. 453.

(t) Complainant attacked ratings charged on speedometers, speedometer heads, and speedometer connections, shipped between January 1918 and February 1920, from Chicago, Ill., to San Francisco, and Los Angeles, Calif., as unjust, unreasonable and unduly prejudicial. In 64 I. C. C. 541 the Commission found rates attacked unreasonable and awarded reparation. HELD, rates attacked unreasonable, reparation awarded. California Sales Company v. Director General, 92 I. C. C. 619.

(u) Complainant attacked commodity rate charged of 48.5c charged on 10 cars of wrapping paper shipped from International Falls, Minn., to Chicago, Ill., between August 30 and Oct. 14, 1918 as unreasonable, unjustly discriminatory and unduly prejudicial to extent it ex-

ceeded 20c. Shipments moved to Duluth, Minn., 76 miles over M. D. & W., and D. W. & P., and from Duluth to Chicago over the C. St. P. M. & O., and C. & N. W., no through rates being in effect, charged fifth class of 26.5c to Duluth plus 22c commodity rate beyond. The 20c rate was a commodity rate on newsprint contemporaneously in effect from International Falls to Chicago, same subsequently being made applicable on wrapping paper. In 66 I. C. C. 571 the Commission found rates on wrapping paper should not exceed 110% of the rates on newsprint. HELD, rate of 48.5c charged unreasonable to extent factor up to Duluth exceeded 12c, reparation awarded. Minnesota & Ontario paper Co. v. Director General, 93 I. C. C. 139.

(v) Complainant attacked class rates charged on soapstone disks, loose, carloads, to Toledo, O., from Schuyler and Tye River, Va., and to Muncie, Ind., from Schuyler, as unreasonable, unjustly discriminatory and unduly prejudicial. Schuyler is on the Nelson & Albermarle, 8 miles west of Esmont, Va., and Tye River is on the Southern, 23 miles north of Lynchburg, Va., the short line distances over the C. & O., and connecting lines being 601 and 644 miles, to Toledo and Muncie from Esmont and 570 miles to Toledo from Lynchburg charged at commodity rates from Schuyler to Esmont, and applicable arbitrary, Tye river over Lynchburg and other Virginia common points, plus fifth class rates beyond on soapstone, slabs, dressed or dorms, n. o. i. b. n., in barrels, boxes or crates, carload minimum 30,000 pounds. The rating applicable to and beyond the junction points under rule 5 of the governing classification was third class. Soapstone foot warmers, griddles, laundry tubs, and sinks, in barrels, boxes or crates, minimum 30,000 pounds, take commodity rates from Esmont to Chicago, Ill., and St. Louis, Mo., 822 and 877 miles, or 38 and 47.5c respectively, equivalent to about 73% of the fifth class rates. Prior to March 25, 1923 commodity rates 3c higher were in effect from Tye River to the same destinations. Since July 31, 1922 a commodity rate of 7.5c has been in effect from Schuyler to Esmont on soapstone furnace linings. HELD, rates attacked from Schuyler to Toledo and Muncie unreasonable to extent the rates beyond Esmont exceed 42 and 45c prior to July 1, 1922, and 38 and 40.5c thereafter, and rates from Tye River to Toledo unreasonable to extent they exceeded 45c prior to July 1, 1922 and 40.5c thereafter, reparation awarded. Toledo Cooker Co. v. N. & A. Ry., 93 I. C. C. 271.

(w) Complainant attacked class rates as unreasonable, unjustly discriminatory and unduly prejudicial charged on two cars of electrical heating and cooking appliances from Marion, Ind., to San Francisco, Calif., in Sept. and Oct. 1921. Charged third class of $4.20 on articles other than toasters and first class of $5.835 on toasters. Effective Sept. 30, 1922 a commodity rate of $2.75 was published on electric heaters, hot plates, ranges, sadirons, table stoves and toasters, for distance of 2,400 miles. HELD, rates charged not unreasonable or otherwise unlawful, complaint dismissed. Rutenber Electric Co. v. C. C. C. & St. L. Ry., 93 I. C. C. 541.

(x) Complainant attacked commodity rates charged on lard substitutes in peddler cars from Houston and Sherman, Tex., to Oklahoma, Arkansas and Louisiana as unreasonable and unduly prejudicial in relation to movement in peddler cars, from the same points, and from Kansas City, Mo., Wichita, Kas., Oklahoma City, Okla., and Fort Worth and Dallas, Tex., to points in the same destination territories. Taft is a local point on the A. S. & A. P., 132 miles south of San Antonio. No peddler services are maintained from San Antonio or Taft, or from other points in the surrounding region, but complainants desire such services from San Antonio and Taft to points in Oklahoma, Arkansas and Louisiana. Shortly before the hearing peddler car service from Houston theretofore confined to hauls over S. P., lines to Louisiana points on that system, was extended to include hauls wholly over lines of the Gulf Coast system to Louisiana points, and hauls over certain connections to points on the V. S. & P., and Louisiana points on the Rock Island. Sherman is north of Dallas and near the Oklahoma line. It has extensive peddler car service, single line and joint line, over several railroads to Oklahoma, Arkansas and Louisiana points. Lard substitutes are the cheapest shortening material. The principal forms are made from cotton seed oil. They are used for the same purpose as lard, with which they come into active competition. In

important particulars lard substitutes have more favorable transportation characteristics than lard. Thus, lard requires refrigeration. The shipper pays for the ice, but there is delay incident to the placing of cars at icing stations. Lard substitutes are not iced, and may move in ordinary channels. From transportation and commercial standpoints lard substitutes are closely related to lard. They receive the same classification ratings in the three classification territories. The record does not warrant the requirement that defendants establish peddler car service over additional routes. Unlawful prejudice and preference may arise from difference in service as well as from difference in measure or rates, and defendants should so regulate their peddler car service as to avoid undue preference and prejudice. HELD, rates attacked unreasonable and unduly prejudicial to extent they exceed rates on lard, in peddler cars, for equal distances. HELD, further, failure of defendants to maintain peddler car service from Houston, San Antonio, Taft and Sheridan to Oklahoma, Arkansas and Louisiana substantially equivalent to peddler car service maintained by them from Kansas City, Wichita, Oklahoma City, Fort Worth and Dallas to same destinations not unreasonable or unduly prejudicial. Interstate Cotton Oil Refining Co. v. A. T. & S. F. Ry. 95 I. C. C. 171.

(y) Complainant attacked commodity rates charged on talc, carloads, from Hemp, on the Norfolk Southern between Charlotte and Raleigh, N. C., to points in Florida, Illinois, Pennsylvania, New Jersey and Maryland as unjust, unreasonable, unjustly discriminatory and unduly prejudicial. After the plant which complainant erected for the mining of talc was completed in 1921, complainant found that it could not compete with other talc producing points under the rates from Hemp and requested the carriers to establish lower rates. In the latter part of 1921 the carriers offered to publish rates on the basis of the talc rates from Poultney, Vt., a point with which complainant had represented itself to be in competition. The basis suggested by the carriers was not satisfactory to complainant, which then asked for the publication of rates to central and trunk line territories on the basis of the clay rates from Georgia to those territories. Rates on substantially this basis was published to all of the destinations here considered, effective Dec. 25, 1922. HELD, rates attacked unreasonable to extent they exceeded on and after July 1, 1922, to Jacksonville $5.07, York, $4.59, Philadelphia $4.59, Manville $5.22, Vandalia $5.76 and East St. Louis $5.76, reparation awarded. Standard Mineral Co. v. Norfolk Southern Ry. 95 I. C. C. 704.

(z) Complainant attacked commodity rates charged on 50 cars of wagons shipped during August, September and October 1920 from Jeffersonville, Ind., to Galveston, Tex., and reconsigned to Laredo, Tex., as illegal, unreasonable, unjustly discriminatory and unduly prejudicial. Shipments consisted of escort wagons, knocked down, purchased at a salvage sale from the United States Army. Charged $1.17 and $1.56 constructed by adding to commodity rate from point of origin to Texas common points, the class A differential thence to Laredo, applying on vehicles, minimum 12,000 pounds. The evidence fairly establishes that the wagons shipped were not farm wagons such as are contemplated under the description of agricultural implements. In the absence of a specific rating on escort wagons the rates on vehicles were applicable. HELD, rates charged applicable and not unreasonable or other wise unlawful, complaint dismissed. Taylor v. I. & G. N. Ry., 96 I. C. C. 55.

(aa) Complainant attacked combination rates charged on lepidolite, carloads, from Embudo, N. M., to Wheeling W. Va., since July 1, 1922 as unreasonable, unjustly discriminatory and unduly prejudicial as compared with rate on fluorspar from more distant points in New Mexico to the same destination. Embudo is 53 miles north of Santa Fe on a narrow gauge line of the Rio Grande. The two articles mentioned are somewhat analogous natural mineral products, and they have substantially similar transportation characteristics. Rate attacked is combination rate of 68c, composed of 38.5c to Missouri river and sixth class rate of 29.5c beyond. Rate sought 51c the rate on flourspar from conditions from Embudo were not shown Silver City to Wheeling. The operating to be any more difficult from Wagon Wheel branch, which is also on a mountain branch of the Rio Grande; and it does not seem probable that the transportation from Embudo can be more ex-

pensive than from Silver City which is over 300 miles more distant. HELD, rate attacked unreasonable to extent it exceeded 51c, reparation awarded. New Mexico Corp. Commission v. A. T. & S. F. Ry., 96 I. C. C. 412.

(bb) Complainant attacked commodity rates charged on carloads of apples, peaches, pears and plums in baskets and of apples in bulk from points in the Yakima Valley in Washington to all interstate destinations as unreasonable and unduly prejudicial. The present rates on shipments in boxes or in barrels from the Yakima Valley are $1.28 to destinations between and including Colorado common points and the Missouri river crossings, and $1.50 to all destinations east of the Missouri River, including the Atlantic seaboard and the southeast. On shipments in bulk or in baskets they are $1.92 and $2.25 respectively. Growers in southern Idaho and Colorado have the benefit of carload commodity rates which are the same whether the fruit is shipped in boxes, baskets or in bulk. Defendants offer no justification from a transportation standpoint for according competing shippers in southern Idaho and in other districts a rate relationship on this traffic different from that available to complainants. The maintenance by defendants of a rate relationship between the Yakima Valley and southern Idaho, for example, which subjects some growers and shippers in the former district to a rate disadvantage as compared with shippers in the latter district, if not justified by transportation conditions, is undue prejudice within the meaning of the act and can not be justified by the fears of other shippers as to the commercial effect upon the industry of its removal. HELD, rates on peaches, pears and plums, in baskets, carloads, from Yakima Valley unreasonable to extent they exceed rates on those fruits in boxes. Kloeber v. N. P. Ry., 96 I. C. C. 437.

(cc) Complainant attacked rates charged on live poultry between Jan. 1 and June 30, 1922 from interstate points to Philadelphia, Boston, Chicago, New York, Jersey City, Weehawken, Hoboken and Newark, as unjust and unreasonable. On Dec. 16, 1921 the Commission authorized tariffs containing 10% reductions effective Jan. 1, 1923. Reductions were not generally made in the rates on live poultry in eastern territory. Consequently shipments moving on combination rates basing on the Mississippi or Ohio rivers did not obtain the benefit of the reduction in so far as the eastern factors of the rates were concerned, although the rates in western and southern territories were reduced as well as the joint through rate. The reductions were made voluntarily by the carriers. The fact that other rates were not reduced and that such rates as were reduced caused a temporary disruption of a former rate relationship is not sufficient basing for a finding that the rates attacked were unreasonable. HELD, rates attacked not unreasonable. Risser v. A. T. & S. F. Ry. 96 I. C. C. 513.

(dd) Complainant attacked ratings and rates on cocoanut stearine, carloads, and less carloads, from Bayonne, N. J., to points in official territory two years prior to Oct. 8, 1923 as unreasonable, unjustly discriminatory, and unduly prejudicial to extent they exceed ratings and rates on stearine, n. o. i. b. n. In Dec. 1919 the description of cocoanut butter substitutes was eliminated, cocoanut stearine having been in 1914 specifically rated third class, carloads and second class less carloads. These ratings are now in effect. Stearines, n. o. i. b. n., which include animal stearines and all vegetable oil stearines except cocoanut, are rated fifth class, carloads, and rule 26, 20% less than third class, less carloads, except that in tubs, in less carloads, they are rated third class. The evidence indicates that the present ratings and rates on stearine, n. o. i. b. n., in official territory, are maximum reasonable ratings and rates. HELD, ratings attacked unreasonable and unduly prejudicial to extent they exceeded ratings and rates on stearines, n. o. i. b. n., reparation awarded. Best Foods, Inc. v. C. R. R. of N. J., 98 I. C. C. 331.

(ee) Complainant attacked ratings in southern and western classifications on pea hullers as unreasonable. The classification divisions between hand agricultural implements, mill or warehouse machinery, and agricultural implements other than hand, having been established for a number of years. When complainants pea hullers are thus divided the basis for the division, from the standpoint of any differences in transportation characteristics, seems rather unsubstantial; and doubtless complainant is correct in stating that it is inconveni-

enced thereby in billing its shipments. But the showing of an overlapping condition in an individual instance such as this does not establish that the existing groupings are basically unsound. The primary question for determination is whether the existing descriptions and ratings are shown by this record to be unreasonable. HELD, ratings on complainants type B hullers are not unreasonable and that applicable less carload rating of double first class on complainants type C hullers, set up, under southern and western classifications is unreasonable to extent it exceeds one and one half times first class. Star Pea Huller Co. v. C. N. O. & T. P. Ry., 98 I. C. C. 357.

(ff) Complainant attacked rates on moss, in machine pressed bales, carloads, from producing points in Louisiana to be unjustly discriminatory and unduly prejudicial. Moss is not readily susceptible to damage, but box cars with reasonably water tight roofs are required for its shipment. It is rated, carloads, fifth class in official and western classifications, and class D in southern. Few, if any, other articles rated fifth class in western classification are subject to a minimum as low as 20,000 pounds. The basis sought is a base rate of 42c to St. Louis plus the usual fifth class differential over or under St. Louis to the other refined territories. Complainants attack is directed to the rates from points in the territory immediately west of the river. HELD, rates attacked not unreasonable, unjustly discriminatory or unduly prejudicial except rates from Rosedale, La., to points intermediate to Albany, Rochester, Syracuse and Utica, N. Y., higher than to those farther distant points unreasonable to that extent, record held open as to reparation. National Asso. of Furniture Mfrs. v. A. A. R. R. Co., 98 I. C. C. 501.

(gg) Double first-class ratings and rates on adding machines, in boxes, l. c. l., in western classification, found not unreasonable in the past, but for the future found unreasonable to extent they may exceed one and one-fourth times first class. Burroughs Adding Machine Co. v. M. C. R. R. Co., 91 I. C. C. 378.

(hh) Second-class rating and rates on adding machines in boxes, c. l., in official southern and western classification found not unreasonable. Such rating, with minimum applicable thereto, can be easily loaded in standard equipment, was voluntarily established by carriers upon request and data submitted by complainant, and does not appear unreasonable when compared with rating and rates approved by commission in 64 I. C. C. 541 on speedometers, a commodity having similar transportation characteristics in many respects. Burroughs Adding Machine Co. v. M. C. R. R. Co., 91 I. C. C. 378.

(ii) Following Stewart-Warner Speedometer Corp., 64 I. C. C. 541, and other cases cited, double first-class rates and ratings on speedometers, l. c. l., found unreasonable to extent they exceeded first-class rates and ratings, subsequently established. Reparation awarded. Baker Steam Motor Car & Mfg. Co. v. A., T. & S. F. Ry. Co., 91 I. C. C. 381.

(jj) Second class rating in official classification territory on tinners snips or shears, found not unreasonable or unduly prejudicial as compared with third-class rating on mechanics' tools. Tinners' snips or shears are more closely related to cutlery and hand tree pruners and plant-cutting shears, which are accorded second-class ratings. Moreover, tinners' snips or shears are rated second class in southern and western classifications and such rating was recommended for them by commission's examiners in Consolidated Classification case, 54 I. C. C. 1. Peck Stow & Wilcox Co. v. N. Y., N. H. & H. R. R. Co., 91 I. C. C. 747.

(kk) In 83 I. C. C. 267 the Commission found fourth class rating and rates on corrugated galvanized pipe, U. S. standard gauge No. 16 or thicker, carloads, from Pueblo, Colo., to Kansas, Nebraska, South Dakota, Wyoming, Montana, Idaho, Utah, Arizona, and New Mexico applicable and not unreasonable but unduly prejudicial to extent they exceeded rating and rates from Pueblo on straight galvanized riveted sheet iron and sheet steel pipe U. S. standard No. 16 or thicker, of the same inside diameter as culvert pipe, carloads, minimum 24,000 pounds, subject to rule 34 of the consolidated classification. HELD, original finding affirmed. Colorado Culvert & Flume Co. v. A. T. & S. F. Ry., 100 I. C. C. 311.

(ll) Complainant attacked class rates charged on six cars of zinc dross during

January and Sept. 1922 from Middletown and Cincinnati, O., Ashland, Ky., and New York, N. Y., to Newport News, Va. as unreasonable. In 81 I. C. C. 645 the Commission found rates on this commodity unreasonable to extent they exceeded 85 per cent of the sixth class rates. HELD, rates attacked not unreasonable except that rate from New York unreasonable to extent it exceeded 29c, reparation awarded. Lissberger & Co. v. C. & O. Ry., 101 I. C. C. 23.

(mm) In 91 I. C. C. 45, the Commission found applicable rates on Cream of Wheat from Minneapolis, Minn., to Montana, Idaho, Washington, Oregon and California not unreasonable or unduly prejudicial and dismissed the complaint. Case was reopened. No further evidence was offered. HELD complaint dismissed. Cream of Wheat Co. v. A. T. & S. F. Ry., 101 I. C. C. 283.

(nn) Respondents proposed to change the description of glue stock appearing in their present tariffs in connection with rates and rating on that commodity between points in central territory, and from central territory to trunk line territory, to provide that sixth class rates will not apply on any articles (of glue stock) which are edible ingredients of food for human consumption. If permitted to become effective the proposed change will result in increasing from sixth to fifth class the rates on the excepted articles. Respondents say that the suspended schedules were published in order to remove any doubt as to the applicable rates and ratings on pieces of hog skin which protestants have been shipping as glue stock. It is contended by respondents that these articles should take fifth class rates under the rating provided in the classification for hog skins, whereas shippers contended that they were fleshings or hide trimmings, and as such were entitled to sixth class rates provided for glue stock in the exceptions to official classification. The record clearly shows that pork hide, trimmings or fresh frozen or green salted pig skin are used almost exclusively in the manufacture of edible gelatin. The Commission thinks that these articles may properly be eliminated from the glue stock description, but that no change has been justified with respect to the other articles under that description. HELD, schedules not justified without prejudice to the filing of new schedules proposing to eliminate pork hide trimmings or fresh frozen or green salted pig skin from the description of glue stock. Glue stock in official classification territory 101 I. C. C. 601.

(nna) Classification ratings on kitchen cabinets, crated or boxed, l. c. l., in official and southern classifications, found not unreasonable or unduly prejudicial as compared with ratings on buffets, dressers, chiffoniers, vanity dressers, and other articles of furniture. Indiana Public Service Commission v. A. A. R. R. Co., 92 I. C. C. 83.

(oo) Proposal to increase from first class to 1½ times first class the l. c. l. ratings on automobile wheels made of wood combined with iron or steel, with or without rubber tires, and weighing 200 pounds or more each, found not justified. Commodity here considered is not analogous to those to which a rating of 1½ times first class has been assigned by the commission in various cases, whereas a rating of first-class has been prescribed on speed indicators and automobile sound-warning signals, commodities having a much higher value than automobile wheels. Classification of Motor Vehicle Wheels, 92 I. C. C. 190.

(pp) Commodity rate on iron or steel scrap, when applied on manganese-steel scrap, found unreasonable as compared with lower rate on brass scrap. Transportation characteristics of manganese-steel scrap are no less favorable than those of brass scrap, and earnings under brass-scrap rate compare favorably with earnings on other articles, generally of higher value, moving between points in same general territory here involved. Reasonable rate for future prescribed. Chicago Heights Mfrs. Asso. v. P. R. R., 92 I. C. C. 194.

(qq) Rating of second class on Coca-Cola sirup, in bulk in barrels or kegs, l. c. l. in official classification territory found unreasonable to extent it exceeds rule 25. Reduction to rule 25 will result in approximately equal ratings in the three classification territories and in a better balanced relationship between ratings on the sirups and finished beverages, and will accord substantially with decision in Coca-Cola Co., 45 I. C. C. 461. Coca-Cola Co. v. B. & O., 92 I. C. C. 340.

(rr) Rating of fourth class on Coca-Cola sirup, in bulk in barrels or kegs, c. l., in official classification territory found not unreasonable or otherwise un-

lawful as compared with ratings on other liquids, such as acids, oils, chemicals, drugs, and medicines, moving in similar containers. While latter commodities exceed or equal Coca-Cola sirup in value, are not as heavy, and some are of a poisonous or inflammable nature and not as desirable from a transportation standpoint, force of such comparisons is lessened by consideration of fact that those articles are in general commodities of utility, if not of prime necessity, and some, in their uses in industry and the arts, are in nature of raw materials. Coca-Cola Co. v. B. & O., 92 I. C. C. 340.

(ss) Rating of 1½ times first class on aluminum articles, not decorated, not nested or flat, in barrels or boxes, l. c. l. in western classification territory found unjust and unreasonable to extent it exceeds 1¼ times first class. Present rating seems too high in itself and also in relation to rating on nested aluminum ware. Aluminum Goods Mfg. Co. v. A. & V. Ry. 92 I. C. C. 346.

(tt) Present third-class c. l. ratings, minimum 20,000 pounds, in official, southern, and western territories, applied to aluminum articles as a whole, found to result in unjust and unreasonable charges. Carriers ordered to establish, for alternative application, a rating of second class, minimum 12,000 pounds, subject to rule 34, making latter rating applicable when lower charges result. While maintenance of a minimum which can be loaded only by certain shippers seems improper, it would be equally unfair to such shippers to reduce minimum to a figure reflecting actual loadings of other shippers with a compensating increase in the c. l. rating. Aluminum Goods Mfg. Co. v. A. & V. Ry., 92 I. C. C. 346.

(uu) Proposed increased rating in official classification on soap, n. o. i. b. n., in pails or tubs, l. c. l., from fourth class to rule 26, found not justified. Ratings on soap in pails or tubs and on soap in barrels or boxes have been maintained on a parity in official classification for many years and carriers are not warranted in disrupting this long-existing parity. It is not shown why a box could be more easily or cheaply handled than a pail; and under general rules of the consolidated classification, freight in drums and other containers can be shipped at rating applicable on freight in barrels. Classification of Soap, 92 I. C. C. 353.

(vv) Upon further consideration, official classification rating of third class, l. c. l., on floor-sweeping compound, in bulk, in barrels, found unreasonable to extent it exceeds fourth class. The commodity is of low grade and heavy density and is not easily damaged, from a transportation standpoint it is desirable traffic, and no explanation was offered by carriers for according it higher ratings in official than in southern or western classifications. Former report, 85 I. C. C. 416, reversed. Fitch Dustdown Co. v. A. A. R. R. Co., 92 I. C. C. 359.

(ww) Rates on speedometers, speedometer heads, and speedometer connections found unreasonable to extent they exceeded rates applicable under ratings prescribed in Stewart-Warner Speedometer Corp., 64 I. C. C. 541. Reparation awarded. California Sales Co. v. Director General, 92 I. C. C. 619.

(xx) Rates on peanuts, shelled, found unreasonable as compared with lower rates on peanut butter and unshelled peanuts and to extent they exceeded rates prescribed in Fidelity Cotton Oil Co., 47 I. C. C. 542. Reasonable rate for future prescribed and reparation awarded. Oklahoma Traffic Asso. v. A., T. & S. F. 92 I. C. C. 695.

(yy) Rating and rates on brooms, bahia and bassine fiber, found not unreasonable. The classification of brooms, other than wire, has been general for many years, irrespective of material from which made and brooms here considered compete with ordinary broomcorn brooms. In absence of differentiating transportation conditions competitive articles such as these should be accorded a parity in rates and ratings. Edlund Broom Corp. v. B. & M. R. R., 92 I. C. C. 749.

(zz) Rate of 1½ times first class applicable on "jugs, glass, insulated and metal jacketed," and under analogous article rule of the governing classification assessed on earthenware jugs, insulated and metal jacketed, found unreasonable to extent it exceeded fourth class subsequently established when classification was amended so that same rating applied to the commodity whether of glass or earthenware. Glass and earthenware jugs, insulated and metal jacketed, are adapted to similar uses, both have similar transportation characteristics, and are competitive. Reparation awarded. Cullum & Boren Co. v. C., B. & Q., 93 I. C. C. 354.

(3a) First-class rate on cotton shirt

forms, l. c. l., from Baltimore to Washington, N. C., found not unreasonable as compared with lower commodity rate formerly in effect, or with rate on finished shirts in opposite direction. Commodity rate was canceled because other manufacturers of shirt forms in North Carolina requested establishment of similar rates lower than first class and defendants urged that it would be unduly prejudicial to charge first-class rates from other points while maintaining lower commodity rates from Washington. The finished shirt rate in the opposite direction was also subsequently cancelled because considered subnormal, and first-class rates now apply in both directions. Moreover, defendants instanced first-class rates for similar and greater distances which are higher than rates charged. Flowers & Stell v. N. S. R. R., 93 I. C. C. 388.

(3b) Official classification ratings on peanut butter; butter, sugar or corn sirup and sugar combined; comb or strained honey; honey and sugar mixtures; olive oil; ground spices; and vinegar, in glass, packed in barrels or boxes; l. c. l., found not unreasonable; but similar ratings in said classification on olives; mince meat; pickles and table sauces, n. o. i. b. n.; fish, other than fresh; preserved fruit, fruit butter; crushed fruit; fruit jam; fruit jelly; fruit pulp; edible jams, jellies, or preserves, n. o. i. b. n.; and corn sirup jelly, in glass, found unreasonable to extent they exceed the first numbered class above the l. c. l. ratings contemporaneously applicable on same articles in metal cans. Indian Packing Corp. v. Director General, 93 I. C. C. 400.

(3c) Upon rehearing, findings in original report, 64 I. C. C. 205, prescribing third class rating on sliced dried beef in glass, l. c. l., modified, and rating not in excess of first numbered class above the l. c. l., rating contemporaneously applicable on the same commodity in metal cans found reasonable. Reparation denied. Indian Packing Corp. v. Director General, 93 I. C. C. 400.

(3d) Having regard for difference in structure of freight and express classifications, the commission can not predicate a condemnation of the freight rate for a light and bulky article like furniture frames solely upon a showing that express rates are lower between many points. Parlor Frame Mfrs. Asso. v. A. A. R. R., 93 I. C. C. 506, 509.

(3e) Proposed increased rating on acid carboys, returned empty, from and to points in western trunk-line territory, found justified. Acid carboys are not desirable freight and can not be handled as expeditiously or cheaply as other empty returned containers which can be tiered. There is considerable danger involved in their handling, and many restrictions not operative with respect to mineral-water and other empty returned containers increase cost of their transportation. Moreover, rating proposed is the same as that now applicable from intermediate points and will have effect of removing fourth-section departures, is the same as that generally applicable in western trunk-line territory east of Missouri River, does not appear unreasonable, and it is not shown that it will result in undue prejudice or preference. Carboys, Returned Empty, in Western Territory, 93 I. C. C. 672.

(3f) Third-class rating and rates in southern classification on oleine, coconut, found not unjustly discriminatory or unduly prejudicial but unreasonable to extent they exceeded fifth-class rating and rates contemporaneously applicable on coconut oil. Oleine and refined coconut oil are analogous, are used for same purposes, the only difference between them being in the melting point. Reasonable rating prescribed for future and reparation awarded. Best Foods v. C. R. R. Co. of N. J., 95 I. C. C. 738.

(3g) Report of the commission in response to Senate Resolution 314, setting forth existing classification ratings on canned fish, fruits, meats, mincemeat and jams, jellies, and preserves, in metal cans, in barrels, boxes or crates; the increased ratings on these articles proposed by carriers in official classification territory; and the percentage increases which the advanced classification would mean in the freight rates applicable on these canned food products. Canned Foods, 95 I. C. C. 748.

(3h) Answering complainant's contention that rating on cast-iron toys should be same as that applicable on iron and steel hardware, n. o. i. b. n., defendants urge that a mere showing that such toys are cheaper, with similar transportation characteristics, does not prove that rating should be same; that such toys are in the nature of nonessentials and properly are rated higher than general utility articles included within description of hardware, n. o. i. b. n. HELD,

evidence is not persuasive that ratings on cast-iron toys in classification territories are unreasonable as compared with strikingly nonuniform ratings on hardware, nor is there any competitive reason for such rating. See Daisy Mfg. Co., 81 I. C. C. 44. Grey Iron Casting Co. v. A. & V. Ry. Co., 96 I. C. C. 199.

(3i) Proposed changes including increases and reductions in l. c. l. ratings in official classification on canned food products, packed in barrels, boxes, or crates, the effect of which will bring about the classification relationship prescribed in Indian Packing case, 93 I. C. C. 400, in purported compliance with which proposed schedules were filed, found justified, except proposed increases on corn-sirup jelly. Classification of Canned Goods, 98 I. C. C. 166.

(3j) There is no fixed measure for the reasonableness of a classification rating. Classification is largely a matter of comparison of all the commodities that move as freight and the assignment of ratings such that each shall bear its fair share of the transportation burden. Classification of Canned Goods, 98 I. C. C. 166, 176.

(3k) Where classification divisions have been established for a number of years and an individual instance arises showing an overlapping condition which causes the complainant to be inconvenienced in billing its shipments, it does not establish that the existing groupings are basically unsound. Star Pea Huller Co. v. C., N. O. & T. P. Ry. Co., 98 I. C. C. 357, 358.

(3l) Rates and ratings on grain flour, edible flour, and corn meal, in ropestock paper bags, in c. l. and l. c. l. when carried under tariffs governed by southern classification, and in l. c. l. when carried under tariffs governed by western classification, found not unreasonable, but are and for future will be unjustly discriminatory, of shipments in cloth bags, to extent they exceed or may exceed corresponding rates and ratings contemporaneously maintained on same commodities when in cloth bags. Rope Paper Sack Bureau v. A. &. V. Ry. Co., 98 I. C. C. 511.

(3m) Class rate charged on automobile heaters in l. c. l. from Chicago, Ill., to San Francisco, Calif., found applicable and not shown to be unreasonable. Under the tariff governing, provision is made for a lower commodity rate on automobile parts, but heaters can not be classed as a part of an automobile, being more in the nature of an accessory or added feature. Neither are heaters included in the list of automobile parts specifically named in the classification, they being separately provided for under the heading "Heaters." Complaint dismissed. Western Auto Supply Agency of Los Angeles, Calif., v. C., B. & Q. 98 I. C. C. 647.

(3n) Respondents proposed to cancel application of present rating of 83.33% of sixth class on calcined and wall plaster, gypsum rock, and plaster board, from Grand Rapids, Mich., and other points in c. f. a. territory to Canadian territory, leaving the full sixth class rates in effect. Respondents in United States state that their purpose is to rectify a condition which would never have existed but for their unauthorized action in including plasterboard in the exceptions among articles in the plaster list when for shipments into Canada without first obtaining the consent of the Canadian lines. HELD, schedules not justified. Classification exceptions on plaster board 102 I. C. C. 94.

(3o) Respondents proposed carload and less carload ratings on radio receiving sets and on talking machines and radio sets combined, in the official, southern and western classifications. On account of the comparatively recent development of radio receiving sets, specific provision has not heretofore been made for them in the classification. Respondents admit that they are electrical appliances. Electrical appliances, n. o i. b. n., are uniformly rated first class in less carloads and third class carloads. Radio loud speakers are specifically rated one and one-half times first class less carloads and second class carloads. Specific provision is likewise made for radio bulbs or tubes, at double first class, less carloads and first class carloads. Where a set is designed for the reception of tubes or a loud speaker or both, and those parts, or either of them, are shipped with the set, whether installed or separately packed, the whole constitutes a single electric appliance, and must be rated as such. In the absence of specific provision in the classification for talking machines and

radio sets combined, they are ratable under the combination article rule as a talking machine and an electric appliance, n. o. i. b. n., combined. Talking machines are rated first class less carloads and second class carloads. By the schedules under suspension respondents proposed to establish less carload ratings on radio sets and talking machines and radio sets combined of one and one-half times first class in official and western classifications, and double first class in southern, and uniform car load rating of second class. HELD, proposed ratings justified except to extent the less carload rating proposed in southern classification exceeds one and one-half times first class. HELD, further proposed ratings on talking machines and radio sets combined, less carloads, justified except to extent rating proposed in southern classification exceeds one and one-half times first class, and proposed ratings on talking machines and radio sets combined, in carloads not justified. Classification on radio sets 102 I. C. C. 140.

(3oa) Finding in original report, 83 I. C. C. 361, that fourth-class rating, minimum 16,000 pounds, on Radiantfire heaters, in carloads, would be unreasonable for the future to extent it exceeded fifth-class, minimum 24,000 pounds, the rating applicable on stoves and ranges, iron or steel, for charcoal, coal, or wood, with or without burning attachments, reversed and fourth-class rating found not unreasonable. Carriers point out that the average weight per cubic foot of stoves and ranges is considerably in excess of that on Radiantfire heaters; that fifth-class ratings apply on various commodities of relatively low value which load heavily and move in large volume; and that ratings of fourth class are accorded various other types of heaters similar to Radiantfire. General Gas Light Co. v. A. G. S., 102 I. C. C. 181.

(3p) Complainant attacked third class rates charged on cylindrical cheese boxes, carloads, from Marshfield and other producing points in Wisconsin to destinations in western trunk line territory as unjust, unreasonable, unjustly discriminatory and unduly preferential of wooden drums and other wooden containers which are accorded class D rates under exceptions to the classification. On intrastate shipments in Wisconsin lower bases are applicable, 150% of the lumber rate in some instances, and arbitraries in addition to the lumber rate in others. The class D rates, minimum 14,000 pounds, set forth in the complaint as applicable on drums and butter tubs, were established many years ago to assist and encourage new industries on the Missouri river which had to obtain practically all their cooperage requirements from distant points. Complainants case rests primarily on comparisons of cheese boxes with butter tubs. In general the latter are more valuable. Butter tubs and drums do not compete directly with cheese boxes. The revenue on shipments from Merrill, Wis., indicates that to destinations in Illinois, Iowa, Missouri Nebraska and Minnesota the present third class rates on cheese boxes yield car mile earnings from 2 to 12c lower than the average earnings of 23.5c received by the Milwaukee during 1923. Considering the light car loading of this commodity the third class rates do not produce earnings which maybe regarded as excessive. HELD, rates attacked not unreasonable or otherwise unlawful, complaint dismissed. Wisconsin Cheese Box Mfrs. v. A. T. & S. F. Ry. 102 I. C. C. 279.

(3q) Complainant attacked class rate charged on ground calcined magnesite, carloads, from Joliet, Ill., to Omaha, Neb., as unreasonable, shipments moving in April, May and October 1921. The commodity under consideration must be shipped in water tight equipment unless packed in waterproof bags. Both crude and calcined magnesite, carloads are rated fifth class, charged fifth class rate of 46c. By exceptions to the clasification effective June 15, 1921 provision was made for the application of class D rates in this territory and last shipment was charged class D rate of 31c. Stucco is rated class C in western classification and by exceptions class D is provided on magnesite stucco, dry, in packages and liquid, in barrels or drums. Stucco is generally accorded within this territory commodity rates applicable on wall plaster at rate to Omaha of 25.5c. Class D rates apply on this commodity from Joliet to various Mississippi and Missouri river cities and contiguous points. HELD, rate attacked subsequent to June 15, 1921 not unreasonable but fifth class rate prior to that date unreasonable to extent it exceeded class D rates reparation award-

ed. Mineralite Stucco Corp. v. C. R. I. & P. Ry. 102 I. C. C. 654.

(3r) Complainant attacked commodity rates charged on boxes fibreboard, pulpboard, or strawboard, knocked down, flat or folded flat, with or without fillers, in straight or mixed carloads, from Nashville, Tenn., to Birmingham, and Montgomery, Ala., Atlanta, Augusta, Macon and Savannah, Ga., and Jacksonville, Fla., as unreasonable. Paper boxes generally moved throughout the southeast under fifth class rates, but commodity rates were in effect from Nashville. Subsequent to the hearing defendants filed schedules to become effective July 15, 1924 which contained proposed increases and reductions in rates on paper boxes between southeastern points including those from Nashville. The rates therein proposed from Nashville would have resulted in reductions to all points except to Chattanooga, Jacksonville and Savannah. The report in that case 93 I. C. C. 559, is controlling here and the rates prescribed have become effective. HELD, present rates not unreasonable, complaint dismissed. American Tri-State Paper Box Co. v. L. & N. R. R. 104 I. C. C. 442.

(3s) Complainant attacked fourth class ratings, minimum weight, 30,000 pounds, in official, southern and western classifications on cocoa powder, in bulk, in barrels, carloads, as unreasonable unjustly discriminatory and unduly prejudicial. No special equipment is needed, although it is desirable that the cars have a tight roof, as cocoa is susceptible to damage by becoming wet. Claims for loss or damage are negligible. The present ratings apply whether the shipments are in glass or earthenware containers, in cartons, in cans or in bulk in barrels. Defendants offered no evidence as to the fourth class rating in western or southern classifications. HELD, rating attacked of fourth class unreasonable to extent it exceeds fifth class, minimum 36,000 pounds. Opler v. A. & R. Ry. 104 I. C. C. 468.

(3t) Complainant attacked combination rate charged on wooden bull wheel arms, cants and pins, carloads, from Tulsa, Okla., to Scottdale, Pa., as unreasonable, unjustly discriminatory and unduly prejudicial. Shipments moved MKT to East St. Louis, Ill., and Pennsylvania beyond, 1,194 miles, applicable rate composed of class B rate of 67c to East St. Louis plus 6th class rate of 36.5c beyond. Prior to July 1, 1923 the rate on lumber from Tulsa to Scottdale was 56.5c, minimum 34,000 pounds, composed of 29.5c to East St. Louis plus 33c beyond, subject to the combination rule. This rate was superseded on that date by a joint rate of 48c. The Commission has repeatedly found rates on these commodities unreasonable to the extent that they exceeded corresponding rates on lumber unless the latter are shown to be below the general level of lumber rates in the immediate territory. HELD, rates attacked unreasonable to extent they exceeded 56.5c prior to July 1, 1923 and 48c thereafter, reparation awarded. Marion Machine Foundry & Supply Co. v. Pennsylvania R. R. 104 I. C. C. 471.

(3u) Complainant attacked class rates charged on magnesite stucco carloads, from Cedar Rapids, Iowa to Nebraska, Colorado, Wyoming, Kansas and southwestern Missouri. Rocbond is used as an exterior wall coating, similar to the ordinary pebble dash covering. The base is magnesite to which is added sand and granulated cork, to make the so-called stucco mix. Other ingredients are magnesium chloride and crushed rock dash. The three articles are shipped in separate containers in the same car, the stucco mix in 100 pound paper bags, the magnesium chloride in 100 pound burlap bags, waterproof lined; or in 300 pound metal drums, and the crushed rock dash in 100 pound burlap bags. The governing classification, by an exception, rates magnesite stucco in class D. A commodity rate under the general description "stucco" is provided for the movements here considered. In 74 I. C. C. 567 the Commission denied to carriers in western trunk line territory permission to make class D rates applicable on magnesite stucco by excepting that commodity from the application of commodity rates then in effect on stucco. The magnesite stucco mix resembles ordinary stucco in appearance, and is shipped in the same general kind of containers. It appears to be no more susceptible to damage than the ordinary stucco if as much. There is no doubt that the three ingredients combined constitute only the complete commodity magnesite stucco. Damage claims are light. HELD, rates on magnesite stucco, shipped as above described, the magnesium chloride not to exceed 20%, and the crushed rock dash not to exceed 50% of the gross weight of the shipment, for future, unreasonable to extent they ex-

ceed rates on stucco, reparation awarded. Rocbond Co. v. A. T. & S. F. Ry., 104 I. C. C. 517.

(3v) Respondents proposed to change the description on bolt, nail, rivet and wire rods, in coils, so as to restrict the application of the so-called billet basis of rates on carload shipments throughout official classification territory to rods round in cross section. In carloads the rods described are accorded the billet basis of commodity rates which, especially for the longer hauls approximate sixth class rates throughout official territory. The proposed description would definitely limit the application to the round rods. Coiled iron or steel rods of other class section would take the rates applicable on articles in the general iron and steel list which approximate fifth class. Upon the preponderance of the evidence the Commission finds that the billet basis of rates applies on steel rods other than round which otherwise conform to the present description. It is incumbent upon respondents to justify the resulting increased rates. The effect of the proposed description would be to increase the rates now effective on rods, in coils, which are not round in cross section. The distinction between round and not round does not reflect any substantial difference in material, stage or process of manufacture value, or transportation characteristics other than volume of movement. The burden resting upon respondents to justify this proposed increase has not been borne, nor has it been made to appear that the resulting difference in rate level would be free from undue preference or prejudice as between round rods and rods of other shapes, when shipped in coils. HELD, tariffs not justified. Iron and steel articles 104 I. C. C. 616.

(3w) Respondents proposed increased classification ratings on insulating material, flax felt and wood fibre felt, in carloads and less carloads, in western and southern territories. At present higher ratings apply on these insulating materials in the official than in the western or southern classifications, and that the proposed changes will have the effect of making the ratings uniform. The proposed increased ratings were prompted in the first instance by complaints of manufacturers of cork insulating material that a higher rating is assigned to their product than to the competitive articles and to others of the same character. The proposed changes would provide the same ratings and carload minimum for the several varieties. The evidence does not indicate that earnings under the proposed ratings will be unduly high in comparison with those yielded by class rates applicable on analogous and comparable articles. The reasonableness of a classification rating on any article can not be determined solely by a showing of the effect in increased revenue acruing to the carriers thereby. Considering the ratings applicable to other similar and heavier loading articles, and to the very light weight density of most of these insulating materials, the suggested ratings do not appear unreasonably high. HELD, schedules justified. Classification ratings on insulating material 104 I. C. C. 713.

(3x) Carriers parties to the official classification proposed to increase the rating on talking machines and radio sets combined, from second to first class, continuing the minimum weight at 16,000 pounds. The combined machines are rated second class, minimum 16,000 pounds, in the official, southern and western classifications. They have been so rated for several years, or since their manufacture began. The minimum is subject to rule 34 of the classification. Effective Feb. 10, 1925 carriers parties to the three classifications proposed to increase the carload minimum weight on the combined machines to 20,000 pounds continuing the rating at second class. In 102 I. C. C. 140 the Commission found the proposed minimum could not be loaded. The Commission has not fixed the carload rating for these combined machines in any of the three classifications; but whatever rating is proper for the official classification is in all likelihood proper, at least so far as the higher classes are concerned, for the western and southern classifications as well. The combined machines are well packed in boxes and loss or damage claims are infrequent. Radio loud speakers or talkers are rated second class, minimum 16000 pounds, and radio tubes or bulbs are rated first class, minimum 14,000 pounds in all three classifications. Apparently the only transportation difference between the combined machines and loud speakers is that the latter are somewhat more expensive per pound. The lower minimum weight for radio bulbs or tubes indicates that they are lighter per cubic foot than combined machines. Granting respondents contention that the freight

charge is a relatively small burden in marketing such a high grade specialty, it nevertheless is incumbent upon respondents to show that the rating which they propose is reasonably consistent with the ratings maintained by them on other comparable articles. HELD, suspended schedules not justified. Classification of radio sets and talking machines 107 I. C. C. 175.

(3y) In 93 I. C. C. 697 the Commission found first class rates charged on bicycles, carloads, from Westfield, Mass. and Little Falls, N. Y., to San Francisco., Calif., and from Middletown, O., to Oakland, Calif., as applicable. Countiss westbound tariff I. C. C. 1067 contained commodity rates of $2.075 and $3.085 minimum 20,000 pounds under the following description: Vehicles, non-self propelling, except as otherwise provided, and parts thereof, viz: Vehicles, light and heavy, freight or passenger, and finished parts thereof (see note 1) Note 1. Rates named will not apply on self propelling vehicles nor on pneumatic rubber tires. In 93 I. C. C. 689 and 101 I. C. C. 334 the Commission found that a bicycle came within the definition of a "light, non-self propelling passenger vehicle." HELD, rates applicable were $3.085 and $2.075. reparation awarded. Jones v. Pennsylvania R. R. 107 I. C. C. 483.

(3z) Complainant attacked sixth class rates of 25c charged on inedible tallow and inedible grease, carloads, from Georgetown and Bennings, D. C., to Jersey City, N. J., Port Ivory, N. Y., Brooklyn, N. Y., and New York harbor lighterage points, as unreasonoble, that lower rates were maintained on cottonseed oil from Relee and Rosslyn, Va., to New York and that on these commodities, defendants maintained lower rates for similar transportation under like conditions between other points in trunk line and central territories. Average distance 230 miles. The class rates between points in this territory are now subject of a comprehensive investigation, and this record is not sufficiently developed to warrant a finding that the sixth class rates are unreasonable. HELD, rate attacked not unreasonable, complaint dismissed. Hopfenmaier v. B. & O. R. R. 107 I. C. C. 577.

(4a) Proposed general revision of all-rail and rail-and-water rates on furniture, including chairs and mattresses, c. l. and l. c. l., from southern manufacturing points to eastern territory, which would result in both increases and reductions, found justified. Proposed schedules purport to comply with findings in original report, 91 I. C. C. 27; are designed to restore rates from southern manufacturing points to the East to a basis comparable with central-territory basis; and to bring about a greater uniformity in rates and carload minima. Findings in original report affirmed and order of suspension vacated. Furniture from Southern Points, 100 I. C. C. 127.

(4b) Upon further hearing, finding in original report, 83 I. C. C. 267, that fourth-class rating and rates on galvanized corrugated riveted sheet-iron and steel culverts or culvert pipe, from Pueblo, Colo., to points in certain other States were applicable and not unreasonable, but unduly prejudicial, affirmed. Rate alleged applicable was restricted in its application to pipe, n. o. i. b. n., and since culverts were specifically indexed by name, was obviously inapplicable. Colorado Culvert & Flume Co. v. A., T. & S. F., 100 I. C. C. 311.

(4c) First-class rating on barrack bags, in official classification found unreasonable to extent it exceeded or exceeds second-class, any quantity, which is prescribed as reasonable rating for future. Charges collected on such shipments from Jeffersonville, Ind., to New York, N. Y., at first-class rate found unreasonable to extent they exceeded those which would have accrued at second-class rate. Triad Corp. v. E. R. R. Co., 100 I. C. C. 402.

(4d) Rates on wrapping paper, in straight and mixed carloads with toilet paper and paper towels, from Wisconsin and Michigan points to Wichita, Kans., found unreasonable to extent they exceeded basis prescribed in the Paper case, 66 I. C. C. 571. Reparation awarded. Wichita Chamber of Commerce v. A., T. & S. F., 101 I. C. C. 55.

(4e) Third-class and first-class rates applicable on c. l. and l. c. l. shipments of printed matter n. o. i. b. n., assessed on shipments of paper envelope blanks, or paper wrappers, in sheets, printed or lithographed, moving over an interstate route from New York, N. Y., to Buffalo, where they are put through a further

process of manufacture and made into envelopes which are reshipped to New York, found not unreasonable or otherwise unlawful, as compared with the second-class and fifth-class rates applicable on "envelopes, other than Government stamped, printed or not printed," assessed on envelopes reshipped to New York. Rates higher on unfinished than on finished products are unusual, but in other cases the commission has declined to disturb the classification as applied to particular kinds of printed matter. American Lithographing Co. v. L. V. R. R., 101 I. C. C. 100.

(4f) Complainant attacked rates charged on linoleum and asphalt paper felt covering, carloads, from North Philadelphia, Pa., and other eastern points to Memphis, Tenn., as unreasonable, unjustly discriminatory and unduly prejudicial compared with St. Louis, Mo., and Ohio river cities. Linoleum and oilcloth are rated fourth class in carloads, minimum 30,000 pounds, in both official and southern classifications, and the movement in those territories appears to be exclusively on class rates. As the general level of class rates from the east to Memphis is higher than that within official classification territory, complainants sought the establishment of commodity rates which would more nearly equal the fourth class rates to St. Louis than do the fourth class rates to Memphis. It is not denied that such commodities as linoleum and oilcloth generally and properly take class rates in official and southern territories. HELD, rates attacked not unreasonable or otherwise unlawful, complaints dismissed. Memphis Freight Bureau v. A. C. L. R. R., 109 I. C. C. 31.

(4g) Complainant attacked fourth class rate, minimum 36,000 pounds, which defendants collected on barber chair parts from North Chicago, Ill., to Cincinnati, O., since Sept. 25, 1922 as unreasonable to extent it exceeded fifth class rate, 30,000 pounds. Shipments consisted of bases and pedestals, seat rims, arm rims and back rims. The classification provided a specific rating on the pedestals or bases, in carloads of fifth class, minimum 30,000 pounds, under the heading of furniture parts, bases or pedestals, chair, stool or table, iron or steel. Back rims, seat rims and arm rims were and are subjected to fourth class rating and 36,000 pound minimum on iron or steel castings, n. o. i. b. n., further advanced than in the rough by being enameled. The real issue is whether the fourth class rating and rate was and is reasonable on shipments of arm rims, back rims and seat rims. The attacked rating does not appear inconsistent with the value and weight per cubic foot of the articles, and it compares favorably with that on rough iron or steel castings, on iron and steel hardware, and on various iron or steel furniture parts. HELD, rating and rates attacked not unreasonable, complaint dismissed. Berninghaus Co. v. C. & N. W. Ry., 109 I. C. C. 104.

(4h) Complainant attacked class rates charged on carload and less carloads to the return to Kalamazoo, Mich., from numerous points in Illinois, Indiana, Iowa, Michigan, Pennsylvania, West Virginia and New York of steel shipping drums in which rosin size had been shipped from Kalamazoo to such points were and are unreasonable, unjustly discriminatory and unduly prejudicial. Complainant attacked carload and less carload rates and carload minimum applicable to the return to Ivorydale and Port Ivory from all points in official territory of iron or steel shipping drums in which glycerine and silicate of soda had been shipped to such points as unreasonable. This traffic moves at class rates subject to the official classification. There is no suggestion that the reduction in rates here sought would produce any increase in the return movement of empty drums. The evidence in these cases does not establish that the volume of movement between any particular points is sufficiently heavy to warrant requiring the defendants to establish rates on other than the class basis. On the contrary, so far as volume of movement is concerned, the class basis would appear to be peculiarly appropriate for this traffic, involving, as it does, shipments from numerous points scattered throughout the territory but with no considerable volume from any one point. The Commission has recognized that in many instances the rates provided by the carriers for the movement of returned empty containers were upon less than a maximum reasonable basis. The Commission has repeatedly approved the cancellation of exceptionally low rates on empty used packages and containers. HELD, neither from the standpoint of volume of movement nor otherwise is the Commission justified in

requiring the defendants to remove the drum traffic here under consideration from the classification and substitute some other and different basis thereon. It follows that if complainants have just cause for complaint against the charges which they now pay, it is because the classification is wrong or the class rates, as such, are too high. It would appear that no change should be made in the carload minimum without at the same time giving consideration to whether or not a change should also be made in the rating. HELD, rates and carload minima not unreasonable or otherwise unlawful, complaints dismissed. Western Paper Makers Chem. Co. v. A. A. R. R., 109 I. C. C. 133.

(4i) Respondents proposed to increase the ratings on hand pea hullers in the official, western and official classifications. Pea hullers are machines designed to hull peas for use as seed. Protestant ships only in less carloads and its shipments are always crated. Protest against the proposed carload ratings was withdrawn and evidence is confined to crated less carload shipments. Protestants hand hullers are both heavier per cubic foot and cheaper per pound than the power hullers considered in 98 I. C. C. 357. HELD, respondents have not justified the suspended schedules, under which hand and power hullers would be rated alike. The record, however, leaves no doubt as to the propriety of increasing the present ratings. One and one fourth times first class will be an appropriate rating for hand hullers in crates less carloads. HELD, proposed minimum weight in carloads justified as well as proposed carload ratings in the southern and western classifications, but in the official classification a carload rating higher than rule 25 has not been justified. Classification of hand pea hullers, 109 I. C. C. 143.

(4j) Complainant attacked fourth class rates charged on automobile bow sockets, carloads, since May 19, 1921 from Binghamton and Cortland, N. Y., and Pontiac, Mich., to destinations in Michigan, Missouri, New York, Ohio and Wisconsin as unjust, unreasonable and inapplicable, in violation of sections 1 and 6. Fifth class rates are asserted to have been applicable prior to June 10, 1923 instead of fourth class charged, and fifth class basis is sought on and after that date and for the future. Automobile bow sockets are used on open types of passenger vehicles to support the bows and fabric tops. The mechanism differs from carriage or buggy bow sockets only in detail, but it is somewhat heavier. Their functions are analogous. Automobile bow sockets are not wagon or carriage irons. They are designed and manufactured solely for automobiles and are not interchangeable with the analogous parts of horse drawn vehicles. The tariff description of the latter was specific and the analogous article rule was not applicable. Hence these shipments prior to June 10, 1923 must be considered to have been embraced in item of automobile parts, n. o. i. b. n., overcharges should be refunded. Automobile bow sockets move in large volume, usually in carload quantities, are separately wrapped, generally in paper, and are shipped in wooden boxes. Wrapping and packing of automobile and carriage bow sockets are similar. Claims for loss or damage are negligible. Bow sockets should be rated the same as the majority of other automobile parts, fifth class, and mimimum should be 36,000 pounds. HELD, fourth class rates unreasonable to extent they exceed fifth class, minimum 36,000 pounds, reparation denied. Chevrolet Motor Co. v. B. & O. R. R., 109 I. C. C., 184.

(4k) Complainant attacked first class rate on overalls in less carloads from Middlesboro, Ky., to Tupelo, Miss., as unjust, unreasonable and unjustly discriminatory, and, as compared with the rates from the same points to Memphis, Tenn., unjustly prejudicial to Tupelo. Tupelo is on the M. & O., and Frisco 50 miles south of Corinth, Miss., and 106 miles east of Memphis. The principal route of movement from Middlesboro to Tupelo is over Southern to Corinth and M. & O., beyond about 447 miles. There is another possible route by way of Southern to Birmingham, Ala., and Frisco beyond. From Middlesboro to Memphis by way of the Southern the distance is about 489 miles. Applicable rate $1.41 to Tupelo, to Memphis commodity rate of 84.5c. In 98 I. C. C. 627 the Commission found justified the proposed cancellation of less carload commodity rates and the commodity rate to Memphis was canceled on Nov. 5, 1925 leaving in effect first class rate of $1.52. HELD, rate attacked not unreasonable reparation denied on undue prejudice al-

legation, complaint dismissed. Northeast Mississippi Traffic Bureau v. M. & O. R. R., 109 I. C. C. 246.

(4l) Complainant attacked class A rate charged on one road wheel crane from Huntington, Ind., to Merced, Calif., July 20, 1922 as unreasonable. Shipment moved via Erie to Chicago, Northwestern to Omaha, U. P., to Ogden, Utah, S. P., to destination, 2,424 miles, charged class A rate of $2.73. Prior to March 15, 1918 defendants maintained a commodity rate of $1.73 on machinery and machines, and parts thereof taking class A rates, minimum 30,000 pounds and there was also in effect on machinery and machines under alternative provisions of the tariff a rate of $1.71 made by adding a class A arbitrary of 21c to a commodity rate of $1.50. On that date this rate was canceled allowing class rate to apply of $1.82. Effective June 1, 1922 there was established a rate of $2.61 on machinery and machines and parts thereof. HELD, rate attacked unreasonable to extent it exceeded $2.61, reparation awarded. Valley Paving & Construction Co. v. S. P. R. R., 109 I. C. C. 255.

(4m) Complainant attacked combination rate charged on a car of rig irons and 12 kegs of nails shipped June 10, 1922 from Ranger, Tex., to Comanche, Okla., as unreasonable. Shipment moved W. F. R. & Ft. W., to Dublin, Tex., Ft. W. & R. G., to Fort Worth, Rock Island through Ringgold, Tex., to destination 256 miles, charged 74.5c to Ringgold and 30.5c beyond on rig irons, and 34c to Dublin and 90.5c beyond on the nails. Ranger is in Texas common point territory 95 miles west of Fort Worth over the T. & P., at the junction with the W. F. R. & Ft. W. When the shipment moved a rate of 79.5c applied on rig irons, carloads, from Ranger to Comanche over T. & P. and Rock Island, distance 224 miles. Rig irons and the necessary quantity of nails are generally included in oil well outfits and supplies. When the shipments moved a mileage rate of 76.5c applied on oil well outfits and supplies from Ranger to Comanche, and complainant contends the rate should be 85 per cent thereof or 79.5c. HELD, rates charged unreasonable to extent they exceeded 79.5c, and for future 71.5c, reparation awarded. Lone Star Gas Co. v. C. R. I. & G. Ry., 109 I. C. C. 258.

(4n) Complainant attacked as unreasonable the carload rating in the western classification on carpets and carpeting made of cork, linoleum, or asphalted and decorated paper felt, and mats or rugs made of linoleum or of asphalted and decorated paper felt. Floor coverings are rated third class in carloads, minimum 30,000 pounds, in the western classification, and fourth class, same minimum in the official and southern classifications. The less carload ratings are fourth in the three classifications. The record shows that there is a substantial carload movement of floor coverings under rates governed by the western classification. The weight density of these commodities when packed for shipment in high. The average value is between 13 and 14c per pound. These two factors make for the proposed reduction in rating. To deny a reduced rating on floor coverings to the smaller jobbers and communities in the west solely because to do so would enable them to compete on more nearly equal terms with jobbers in the larger centers of population would be in contravention of one of the primary purposes of the act. From the standpoint of car space alone, it is easily possible to load 60,000 pounds of floor coverings in a 36 foot car. Defendants can not reasonably be required to maintain a lower minimum than 36,000 pounds on these commodities in the western classification. HELD, carload rating in western classification is unreasonable to extent it exceeded fourth class, minimum 36,000 pounds. Congoleum Nairn, Inc., v. C. & N. W. Ry., 109 I. C. C. 447.

(4o) Complainant attacked class A rate of $1.055 charged on two cars of electric starters and electric transformers on Jan. 7 and 12, 1918 from Glen Rock, Wyo., to St. Louis, Mo., as illegal and unreasonable. Allegation of unreasonableness was barred by the statute at time formal complaint was filed. The commodity rate was applicable on machinery or oil well supplies as described on page 42 of the tariff. The list on that page contains electrical machinery consisting of dynamos and motors and parts thereof. Electric starters and electric transformers are not specifically named, but transformers are. The latter would include electric transformers. An electric starter is an electric motor. HELD, applicable rate was commodity of 75c, reparation awarded. Wagner

Electric Corp. v. Director General 112 I. C. C. 57.

(4p) Complainant attacked official classification rating of fourth class, and rates governed thereby, on shipments of crushed carbon, or carbon flour, carloads, from Kaulmont, Pa., to Madison, Wis., as unreasonable to extent they exceed sixth class rating and rates. In 80 I. C. C. 344, Commission found fourth class rating not unreasonable. Carbon flour is a product of petroleum coke, the solid residue of petroleum refining. The material is not readily inflamable or susceptible to damage by water and is not injured when spilled in the car floor as the result of breakage of the container. Complainant has filed no loss or damage claims. In southern and western classification territories carbon flour, carloads, is rated fourth and fifth class, respectively. It is true that sixth class rating sought is applicable on petroleum coke, the raw material from which carbon flour is made and that the manufacturing process changes the nature of the coke and considerably enhances the value. But petroleum coke usually moves under rates that are 80 per cent of sixth class. Carbon flour is shown by this record to be a heavy low grade commodity, more closely associated with the carbons and carbon articles rated sixth class, carloads, than those rated fourth or fifth class. HELD, ratings and rates attacked unreasonable to extent they exceeded sixth class minimum 50,000 pounds, reparation awarded. French Battery & Carbon Co. v. C. & N. W. Ry., 112 I. C. C. 128.

(4q) Complainant attacked third class rates charged on four cars of camp outfits shipped between Sept. 11, 1923 and May 14, 1924 between Louisiana and Arkansas as unreasonable, unjustly discriminatory and unduly prejudicial to extent they exceeded class A rates applicable on contractors outfits. The cars are loaded and unloaded on public team tracks by complainant. Defendants expressed a willingness to establish class A rates on camp outfits. HELD, rates attacked on camp outfits unreasonable to extent they exceeded class A. rates on contractors outfits, reparation awarded. Standard Pipe Line Co. v. T. & P. Ry. 112 I. C. C. 186.

(4r) Complainant attacked carload ratings and rates on numerous articles included in the designation of furniture in official classification, as unreasonable and, as compared with ratings and rates on the same articles in western, southern, and Illinois classifications, unjustly discriminatory and unduly prejudicial. Generally, in official classification, the articles with which the complaint is concerned are rated, in carloads, second class, minimum 10,000 or 12,000 pounds, in most instances the latter, subject to rule 34. An exception is school chairs, which are rated rule 25, mimimum 14,000 pounds. The rating sought in all cases is third class, subject to present minima. Furniture, in carloads, is generally rated second class in official classification and third class in western and southern. Complainants dissatisfaction with the present furniture rating in official territory is induced largely by the concept that it is not in alignment with the rating accorded furniture traffic elsewhere. Apart from this, however, one of the cardinal contentions is that the classification elements fully warrant a rating of third class in official classification. Although the matter of claims will be accorded separate notice, it is not out of place at this point to observe that suitable packing is advantageous not only to the carrier but also to the trade, since it manifestly is better for the dealer to have satisfied customers receiving consignments in good and merchantable condition than to have one of the parties to the transaction burdened with a loss or damage claim and attendant delays and vexations. Comparisons of rate levels in different sections simply show that the class rate structures within the several classification territories are by no means homogeneous. In official territory class rates move traffic more generally than do class rates in other territories. This situation is reflected in respect to the transportation of furniture which in official territory moves largely on class rates and in other territories principally on commodity rates materially lower than class rates. HELD, ratings and rates not unreasonable. Complaint dismissed. Commission will institute a general investigation as the general basis of rates on furniture throughout the country. National Council of Furniture Asso. v. A. A. R. R., 112 I. C. C. 289.

C. 721.

§23. Uniform or Consolidated Classification.

(a) The commission is inclined to view with favor any steps which may be taken by carriers to simplify the present system of publishing rates from Southwestern territory to the East, with the important qualification, however, that the resulting rates must be reasonable. Butter, Eggs, Dairy Products, and Poultry, 96 I. C. C. 19, 29.

§24. Exceptions to classification.

See Advanced Rates §5 (2) (bb); Class Rates §1 (n), §2 (3j) (3k) (5b).

(a) Respondents proposed to cancel the present exception to the western classification on cotton batting, leaving in effect the classification rating. The exception provides for second class rates on cotton batting, minimum 10,000 pounds. The western classification names ratings of second class on cotton batting in boxes, paper lined crates, or bales not machine compressed, carloads, minimum 10,000 pounds, and third class in machine pressed bales, carload, minimum 18,000 pounds. HELD, suspended schedules in so far as they provide for the application of third class on cotton batting, in machine pressed bales, carloads, minimum 18,000 pounds subject to rule 34, justified, but that in so far as they provide for the application of the graduated scale to the minimum of 10,000 pounds on cotton batting, in boxes, paper lined crates, or bales not machine pressed, carloads, not justified. Cotton batting in W. T. L. territory, 91 I. C. C. 535.

(b) Respondents proposed to cancel various exceptions to the official classification on wool in the grease, scoured wool, wool noils, and wool tops, applicable between points in New England, and in lieu thereof to apply the full classification basis, except, on certain wool in the grease, when compressed to a density of not less than 19 pounds per cubic foot. If allowed to become effective it will result in the same basis of rates on wool within New England as is generally applied in official territory. HELD, suspended schedules justified. Wool between New England territory, 92 I. C. C. 236.

(cd) Proposed cancellation of exceptions to official classification on wool in the grease, scoured wool, and wool noils and tops, applicable between points in New England, and in lieu thereof to apply the full classification basis; also to increase ratings on wool, in the grease, washed or unwashed, not scoured, in bales, c. l., when compressed to density of not less than 19 pounds per cubic foot, found justified. To continue present exceptions would mean continuation of a basis of rates in favor of New England shippers. Higher basis proposed will result in same basis of rates within New England as is generally applied in official territory and is part of the general revision of rates of New England carriers. Wool between New England Points, 92 I. C. C. 236.

(e) Exceptions to the governing classifications, as well as commodity rates, are usually established only when there is a considerable volume of movement in particular channels. Indian Packing Corp. v. Director General, 93 I. C. C. 400, 404.

(f) Exceptions to the classification and commodity rates are often founded on the conditions surrounding the transportation of the excepted commodity between particular points or in comparatively limited sections. A mere reference to certain tariffs in which such commodity rates or exceptions appear is not in itself persuasive of any impropriety in the classification. Classification of Canned Goods, 98 I. C. C. 166, 175.

(g) Maintenance of classification exceptions on various commodities from St. Paul, Minneapolis, and Duluth, Minn., Superior, Wis., and points taking same rates to Fargo, N. Dak., while contemporaneously failing to maintain such exceptions from same points of origin to Valley City and Jamestown, N. Dak., found unduly prejudicial to latter two points and unduly preferential of Fargo. Fargo Commercial Club v. A. & W. Ry. Co., 98 I. C. C. 691.

(h) L. & N., respondent, proposed to eliminate alcoholic liquors, less carloads, from certain tariffs. The only justification offered by respondent for the proposed exception is that since the Federal prohibition law went into effect it has found it necessary to police each shipment from the time of receipt until arrival at destination or delivery to a connecting carrier if the destination is beyond its line, and that the expense of policing liquor in transit in less carload lots is greater in most instances than the revenue received under the first class rate applicable. The question here presented is whether the respondent can, as common carrier, under the law, refuse to accept alcoholic liquor for transportation merely upon the ground that the cost of guarding it under the facilities for transportation provided by respondent is not remunerative under the present rate. Respondent has the right and duty under the law to establish just and reasonable rates for transporting alcoholic liquors in any quantity, and in establishing such rates may consider the value of the service performed for the shipper and the cost to respondent of performing it. Respondent has expressly held itself out to accept this traffic by obtaining the necessary Government permit. It does not appear that the traffic is inherently any more dangerous or otherwise objectional from a transportation point of view in less than carloads than in carloads, or that the requests for transportation in less carloads have been or are likely to be unreasonable. HELD, suspended schedules not justified. Alcoholic liquors via L. & N. 102 I. C. C. 202.

(i) Respondents proposed to cancel the application of exception note 4 of Agent Dulaneys exceptions to southern classification I. C. C. 20, to class rates on certain water and rail traffic from Baltimore, Md., and north Atlantic ports to Lynchburg, Va., and other Virginia points. Present rates from north Atlantic ports to Lynchburg are governed by southern classification subject to exception note 4 above referred to. This provides that various specified commodities, such as canned goods, cigarettes, coconuts other than desiccated, sugar, and smoking tobacco, in less carloads, moving by water and rail between north Atlantic ports and Lynchburg shall take certain class ratings which are one class lower than the southern classification ratings. The cancellation proposed would restore the ratings on the commodities mentioned moving by water and rail to the full southern classification basis the same as applies in connection with all rail movements, and would result in material increases in rates. Respondents offered little justification for the proposed cancellation other than a statement by the publishing agent that the present application of note 4 was provided for by mistake, due to a clerical error. HELD, proposed schedules not justified. Cancellation of note 4 exceptions to southern classification on water and rail traffic from north Atlantic ports to Lynchburg, Va. 102 I. C. C. 205.

(ia) Proposed cancellation of exceptions to southern classification, under which certain commodities l. c. l. moving water-and-rail from north Atlantic ports to Lynchburg and other Virginia points take ratings one class lower than those provided in southern classification and restoring of such ratings to the full southern classification basis applying all-rail, found not justified. Respondents offered little justification other than a statement that exceptions were erroneously published, no evidence concerning reasonableness of the rates proposed being adduced, or justification for fourth-section departures which would result thereunder offered. Moreover, a considerable volume of business has developed under the present rates which have been in effect approximately two years. Exceptions to Southern Classification, 102 I. C. C. 205.

(j) Upon general investigation, on commission's own motion, of l. c. l. ratings in exceptions to southern classification, FOUND: There is no justification for requiring the maintenance or establishment on l. c. l. traffic of exceptions to southern classification. Southern Class Rate Investigation, 100 I. C. C. 513, 549, 641, 706.

(k) Complainant attacked exception to classification rate of 17.5c charged on four cars of prepared roofing, between Sept. 4 and April 26, 1924 from Chicago, Ill., to Terre Haute, Ind., as inapplicable to extent it exceeded 13c. Rate charged 90 per cent of sixth class. Defendant was a party to a specific joint commodity rate of 13c from Chicago to Midland City, Ill., applicable through Terre Haute. Subsequently defendant cancelled

routing via Terre Haute. HELD, rate attacked inapplicable, applicable rate was 13c, reparation awarded. Elaborated Ready Roofing Co. v. C. & E. I. Ry., 109 I. C. C. 401.

(l) The exception to the classification required reference to the tariff naming class rates, and can not be considered as a specific commodity rate. Elaborated Ready Roofing Co. v. C. & E. I. Ry., 109 I. C. C. 401, 402.

Classification Exceptions on Empty Egg Cases, 88 I. C. C. 376.

§27. Reparation.

See Reparation.

(a) An award of reparation does not necessarily follow from a finding that a classification rating is unreasonable. Bissinger & Company v. G. N. Ry., 92 I. C. C. 577, 581.

ALL OTHER CITATIONS

O-So-Ezy Products Co. v. Director General, as Agent, 85 I. C. C. 187; Albers Bros. Milling Co. v. Director General, as Agent, 85 I. C. C. 747; Garrett-Callahan Co. v. A. C. L. R. R. Co., 88 I. C. C. 103.

VI. TARIFFS AND CONSTRUCTION

§28. In general.

See Advanced Rates §17 (gg); Tariffs.

(a) Condensed buttermilk is made by subjecting buttermilk to a patented process in the course of which a portion of the water content is removed and lactic acid developed. In physical appearance it resembles lard. The change produced in condensation is due to extraction of water and chemical action and not to medication or the addition of condiments. Consolidated Products Co. v. C., B. & Q. R. R. Co., 89 I. C. C. 103, 104.

(b) The hulled product of oats is called oat groats, and in that form is used only as a poultry food. When oat groats are steamed and passed between steam rollers the product becomes rolled oats, which is used generally as a food for human consumption. Oat groats ground up is called oat flour and is used only as a poultry food. Atlas Cereal Co., v. A., T. & S. F. Ry. Co., 89 I. C. C., 212, 213.

(c) In the process of milling rice there is a by-product of broken rice, and rice flour is made by grinding this broken rice. Grosjean Rice Milling Co. v. Director General, as Agent, 89 I. C. C. 395, 397.

(d) No classification can be so minute as to conform to the differing varieties and conditions of traffic, and to separate different grades of densities of the same article into different classes with varying rates, even if it could be accomplished, would go far to defeat the real purpose of classification. Edlund Broom Corp. v. B. & M. Ry., 92 I. C. C. 749, 751.

(e) Complainant attacked first class rates applied to various carloads of bicycles, crated, from eastern points to Oakland and San Francisco, Calif., as unjust, unreasonable, unduly prejudicial and inapplicable to extent they exceeded commodity rates in effect on passenger vehicles. The issue presented is one of tariff interpretation only. At time of movement the tariff contained commodity rates of $2.075, $2.315 and $3.085 from Middletown to Oakland, from Westfield to San Francisco and from Little Falls to San Francisco, respectively, on vehicles, nonself-propelling, and parts thereof. The Commission is of the opinion that a bicycle is neither a freight nor a passenger vehicle, and rates charged were applicable and not unreasonable or otherwise unlawful. Complaint dismissed. Jones v. Pennsylvania R. R., 93 I. C. C. 697.

(f) Respondents proposed to change the item in the official classification covering rags, n. o. i. b. n., in machine pressed bales, less carloads, so as to increase the rating from fifth class to fourth class on rags having value for purposes other than conversion into fiber. Under the schedules here proposed shippers and carriers would be required to determine in the first instance, as at present, whether a given lot of material was in fact rags, and following that it would be necessary, before the legal rate could be known, to relate the rags to some standard of value or usefulness which the record shows is quite indefinite and indeterminate, if it exists at all. HELD, schedules not justified. Classification of rags, 98 I. C. C. 591.

(g) Tariffs carried description on "fabrics, made wholly of cotton, in original piece—but not finished articles ready

for use—in rolls covered with burlap or in bales or boxes, any quantity," and on "cotton-piece goods, any quantity, viz, cotton fabrics (made wholly of cotton), in original piece (but not finished articles ready for immediate use), packed in rolls covered with burlap, or in boxes or bales." Contention that terms "wholly manufactured articles" and "finished articles" in above descriptions had effect of limiting application thereof to unfinished cotton fabrics or cotton fabrics requiring some further process of manufacture to render them suitable for commercial use as fabrics, not sustained. More apt terms would have been employed to give expression to such meaning if intended. Rosenblatt & Sons v. Director General, 91 I. C. C. 18, 19.

(h) Cotton denim is a coarse cotton fabric, and clearly comes within description "cotton-piece goods, n. o. i. b. n." Rosenblatt & Sons v. Director General. 91 I. C. C. 18, 20.

(i) "Cream of Wheat" is that part of so-called first break in process of milling wheat into flour, known to the milling trade as Number 1 middlings, wheat grits, farina, or semolina, and is the portion of wheat grain which, when subjected to from six to eight additional processes, becomes finest grade of flour. Cream of Wheat Co. v. A., T. & S. F. Ry. Co., 91 I. C. C. 45.

(j) When complainant discovered that wheat grits had been included in tariff item taking flour rates it thereafter ceased to bill its product, Cream of Wheat, as a cereal-food preparation and availed itself of flour rate by billing as wheat grits. HELD: Such billing was improper, and fact that commodity is prepared and represented to the trade solely as a cereal food and not as grits is sufficient to make rates on cereal foods applicable. Andrews Soap Co., 4 I. C. C. 41. Cream of Wheat Co. v. A., T. & S. F. Ry. Co., 91 I. C. C. 45, 47.

(k) Wool in the grease, fleece wool, pulled wool, and scoured wool, defined. Wool Rates Investigation, 1923, 91 I. C. C. 235, 238.

(l) "Fluorspar" is a nonmetallic mineral consisting of about 51 per cent calcium and 49 per cent fluorine and is primarily used as a flux in metallurgy. About 85 per cent of production in this country is used by steel industry and remaining portion is used in production of glass, enamel ware, hydrofluoric acid, and aluminum. Rosiclare Lead & Fluorspar Mining Co. v. M. & O. R. R. Co., 91 I. C. C. 577, 578

(m) A lamb is any sheep under 15 months old, either a wether, ewe, or buck. Standfield v. O. W. R. R. & N. Co., 91 I. C. C. 598, 601.

(n) As between two ratings prescribed by different classification items, each item describing article shipped in general terms, and neither one being more definite than the other, applicable rating is the lower of the two. Peck Stow & Wilcox Co. v. N. Y., N. H. & H. R. R. Co., 91 I. C. C. 747, 748.

(o) Complainant attacked class A rate charged on electrical appliances, including electric fans and electric motors, of $3.035 May 13, 1922 from Springfield, O., to San Francisco, Calif., as illegal, unreasonable, unjustly discriminatory unduly prejudicial and in violation of fourth section to extent it exceeded $2.84. The main issue is one of tariff interpretation. The tariff provided a car load commodity rate from Chicago to San Francisco of $2.53 under the general heading of machinery, sugar making, among the items being motors and fans. The tariff also authorized the application of any combination of intermediate rates of less than the through rate. The electric fans and motors shipped could not be put to any normal use in connection with machinery in a sugar mill. Consequently there were not within the descriptive term of the tariff, and the class rates properly applied. HELD, rate charged applicable not unreasonable or otherwise unlawful, complaint dismissed. Robbins & Meyers Co. v. C. C. C. & St. L. Ry., 100 I. C. C. 418.

(p) Lime Cola "syrup" held to take third class rating under southern classification No. 40, item 25, as fountain syrups, fruit syrups, or syrups not otherwise classified, term "syrup," as used, in G. F. O. 3004, which fixes commodity rate as addendum to molasses, having narrower meaning, and, in view of section 24, was not intended to include syrups used merely as basis for a beverage. Louisville & N. R. Co. v. Lime Cola Bottling Co., (Ala., 1924) 101 So. 678.

(q) Terms "clipped tops" indicates a removal of leaves from beets, carrots,

and parsnips, from 3 to 6 inches of stems being retained to permit tying in bundles. Beets and Carrots from Texas, 92 I. C. C. 141, 142.

(r) In the western classification boilers were included in list of articles under heading "Machinery and Machines" but carriers removed it from that list resulting in making commodity rates on machinery and machines inapplicable to boilers, and leaving the full classification basis to apply. After shipments moved, boilers were restored to machinery commodity basis. No adequate explanation or justification for singling out boilers and placing them upon full classification basis having been offered by carriers, who also failed to sustain burden of proof cast upon them to justify rates as increased, class rate assessed on shipments of boilers from Munice, Ind., to Houston and Orange, Tex., found unreasonable to extent it exceeded lower commodity basis and reparation awarded. National Supply Co. of Texas, v. C., C., C. & St. L., 92 I. C. C. 295.

(s) Commodities of same nature and used chiefly for same purpose usually take same rates, and differences in value of same commodity shipped in different forms are frequently disregarded in rate making where articles are essentially of same nature and highly competitive. Chloride of Zinc to Texarkana, 92 I. C. C. 569, 572.

(t) A lower rate properly may be applied to a product when in an unfinished condition than that applicable to it when finished. U. S. v. Gulf Refining Co., 45 Sup. Ct. 597.

(u) At time of movement there was no specific rate or rating on "earthenware jugs, insulated and metal jacketed," and under analogous article rule rate applicable on "jugs, glass, insulated and metal jacketed," was assessed. Contemporaneously lower rates applied on "pottery, earthenware, stoneware, common brown or gray jugware." FOUND, an earthenware jug, when insulated and metal jacketed, completely loses its identity as an ordinary earthenware jug or jar and value of insulated metal-jacketed articles greatly exceeds that of ordinary earthenware jugs. Article under consideration does not fall within generic term "pottery, earthenware, stoneware, common brown or gray jugware," and rate charged was applicable. Cullum & Boren Co. v. C., B. & Q., 93 I. C. C. 354.

(v) Where classification provides a specific rating on an article, a broad description, used in connection with a lower commodity rate under which such article may be included does not take it out of the classification. Cleveland Akron Bag Co. v. W. & L. E., 93 I. C. C. 694, 695.

(w) Bicycles were classified under heading of "hand vehicles" upon which first-class rates applied. Contemporaneously a lower commodity rate was maintained on "light and heavy non-self-propelling freight and passenger vehicles." HELD, since a bicycle is neither a freight nor a passenger vehicle, first-class rates assessed were applicable. United Cycle & Supply Co. v. B. & O., 93 I. C. C. 689; Jones v. P. R. R., 93 I. C. C. 697.

(x) Minimum charge of $15 per car, applicable on freight generally, collected on intrastate shipments of pine stumps, boughs, limbs, and wood fragments moving during Federal control, found assessed without tariff authority. Shipments were billed as wood and were used in the extraction of oil, rosin, and turpentine. No specific rates were applicable and while governing classification carried the so-called analogy rule, the practically refuse material comprising the shipments finds no analogy in lumber which embraces a prepared, sawed, product of the forests. Nor can analogy be found in tariff item on fuel wood since applicable rates thereon were measurable in cords and shipments here in question could not be corded. Charges based upon those applicable on lumber, without regard to minimum charge per car, found reasonable and reparation awarded. National Reduction Corp. v. Director General, 95 I. C. C. 284.

(y) To fall properly within the tariff designation "other than crude," bristles need not necessarily be completely finished, ready for use in the manufacture of brushes. It is sufficient that some of the work be performed in preparation for such use. Cone & Co. v. Director General, 96 I. C. C. 629.

(z) Where a classification provided two ratings for same commodity, under equally specific descriptions, the legal rating is the lower of the two. Classification of Targets, 98 I. C. C. 178, 180.

(aa) Rate on wooden wagon bows from Columbus, Ohio, to Sherman and Stamford, Tex., specifically named in the

tariff on this commodity, found unreasonable to extent it exceeds lower contemporaneous rate on "wagon wood, not otherwise specified," which latter rate is prescribed as reasonable for future. Fort Smith Rim & Bow Co. v. B. & O. R. R. Co., 98 I. C. C. 536.

(bb) Class rate charged on automobile heaters, l. c. l. from Chicago, Ill., to San Francisco, Calif., found applicable and not shown to be unreasonable. Under the governing tariff provision is made for a lower commodity rate on automobile parts, but heaters can not be classed as a part of an automobile, being more in the nature of an accessory or added feature. Neither are heaters included in the list of automobile parts specifically named in the classification, they being separately provided for under the heading "Heaters." Complaint dismissed. Western Auto Supply Agency of Los Angeles, Calif., v. C., B. & Q., 98 I. C. C. 647.

(cc) Complainant apparently deduces that any special feature or attachment which some manufacturer might include as a part of regular equipment, even though not ordinarily considered as essential to the operation of a motor car, should, when shipped by itself, be regarded as an automobile part, and so rated. In practical effect this would nullify the classification which is intended to govern the rates on articles listed therein, except where specific commodity rates or exceptions are provided. Western Auto Supply Agency of Los Angeles, Calif., v. C., B. & Q., 98 I. C. C. 647, 648.

(dd) Complainant attacked class rate charged on three cars of scrap iron during 1923 from Alexandria, Va., to Harrisburg and Lebanon, Pa., as unreasonable. The shipments consisted of parts of 1,400 horsepower engines which were removed from ships. The parts shipped weighed about 15 tons each. It was and is the practice of complainant to break similar parts into smaller pieces, but this was not done when these shipments moved, because of lack of space and accumulation of work. There is no evidence in the record to indicate whether or not the commodities were sold for remelting purposes or were remelted. A witness for complainant conceded that some one desiring to construct a marine engine of the type of these could add the missing parts to the pieces shipped and save considerable expense, inasmuch as these pieces were expensive because of their size. The conclusion must be reached that the articles shipped were not scraps or pieces of iron or steel, having value for remelting purposes only. To come within that tariff description the articles must not be shipped in their original form, but must be so reduced into fragments, scraps, or pieces as to be useless for any purpose other than remelting. HELD, fifth class rate applicable and not unreasonable, complaint dismissed. Simon v. Southern Ry. 102 I. C. C. 325.

(ee) Rate on wood pulp found not applicable on shipments of wood flour from Hercules, Calif., to Bacchus, Utah, at time shipments moved, and applicable rate on such shipments found unreasonable to extent it exceeded rate applicable on wood pulp, which was subsequently established on wood flour. Reparation awarded. Hercules Powder Co. v. Director General, 100 I. C. C. 393.

(ff) Ice-cream mix sold and shipped under the trade name of Kim, as herein described, found to be a form of condensed milk. Kentwood Ice Mfg. & Bottling Works v. Amer. Ry. Ex. Co., 101 I. C. C. 93, 99.

(gg) Rating for dry goods, n. o. i. b. n. found applicable to bed sacks, and not unreasonable. Following 16 I. C. C. 405, commission found not warranted in removing bed sacks, a textile article little used or known, from the broad classification for dry goods and in prescribing a rating based on the classification characteristics of the article. Triad Corp. v. C. of G. Ry., 101 I. C. C. 687.

(hh) Where a radio set is designed for the reception of tubes or a loud speaker, or both, and those parts, or either of them, are shipped with the set, whether installed or separately packed, the whole constitutes a single electrical appliance and must be rated as such. Classification of Radio Sets, 102 I. C. C. 140, 141.

CLAYTON ACT

(a) The distribution or sale of standard patterns to retail dealers, the sale of catalogues, fashion sheets, and other advertising matter to the same dealers, inseparably connected with the sale or agreements regarding delivery of patterns to retail distributors throughout the country, held interstate commerce, within the terms of the Clayton Act. Butterick v. Federal Trade Commission 4 Fed. (2d) 910.

COASTWISE TRAFFIC

See Export Rates and Facilities §6 (f); Import Traffic; Port to Port Rates; Proportional Rates II (kk); Rail and Water Rates.

(a) Relationship of rates on certain commodities for export, import, or coastwise movement via Galveston, Tex., from or to points in Texas, Oklahoma, western Louisiana, Arkansas, and Kansas found unduly prejudicial to Galveston and unduly preferential of New Orleans, La. Such undue prejudice should be removed by establishing the same rates to or from New Orleans or Galveston, as the case may be, in instances where the differences in distance from and to the two ports are not greater than 100 miles, and by establishing rates to or from Galveston, as the case may be, certain prescribed differentials, under New Orleans in instances where the differences in distance in favor of Galveston are greater than 100 miles. The record is not sufficiently complete to warrant the commission in prescribing relationships between the rates to or from Galveston and New Orleans on other commodities or from or to points other than those embraced in the foregoing findings. Relationships herein prescribed will serve as a guide to defendants in readjusting the rates on other export, import, and coastwise traffic. Galveston Commercial Asso. v. G., H. & S. A. Ry. Co., 100 I. C. C. 110.

(b) That coastwise water service is materially cheaper than rail service admits of no doubt. This is particularly true of l. c. l. freight, which is carried by boat in practically the same manner as c. l. freight. Southern Class Rate Investigation, 100 I. C. C. 513, 687.

I. CREATION AND PURPOSE.

§1. Nature in General.

(a) There is no good reason for maintaining commodity rates on articles which move in small volume and in l. c. l. quantities. Burlap Bags and Iron and Steel Articles, 89 I. C. C. 131, 134.

(b) Commodity tariffs must be read in the light of the governing classification. Grosjean Rice Milling Co. v. Director General, 89 I. C. C. 220, 396.

(c) Consideration of volume of movement of a given article between given points in determining the commodity rates on that article between those points tends to ignore any percentage relation of commodity rates to class rates between other points where the volume of movement is not similar. Fresh Fruits and Vegetables, 89 I. C. C. 473, 475.

(d) Commodity rates applicable to less carload traffic constitute departures from the usual practice, and their establishment should be required only upon a clear showing of compelling reasons. Arkansas Fertilizer Co. v. A. & S. Ry., 92 I. C. C. 504, 509.

(e) Commodity rates must be specific and must not be applied to analogous articles. Cullum & Boren Co. v. C. B. & Q. R. R., 93 I. C. C. 354, 355.

(f) Commodity rates are ordinarily established when special treatment not afforded by the classification is required, and while heavy loading and volume of movement are not the only consideration in the establishment of commodity rates, they are important elements, which, other considerations being equal, may and frequently do become determinative. Parkersburg Rig & Reel Co. v. C. R. I. & P. Ry., 95 I. C. C. 181, 187.

(g) Commodity rates must be applied strictly, from which it follows that only the article or articles clearly comprehended within the descriptive terms of the commodity rate could be considered as having been removed from the classification. St. Louis Fruit & Vegetable Asso. v. L. & N. R. R., 98 I. C. C. 553, 556.

(h) Respondents proposed the cancellation of numerous carload and less carload commodity rates from points in southeastern and Carolina territories to destinations in the Mississippi Valley territory, and in a few instances, to Ohio river crossings, thereby making applicable class rates between the respective points. On conference held at the office of the commission on Nov. 7, 1923 the matter of carload rates was disposed of by agreement between the shippers and the carriers and by order of the Commission the orders of suspension were vacated and set aside except in so far as they affect less carload and any quantity rates. The present less carload commodity rates from the southeast and the Carolinas were made with relation to less carload and any quantity commodity rates from the Ohio river crossings to the valley, which, have been canceled, with a few exceptions. The class rates bear the same percentage relationship to each other as do the rates from the Ohio and Mississippi river crossings, and are in accord with the fourth section over all direct routes. Many of the commodity rates are obsolete and there is no objection to their cancellation. **Marble Granite and Stone.** The marble and granite interests are not averse to the ultimate elimination of the less carload commodity rates when a proper level of class rates and appropriate classification has been prescribed to take care of the commodity without any undue increase in the rates. If the less carload commodity rates are canceled the resulting class rates would in some instances be three or four times that of the carload rate on the same commodity. This relationship is abnormal and there should be a closer spread between the carload and less carload rates. **Furniture.** Class rates apply northbound from New Orleans to High Point, N. C., and defendants proposed to make applicable same rate southbound. Furniture is bulky, fragile, and susceptible to damage in transportation. It is a high grade commodity which, generally speaking, should move on class rates in less carload quantities. **Other Commodities.** Harness and saddlery is shipped in large quantities from Buford, Ga. The evidence shows that 90% of the movement from Buford is on class rates and no valid reason is shown for the further continuation of commodity rates to the Gulf ports. It is proposed to cancel the less carload commodity rates on excelsior packing mats from Woodland, Ga., to New Orleans and Vicksburg. There has been no movement under the commodity rates during the past year. Less carload commodity rates are published on meats and lard compounds or substitutes from Moultrie, Ga., to lower Mississippi river points and to Gulf ports. Shippers at Moultrie are agreeable to this cancellation. Liquid carbonic gas moves generally on class rates in south-

ern territory and from other points in the valley. The proposed adjustment on hats and caps will restore the original basis. This also applies to patent medicines, window glass, starch, stationery, leather, paints, trunks, boots and shoes, and various other articles. Less carload commodity rates are applicable on alcohol in wood on which there has been no movement, the same being true on ale, beer, porter, and other malt liquors. Axes move at commodity rates from Montgomery to New Orleans and Vicksburg while third class rates apply to other valley points and from Birmingham. An any quantity rate of 21.5c on jute bagging will become 28.5c to Meridian and 31.5c to Jackson. HELD, proposed rates on marble granite and stone have not been justified, but proposed schedules on other commodities have been justified. Commodity rates between points in southern territory, 98 I. C. C. 627.

(i) Commodity rates are ordinarily established when special treatment not afforded by the classification is required, and while heavy loading and volume of movement are not the only considerations in establishment of commodity rates, they are important elements, which, with other considerations being equal, may and frequently do become determinative. Parkersburg Rig & Reel Co. v. C., R. I. & P., 95 I. C. C. 181, 187.

(j) It is believed that the new distance scale of class rates herein prescribed for application in southern territory, if applied both interstate and intrastate, will more than maintain present revenues, particularly if many of the l. c. l. exceptions and commodity rates are gradually eliminated. The possible increase in revenue, if the maximum rates are uniformly applied, is believed to be justified by fact that class-rate traffic is in general of such a character that in revising the rates upon its revenue doubts may well be resolved in favor of carriers, or, in other words, in favor of commodity rates on traffic of a more basic character, the revision of which is pending. Southern Class Rate Investigation, 100 I. C. C. 513, 649.

(k) Proposed revision of distance commodity rates on commodities other than those treated in Memphis-Southwestern Investigation, 77 I. C. C. 473, for application between points in southwestern territory between points in such territory, on the one hand, and defined territories in c. f. a., western trunk-line, and southern territories and related points, on the other, designed for the purpose of complying with the commission's orders in the above-cited case, found justified with respect to certain commodities and not justified with respect to others. Reasonable rates in specific instances prescribed for the future and fourth section relief granted. Commodity Rates in Southwestern Territory, 101 I. C. C. 308.

(l) Departure from the percentage formula in making commodity rates is not in and of itself a violation of section 1 of the interstate commerce act. In principle there is no more reason under section 3 than under section 1 for requiring either conformity to, or equal departures from, the percentage formula. The earnings and transportation conditions are matters for the exercise of judgment as much in the one case as in the other. Detroit Chemical Works v. C. R. R. Co., 101 I. C. C. 671, 673.

(m) Proposal to cancel commodity rates on brick, draintile, and other clay products from Mason City, Des Moines, Acme, and Rockford, Iowa points on Rock Island, to Ashland, Wis., on Soo Line, leaving in effect considerably higher class rate and creating many violations of long-and short-haul provision of fourth section of the act, found not justified. Combination Rule on Brick and Draintile, 101 I. C. C. 729.

(n) Proposed cancellation of commodity rates on cheese from Wisconsin points, Chicago, Missouri and Mississippi River points, and points in defined territories to destinations in Arkansas, Louisiana, Oklahoma, and Texas, and application of third-class rates in lieu, thereof, found not justified. Cheese from Wisconsin, 101 I. C. C. 744.

(na) Following 102 I. C. C. 79 in which the commission quoted its statement in Southern Class Rate Investigation, 100 I. C. C. 513, that with a reasonable level of class rates, there would appear to be little if any justification for requiring l. c. l. commodity rates in southern territory, proposed cancellation of l. c. l. commodity rates on clean rice between points in southern territory, which would result in increases, found not justified. Rice between Points in Southern Territory, 102 I. C. C. 2, 317.

(o) It has long been recognized that volume of movement, present or prospective, is one of the controlling factors in the establishment of commodity rates. Western Paper Makers Chem. Co. v. A. A. R. R., 109 I. C. C. 133, 135.

(p) A commodity rate on less carload traffic is a pronounced departure from the usual practice and the Commission should require its establishment only upon a clear showing of compelling reasons. Western Paper Makers Chem. Co. v. A. A. R. R., 109 I. C. C. 133, 137.

(q) A commodity rate applicable on less carload traffic is a pronounced departure from the usual practice. Given a reasonable level of class rates, it seems that under few, if any, circumstances, will the Commission be justified in requiring the maintenance or establishment of less carload commodity rates. Bananas from Gulf ports, 109 I. C. C. 211, 218.

(r) Under the circumstances the shipment of 12 carloads in one direction and 2 carloads in the other does not justify a commodity rate and the record does not establish the necessity of a commodity rate for the future. Dolese Bros Co. v. C. R. I. & P. Ry., 109 I. C. C. 561, 564.

(s) Given a reasonable level of class rates, it seems that under few, if any, circumstances will the Commission be justified in requiring the maintenance or establishment of less carload commodity rates. Provided that no undue preference results, the carriers may establish them voluntarily for competitive reasons or even for the purpose of aiding in the development of the territory which they serve. But those are not reasons which may govern the action of the Commission. Dixie Peanut Mills v. A. G. S. R. R., 112 I. C. C. 167, 170.

(t) The mere fact that a commodity moves in considerable volume during an annual period of 60 days does not entitle it to a commodity rate. Commodities may move in considerable volume and yet remain on a class rate basis. Heinz Co. v. Director General, 112 I. C. C. 206, 212.

ALL OTHER CITATIONS

Cutler-Hammer Mfg. Co. v. Director General, as Agent, 88 I. C. C. 600.

§2. Relation to Class Rates.

See Class Rates.

(a) Charges on fuller's earth, moving in tank cars furnished by shipper because of inability of carriers to furnish adequate box-car equipment, from Georgia and Florida points to Richmond, Calif., based on combinations to and from Mississippi River, found unreasonable to extent class rates for haul east of New Orleans, La., exceeded the contemporaneous commodity rates applicable on shipments moving in box cars. Reparation awarded. Standard Oil Co. v. A. T. & S. F. Ry. Co., 89 I. C. C. 27.

(b) Commodity rate on agricultural implements moving from Memphis, Tenn., to Jackson, Miss., found unreasonable to extent it exceeded the contemporaneous sixth class rate to and from same points. Prior to the general adjustments prescribed on class rates in 55 I. C. C. 515, and on commodity rates in 64 I. C. C. 306, these rates were on an equality, but the commodity rate became higher than the class rate due to "a chance result of the general adjustments" under which the class rates were revised in advance of the commodity rates. Reparation awarded. McCleland Hardware Co. v. I. C. R. R. Co., 89 I. C. C. 129.

(c) Consideration of volume of movement of a given article between given points in determining the commodity rates on that article between those points tends to ignore any percentage relation of commodity rates to class rates between other points where volume of movement is not similar. Fresh Fruits and Vegetables, 89 I. C. C. 473, 475.

(d) Where a commodity moves in considerable volume and carriers prefer to move them on class rates instead of providing commodity rates, they must provide an application of class rates that is reasonable and nonprejudicial in view of all circumstances and conditions surrounding the traffic. The class rate basis can not be justified by a mere showing that rates are group rates, when the group is extensive and the particular commodity considered moves from only one point in the group, competition being with a point a few miles away and outside of that group. Virginia Can Co. v. A. & V. Ry. Co., 89 I. C. C. 562, 564.

(e) A comparison of earnings on a specified commodity with average earn-

ings on all traffic is generally of little if any value in measuring the reasonableness of rates, for reasons, among others, that averages are based on class as well as commodity rates, divisions of joint rates as well as local rates, and c. l. and l. c. l. traffic; and because of differences between average and actual hauls. Iron and Steel Articles, 89 I C. C. 606, 622.

(f) Complainant attacked commodity rates charged on Cream of Wheat, from Minneapolis, Minn., to Montana, Idaho, Washington, Oregon and California as unreasonable, unjustly discriminatory and unduly prejudicial to extent they exceeded rates on flour. It is shipped in wooden cases, average weight 59,500 lbs. On Nov. 30, 1922, the defendants established rates of 95c to Washington, Oregon, Montana and Idaho and 99c to California. The fact that the commodity is prepared and represented to the trade solely as a cereal food and not as grits is sufficient to make the rates on cereal foods applicable. Flour is a prime necessity that moves in volume everywhere. Every consideration dictates that flour should move at comparatively low rates in all sections. Flour is the most valuable article to which the grain or grain products rates are generally accorded. Complainants principal competition is with the other cereal breakfast foods and not with middlings, which is normally an animal food. It is not established that there is substantial competition between Cream of Wheat and flour, notwithstanding in some of its secondary uses, such as making of pancakes and waffles, Cream of Wheat displaces and to that extent competes with flour. Such competition is not comparable with that existing between ordinary flour and prepared flour. HELD, rates attacked not unreasonable or unduly prejudicial, complaint dismissed. Cream of Wheat v. A. T. & S. F. Ry., 91 I. C. C. 45.

(g) Complainant attacked joint commodity rate on asbestos fiber from Sherbrooke, Que., to Milwaukee, Wis., charged on a car of asbestos refuse originating at Thetford Mines, Que., as unreasonable to extent it exceeded rate on asbestos plaster or finish from Sherbrooke to Milwaukee. In 88 I. C. C. 600, rate attacked found unreasonable to extent it exceeded rate on asbestos plaster. Rate on asbestos fiber was 52c, the contemporaneous rate on asbestos plaster was 33c. HELD, reparation awarded on basis of 33c. Cutler Hammer Mfg. Co v. Director General, 92 I. C. C. 9.

(h) Complainant attacked commodity rates charged on shelled peanuts, carloads, from Denison, Fort Worth, Weatherford, De Leon, and Tyler, Texas, to Oklahoma City, Okla., as unreasonable. Rates on shelled and unshelled peanuts from points in the southwest are frequently the same. The western classification rates peanuts, shelled and unshelled, fourth class. Peanut butter, a product of peanuts, is rated fifth class in western territory, the rates and rating being the same as those on canned goods. In 47 I. C. C. 542 the Commission prescribed a rate of 45c on peanuts, shelled or unshelled, from Houston, Tex., to St. Louis, Mo., 798 miles. Rate is now 69c or 47.2 per cent of the fourth class rate. This percentage of the fourth class rates in force on and after July 1, 1922 from the points here considered to Oklahoma City would result in rates of 33c from Denison, 34c from Fort Worth, 38.5 from Weatherford, 44c from De Leon and 43c from Tyler. HELD, rates attacked unreasonable to extent they exceeded rates enumerated above, reparation awarded. Oklahoma Traffic Association. v. A. T. & S. F. Ry., 92 I. C. C. 695.

(i) Complainant attacked fourth class rate of 59c charged from Barberton, O., to Duluth, Minn., on less carload shipment of iron pipe fittings weighing 7,000 pounds, destined to Virginia, Minn., as unreasonable and inapplicable to extent it exceeded commodity rate of 33c. Shipment moved over Pennsylvania to Cleveland Pier, O., thence Great Lakes Transportation Co. to Duluth, July 17, 1922. No joint rates to Virginia were in effect. Charges beyond Duluth not questioned. There was published on page 53, section 2 of the tariff carrying the class rate, a commodity rate of 33c on iron and steel articles, carloads, as described in note 8, pages 39 and 41. Note 8 provided "where reference is made on pages 50 to 54 to this note, rates apply on the following commodities, in either carloads or less carloads, unless otherwise specified". Pipe fittings, not including valves, without limitation as to whether carload or less than carload,

were included in the list of commodities shown. The record shows that while it was the intention to omit all reference to less carload rates in connection with list of articles of iron and steel manufacture, through oversight this was not done in this tariff. HELD, 33c commodity rate applicable to Duluth, reparation awarded. Murray-Egan-McLeod Co. v. Pennsylvania R. R., 93 I. C. C. 79.

(j) Respondents proposed to establish a commodity rate substantially lower than the prevailing class basis on various kinds of insulators and metal accessories, pole brackets, and cross arm pins, in straight or mixed carloads, from Emeryville, Calif., to transcontinental rate Groups F to J inclusive. Present applicable fifth class rates are $2.40 to group F, $2.25 to group G and H and $1.97 to group J, minimum 36,000 pounds. Proposed commodity rate is $1.06, to all groups. Present output of the Emeryville plant is from four to six cars a month, and this is the only production in rate basis 1 territory. Carriers took as a constructive transcontinental rate eastbound to Group D, which includes most of Illinois and Wisconsin, the rate of $1.18 applying in the reverse direction and made the proposed rate 90% thereof, the usual basis for constructing rates to points on and west of the Missouri river. Considering the extensive areas of the respective groups, the proposed rate can not be said to be materially out of line with the present rates from Macomb, Ill., and other eastern producing points. HELD, schedules justified. Eastbound transcontinental rates on insulators, 93 I. C. C. 282.

(ja) Complainant attacked commodity rate charged on pig iron carloads from Toledo, O., to Holland, Mich., as unreasonable, unjustly discriminatory and unduly prejudicial. Holland is on the P. M., 178 miles west of Detroit, 25 miles southwest of Grand Rapids and 159 miles northeast of Chicago. It is 210 miles from Toledo over the P. M., via Plymouth, Mich. By the present adjustment both Toledo and Detroit are accorded the same rates on this article to a large territory of destination. From both Detroit and Toledo, Holland, Grand Rapids are accorded the same rates on pig iron, although distances to the matter are materially shorter. A difficulty in comparing these commodity rates with class rates is that they are not made upon the same principles. The class rates which are designed to move a variety of articles are based primarily upon distance, while the pig iron rates are influenced by the peculiar conditions surrounding that traffic, including competition among the producers and also among the users of this article. In this territory the commodity rates on pig iron from Toledo and Detroit are generally the same, but the class rates are not. HELD, rate attacked not unreasonable or otherwise unlawful, complaint dismissed. Holland Furnace Co. v. P. M. Ry., 101 I. C. C. 19.

(k) Complainant attacked commodity rates charged on 8 cars of cereal beverages shipped between April 3 and Sept. 11, 1922 from Milwaukee, Wis., to Emporia, Kas., as unjust, unreasonable and unduly prejudicial. Emporia is on the Santa Fe and MKT. Shipments moved via C. & N. W., C. G. W., and Santa Fe; C. & N. W., I. H. B., and Santa Fe; and C. M. & St. P., and Santa Fe. Charged 72c prior to July 1, 1922 and 64.5c thereafter, applicable rates 70c and 63c, shipments overcharged. Effective Dec. 1, 1922 rate reduced to 51.5c. Rates made effective on this date were based on 80 per cent of fifth class rates. HELD, rate attacked not unreasonable or unduly prejudicial, overcharges ordered refunded, complaint dismissed. Emporia Wholesale Coffee Co. v. A. T. & S. F. Ry., 101 I. C. C. 391.

(l) The classification generally imposes the highest rate which a particular commodity should bear under normal conditions. A commodity rate which is higher than the class rate is an abnormality which on its face requires special justification. Traffic Bureau Chamber of Commerce v. M. & M. T. Co., 101 I. C. C. 424, 425.

(m) Proposed cancellation of commodity rates on furniture, c. l. and l. c. l., from and to points in c. f. a. territory, and substitution therefor of the classification basis and in certain instances the exception basis, which would result in both advances and reductions, found not justified except as to l. c. l traffic. Proposed cancellation while at same time continuing the relatively lower commodity basis from producing points in adjoining territories would seriously disturb long-standing and important relationships, and create undue prejudice

against southern Indiana manufacturers. Furniture from C. F. A. Territory, 92 I. C. C. 97.

(n) Commodity rate on pig iron from Toledo, Ohio, to Holland, Mich., found not unreasonable or otherwise unlawful as compared with contemporaneous class rates on like traffic from and to points involved and from Toledo to other destinations for comparable distances. Holland Furnace Co. v. P. M. Ry. Co., 101 I. C. C. 19.

(o) Commodity rate on grape fruit found unreasonable to extent it exceeded lower class C rate contemporaneously in effect on fresh fruits and vegetables. Reparation awarded. Levy & Zentner Co. v. A., T. & S. F., 101 I. C. C. 361.

(p) Upon contention of complainant that a commodity rate that exceeds the class rate which would otherwise apply raises a presumption of unreasonableness and is, "an abnormality which on its face requires special justification," FOUND: That the principle laid down in Morrell & Co., 81 I. C. C. 200, is sound, and one to which the commission adheres, but it does not wish to be understood as holding that the presumption of unreasonableness is by any means conclusive, but what it does say is that such an adjustment is abnormal and on its face unreasonable, and requires substantial evidence to justify it. A mere recital of its continued existence is not sufficient. Traffic Bureau-Chamber of Commerce v. M. & N. T. Co., 101 I. C. C., 424, 425, 426.

(q) In absence of other evidence that it is unreasonable or discriminatory, the fact that a commodity rate is a greater or less proportion of the corresponding class rate is not a sufficient ground for condemning the commodity rate as unreasonable. Decker & Sons, 30 I. C. C. 547. Procter & Gamble Distributing Co. v. St. L. F., 101 I. C. C. 563, 587.

(r) So many elements enter into the determination of a commodity rate that it can not be said that a commodity rate must bear a fixed relation to the corresponding class rate, even as between competing points. Bliss Sirup Refining Co. v. A. T. & S. F. Ry., 109 I. C. C. 392, 394.

ALL OTHER CITATIONS

Indiana Public Service Commission v. A. A. R. R. Co., 85 I. C. C. 533; Radiant Glass Co. v. Director General, as Agent, 88 I. C. C. 295; Barker Produce Co. v. S. P. Co., 88 I. C. C. 385; Babbitt Bros. Trading Co. v. A. T. & S. F. Ry. Co., 88 I. C. C. 614.

II APPLICATION AND CONSTRUCTION.

See Application of Rates; Tariffs §7.

§2½. In General.

(a) Proposed reduced rates on numerous commodities from New York, N. Y., piers of Southern Pacific Co.—Atlantic S. S. Lines (Morgan Line), applying by water to Galveston, Tex., and New Orleans, La., thence by rail to points on lines of Southern Pacific system in New Mexico, Arizona and California designed for purpose of meeting rates of competing water carriers operating thru the Panama Canal, found justified. Reduced Commodity Rates to Pacific Coast, 88 I. C. C. 512.

(b) Proposed cancellation of commodity rates on burlap bags and on iron and steel hinges, door hangers, and related articles, from c. f. a. territory to Mississippi Valley destinations, and apply class rates which are higher, found justified. There are many fourth section departures under present commodity rates which have failed to develop a c. l. movement; carriers' revenues as a whole will not be materially increased; proposed schedules will not work a hardship upon any locality; no good reason appears for maintaining commodity rates on articles moving in small volume and in l. c. l. quantities; and propriety of harmonizing the rates to conform with those already in effect to southeastern territory, and from Ohio River crossings and St. Louis to Mississippi Valley points, can scarcely be questioned. Burlap Bags and Iron and Steel Articles, 89 I. C. C. 131.

(c) Commodity tariffs must be read in the light of the governing classification. Grosjean Rice Milling Co. v. Director General, 89 I. C. C. 395, 396.

(d) Commodity tariff, under heading of "Cereals and Cereal Products," named a joint commodity rate on "Wheat (except Buckwheat) and Flour." Whether or not it was intention to restrict this rate to wheat flour, since it

is apparent that the tariff does not so restrict such rate found applicable on rice flour. Grosjean Rice Milling Co. v. Director General, 89 I. C. C. 395, 396.

(e) Where an article is clearly embraced within a general commodity designation, and neither tariff nor governing classification discloses a contrary intention, the commodity rate is applicable, even though the classification description is more specific. Frost & Co., 57 I. C. C. 755. This principle applies even though the particular article was not in contemplation when the commodity item was framed. Texas State Highway Dept., 69 I. C. C. 220. Grosjean Rice Milling Co. v. Director General, 89 I. C. C. 395, 396.

(f) Commodity tariff provided rate on "Cereals and Cereal Products, viz: Flour," but no list of commodities thereunder was provided. Governing classification did not list any commodities under designation "Cereals and/or cereal products," but under heading, "Flour: Rice," a fifth class rating was provided. HELD, since rice is a cereal, and as neither commodity tariff nor classification clearly discloses an intention to exclude rice flour from benefit of commodity rate on cereal products, the commodity rate must be considered as covering this article. Grosjean Rice Milling Co. v. Director General, as Agent, 89 I. C. C. 395, 396.

(g) Tariff naming commodity rate contained no list of commodities intended to be embraced within designation "Grain, grain products, . . . " Classification, however, provided rates on common grains under heading "Grain" in which rice was not included, that commodity being specifically rated under its own name. There is no heading "Grain products," but in commodity tariff under heading "Flour, Rice, in bulk in bags," an any-quantity class rating is provided. HELD, from standpoint of the governing classification rice is not a grain and rice flour not a grain product. Class rating provided in the commodity tariff found applicable on rice flour. Grosjean Rice Milling Co. v. Director General, 89 I. C. C. 395.

(h) Carriers may for competitive or other reasons establish rates which the commission could not initiate for them; and equality of distance from competing markets is not an absolute test of whether an equality of rates results in undue prejudice and preference. Reduced Commodity Rates to Pacific Coast, 89 I. C. C. 512, 524.

(i) Proposal to add a new commodity description, viz., stone chips or granules (roofing granules), for the purpose of differentiating this commodity, used in the manufacture of roofing materials, from crushed stone used for other purposes, found justified. Crushed Stone from Maryland and Pennsylvania, 89 I. C. C. 681.

(j) Although rates may not be based upon use, use is a factor which may be considered in determining the proper description of a commodity. Crushed Stone from Maryland and Pennsylvania, 89 I. C. C. 681, 684.

(k) Sixth-class rates on spelter from Locust Point, Baltimore, Md., to Apollo, Pa., found unreasonable to extent it exceeded lower commodity rate contemporaneously in effect via route other than route of movement, which lower rate also applied from Baltimore to a large number of consuming points for greater distances. Reasonable rate for future prescribed and reparation awarded. Apollo Steel Co. v. Pennsylvania R. R. Co., 89 I. C. C. 747.

(l) Complainant attacked combination rates charged in September, October and November, 1918, from Keyton, Ala., charged on manure to Quincy, Fla., and two cars to Mount Pleasant, Fla., as excessive, unreasonable, unduly prejudicial and preferential and in violation of section four. Keyton is on the C. of Ga., 4 miles east of and intermediate to Montgomery. Quincy and Mount Pleasant are on the S. A. L. Short line route from Keyton to Quincy is over originating line to Cuthbert, Ga., and G. F. & A. beyond, 202 miles. Mount Pleasant is about 9 miles east of Quincy. Charged $5 per car to Montgomery, $4 per ton to Quincy or Tallahassee, and $1.425 to Mount Pleasant. Effective Nov. 10, 1918, through rates from Keyton of $2.60 to Quincy and $2.70 to Mount Pleasant were established. HELD, rates attacked unreasonable to extent they exceeded rates subsequently established, complaint dismissed. Wedeles Tobacco Co. v. Director General, 92 I. C. C. 80.

(m) Complainant attacked commodity rates charged on cement from Humboldt, Kans., to Slick, Okla., during October and November, 1920, as unreasonable. No

evidence was offered to show the dates on which the shipments were delivered, but the original freight bills, which were subsequently introduced in evidence, are dated prior to November, 1920. Complaint is barred. HELD, complaint dismissed. Monarch Cement Co. v. A. T. & S. F. Ry., 92 I. C. C. 325.

(n) Complainant attacked commodity rate of 93.5c charged on three cars of broom handles from Glidden, Wis., to Wichita, Kans., as unreasonable, between August, 1921, and February, 1922, this rate being applicable on broom handles. They were in the white and were turned to shape with two holes in the end. They were tied together in bundles, not wrapped or packed with special case. All of which indicates that additional work was to be done on each handle before it was fastened to the broom and that the manufacturer did not consider it a finished handle. A commodity rate of 55.5c was applicable on handle timber, in the rough, sawed or turned to shape, not further finished; will not apply on finished handles. The handles were complete and not "handle timber," therefore the item did not apply. HELD, rate attacked unreasonable to extent it exceeded 55.5c, reparation awarded. Wichita Board of Commerce v. C. R. I. & P. Ry., 92 I. C. C. 574.

(o) Decision of the District Court that as between the commodity rates and class rates in an established tariff, the commodity rates governed as to certain shipments, which followed the decision of the Interstate Commerce Commission, HELD correct and affirmed. Davis, Director General of Railroads v. Prairie Pipe Line Co., 298 Fed. 393.

(p) Respondents proposed to cancel the application of wrought iron pipe commodity rates on iron or steel sucker and pull rods, carloads, from St. Louis, Mo., and points in central territory to Kansas and Missouri, leaving in effect the higher fifth class rates on sucker rods and class A rates on pull rods. For the past ten years, or longer, commodity rates considerably lower than fifth class have been maintained by respondents on sucker and pull rods to the Kansas and Missouri territory herein considered, and on the same basis as that applied on wrought iron pipe. The record indicates that the present rates on sucker and pull rods are in need of revision and that the present relationship of these rates with those to Oklahoma points results in prejudice to localities in the latter territory. On the other hand the proposed application of class rates would result in some instances in rates higher than those to Oklahoma points, and considerably higher in many cases than those proposed by carriers in another case. HELD, schedules not justified. Sucker and pull rods from St. Louis, 95 I. C. C. 599.

(q) Complainant attacked commodity rates charged on 15 cars of gasoline from Wichita Falls, Burkburnett and Fort Worth, Tex., to Milwaukee, Wis., during March and April 1921 as illegal in violation of section six. Charged 57.5c prior to August 26, 1920 which was the rate on August 25, 1920 increased 35%. The factors of that through rate prior to the above date were 14.5c to Vicksburg and 28c beyond. Complainants did not allege unreasonableness or a violation of the fourth section and no evidence of unreasonableness of the rate charge was offered. HELD, rate charged applicable, complaint dismissed. Producers Refining Co. v. St. L. S. W. Ry., 96 I. C. C. 701.

(r) Commodity rates applicable to l. c. l. traffic constitute departures from usual practice, and their establishment should be required only upon a clear showing of compelling reasons. Arkansas Fertilizer Co. v. A. & S. Ry., 92 I. C. C. 504, 509.

(st) Over a period of two years, 106 shipments of unfinished cotton hosiery were made from Rockford, Ill., to Philadelphia, North Philadelphia, and Germantown, Pa., 13 of which were in c. l. quantities and 93 in l. c. l. quantities. FOUND Such a movement is not sufficient in volume to warrant establishment of c. l. commodity rates on this traffic. Burson Knitting Co. v. B. & O., 92 I. C. C. 607, 608, 609.

(u) Upon contention of complainants that commodity rates in effect when shipments moved were not legally published, in that the tariffs did not show proper cancellation of the previous issues, and therefore no through commodity rates were established, leaving the class rates to apply, FOUND: Tariff carrying the rates charged states on its title-page "cancels I. C. C. No. 166,", and this is sufficient to constitute cancellation of that tariff in full, notwithstanding an item on another page under

the heading "Cancellation" which explains the reason of the noninclusion of rates from or to certain stations which theretofore had been named. Failure to comply with the requirement of the railroad administration that freight-rate authority shall be obtained for all changes in rates of carriers under Federal control does not invalidate the tariff. Nash Spokane Co. v. Director General, 100 I. C. C. 223, 226.

(v) Commodity rates on watermelons and vegetables from points in California to Spokane, Wash., found applicable. Complainant contended that a lower proportional Class C rate was applicable but tariff carrying that rate provided that the rates therein could not be used where through rates were established. There was no tariff authority for departing from the use of the published through commodity rate. Nash Spokane Co. v. Director General, 100 I. C. C. 223, 225, 226.

(w) Complainant attacked commodity rates charged on two cars of granite shipped August 18, 1922 and Jan. 26 1923 from Montello, Wis., to Muscatine, Ia., as unreasonable and unjustly discriminatory. Shipments moved Soo Line to Chicago, Rock Island beyond 504 miles, charged 24.5c and 21c. Under the rule of the classification pertaining to mixed carloads, the applicable rate was class C rate of 24.5c. The class C rate is the same as, and was originally made in competition with, the class C rate from Red Granite, Wis., to Muscatine, 353 miles over the Northwestern to Milwaukee and C. M. & St. P., beyond. Complainant does not receive dressed granite in straight carloads. There is no contention that the rule governing mixed car loads of this commodity and polished or traced granite is unreasonable or otherwise unlawful. HELD, applicable rate not unreasonable or otherwise unlawful, complaint dismissed. Olsen v. M. St. P. & S. S. M. Ry., 109 I. C. C. 526.

(x) Complainant attacked commodity rate of 38.5c charged on two cars of scrap iron shipped Sept. 6 and 11, 1922 from New Orleans, La., to Birmingham, Ala., as unjust, unreasonable and inapplicable. The shipments consisted of specially designed vehicle axles for army ambulances. Defendants classified them as vehicle axles, n. o. i. b. n., iron or steel, sixth class rate of 56.5c per 100 pounds, although they were billed as scrap iron. The scrap iron rate was $3.72 per ton, to apply on scraps or pieces of iron or steel having value for remelting purposes only. At the destination the axles, heated until they were melted together, and then passed through a roller producing 1 inch bars or billets. HELD, shipments undercharged, applicable rate 56.5c, complaint dismissed. Southern Steel & Rolling Mill v. L. & N. R. R., 109 I. C. C. 539.

(y) Complainant attacked commodity rate of $2.625 charged on one car of carbide of calcium shipped on August 13, 1921 from Duluth, Minn., to Kingman, Ariz., and routed by consignor "G. N. Sioux City, C. B. & O. Fremont, U. P., Denver, C. S., Pueblo, A. T. & S. F." as unreasonable to extent it exceeded rate of $1.665 applicable over other routes. Distance over route of movement is 2,011 miles, and is the short line route. The rate of $1.665 was clearly applicable in connection with all other workable lines, except the U. P. The rate collected was combination on Denver. Effective July 15, 1925 defendants removed the ambiguity in the tariff by adding "whether interchanged direct or via other intermediate lines" after the words "Denver, Colo." HELD, rate collected inapplicable to extent it exceeded $1.665, reparation awarded. Central Commercial Co. v. A. T. & S. F. Ry., 109 I. C. C. 639.

(z) Complainant attacked commodity rates charged on 30 cars of scrap steel rails shipped from Detroit, Mich., to Kenosha, Wis., between May 4 and Oct. 31, 1918, as unreasonable and illegal. Scrap steel rails were bought by complainant from the M. C., while that carrier was under federal control on basis of F. O. B. M. C., tracks Blue Island, Ill., or F. O. B. M. C. tracks Chicago. Shipments moved, M. C., I. H. B., and Belt, to Chicago thence Northwestern, covered by through bills of lading as No. 1 scrap steel rails, charged joint rate Detroit to Kenosha of $3.60 applicable on old rails. While it is true that complainant would have been entitled to the lower of the two rates published in the tariffs from Chicago to Kenosha if the shipments had originated at Chicago, or if the billing had indicated that the rails were company material of the M. C., and as such entitled to free transportation to Chicago, the Commission can not ignore the facts that the shipments originated at Detroit and not at Chicago,

that they moved from Detroit on through bills of lading which correctly described the commodity and did not indicate it was company material of the M. C., and that they were assessed the applicable rates from Detroit to Kenosha, which rates are in no way shown to have been unreasonable or otherwise in violation of the act. Complainants claim for further refund also arises out of the terms of the contract of sale and, if not barred by lapse of time, is one for a court of law, if such refund can not voluntarily be obtained from defendant. HELD, rates not unreasonable or otherwise unlawful, complaint dismissed. Briggs & Turivas v. Director General, 112 I. C. C. 313.

ALL OTHER CITATIONS

Southern Cotton Oil Co. v. Director General, as Agent, 85 I. C. C. 433; Mid-Continent Equipment & Machinery Co. v. M. Ry. Co., 88 I. C. C. 217; Cutler-Hammer Mfg. Co., v. Director General, as Agent, 88 I. C. C. 600; Headington & Hedenbergh v. Director General, as Agent, 88 I. C. C. 745.

§3. Specific Commodity Rating.

See Tariffs §18.

(a) Commodity rate on agricultural implements moving from Memphis, Tenn., to Jackson, Miss., found unreasonable to extent it exceeded the contemporaneous sixth-class rate to and from the same points. Prior to the general adjustments prescribed on class rates in 55 I. C. C. 515 and on commodity rates in 64 I. C. C. 306, these rates were on an equality, but the commodity rate became higher than the class rate due to "a chance result of the general adjustments" under which the class rates were revised in advance of the commodity rates. Reparation awarded. McCleland Hardware Co. v. I. C. R. R. Co., 89 I. C. C. 129.

(b) Commodity tariff provided rate on "Cereals and Cereal Products, viz: Flour," but no list of commodities thereunder was provided. Governing classification did not list any commodities under designation "Cereals and/or cereal products," but under head "Flour: Rice," a fifth-class rating was provided. HELD, since rice is a cereal, and as neither commodity tariff nor the classification clearly discloses an intention to exclude rice flour from benefit of the commodity rate on cereal products, the commodity rate must be considered as covering this article. Grosjean Rice Milling Co. v. Director General, as Agent, 89 I. C. C. 395, 396.

(c) Where an article is clearly embraced within a general commodity designation, and neither the tariff nor governing classification discloses a contrary intention, the commodity rate is applicable, even though the classification description is more specific. Frost & Co., 57 I. C. C. 755. This principle applies even though the particular article was not in contemplation when the commodity item was framed. Texas State Highway Dept., 69 I. C. C. 220. Grosjean Rice Milling Co. v. Director General, 89 I. C. C. 396.

(d) When a commodity is not distinctly within some common designation, its use and the ratings of competitive products are important factors with its transportation characteristics in the determination of what rating is appropriate for it. Procter & Gamble Co., 9 I. C. C. 440, 482; Drake Marble & Tile Co., 37 I. C. C. 512. Vitrolite Co. v. A., T. & S. F. Ry. Co., 89 I. C. 367, 371.

(e) Tariff naming commodity rate contained no list of commodities intended to be embraced within designation "Grain, grain products, ... " Classification, however, provided rates on common grains under heading "Grain," in which rice was not included, that commodity being specifically rated under its own name. There is no heading "Grain products," but in commodity tariff under heading, "Flour, Rice, in Bulk in Bags," an any quantity class rating is provided. HELD, from standpoint of governing classification rice is not a grain and rice flour not a grain product. The class rating provided in the commodity tariff found applicable on rice flour. Grosjean Rice Milling Co. v. Director General, 89 I. C. C. 396, 397.

(f) Carbon black is the soot which collects against a steel channel when natural gas is burned with sufficient combustion. Goodyear Tire & Rubber Co. v. A. C. & Y. Ry. Co., 89 I. C. C. 401.

(g) Complainant attacked commodity rates charged on cars of hay and straw between St. Louis, Mo., on the one hand, and East St. Louis, Madison, Granite City, and National Stock Yards, Ill., as unreasonable, unduly prejudicial and illegal. Specific rates are published on other commodities. A rate of 2.5c is applicable on commodities on which specific rates are not named, with minimum of

$12 per car, reduced to 2c in June, 1920, increased to 3c August 26, 1920, reduced on July 1, 1922, to 2.5c, minimum $12 per car. The hauls necessary in local movements of hay and straw between St. Louis and East St. Louis vary from 3.5 to 15 miles through congested districts and over expensive bridges across the Mississippi. HELD, rate attacked not unreasonable or unduly prejudicial, complaint dismissed. Toberman Mackey & Co. v. T. R. R. Co., 91 I. C. C. 79.

(h) The subsequent establishment of a commodity rate has effect of removing article covered thereby from the classification and class-rate tariffs which theretofore applied. Rule 7 (a) of Tariff Circular 18-A. Furthermore, under rule 8 (a) of that tariff circular, it is not a condition precedent to application of such a commodity rate that tariff containing it make cross-reference to tariff in which class rates are named. Singer v. St. L. S. F., 95 I. C. C. 667, 668.

(i) A commodity rate on a specific article of transportation, stated definitely as so many cents per 100 pounds, is a specific commodity, rate, notwithstanding the fact that the same rate is not repeated in the tariff in connection with each point of origin and each point of destination from and to which the rate is made to apply. There are several methods of indicating the points from and to which specific commodity rates apply. Miller & Lux v. S. P. Co. 102 I. C. C. 137, 139.

(ia) Specific commodity rates from farther distant points, applied at intermediate points of origin, found to have been legally assessed. Lower class rates were carried in another tariff, but neither it nor the commodity tariff specifically named the intermediate point as a point of origin, such point being specifically included in both tariffs in index of stations. Both also provided that rates from next farther distant origin points would apply from intermediate points not specifically named. The class rate tariff, however, was limited to apply where commodity rates are not otherwise specifically provided. Fact that commodity tariff did not name the intermediate point "specifically" as an origin point does not mean that there was no "specific" commodity rate in effect. The intermediate provision established the specific commodity rates just as positively, plainly, and legally from the unnamed intermediate point as from the farther distant point. Miller & Lux v. S. P. Co., 102 I. C. C. 137.

(j) Where an article is clearly embraced within a generic commodity designation, and neither the tariff nor governing classification discloses a contrary intention, the Commission has found the commodity rate applicable, even though the classification description was more specific, and have done so even though the particular article was not in contemplation when the commodity was framed. Thilmany Pulp & Paper Co. v. N. & A. Ry. 104 I. C. C. 186, 187.

§4. Creation Subsequent to Shipment.

See Evidence §64.

(a) Class D rate on nut coal from Cornell, Kans., to Fairview, Mo., found unreasonable to extent it exceeded lower commodity rate subsequently established. Reparation awarded. Midland Coal Co. v. M. P. R. R. Co., 89 I. C. C. 101.

(b) Proposed cancellation of commodity rates on burlap bags and on iron and steel hinges, door hangers and related articles from c. f. a. territory to Mississippi Valley destinations, and apply class rates which are higher, found justified. There are many fourth-section departures under present commodity rates which have failed to develop a c. l. movement; carriers' revenues as a whole will not be materially increased; proposed schedules will not work a hardship upon any locality; no good reason appears for maintaining commodity rates on articles moving in small volume and in l. c. l. quantities; and propriety of harmonizing the rates to conform with those already in effect to southeastern territory, and from Ohio River crossings and St. Louis to Mississippi Valley points, can scarcely be questioned. Burlap Bags and Iron and Steel Articles, 89 I. C. C. 131.

(c) Fifth-class rates assessed on evaporated milk from Lodi, Wis., to Chicago and Clearing, Ill., found unreasonable as compared with lower rates from competing milk-producing points in Wisconsin in same general territory as Lodi, and to extent they exceeded lower commodity rate from Reedsburg, Wis., to which Lodi is intermediate, which lower commodity rate was subsequently established from Lodi. Reparation awarded. Nestle's Food Co. v. Director General, as Agent, 89 I. C. C. 340.

(d) Combination fourth-class rates on

carbon black from Lem, Ky., to Akron, Ohio, found unreasonable as compared with lower commodity rate from Elk View and Turner, W. Va., competing points, and to extent they exceeded commodity rate subsequently established. Reparation awarded. Goodyear Tire & Rubber Co. v. A., C. & Y. Ry. Co., 89 I. C. C. 401.

(e) Complainant attacked commodity rate charged on canned goods, carloads, from Mobile to Montgomery, Ala., carloads, shipped by water to Mobile from interstate points, since July 1, 1923 fifth class rate was in effect and on that date commodity rate of 38c was established. Distance 178 miles. HELD, rate attacked unreasonable to extent it exceeded 35c, reparation awarded. Schloss & Kahn Grocery Co. v. L. & N. R. R., 95 I. C. C. 618.

(f) It is well settled that subsequent establishment of a commodity rate has the effect of removing the article covered thereby from the classification and from the class rate tariffs which theretofore applied. Singer v. St. L. S. F. Ry., 95 I. C. C. 667, 668.

ALL OTHER CITATIONS

Grasselli Chemical Co. v. B. & O. R. R. Co., 88 I. C. C. 337; Interstate Sugar Co. v. D. & R. G. R. R. Co. 88 I. C. C. 432.

III. REASONABLENESS AND DISCRIMINATION.

§5. In General.

See Advanced Rates §5 (3); Class Rates §2 (o); Discrimination; Distance Rates; Reasonableness of Rates.

(a) Proposed cancellation of commodity rates on burlap bags and on iron and steel hinges, door hangers, and related articles, from c. f. a. territory to Mississippi Valley destinations, and apply class rates which are higher, found justified. There are many fourth-section departures under present commodity rates which have failed to develop a. c. l. movement; carriers' revenues as a whole will not be materially increased; proposed schedules will not work a hardship upon any locality; no good reason appears for maintaining commodity rates on articles moving in small volume and in l. c. l. quantities; and propriety of harmonizing the rates to conform with those already in effect to southeastern territory, and from Ohio River crossings and St. Louis to Mississippi Valley points, can scarcely be questioned. Burlap Bags and Iron and Steel Articles, 89 I. C. C. 131.

(b) Rate on dressed poultry from Springfield, Mo., to Key West, Fla., for export to Cuba, found unreasonable to extent it exceeds rate on like traffic from Kansas City, Mo. Ordinarily traffic from Kansas City would move through Springfield, and class and commodity rates, generally, from Springfield to the southeast are not higher than from Kansas City. Reasonable basis of rates prescribed and reparation awarded. Armour & Co. v. A. C. L. R. R. Co., 89 I. C. C. 162.

(c) Rates on copper matte from Bella Vista, Calif., to Tacoma, Wash., found unreasonable as compared with lower rates on same commodity between other points in same general territory. Reasonable maximum rate prescribed and reparation awarded. Afterthought Copper Co. v. Director General, as Agent, 89 I. C. C. 346.

(d) Complainant attacked commodity rates charged on fresh fruits and on fresh or green vegetables, in straight and mixed carloads, and on fruits and vegetables, fresh or green, in mixed carloads, from San Francisco and Los Angeles, Calif., as unreasonable, unjustly discriminatory and unduly prejudicial to Douglas and Bisbee, Ariz. Douglas is on the E. P. & S. W., 217 miles west of El Paso and 124 miles east of Tuscon. Bisbee is on a branch line of that carrier, 7 miles from Osborn, which is 22 miles west of Douglas. In recent cases the commission has prescribed rates from California to Arizona and New Mexico on the basis of class C rates. Since July 1, 1922, rates on these commodities have been on the class C basis. HELD, rates attacked unreasonable to extent they exceeded class C, reparation awarded. Buxton Smith Company v. A. T. & S. F. Ry., 89 I. C. C. 373.

(e) Complainant attacked combination rates charged on four cars of rice flour shipped in September, 1919, from Seattle, Wash., to New Orleans, La., as inapplicable and unreasonable. Shipments moved via N. P. to Billings, Mont., Burlington to Kansas City, Mo., Frisco to Memphis, Tenn., and I. C. beyond, charged 80c. Through fifth class rate was $2.10 and a rate of 83.5c on cereals and cereal products. The governing

western classification does not list any commodities under this designation. Rice is a cereal, and as neither the commodity tariff nor the classification clearly discloses an intention to exclude rice flour from the benefit of the commodity rate on cereal products, the joint commodity rate must be considered as covering this article. The same tariff named a joint commodity rate of 61c on wheat and flour, which is applicable to rice flour. The class C rate beyond of 19c made a combination lower than the through rate of 83.5c. HELD, applicable rate 80c. HELD, rate attacked not unreasonable, complaint dismissed. Grosjean Rice Milling Company v. Director General, 89 I. C. C. 395.

(f) Complainant attacked commodity rate of 49c charged on 129 tank cars of petroleum gas oil between Oct. 12 and Dec. 2, 1922, from Burkburnett, Henrietta and Wichita Falls, Tex., to Louisville, Ky., as unreasonable, unjustly discriminatory and unduly prejudicial to extent it exceeded rate of 41.5c applicable on crude and fuel oils. Respondents proposed to cancel joint rates on crude and fuel oils to Louisville and to Jeffersonville and New Albany, Ind., from several groups in northern Texas. The effect would have been to substitute for the present joint through rates from north Texas points on crude and fuel oils the lowest combination, thereby placing those rates on the same basis as gas oil. Shipments moved through East St. Louis, Ill., except three through Memphis, Tenn., and nine through Hattiesburg, Miss. Charged 26.5c to East St. Louis and 22.5c beyond. The parties agree that crude, fuel, and gas oils should take the same rate. HELD, rate attacked not unreasonable, unjustly discriminatory or unduly prejudicial, and proposed tariffs justified, complaint dismissed. Standard Oil Company v. M. K. T. R. R., 89 I. C. C. 463.

(g) Proposed reduced rates on numerous commodities from New York, N. Y., piers of Southern Pacific Co.—Atlantic S. S. Lines (Morgan Line), applying by water to Galveston, Tex., and New Orleans, La., thence by rail to points on lines of Southern Pacific system in New Mexico, Arizona and California, designed for purpose of meeting rates of competing water carriers operating through the Panama Canal, found justified. Reduced Commodity Rates to Pacific Coast, 89 I. C. C. 512.

(h) Complainant attacked commodity rates charged on draintile, carloads, from Commerce, Mo., to points in northeastern Arkansas as unreasonable, unjustly discriminatory and unduly prejudicial. Commerce is on the Frisco 13 miles south of Cape Girardeau, Mo. Points of destination are on the Frisco and J. L. C. & E. R. R., within the triangle in northeastern Arkansas formed by the Frisco from St. Louis to Memphis and from Kansas City to Memphis. The Frisco connects with the Jonesboro at Leachville and Blytheville, Ark. Shipments moved outbound either through Brooks Junction or Cape Girardeau, between Oct. 5, 1916, and Dec. 31, 1920. Complainant's principal competitors are at Rich Hill, Mo., and Pittsburgh, Kans. From Rich Hill and Pittsburgh to all points in Arkansas except Helena the rates on paving brick also apply on draintile. There are no commodity rates on paving brick from Commerce to points in Arkansas. Draintile is similar in many respects to sewer pipe, but it is a cheaper commodity, somewhat softer and more liable to breakage. Defendants admit that some readjustment is necessary in the rates from Commerce as compared with those from Rich Hill and Pittsburgh. HELD, rates attacked not unreasonable but unduly prejudicial in favor of Rich Hill and Pittsburgh, and for future rates from Commerce should be based on 6c single and 8c joint line for 5 miles and 21c single and 22c joint line for 500 miles. Post Bros. Tile Co. v. Director General, 89 I. C. C. 544.

(i) Complainant attacked commodity rates charged on tin cans, carloads, and less carloads, from Buchanan, Va., to destinations in southern classification territory as unreasonable and unjustly discriminatory, prejudicial and preferential. Buchanan is on the N. & W., 25 miles northeast of Roanoke, and on the C. & O., 49 miles northwest of Lynchburg. There are manufacturing plants at Roanoke and at Bedford, Va., on the N. & W., 29 miles east of Roanoke and 25 miles west of Lynchburg. Roanoke and Lynchburg are the junction points on substantially all shipments from Buchanan and Bedford to the territory here involved. The loaded weight varies from around 10,000 pounds of the largest size to about 17,000 pounds of the smallest size, average 14,000 pounds and they move in ordinary box cars in bulk, in crates and in cartons. Loss and damage claims have not been frequent or large

in amount. There is no evidence that the carrier assumes unusual risk of damage or that unusual care in transportation is required. Tin cans are classified fifth class in carloads and first class less carloads in the southern classification. Throughout southern territory they generally move under class rates, but in a number of instances rates less than the class rates have been established. The rates generally in the territory involved for a long time have been and now are made to apply from groups of points of origin to groups of points of destination. These groups include widely separated points both of origin and of destination. The difference in distance between the nearest points in an origin group and a destination group and the most distant points in the same groups often exceeds 200 miles, and amounts to from 20 per cent of the distance between the nearest points in an origin and a destination group to the same or more than that distance. The evidence does not warrant any general readjustment of groups. Buchanan is within the Basic-Charlottesville-Orange group of points of origin which generally take rates higher to southern territory than those applicable from the Virginia cities group. This group embraces points about 100 miles north of Buchanan, which is 22 miles from the southern boundary of the group. There is no evidence of any production of soldered tin cans at any other point in the group. So far as concerns the shipment of tin cans from this group into the territory involved, Buchanan seems to stand out from other points in the group, and the imposition of the class rates would be, in effect, to constitute it a production group by itself. Defendants seem to have recognized this condition by the establishment of carload rates from Buchanan into the territory involved at differentials over the rates from Roanoke, Lynchburg, Bedford and other points in the Virginia cities group. HELD, rates attacked not unreasonable or otherwise unlawful, but carload rates attacked prior to the establishment of the present differential basis unreasonable to extent rates from Buchanan exceed rates from Roanoke by 4.5c and 4c prior to July 1, 1922, to Carolina and southeastern territories and 2.5c and 2c prior to July 1, 1922, to Mississippi valley territory, reparation awarded. Virginia Can Company v. A. & V. Ry., 89 I. C. C. 558.

(j) A comparison of earnings on a specified commodity with average earnings on all traffic is generally of little if any value in measuring the reasonableness of rates, for the reasons, among others, that averages are based on class as well as commodity rates, divisions of joint rates as well as local rates, and c. l. and l. c. l. traffic; and because of differences between average and actual hauls. Iron and Steel Articles, 89 I. C. C. 606, 622.

(k) Rates on fresh fruits and vegetables from Indiana points to Chicago, Ill., found unreasonable and unduly prejudicial as compared with rates on the same commodities from Illinois points to Chicago. No conditions affecting the transportation which would justify a differential level of rates on this intrastate and interstate traffic was shown. Reasonable and nonprejudicial rates prescribed. Indiana Public Service Comm. v. B. & O. R. R. Co., 89 I. C. C. 651.

(l) Proposal to add a new commodity description, viz., stone chips or granules (roofing granules), for purpose of differentiating this commodity, used in the manufacture of roofing materials, from crushed stone used for other purposes, found justified, but proposal to apply a higher rating on the former than on the latter, found not justified. Crushed Stone from Maryland and Pennsylvania, 89 I. C. C. 681.

(m) Complainant attacked commodity rates on special iron in the southern classification in carloads, from Cincinnati and Ironton, O., and Pittsburgh, Pa., on tin and terne plate from Cincinnati and Pittsburgh and on nails, carloads, from Ironton to Knoxville, Tenn., as unreasonable and unduly prejudicial to Knoxville and unduly preferential of Chattanooga, Nashville and Memphis, Tenn., Bristol, Va., Asheville, N. C., and Charleston and Spartanburg, S. C. Complainant attacked rates on iron and steel articles rated special iron in the southern classification from Buffalo, N. Y., and Pittsburgh to Chattanooga, Tenn., as unreasonable and unduly preferential of rates to Memphis, Helena, Greenville, Vicksburg and Natchez, Miss., Mobile, Ala., and New Orleans, La. Knoxville is in the eastern part of Tennessee and is served by the Southern and L. & N. Chattanooga is southwest of Knoxville and is served by the Southern and N. C. & St. L. Bristol, Asheville, Charleston and Spartanburg are served by the Southern; Nashville by the L. & N., and N. C. & St. L.; and Memphis, New Orleans and

Mobile by the Southern and L. & N. **Special iron and steel articles and tin and terne plate from Cincinnati to Knoxville.** The rate on special iron and steel articles and tin and terne plate, carloads from Cincinnati to Knoxville 292 miles via the L. & N. is 33c. The same rate is maintained on this traffic to Knoxville from Louisville, Ky., 277 miles over the L. & N., and from a number of points in the immediate vicinity of Cincinnati, including Newport, Ky., and from all of the points named to Chattanooga. Both the class and commodity rates from Cincinnati and Louisville generally are and for a number of years have been the same to Knoxville and Chattanooga. **Special iron and steel articles and nails from Ironton to Knoxville.** Prior to July 1, 1923, the rates from Ironton to Knoxville were joint commodity rates of 42c on nails and 44.5c on special iron and steel articles. On that rate they were reduced to 39c. From Pittsburgh and Buffalo districts the rates to Knoxville and Chattanooga are joint commodity rates. When originally established they were made on basis of the lowest combination on the Ohio river crossings. The combination basis has been changed as the result of the different percentage increases in rates in the eastern and southern groups, and at the present time the joint rates are less than the combinations. The rates apply via both Cincinnati and eastern gateways. Over routes through the latter gateways Knoxville is intermediate to Chattanooga, Nashville and Memphis and Chattanooga is intermediate to Nashville and Memphis. Prior to July 1, 1923, the rates from Pittsburgh to Knoxville were higher than to Nashville and Memphis, although the short line distances shown to these points are 16 and 206 miles, greater than to Knoxville. The L. & N. forms the direct line from Cincinnati to Nashville and Memphis, and to Knoxville its line is only 10 miles longer than the direct route. Transportation conditions on the line to Knoxville are substantially similar to those on the line to the two other points. Fourth section relief denied. HELD, rates attacked unreasonable and unduly prejudicial to extent they exceeded the following: on special iron and steel articles and on tin and terne plate from Cincinnati to Knoxville, 27.5c prior to August 26, 1920, 34.5c on and after that date to June 30, 1922, and 31c thereafter; on special iron and steel articles and on nails from Ironton to Knoxville, 28.5c prior to August 26, 1920, 38c from that date to June 30, 1922, and 34c subsequently; on special iron and steel articles and tin and terne plate from Pittsburgh to Knoxville, 41.5c prior to August 26, 1920, 55.5c from that date to June 30, 1922, and 50c from that date to June 30, 1923, and since the latter date not unreasonable or unduly prejudicial on special iron and steel articles and on boiler tubes, structural iron and steel, bar iron, bar steel, wrought iron and steel pipe, iron and steel plates, and iron and steel rivets from Buffalo to Chattanooga, 59c prior to July 1, 1922, 53c from that date to June 30, 1923, and since that date not unreasonable or unduly prejudicial; and on special iron and steel articles and boiler tubes, structural iron and steel, bar iron, bar steel, wrought iron and steel pipe, iron and steel plates, and iron and steel rivets from Pittsburgh to Chattanooga 55.5c prior to July 1, 1922, 50c from that date to June 30, 1923, and since that date not unreasonable or unduly prejudicial, reparation denied. Knoxville Traffic Bureau v. Southern Ry., 89 I. C. C. 708.

(n) Sixth-class rates on spelter from Locust Point, Baltimore, Md., to Apollo, Pa., found unreasonable to extent it exceeded lower commodity rate contemporaneously in effect via route other than route of movement, which lower rate also applied from Baltimore to a large number of consuming points for greater distances. Reasonable rate for future prescribed and reparation awarded. Apollo Steel Co. v. Pennsylvania R. R. Co., 89 I. C. C. 747.

(o) Complainant attacked commodity rates charged on roofing talc, carloads, from Johnson, Vt., to Chicago, Ill., and St. Louis, Mo., between Jan. 15, 1921, and Jan. 2, 1922; to Grays Ferry, Pa., between Jan. 15 and Oct. 6, 1921; from Rochester, Vt., to Erie, Pa., between Jan 15 and May 15, 1922, and from Braintree, Vt., to Erie, Pa., between Jan. 15, 1921, and Jan. 2, 1922, as unjust and unreasonable. Johnson is on the St. J. & L. C. Braintree is on the Central Vermont, and Rochester is on the White River R. R. Roofing talc is a low grade commodity used to surface roofing, paper and to improve its appearance. Effective June 25, 1918, the Director General prescribed increases of 1c on slate and 25 per cent on talc, thus increasing the difference which had existed between the rates on those two commodities prior to that date. The reduced rates on roofing talc became effective from Johnson to

trunk line territory on Oct. 6, 1921, and from Johnson, Braintree and Rochester to central territory on Jan. 2, 1922. HELD, rates attacked unreasonable to extent they exceeded those subsequently established, reparation awarded. Barrett Company v. St. J. & L. C. R. R., 91 I. C. C. 9.

(p) Complainant attacked combination commodity rates charged on 32 cars of coke shipped between July 5 and Dec. 28, 1918, from Everett, Mass., to Auburn, R. I., as unreasonable. Shipments moved over B. & A., to Boston and New Haven to destination, 57 miles, charged 50c to Boston and $1.40 beyond. Effective Feb. 20, 1919, a joint rate of $1.40 was established. No evidence was introduced by complainant bearing upon the unreasonableness of the rate attacked. These shipments were the first received from complainant from Everett. HELD, rates attacked not unreasonable, complaint dismissed. General Fire Extinguisher Co. v. Director General, 91 I. C. C. 13.

(q) Complainant attacked commodity rates charged on corrugated strawboard and fiber board boxes, knocked down flat, and fillers, in straight or mixed carloads, from Carthage, Ind., to Sand Springs, Sapulpa and Blackwell, Okla., as unreasonable and unduly prejudicial. Carthage is on the Big Four, 297 miles from St. Louis. Sand Springs is 30 miles from Tulsa. Sapulpa is on the Frisco and Blackwell served by the Frisco and Santa Fe. Complainant is in competition with manufactures of paper boxes at Chicago, Joliet, and Rockford, Ill., Milwaukee, Chippewa Falls and other points in Wisconsin. Rates applicable 78.5c, claims for damage on these commodities are negligible. The rating is fifth class, but by exceptions to official classification sixth class rates are applicable from Carthage to St. Louis. Rates on paper boxes from Carthage to Sand Springs and Sapulpa were first requested in 1919 and were established by making rates from Carthage as much higher than the commodity rate from Chicago to those destinations as the fifth class rate from Carthage was higher than the fifth class rate from Chicago. Subsequent rate changes disturbed this relationship but at the hearing defendants proposed to establish rates from Carthage on substantially the same basis with some modifications in order to comply with the fourth section, or 72c minimum 30,000 pounds and 65.5c minimum 40,000 pounds. HELD, rates attacked prior to July 1, 1922, unreasonable to extent they exceeded 67c to Sand Springs, 72c to Sapulpa, 73c to Blackwell, all minimum 40,000 pounds; and minimum 30,000 pounds 75c to Sand Springs, 76c to Sapulpa and 77c to Blackwell, reparation awarded. American Paper Products Company v. A. T. & S. F. Ry., 91 I. C. C. 383.

(r) Respondent, M. C., proposed to cancel its commodity rate of 6.5c on scrap paper, carloads, via Gary, Ind., between Chicago and Joliet, Ill., which would result in application of class C rate of 11.5c. Distance from Joliet to Chicago over respondent's line is 79.5 miles, rates applying at intermediate points including Griffith, Ind., which is 45 miles from Chicago. Short line distance Chicago to Joliet is 37 miles and to Griffith 29 miles, present rate over latter route Chicago to Joliet is 6.5c, same as that applicable over respondent's line, and present rate from Chicago to Griffith is 11.5c, the same as that here proposed by respondent. Respondent established the rate of 6.5c to Joliet to meet competition over the direct route and the proposed rate to Griffith would be the same as that now applicable over the direct route. HELD, proposed schedules justified. Scrap Paper Between Chicago and Joliet, Ill., 91 I. C. C. 569.

(s) Complainant attacked commodity rates charged on 7 cars of printing paper from Hamilton, O., and one car of strawboard from Peoria, Ill., to San Antonio, Texas, as unreasonable and unduly prejudicial. Applicable rates $1.125 prior to July 1, 1922, and $1.015 thereafter on the paper and $1.02 on the strawboard. In 66 I. C. C. 571 the commission found reasonable rates on paper from the points in question to destinations shown. HELD, rates attacked on paper unreasonable to extent it exceeded 86.5c prior to July 1, 1922, and 78.5c on strawboard to extent it exceeded 78c reparation awarded. San Antonio Paper Co. v. C. & A. R. R., 91 I. C. C. 589.

(t) Complainant attacked commodity rates of 90c charged on 55 cars of hollow building tile shipped between December, 1918, and June, 1919, from Kankakee, Ill., to Chicago, Ill., as unjust and unreasonable to extent it exceeded 60c. Shipment moved via I. C., 55 miles route via N. Y. C. being 75 miles. Prior to June 25, 1918, the I. C. carried a rate of 50c increased on that date to 90c under G. O. 28. HELD, rate attacked not unreasonable, complaint dismissed. Illinois Fireproof Construction

Co. v. Director General, 91 I. C. C. 753.

(u) Complainant attacked joint commodity rates charged on glass sand, carloads, shipped between Nov. 1, 1916, and Feb. 14, 1919, from Berkeley Springs, W. Va., to Charleroi, Pa., as unreasonable, unjustly discriminatory and unduly prejudicial. Berkeley Springs is on the B. & O., 6 miles south of Hancock, W. Va., and Charleroi is southeast of Pittsburgh, Pa., on the Pennsylvania. Charged $1.62 prior to April 26, 1918, $1.90 from that date to June 24, 1918, and $2.10 thereafter. Shipments moved over B. & O. to Everson, Pa., and Pennsylvania beyond, 207 miles. Lower rates were maintained to Pittsburgh, 211 miles, Glassport, Pa., 211 miles, Corapolis, Pa., 223 miles, Rochester, Pa., 237 miles, Beaver Falls, Pa., 242 miles. HELD, rates attacked unreasonable and unduly prejudicial to extent they exceeded $1.32 prior to April 26, 1918, $1.50 from that date to June 24, 1918, and $1.70 thereafter, reparation awarded. Macbeth Evans Glass Co. v. B. & O. R. R., 91 I. C. C. 758.

(v) Complainant attacked commodity rates charged of 79.5c on three cars of roofing paper, shipped in January, April and June, 1922, from Madison, Ill., to Oklahoma City, Okla., as unreasonable to extent it exceeded 50.5c. Two shipments were routed via Rock Island and one over M. K. & T. 50.5c was prescribed in 66 I. C. C. 571 and was published on June 15, 1922, when it was reduced on July 1, 1922, to 45c, and is the present rate. HELD, rate attacked unreasonable to extent it exceeded 50.5c, reparation awarded. Turner Sheet Metal Co. v. C. R. I. & P. Ry., 91 I. C. C. 763.

(w) Complainant attacked commodity rate of 10c per 100 pounds on ice, carloads, in refrigerator cars owned and furnished by them, from Tobyhanna, Pa., to Trenton, N. J., on and after May 18, 1923, as unjust and unreasonable in that it equals the rate on ice in refrigerator cars furnished by defendants, and exceeds by one cent the rate on ice in box cars furnished by defendants. The present rates of $1.80 per ton on ice in box cars and $2 when in refrigerator cars, are the outgrowth of rates fixed in 15 I. C. C. 305. The compensation paid for the use of complainant's refrigerator cars is the usual mileage rate paid under the tariffs to all private owners of similar equipment. From a statement introduced by defendants, it appears that the carriers' gross earnings on ice shipped to complainants in complainant's private refrigerator cars during July and August, 1923, were lower than on ice shipped to complainants during the same period in either carrier owned box cars or carrier owned refrigerator cars. HELD, rate attacked not unreasonable, complaint dismissed. Holcombe & Sons v. C. R. R. of N. J., 92 I. C. C. 27.

(wa) Complainant attacked combination commodity rates charged on 23 cars of pulpwood between December, 1920, and February, 1921, from Idaho to Spokane, Wash., thence to Millwood as unreasonable to extent they exceeded rates found reasonable in 61 I. C. C. 159. HELD, rate attacked unreasonable to extent factor to Spokane exceeded by more than $4 per car the corresponding factor subsequently established under 61 I. C. C. 159, reparation awarded. Inland Empire Paper Co. v. C. M. & St. P. Ry., 92 I. C. C. 29.

(x) Complainant attacked commodity rate charged on 158 cars of slack coal, shipped from Spadra, Ark., to Chanute, Kas., between Oct. 15 and Dec. 17, 1920, as unreasonable and unduly prejudicial. Shipments moved and routed over M. P. to Coffeyville, Kas., M. K. & T. beyond, 276 miles, charged $3.645, applicable on lump coal and slack coal. Subsequently it was reduced to $2.43 on June 20, 1921, and to $2.19 on July 1, 1922. At time of movement a combination rate of $2.835 was in effect over the route of movement, composed of commodity rate on slack coal to Coffeyville of $2.295 and proportional rate of 54c beyond. There was also in effect a rate of $2.43 from Spadra to Iola, Kas., a competing point on the M. P., north of Chanute, which was applicable over the M. K. T. as an intermediate carrier. HELD, rates attacked unreasonable to extent they exceeded $2.43, reparation awarded. Ash Grove Lime & Portland Cement Co. v. M. P. R. R., 92 I. C. C. 51.

(y) Complainant attacked commodity rate of 8.9c prior to June 25, 1918, and 11c on and after that date charged on 46 cars of broken plaster molds shipped between June 18, 1918, and June 16, 1919, from Chicago, Ill., to Hannibal, Mo., via the Burlington and tenth class rate of 12.5c between July 5 and August 12, 1918, from Chicago to Hannibal over the Wabash as unjust and unreasonable to extent they exceeded the rates on brick. The brick rates were made applicable on broken plaster molds by the Burlington

on June 25, 1919, and by the Wabash on Dec. 15, 1919. There was no rating or rate applicable on these shipments. In the absence thereof it becomes necessary to determine whether the charges collected were unreasonable. HELD, charges not unreasonable, complaint dismissed. Atlas Portland Cement Co. v. Director General, 92 I. C. C. 171.

(z) Complainant attacked commodity rate of $9.05 maintained on manganese steel scrap, carloads, from New Castle, Del., to Chicago Heights, Ill., as unreasonable. Rate attacked is maintained on iron or steel scrap. The $6 rate sought would earn $300 per car and 35.84c per car mile for distance of 837 miles from New Castle to Chicago Heights. HELD, rate attacked unreasonable to extent it exceeds $6 per long ton, minimum 50 tons. Chicago Heights Mfrs. Assn. v. P. R. R., 92 I. C. C. 194.

(aa) Complainant attacked commodity rates charged on dead coal and dead slack carloads for fluxing purposes from Huntington, Bonanza and Midland, Ark., to South Fort Smith, Ark., as unreasonable, unjustly discriminatory and unduly prejudicial to extent they exceeded slack coal rates. Points of origin are on the Frisco and complainant's smelter is on the M. P. Rates on lump coal were assessed and subsequently slack coal rates were published to apply on dead coal and dead slack. Dead coal and dead slack have no value as domestic or commercial fuel and are sold to smelters for fluxing purposes. They are coal or slack which has been placed on the ground and which has lost its fuel properties because of exposure. HELD, rates attacked unreasonable to extent they exceeded rates on slack coal, reparation awarded. Athletic Mining & Smelting Company v. A. C. R. R., 92 I. C. C. 233.

(bb) Complainant attacked commodity rates charged on 982 bales of cotton shipped from Louisiana to Galveston, Tex., between Sept. 1 and Dec. 31, 1921, as unjust and unreasonable. Rate charged on some joint commodity rate; on others combination of commodity rates, no routing instructions being given by shippers. Originating carriers moved the shipments over routes from 30 to 266 per cent longer than by reasonably direct connections. Since little regard was had for distance in fixing rates on cotton in this region, and since the rates hereinafter used for comparison were also applicable over routes much longer than the distances stated in connection therewith, the length of the movement is of little significance. As stated in 77 I. C. C. 388, the rate adjustment on cotton generally in this territory was chaotic, and greatly in need of revision. The rates approved in 85 I. C. C. 5, modified to reflect the higher general rate level prior to July 1, 1922, the rates so approved would result in compressed in transit rates to Galeston as follows: From Cypress, Natchitoches, and Boyce, 85.5c, from St. Landry and Ville Platte, 75c, from Morrows, Ross, Palmetto, and Melville, 82c and from Coushatta and Campti, 85c. HELD, rates attacked unreasonable to extent they exceed from Robeline, Cypress, Natchitoches, Boyse and New Roads, 85.5c; from St. Landry and Ville Platte, 75c; from Morrows, Palmetto and Melville 82c; on uncompressed cotton, from Coushatta, and Campti 98.5c; from Robeline and Boyce, New Roads and Natchitoches, 99c; from St. Landry and Ville Platte 88.5c; from Morrows Rosa and Palmetto 95.5c, reparation awarded. Harris Irby & Vose v. B. S. L. & W. R. R., 92 I. C. C. 304.

(cc) Complainant attacked rates on refined and low grade oils in tank cars from Oklahoma and Kansas to Milwaukee, West Allis and Racine, Wis., between August 28, 1920, and March 18, 1921, as unjust and unreasonable to extent they exceeded 44c on refined and 37c on low grade oils. In 85 I. C. C. 705, the commission found rates attacked unreasonable and awarded reparation. Rates attacked were in effect because defendants published in accordance with the letter of the order in 57 I. C. C. 597, wherein the commission modified the relationship resulting from the rates prescribed in 36 I. C. C. 109, to Chicago and Milwaukee, rates which were suspended and subsequently found not justified in 59 I. C. C. 499. Rates to the basis of which reparation is sought were published effective March 18, 1921, after the suspended schedules had been canceled. It is true that under the terms of the order defendants could comply therewith in the alternative. But that fact did not relieve them from the responsibility of publishing rates which would not contravene the act. They proposed to establish the 3c differential prescribed by increasing the rates to both Chicago and Milwaukee. That was, of course permissible under the order, but as the Commission had prescribed no specific rates, defendants were thereby subject to those provisions of the act under which the

commission is given power to suspend the operation of proposed increased rates and carriers are required to justify them. The result was that the rates attacked became effective. Whether defendant's action in proposing these increased rates or action of the commission in suspending them led to this result is immaterial and not controlling in so far as an award of reparation is concerned. The fact remains that the rates attacked were assessed. If those rates were unreasonable defendants are not entitled to retain the excessive portion even though it be said that the rates were in effect despite defendant's efforts. HELD, reparation awarded. Wadhams Oil Co. v. C. & N. W. Ry., 92 I. C. C. 361.

(dd) Complainant attacked commodity rates charged on gasoline, carloads, from the midcontinent field and from Colorado, Wyoming and California to Salt Lake City, Ogden and Provo, Utah, as unreasonable and unlawful In 66 I. C. C. 8, rates attacked were found unreasonable but not otherwise unlawful. HELD, rates attacked unreasonable to extent they exceeded 93c from midcontinent field, 60c from Florence, Colo., 66c from Casper, Wyo., 70c from Greybull, Wyo., 73c from Wilmington, Calif., reparation denied. Utah State Automobile Asso. v. A. T. & S. F. Ry., 92 I. C. C. 376.

(ee) Complainant attacked commodity rates charged on sheep and goat pelts and skins, straight carloads, or in mixed carloads with the horse and cow hides, from Utah, Wyoming, Idaho, Montana, and Washington to Portland, Ore,, as unreasonable and unduly prejudicial to extent they exceeded fourth class. Commodity rates, without restriction as to package or baling requirements, have been maintained on this traffic to Portland from many points in this territory. Generally, at least, those rates were lower than the class rates. After the commodity rates were established the classification ratings were changed in various particulars and during the period of movement the commodity rates in a number of instances were higher than the class basis, although, under alternative provisions of the tariffs, the lower rates applied. The classification rating on pelts, loose or in bundles, straight carloads, has at no time been lower than second class, and in the absence of a satisfactory showing that a reduction of the rating is warranted by reason of the loadings the rating should not be condemned. On Sept. 10, 1920, the minimum weight on straight cars of loose hides was increased to 20,000 pounds, subject to rule 34, and since that date, through the operation of the mixing rule, a rating of second class and a minimum of 20,000 pounds subject to rule 34 have been applicable on mixed cars of loose hides and pelts. Pelts are not ordinarily more valuable than hides and the difference in the classification ratings on these commodities is apparently based on different relative loading. HELD, rates attacked on straight cars not unreasonable or unduly prejudicial, but rates from Utah, Wyoming, Idaho, Montana and Washington to Portland on mixed cars of dry untanned cattle or horse hides, loose or in packages, and dry untanned sheep or goat pelts or skins, loose, in bundles, or in bales, not machine pressed, are for the future unreasonable to extent they exceed fourth class, minimum 20,000 pounds subject to rule 34, reparation denied. Bissinger & Co. v. G. N. Ry., 92 I. C. C. 577.

(ff) Complainant attacked commodity rates of $2.24 charged on clay, carloads, shipped from Centerpoint, Ind., to Chicago, Ill., between October, 1920, and June, 1922, as unreasonable and unduly prejudicial to extent it exceeded $1.96. Centerpoint is in the Brazil, Ind., district and takes the same rates to Chicago as other points in the district on articles in the brick list. Prior to February, 1920, the rate from Centerpoint to Chicago, 190.7 miles, was $1.60 on common and other brick, hollow building tile, other clay products and clay, minimum 50,000 pounds. The rate on that date on brick, other than common was reduced to $1.40 in accordance with 56 I. C. C. 687; on August 26, 1920, these rates of $1.60 and $1.40 became $2.24 and $1.96, respectively, and on June 1, 1922, the rate on the other commodities, except common brick, was reduced to $1.96. Effective Oct. 16, 1922, the rate on all commodities in the brick list from Brazil and Centerpoint to Chicago became $1.90. HELD, rate attacked unreasonable to extent it exceeded $2.11, reparation awarded. Midland Terra Cotta Co. v. P. C. C. & St. L. Ry., 92 I. C. C. 601.

(gg) Complainant attacked commodity rates charged on 34 cars of riveted steel conduit pipe shipped between June 10 and Nov. 15, 1920, from Duluth, Minn., to Howells, Calif., as illegal, unreasonable, unjustly discriminatory and unduly

prejudicial to extent they exceeded rates on iron conduits. Howells is on the W. P., 263 miles northeast of San Francisco The pipe was designed and constructed for use in conducting water at high pressure from a penstock to electrical power generators. The shipments were made on flat or gondola cars. Shipments were billed as sections of black steel riveted pipe 1-inch and heavier, 42-inch diameter, by 30 feet long. Charged commodity rates of $1.44 prior to August 26, 1920, and $1.92 thereafter, applicable on articles of iron and steel—Pipe, riveted, minimum 30,000 pounds. Rates of $1.125 prior to August 26, 1920, and $1.50 thereafter, were applicable on articles of iron and steel conduits (not insulating nor flexible) iron, coated or enameled. HELD, shipment consisted of riveted steel pipe, rates attacked applicable, not unreasonable, unjustly discriminatory or unduly prejudicial, complaint dismissed. Duluth Boiler Works v. A. T. & S. F. Ry., 92 I. C. C. 692.

(hh) Complainant attacked commodity rates charged on coal carloads during May, June, July and August, September, 1922, from Leesburg, Pa., to Conneaut Harbor, O., as unreasonable. Shipments moved over Pennsylvania to Shenango, Pa., and B. & L. E., beyond, 104 miles. Shipments originally billed to complainant steamship company at Conneaut harbor for reshipment beyond by lake and charged at joint cargo rate of $1.54. Some of the shipments were used by the steamship company in fueling its vessels at Conneaut harbor and others were diverted to complainant dock company either for its use locally at Conneaut harbor or for fueling ships at that point because of the failure of its ordinary supply as a result of the coal strike. Defendant issued an amended bill for charges on such shipments as were not handled beyond Conneaut harbor as cargo shipments at the combinations of $2.73 prior to July 1 and $2.46 on and after that date, composed of $1.19 and $1.07 to Shenango and $1.54 and $1.39 beyond. On Sept. 10, 1922, the cargo rate was reduced to $1.34 under 68 I. C. C. 676, the delay in making the reduction being due solely to tariff complications. On August 22, 1922, complainants asked defendants to establish a rate of $1.51 to apply to Conneaut harbor proper, and this was made effective Sept. 2, 1922. HELD, rates to Conneaut Harbor proper unreasonable to extent they exceeded $1.68 prior to and $1.51 subsequent to July 1, 1922, and that the cargo rate is unreasonable to extent it exceeded $1.34, reparation awarded. Pittsburg & Conneaut Dock Co. v. P. R. R., 92 I. C. C. 719.

(ii) Complainant attacked combination rates charged on acid phosphate, carloads, as unreasonable and unduly prejudicial, to Seymour, Ind. Seymour is on the Pennsylvania and B. & O., 4 miles north of Louisville, Ky. Complainant disposes of its fertilizer in southern Indiana, the manufacturers at New Albany and Jeffersonville being its principal competitors. New Albany and Jeffersonville are on the B. & O., and Pennsylvania, just across the river from Louisville. Rate on acid phosphate from Nashville to Seymour is $4.70 composed of a proportional commodity rate of $1.80 to Louisville plus sixth class rate of 14.5c beyond. The rate from Nashville to New Albany and Jeffersonville is a joint commodity rate of $2.48. The distances from Nashville are 186 miles to Louisville, 190 miles to New Albany and Jeffersonville and 240 miles to Seymour. HELD, rate attacked unreasonable to extent the component from Louisville to Seymour exceeded $2.22 per ton prior to July 1, 1922, and $2.00 per ton thereafter, reparation awarded. Buhner Fertilizer Co. v. B. & O. R. R., 92 I. C. C. 756.

(jj) Complainant attacked commodity rates charged on soft coal, carloads, from mines in Illinois and western Kentucky to Ladysmith, Wis., as unreasonable and unduly prejudicial. Ladysmith is on the Soo Line, local. The rates from the origin groups to Ladysmith are lower than the scale rates on bituminous coal for like distances prescribed by the Commission in 69 I. C. C. 11, for application from Duluth and other Lake Superior points to destinations in Minnesota, North Dakota and South Dakota. The record contains nothing to indicate that the rates from the southern Illinois and other origin groups named in the complaint to Ladysmith are unreasonable. The evidence relied upon by complainant to prove undue prejudice is too meager and indefinite to justify such a finding. HELD, rates attacked not unreasonable or unduly prejudicial, complaint dismissed. Great Western Paper Co. v. C. & E. I. Ry., 93 I. C. C. 95.

(kk) Complainant attacked commodity rates charged on scrap paper in machine pressed bales carloads from Atlanta, Inman Yards, and Marietta, Ga., to

Chattanooga, Tenn. In 1923 a heavy movement took place from Atlanta. Atlanta and Marietta are 138 and 116 miles from Chattanooga over the N. C. & St. L. In Sept. 1919 commodity rates of 16.5c and 17.5c were established, increased to 29.5c and 22c and reduced July 1, 1922 to 18.5c and 20c. In 1923 the rate from Marietta was reduced to 17c and from Atlanta to 18c. The rates on which complainants chiefly rely by way of comparison appear to be below the general level of rates on scrap paper in the south, and the record as a whole does not indicate that the rates attacked are in excess of a reasonable maximum. HELD, rates attacked not unreasonable, complaint dismissed. Sutphin Co. v. Southern Ry., 93 I. C. C. 147.

(ll) Complainant attacked commodity rates charged on 7 cars of newsprint paper, in rolls and bundles, from Port Edwards and Ladysmith, Wis., International Falls, Minn., and Alexandria, Ind., to McAlester, Okla., between May 1920 and March 1922, as unjust and unreasonable and unduly prejudicial as compared with rates to Muskogee. in 66 I. C. C. 571, the Commission fixed rates for the future from and to the points named. McAlester is 62 miles south of Muskogee on the M. K. & T., and Rock Island. HELD, rates attacked unreasonable to extent they exceeded 46, 64, 65 and 72c, reparation awarded. News Capital Co. v. M. K. & T. Ry., 93 I. C. C. 161.

(mm) Complainant attacked commodity rate of 16c charged for transportation of eight cars of ground fluorspar shipped between Jan. 9 and Feb. 17, 1920 from Newell, Pa., to Camden, N. J., as unjust and unreasonable to extent it exceeded 14.5c. Newell is local on the P. & L. E., about 25 miles south of Pittsburg, Pa. Shipments moved via P. & L. E., through Homestead Transfer, Pa., and Pennsylvania beyond 427 miles, charged at rate of 16c. Complainant offered no evidence to indicate that the earnings under the rate attacked were excessive. HELD, rate attacked not unjustly or unreasonable, complaint dismissed. General Chemical Co. v. Director General, 93 I. C. C. 193.

(nn) Complainant attacked commodity rates charged on 194 cars of steel billets from South Kearney, N. J., 10 cars from Canton (Baltimore), Md., and 11 cars from Philadelphia, Pa., to Huntington, Va., Nov. 15, 1921 as unjust, unreasonable and unduly prejudicial. Huntington is on the main line of the C. & O., and Ohio river division of the B. & O., 161 miles east of Cincinnati, O., and 281 miles southwest of Pittsburgh. Rates charged $8.60 from South Kearney, $8.20 from Philadelphia and $8 from Baltimore. When the general rate reductions of 1922 were effected these rates were reduced slightly beyond the extent required, but on Nov. 1, 1923 subsequent to the hearing they were increased to $7.80, $5.40 and $7.20. Steel billets are rated sixth class. The rates applied, which published as commodity rates, are based upon the sixth class rates. This basis is also employed in making commodity rates to Chicago. The commodity rates applied on these shipments, as well as those now in effect, are substantially 82% of the rates to Chicago. HELD, rates attacked not unreasonable or unduly prejudicial, complaint dismissed. West Virginia Rail Co. v. Pennsylvania R. R., 93 I. C. C. 216.

(oo) Complainant attacked combination commodity rate charged on one car of oak bridge flooring shipped from Lonoke, Ark., to Nowata, Okla., Oct. 16, 1920, as unreasonable. Lonoke is on the Rock Island, 22 miles east of Little Rock, Ark. Shipment moved west over that line to Shawnee, Okla., thence north on Santa Fe through Newkirk, Okla., to Winfield, Kas., and south to Nowata, 610 miles, charged 40.5c to Winfield and 23.5c beyond. The direct route from Lonoke to Nowata is over the Rock Island to Little Rock and M. P., beyond 326 miles. Shipment was originally consigned to Deer Creek, Okla., a local point on Santa Fe. Its sale was canceled and complainant directed diversion to Nowata but it had passed Little Rock and Shawnee before this could be affected. A joint commodity rate of 38c applied over the direct route from Lonoke to Nowata. This shipment was unusual and moved over a circuitous three line route at the instance and for the convenience of complainant. HELD, rate 59.5c attacked not unreasonable, complaint dismissed. Nebraska Bridge Supply & Lumber Co. v. A. T. & S. F. Ry., 93 I. C. C. 301.

(pp) Complainant attacked commodity rates charged on newsprint paper, wrapping paper, and paper napkins, carloads, shipped between Oct. 19, 1921 and June 20, 1922, from Little Falls, Minn.,

and Port Edwards, Nekoosa, Rhinelander, and Green Bay, Wis., to San Antonio, Tex., as unjust, unreasonable and unduly prejudicial. Rate charged on newsprint and wrapping paper $1.17 and on paper napkins from Green Bay $1.96. In 66 I. C. C. 571, the Commission found 82 and 83 on newsprint paper from Port Edwards and Little Falls; on wrapping paper from Nekoosa and Rhinelander 90 and 91.5c; and $1.095 on paper napkins from Green Bay, these rates being effective to destinations shown June 20, 1922. HELD, rates attacked unreasonable to extent they exceeded rates next above shown, reparation awarded. San Antonio Paper Co. v. S. A. & P. Ry., 93 I. C. C. 352.

(qq) Complainant attacked commodity rate charged on 36 cars of wheat from Bridgeport, Dalton, Lorenzo, Gurley and Sidney, Neb., to Great Falls, Mont., between Oct. 29 and Nov. 22, 1919, as unreasonable. Points of origin are on the Burlington, shipments moving north and west over the Burlington to Billings and the G. N., beyond, distance from most central point of origin being 773 miles to Great Falls. Rate charged 56c, applicable from Group J under transcontinental grouping. Group J includes points from the Missouri river west to Denver. The destinations under that rate are blanketed from Montana to Pacific coast. A 36c rate was established by the director general in order to relieve drought conditions, and complainant had full use of that rate from Nov. 28, 1919 until it expired by limitation on June 1, 1920. HELD, rate charged not unreasonable or unlawful, complaint dismissed. Royal Milling Co. v. Director General, 93 I. C. C. 377.

(rr) Complainant attacked commodity rate of 44c charged between August 28, 1920 and Dec. 17, 1921 on newsprint paper, carloads from Sault Ste Marie, Ont., to St. Joseph, Mo., as unreasonable to extent it exceeded 41c. St. Joseph is on the Missouri river about 60 miles north of Kansas City, Mo. For many years the two cities, which by direct lines are about equidistant from the Soo, have taken the same rates on newsprint paper from that point. Shipments moved via C. P., Soo Line and Rock Island, 957 miles. In 26 I. C. C. 13, the Commission approved a rate of 26c from Soo to Kansas City and Omaha. This rate, subjected to general increases was charged. In 64 I. C. C. 33 the Commission prescribed a rate of 41c which was established to St. Joseph Dec. 20, 1921. HELD, rate attacked not unreasonable, complaint dismissed. News Corporation v. M. P. R. R., 93 I. C. C. 381.

(ss) Complainant attacked commodity rates on ground iron ore from Neda, Wis., on C. M. & St. P., 2 miles from Iron Ridge, Wis., and 49 miles west of Milwaukee, Wis., to interstate destinations as unreasonable. **Unreasonableness.** Evidence is extremely meager. Ground iron ore is rated class C in western and sixth class in southern classifications, and sixth class under exceptions to the official. Rates of 14c to Chicago and Bensenville and 23c to East St. Louis are equivalent to class D rates. Class D is the basis prescribed from Iron Ridge to western trunk line territory in 16 I. C. C. 587. Generally speaking the class rates to destinations in central territory are on a relatively higher basis from Wisconsin points than from East St. Louis. The rate of 88c to New Orleans is the full class C basis. Rate of 85c to Pacific coast 54% of the class D rate to those points. **Minimum Weight.** Present minima to Pacific coast is 60,000 pounds and 36,000 pounds to other destinations. **Undue Prejudice.** Crude iron ore and ground iron ore, are not like kinds of traffic within the meaning of section 2 and the allegation of unjust discrimination is wholly unfounded. The circumstances and conditions surrounding the transportation of these commodities are so dissimilar as to warrant lower rates on crude than on ground iron ore. HELD, rates attacked not unreasonable or otherwise unlawful, complaints dismissed. Winters Metallic Paint Co. v. C. M. & St. P. Ry., 93 I. C. C. 427.

(tt) Complainant attacked combination commodity rate charged on petroleum coke from Casper, Wyo., to Delta, Utah in July 1919 as unreasonable. Delta is on the L. A. & S. L., 134 miles southwest of Salt Lake City, shipments moving over Burlington and C. & S., to Cheyenne, Wyo., U. P., and O. S. L., to Salt Lake City, L. A. & S. L., beyond charged 32c to Provo, Utah and 20.5c beyond, both factors being increased but one providing that the increase should be added but once. Rate properly applicable was 49c. When the shipments moved there was in effect on coke a

commodity rate of 32c from Casper to competitive sugar producing points in Idaho and Utah for distances approximately the same as that to Delta. Effective Feb. 28, 1920 a combination rate of 39.75c was published from Casper to Delta. HELD, rate attacked unreasonable to extent it exceeded 32c reparation awarded. Delta Beet Sugar Corp. v. Director General, 93 I. C. C. 547.

(uu) Complainant attacked commodity rate of $1.96 charged on 161 cars of soft coal from Harrisburg, Ill., to Lafayette, Ind., from Oct. 1922 to June 1923 as unjust and unreasonable. Harrisburg is in the southern Illinois coal group. Shipments moved over the Big Four to Danville, Ill., N. Y. C., to Sheff, Ind., and Big Four to Lafayette, 273 miles. HELD, rate attacked not unreasonable, complaint dismissed. Lafayette Box Board & Paper Co. v. C. C. C. & St. L. Ry., 93 I. C. C. 579.

(vv) Complainant attacked commodity rate charged on pop corn, carload, of 30c shipped between March 20, 1921 and June 1, 1922, from Arthur, Iowa, to Chicago, Ill., as unreasonable, unjustly discriminatory and unduly prejudicial. Shipments were in bulk in box cars. Loss and damage claims on this commodity are negligible. Pop corn is rated fifth class in western classification. Prior to March 20, 1921 the rate from Arthur was 34.5c. On that date the rate was reduced to 30c but the spread in the rates as between Odebolt and Arthur was increased from 0.5c to 2c. On June 1, 1922 defendant reduced rates from both points to 26.5c, reduced further July 1, 1922 to 24c. Complainant is satisfied with the present rates and grouping. Little evidence was introduced bearing upon the reasonableness of the rate attacked. HELD, rate attacked not unreasonable but unduly prejudicial to extent it exceeded rate from Odebolt, no damage shown to complainant, complaint dismissed. Shotwell Mfg. Co. v. C. & N. W. Ry., 93 I. C. C. 587.

(ww) Complainant attacked commodity rates charged on five cars of munition lint shipped from Brownsville, Belleville, and La Grange, Tex., to Des Moines and Dubuque, Iowa, between Oct. 14, 1921 and Jan. 4, 1922, as unreasonable to extent they exceeded by more than 9 and 8c prior and subsequent to Jan. 1, 1922, rates contemporaneously in effect on cottonseed hulls. Defendants published an emergency rate from Texas on basis of 125% of the rates on cottonseed hulls with maximum of 9c, effective Sept. 29, 1921, limited to expire March 31, 1922, to all points in this destination territory except Des Moines and Dubuque. La Grange and Belleville are in the southern portion of the Texas common point territory, former on the M. K. & T., and latter on G. C. & S. F. The rates sought applied to all points in Omaha-Davenport territory, in which Des Moines is located, as well as to all points in Chicago territory, in which Dubuque is located. The transportation characteristics of munition lint and of cotton seed hull shavings are practically identical. HELD, rates attacked unreasonable to extent they exceed 76.5c from Brownsville to Des Moines, 66.5c from Belleville to Des Moines and 64c from La Grange to Dubuque, reparation awarded. Pearson & Company v. St. L. B. & M. Ry., 93 I. C. C. 681.

(xx) Complainant attacked commodity rate charged on gasoline and kerosene, tank cars, shipped from Tulsa, Okla., to Clayton, N. M., via Pueblo, Colo., between June 22 and Oct. 6, 1920 as unreasonable and unduly prejudicial. While during the period of movement all alternative routes except those of the Santa Fe met the rate in effect via Quanah, the shortest route, the only route now doing so is that via Pueblo. Clayton is a distributing center for complainants products. Prior to July 16, 1919 complainants shipments to Clayton moved via Fort Worth. Thereafter, until Jan. 1, 1920, they moved via Quanah, but averaged 20.6 days in transit. From Jan. 1 to June 22 1920, they moved via Colorado Springs, the longest route, average 18 days in transit. Complainant routed the shipments here considered via Pueblo with a view to more expeditious movement, the shipments moving as routed and averaging 10.4 days in transit. A rate of 51.5c prior to August 26, 1920 and 69.5c thereafter applied via Pueblo to Clayton from points on the Santa Fe as far east as Joplin, Mo., 875 miles. It also applied via Pueblo from Kansas City, Mo., to Colorado common points, including Clayton, 825 miles, and Cheyenne, Wyo., 840 miles. The same rate applied via Pueblo from Tulsa to Colorado common points, including Cheyenne, 892 miles, but not including Clayton, 877 miles. HELD,

rate attacked unreasonable to extent it exceeded 51.5c prior to August 26, 1920 and 69.5c thereafter, undercharges waived, complaint dismissed. Texas Company v. A. T. & S. F. Ry. 93 I. C. C. 691.

(yy) Complainant attacked commodity rates charged on four cars of cotton twine and one car of cotton factory sweepings from Uniontown, Ala., to Pacsteel, Calif., between October 1921 and Jan. 1922 as unreasonable. Shipments moved over Southern to New Orleans and S. P., beyond. Fifty foot cars were ordered but the initial carrier supplied in each instance two smaller cars. Each shipment was partially loaded into one car and the remainder forwarded as a follow lot in the second car. Charged $1.585 on the cotton twine and $1.92 on the cotton factory sweepings. HELD, rates attacked not unreasonable, complaint dismissed. California Cotton Mills Co. v. Southern Ry., 95 I. C. C. 7.

(zz) Complainnt attacked rates charged on rig irons, car loads, shipped since March 10, 1921 from Parkersburg, W. Va., to Louisiana and Arkansas, Kansas, Oklahoma, Montana and California as unreasonable, unduly preferential, and prejudicial. Rig irons are generally used for drilling through hard formations, and when oil deposits lie at greater depths than can be reached with a drilling machine. The articles included in rig iron outfits are put together as shipped, there being no further manufacturing. No special equipment is required for the traffic, ordinary box cars or livestock cars being used. Rating is class A on oil well supplies including rig irons. Commodity rates are asked in straight carloads lower than rates on oil well outfits and supplies. On oil well outfits and supplies, including rig irons, within official and southern classifications, the rates are the same as those contemporaneously applicable on iron and steel articles. **Rates to Louisiana and Arkansas.** Rates on oil well supplies to Louisiana and Arkansas are generally made by adding the Pittsburg differential to the rate from St. Louis. **Rates to Oklahoma.** There is no uniform basis of rates on oil well outfits and supplies to Oklahoma. There is a blanket commodity rate of 143.5c from Parkersburg to all points in Oklahoma; through class A rates to the same points and a combination of local rates to and from St. Louis. The applicable rate is the lowest of the three. **Rates to Kansas.** There are no joint through commodity rates to Kansas. Joint through class A rates are published which are higher than the combination of intermediates. Applicable rates were made by combination of fifth class of 40.5 at present 36c to St. Louis and class A rate beyond. **To Montana.** No joint through commodity rates. Joint through class rates are published but applicable rates are combinations of intermediates. **Rates to California.** No joint through commodity rates but through class rates are published higher than combination of intermediates. HELD, rates attacked on rig irons, carloads, from Parkersburg to Louisiana, Arkansas, Oklahoma, Kansas, Montana and California unjust and unreasonable to extent they exceed 85% of rates on oil well outfits, reparation awarded. Parkersburg Rig & Reel Co. v. C. R. I. & P. Ry., 95 I. C. C. 181.

(3a) Complainant attacked commodity rates of 42 and 41c charged prior to July 15, 1923 and 34.5c and 33c thereafter on fresh meat and packing house products, carloads, from Sioux Falls, S. D., to Lincoln, Neb., as unjust, unreasonable and unduly preferential to competitors at Kansas City, Mo., Minneapolis and Duluth, Minn., and other points to extent they exceeded 23.5c on fresh meat and 18.5c on packing house products. In western classification fresh meat, carloads, is classified third class, and packing house products fifth class. Generally throughout western trunk line territory the rates on fresh meat and packing house products are considerably lower than third and fifth class rates. HELD, rates attacked unreasonable to extent they exceeded between July 26, 1921 and July 1, 1922 38.5c on fresh meat and 33c on packing house products and between July 1, 1922 and July 15, 1923 34.5c on fresh meat and 29.5c on packing house products and subsequent to that date not unreasonable on fresh meat but on packing house products unreasonable to extent it exceeded 29.5c, reparation awarded. Morrell & Company v. C. B. & Q. R. R., 95 I. C. C. 255.

(3b) Complainant attacked commodity rates charged on bituminous coal, carloads, from mines in southern Illinois to Ste. Genevieve and Mosher, Mo., since April 11, 1920, as unreasonable, unjustly discriminatory, unduly prejudicial and

in violation of the fourth section. Ste. Genevieve and Mosher are in southeastern Missouri on the Missouri Illinois R. R. Ste. Genevieve is also on the Frisco, 65 miles south of St. Louis, Mo. Mosher is 2.4 miles west of Ste. Genevieve. Practically all the coal consumed by complainants comes from mines in southern Illinois in what are known as the Belleville, DuQuoin, Murphysboro and southern Illinois groups. Prior to Dec. 12, 1919 the Illinois Southern was the short line or formed a part of the short route, from all of these mines to Ste. Genevieve and Mosher. On that date this road discontinued operations because of financial difficulties, and subsequently the property was purchased by the Missouri Illinois, which commenced operation between Illinois points and Ste. Genevieve and Mosher on March 27, 1921 and of its entire line on June 1, 1921. The Missouri Illinois crosses the Mississippi river by steam car ferry, which operates between Kellogg, Ill., and Little Rock, Mo. Since March 26, 1921 complainants coal has moved and now moves over the Missouri Illinois direct when from mines on that road, and over the Missouri Illinois in connection with the M. P., at Flinton, Ill., or the I. C., at Coulterville, Ill., when from mines on the other defendants line. When the Missouri Illinois commenced operations in March 1921, in order to meet fourth section requirements, the Crystal City rate was extended to Ste. Genevieve from Missouri Illinois and I. C., mines via Kellogg. Subsequently this rate was extended to mines on the M. P., and C. & E. I. via Thebes, necessitating reductions at all points on the Frisco from Cape Girardeau to and including Ste. Genevieve. HELD, rates attacked not unreasonable or otherwise unlawful, complaint dismissed. Peerless White Lime Co. v. C. & E. I. Ry., 95 I. C. C. 260.

(3c) Complainant attacked commodity rate charged on eight cars of portable railway track shipped between Oct. 5 and Nov. 5, 1921 from Tullytown, Pa., to Phoenix, Ariz., as unreasonable. Shipments moved 2,599 miles over Pennsylvania to Chicago, C. M. & St. P., to Kansas City, thence Rock Island E. P. S. W., and S. P. Rate charged $2.255, this basis being the present rate. HELD, rate attacked not unreasonable, complaint dismissed. State of Arizona v. A. E. Ry., 95 I. C. C. 658.

(3d) Complainant attacked commodity rates charged on newsprint paper, book printing paper, printing paper, wrapping paper, flat writing paper, cardboard, strawboard, and tagboard from and to numerous points as unreasonable. Points of origin are in Wisconsin, Minnesota, Michigan, Indiana, Illinois, Ohio, Pennsylvania, New York, Massachusetts, Vermont, New Hampshire and Maine. The destinations are Dallas, Houston, Tyler, and Fort Worth, Tex.; Denver, Colo., Fargo, N. D., Des Moines and Sioux City, Iowa, Lincoln, Neb., Little Rock, Ark., Memphis, Tenn., Oklahoma City, Hartshorne and Hobart, Okla., Sioux Falls, S. D., Wichita, Kas., Council Bluffs, Kansas City, Omaha and Moorhead. In 66 I. C. C. 571 the Commission found that there should be a general readjustment of the rates on certain classes of paper and paper articles, carloads, including those here considered, from Wisconsin, Minnesota and Upper Peninsula of Michigan to western, southwestern and other territories. The present rates on this traffic from and to the foregoing points are in accordance with the rates fixed in that case less the general reduction of July 1, 1922. The present rates on newsprint from Fox River group are 29c to Omaha, 517 miles, and 30.5c to Kansas City, 603 miles. The evidence does not warrant a finding that rates to these points are unreasonable. The rates from points in central territory, to Omaha and Kansas City are and always have been made by combination of local or proportional rates to and from the Mississippi river or Chicago. The through rate of 43.5c on newsprint from Alexandria, Ind., to Omaha and Kansas City appears somewhat high as compared with the prescribed rates in the Paper case on this class of paper to a number of points in western trunk line territory. The short line distance from Alexandria are, to Omaha, 646 miles over Big Four to Peoria, Ill., and C. B. & Q., beyond, and to Kansas City, 583 miles over Big Four to St. Louis and M. P., beyond. Newsprint is not shown to have moved from, and apparently is not produced at, other points in central territory referred to of record. The shipments therefrom consisted of printing paper and paper grouped therewith. The evidence adduced with respect to the present rates on this class of paper from these points and on this and other classes of paper from these points and on this

other classes of paper from eastern points does not warrant a finding that there rates are unreasonable. Rail water and rail rates on newsprint from New England to Texas destinations are under consideration in other cases, and a finding will be deferred. HELD, rates attacked to Omaha and Kansas City, except on newsprint from Alexandria, not unreasonable; rate attacked on newsprint from Alexandria to Omaha and Kansas City not unreasonable as to the past but for the future unreasonable to extent it exceeded 39c; rates charged on evelopes from Waukegan to Moorhead unreasonable to extent they exceeded the aggregate of intermediates. Reparation awarded. Western Newspaper Union v. A. T. & S. F. Ry., 96 I. C. C. 5.

(3e) Complainant attacked commodity rates charged on five cars of paper bags and wrapping and printing paper from Nov. 25, 1921 to June 7, 1922 from Illinois, Michigan and Wisconsin to Pueblo, Colo. as unreasonable. Two cars from Port Edwards and Nekoosa, Wis., charged 90c, from Otsego, Ill., 21.5c to Chicago and 90c beyond and from Decatur, Ill., 92c, and from Neenah, Wis., $1.015. In 66 I. C. C. 571 the Commission prescribed reasonable rates on newsprint and paper articles from Wisconsin and related points to various destinations, including Colorado common points. HELD, rates attacked unreasonable to extent they exceeded 82.5c from Port Edwards, Nekoosa and Neenah, $1.04 from Otsego and 78c from Decatur, reparation awarded. Colorado Paper Co. v. A. T. & S. F. Ry., 96 I. C. C. 73.

(3f) Complainant attacked commodity rates charged on crushed slag, in bulk, carloads, from Lebanon, Bethlehem, Emaus and Hokendauqua, Pa., to New Jersey, Maryland, and Delaware and New York as unreasonable. In 92 I. C. C. 554, the Commission found rates attacked unreasonable to extent they exceeded the basis prescribed therein. Defendant contended shipments to New York were not brought in issue except on shipments from Lebanon, and complainant concedes this is correct. HELD, original order modified so as to exclude New York, N. Y., as a destination on all shipments except those originating at Lebanon, Pa. Buckland v. A. C. R. R., 96 I. C. C. 79.

(3g) Complainant attacked commodity rates charged on a car of canned goods shipped Dec. 17, 1920 from Fairport, N. Y., to Boise, Ida., as unreasonable and unduly prejudicial. Shipment consisted of various kinds of canned goods, including 9,880 pounds of chili sauce. A rate of $1.835 was applicable on all of the commodities including in the shipment, in straight or mixed carloads, except the chili sauce. A less carload rate of $4.155 applied on the chili sauce. At time of movement rates from and to the points in question were $2.42 minimum 40,000 pounds and $1.835 minimum 60,000 pounds. Chili sauce was included in the list of commodities taking the $2.42 rate but was not added to the list taking the $1.835 rate until June 30, 1921. HELD, rates charged unreasonable to extent they would have exceeded those applicable at rate of $1.835, undercharges waived, complaint dismissed. Oakes & Company v. O. S. L. Ry., 96 I. C. C. 95.

(3h) Complainant attacked commodity carload rates charged on 20 cars of lumber from Florida and Georgia to Waverly, N. J., between Dec. 13, 1919 and August 24, 1920 as unreasonable. Shipments moved from Roux, Sorento, and Lake Helena, Fla., and Willacoochee, Douglass, and Thomasville, Ga., charged 38c, 37c, 40c and 36c, respectively. The first cars were consigned to complainant at the siding of the General Leather Co., Newark, N. J. That siding is near the station designated by defendant in its tariffs at Waverly. In order to obtain delivery there the cars had to be reconsigned from Newark. Complainant was then requested by a representative of the defendant to notify consignors to consign future cars to the siding of the General Leather Co. at Waverly. All other cars were so consigned and there were no further charges for reconsignment. The rates to Newark were 34c from Roux, 33c from Sorento, 36c from Lake Helen and 31c from Thomasville and Willacoochee. The rates charged were higher than the rates to all other deliveries in Newark and were higher than the rates to New York City, which included lighterage in New York harbor. HELD, rates attacked unreasonable to extent they exceeded rates to Newark, reparation awarded. Stailey Lumber Co. v. P. R. R., 96 I. C. C. 175.

(3i) Complainant attacked commodity rates on straw, carloads from points in Illinois on the I. C., to Noblesville,

Ind., on the L. E. & W., since July 1, 1922 as unreasonable and unjust. The rates attacked represent joint commodity rates established in 1904 as modified by increases and reductions since that time. Straw is rated fifth class in central territory, the class rate for 200 to 225 miles being 26c. HELD, rates attacked not unreasonable, complaint dismissed. American Strawboard Co. v. I. C. R. R., 96 I. C. C. 289.

(3j) Complainant attacked commodity rates charged on tripoli, carloads, from Seneca, Mo., to St. Louis and East St. Louis, Ill., to Peoria and Chicago, Ill., and to destinations in central, trunk line and Canadian territories as unreasonable, unduly prejudicial. From Feb. 15 to Dec. 11, 1923 class C rates of 33, 36.5c and 40.5c were applicable to St. Louis, Peoria and Chicago, 326, 482, and 610 miles. On December 11, 1923 commodity rates of 22, 26 and 30c became effective. The rates to the other destinations are combinations composed of the commodity rate to St. Louis, plus the sixth class rates to destinations in central and Canadian territories and plus specific commodity rates to trunk line territory. From Tamms, Ill., and other producing points silica takes 80% of sixth class to central and Canadian territories and specific commodity rates lower than the rates on tripoli to trunk line territory. This basis also applies proportionally on silica from St. Louis and other gateways. HELD, rates on tripoli, carloads, from Seneca not unreasonable between August 20, 1921 and Feb. 15, 1923; present rates not unreasonable; but except to St. Louis and East St. Louis, Peoria and Chicago they are unduly prejudicial to extent the components beyond St. Louis exceed amounts which have the same percentage relationships to the sixth class rates from St. Louis to the respective destinations as the rates on silica, carloads, from Tamms, Ill., to the same destinations bear to the sixth class rates from Tamms. American Tripoli Co. v. A. & W. Ry., 96 I. C. C. 421.

(3k) In 88 I. C. C. 582 the Commission found commodity rates on soft coal, carloads, from Duluth and West Duluth, Minn., to Ladysmith, Wis., of $1.89 prior to July 1, 1922 and $1.70 thereafter, unreasonable to extent they exceeded $1.78 prior to July 1, 1922 and $1.60 on and after that date. Case was reopened. HELD, rates attacked not unreasonable or unjustly discriminatory, complaint dismissed. Great Western Paper Co. v. M. St. P. & S. S. M. Ry., 96 I. C. C. 444.

(3l) Complainant attacked commodity rate of 23c charged on 34 cars of condensed and evaporated milk from Lodi and Reedsburg, Wis., between Oct. 21, 1921 and Jan. 30, 1922 to Chicago and Clearing, Ill., as unreasonable, unjustly discriminatory and unduly prejudicial. Lodi and Reedsburg are on the C. & N. W., 182 and 149 miles from Chicago. Clearing is within the Chicago switching district. Effective Feb. 15, 1923 rates of 15.5c from Lodi and 17c from Reedsburg to Chicago were established. HELD, rates attacked not unreasonable, unjustly discriminatory or unduly prejudicial, complaint dismissed. Nestles Food Company v. C. & N. W. Ry., 96 I. C. C. 452.

(3m) Complainant attacked commodity rates charged on 83 cars of coal screenings shipped between Jan. 2, 1918 and Jan. 3, 1920 from Cantrall, Springfield and Pana, Ill., to Lyons, Iowa, as unreasonable, unjustly discriminatory and unduly prejudicial. Distance 178, 190 and 240 miles. Lyons is within the switching limits of Clinton, Iowa, 3 miles beyond the latter station, lower rates being applicable to that point. The rates from Springfield and Cantrall to Lyons were the same as to Clinton prior to Oct. 18, 1917 and on and after Oct. 5, 1918. From Pana the rates to both destinations were the same until Dec. 29, 1919. HELD, rates attacked not unreasonable, complaint dismissed. Ford Roofing Products Co. v. Director General 96 I. C. C. 471.

(3n) Complainant attacked commodity rates charged on 232 cars of fuel oil shipped between August 20, 1922 and April 11, 1923 from Arkansas, Oklahoma and Texas to Steelton, Minn., as unjust, unreasonable and unduly prejudicial. HELD, rates attacked unreasonable to extent they exceeded 43c from Arkansas and Oklahoma and 45.5c from Texas, a differential under the refined oil rates, reparation awarded. Minnesota Steel Co. v. A. T. & S. F. Ry., 96 I. C. C. 483.

(3o) Complainant attacked combination rate charged on a car of dried beet pulp shipped on Jan. 22, 1921 from Bayard, Neb., to Jackson, Miss., as unjust, unreasonable and unduly prejudicial. The distance from Bayard to Jackson is

1,397 miles over route of movement and 1,304 miles via the short line. Applicable rate 86c compared to 56c to Memphis, Tenn., and class D rate of 30c beyond. Present rate is a joint rate of 54.5c effective July 1, 1923 and is on the corn rate basis. At time of movement rates from Bayard to lower Mississippi river crossings were materially lower than the rates to Jackson and other southeastern points. These rates, however, were lower than the rates to intermediate points, and the lower rate to Jackson, subsequently established, was the result of the elimination of fourth section departures under orders of the Commission, and the general 10% reductions. At the time of the movement the rate on corn from Bayard to Jackson was 81c. Dried beet pulp is rated as low or lower than corn in the classifications. Rates on dried beet pulp at the time of movement were the same as the rates on corn in numerous instances, including the rates from Bayard to Mississippi river crossings, used as factors in making up the rates to southeastern points. The present rates to Jackson are the same on both commodities. HELD, rate of 86c unreasonable to extent it exceeded 81c but present rate not unreasonable, undercharge waived, complaint dismissed. Jackson Traffic Bureau v. C. B. & Q. R. R., 96 I. C. C. 763.

(3p) Complainant attacked commodity rates charged on six cars of uncompressed cotton linters shipped Dec. 2, 1921 from Magnolia, Ark., to St. Louis, Mo., as unreasonable and in excess of that applicable. Shipments moved as routed by shipper over the La. & N. W., to McNeil, Ark., and St. L. S. W., beyond 513 miles, charged $1.23, basis for which does not appear. Rates ranging from 79 to 89c applied on cotton linters from numerous points in Arkansas and Louisiana contiguous to Magnolia to St. Louis for distances ranging from 471 to 599 miles, and a rate of 81c to Kansas City applied from Little Rock and Pine Bluff, Ark., 506 and 548 miles. Effective June 23, 1922 defendants established a rate of 86.5c from Magnolia to St. Louis over the route of movement and that rate as reduced under general reductions of 1922 is still in effect. HELD, rates attacked unreasonable to extent it exceeded 86.5c, reparation awarded. O'Donnell Mercantile Co. v. L. & N. W. R., 98 I. C. C. 1.

(3q) Complainant attacked commodity rates on crude oil, in carloads, from Mexia, Tex., to Shreveport, La., as unreasonable and unduly prejudicial to extent they exceeded rates from Mexia to Beaumont and Port Arthur, Tex. The Mexia district is served by the T. & B. V., and S. P. Short route Mexia to Shreveport is over the T. & B. V., St. L. S. W., and T. & P., 212 miles. To Beaumont and Port Arthur the short route is over S. P., 254 and 274 miles. The distance scale under 48 I. C. C. 312 is the same to Shreveport as to Beaumont and Port Arthur but the specific commodity rate to the latter points kept Shreveport at a disadvantage during the various periods of the complaint ranging from 0.5c to 5.5c. Up to the time of the hearing no crude oil had moved under the rate to the preferred points and complainants competitors at those points had not taken advantage of that rate, but preferred to ship by pipe line. If the rate to Beaumont and Port Arthur had been the same as that to Shreveport complaint would have been in no better position in respect of its competitors, because the inducement to ship by rail being still less, the latter would have continued to move all of their crude oil by pipe line. Even if there is now a rail movement under the lower rate to the ports, the circumstances of pipe line competition to Beaumont and Fort Arthur, which has depressed the rate to these ports to its present level, and the absence of such competition to Shreveport, presents a situation which distinguishes the transportation conditions under the rate to Beaumont and Port Arthur from those under the rate complained of, and removes it from the purview of section 3. HELD, rate attacked not unreasonable or unduly prejudicial, complaint dismissed. Caddo Central Oil & Refining Co. v. K. C. S. Ry., 98 I. C. C. 39.

(3r) Complainant attacked commodity rates on clean rice and rice flour, carloads, from Arkansas, interior Louisiana and Texas to Salina, Kans., two years prior to April 30, 1924 as unreasonable, unjustly discriminatory and unduly prejudicial as compared with the rates from the same points of origin to other destinations in Kansas and Missouri. Salina is 186 miles west of Kansas City, Mo., and 182 miles west of what is known as the lower Missouri river group of cities, which includes Kansas City and St. Joseph, Mo., and Atchison

and Leavenworth, Kas. It is served by the Santa Fe, Rock Island M. P., and U. P. For some years rates from points at which clean rice originates have been related. The rates to Salina are much higher than those to the lower Missouri river cities and that from Texas points for an average additional distance of 27 miles to the lower Missouri river cities the rates are 22.5c less than the rates from the same points of origin to Salina. The attacked rates apply on both clean rice and rice flour, in straight or mixed carloads, and both commodities are rated fifth class, carloads, in the western classification. In 93 I. C. C. 517, the Commission found a rate of 61c on clean rice, carloads, from Arkansas to Salina would be reasonable for the future. Based upon the differential of 10c, interior Louisiana mills over Arkansas mills, and also upon rates prescribed in the above case for distance substantially similar to those from interior Louisiana and Texas points to Salina, the rates to Salina would be 71c from mills in interior Louisiana and 67c from mills in Texas. HELD, rates attacked unreasonable to extent they exceeded 61c from Arkansas, 71c from Louisiana and 67c from Texas. Reparation awarded. Salina Chamber of Commerce v. A. & W. Ry., 98 I. C. C. 290.

(3s) Complainant attacked commodity rate charged on tanning extract, carloads, from Newport, Tenn., to Olean, N. Y., between August 27, 1920 and Dec. 31, 1922 as unreasonable, unduly prejudicial and in violation of the fourth section. Newport is on the Southern 62 miles northeast of Knoxville, Tenn. Shipments moved over Southern to Potomac Yards, Va., Pennsylvania beyond, charged 44.5c and 40c. There were in effect from Knoxville to Olean rates of 42c prior to July 1, 1922, 38c July 1 to Oct. 31, 1922 and 38.5c thereafter applicable over the same route. The fourth section departure was not set for rearing in connection with this case. HELD, rates charged not unreasonable or otherwise unlawful, complaint dismissed. England Walton & Co. v. Southern Ry., 98 I. C. C. 449.

(3t) Complainant attacked commodity rates on coal, carloads, on the Virginia to interstate destinations as unreasonable and unduly prejudicial. When this complaint was filed the New River district of the C. & O., comprised all mines on its main line between Meadow Creek on the east and Fort Defiance on the west; all mines on its branch lines and subbranch lines served through junction points on its main line between those points; all mines on the Sewell Valley, an independent short line connecting with it at Meadow Creek and extending in an northeastwardly direction to G. & E. Junction; and certain mines on the main line or branch lines of the Virginian. Since the filing of this complaint the Commission has prescribed the New River district rates, eastbound and westbound, from mines on the Kanawha, Glen Jean & Eastern, an independent short line connecting with the C. & O., at Kilsythe Junction, W. Va., and from mines on the Greenbrier & Eastern a short line connecting with the Sewell Valley at G. & E. Junction. From all the mines within these districts, which form a part of the so called Outer Crescent, 46 I. C. C. 66, the rates to any given point in central territory are the same. Complainant pays combination rates to and from the junction point between the Virginian and the C. & O. Other mines on the Virginian within its New River district receive the benefit of district rates to central territory under trackage agreements between the Virginian and the C. & O. Complainants mines and others served exclusively by the Virginian are the only mines in the districts thus far named of the Outer Crescent which are denied the benefit of district rates to central territory. They are entirely surrounded by mines taking the district rates which they seek. No sufficient reason from an operating standpoint appears why the mines on the Virginian discriminated against should be kept on a different rate footing from other mines on the Virginian or on the branch lines of the C. & O., or on independent short lines within the district. HELD, rates attacked unreasonable and unduly prejudicial to extent they exceed New River district rates. Wyoming Coal Co. v. Virginian Ry., 98 I. C. C. 488.

(3u) Proposed cancellation of commodity rate on scrap paper via Gary, Ind., between Chicago and Joliet, Ill., and intermediate points, leaving in effect higher class rate, found justified. Commodity rate to Joliet was established to meet competition over direct route, and proposed rate would be same as that now applicable over direct route. Scrap Pa-

per between Chicago and Joliet, Ill., 91 I. C. C. 569.

(3v) Proposed cancellation of commodity rates on boots and shoes from various New York points to trunk-line and New England territories, and application of higher class rates in lieu thereof, found not justified. Only justification assigned for proposed cancellation to Boston, Mass., is that New England carriers requested that this be done in order to prevent its extension to other points, while cancellation to such points as Philadelphia, Richmond, and Norfolk, is proposed in order to satisfy a complaint of Baltimore, Md., for removal of unjust discrimination. However, present rates have been long in effect, have evidently been satisfactory to carriers, and it was not shown that there has been such a change in conditions as to warrant adjustment sought, or that present rates are unremunerative or unreasonably low. Boots and Shoes from New York Points, 91 I. C. C. 591.

(3w) Proposed restriction of commodity rates on sash, in mixed carloads, with common unglazed doors and millwork, from certain points in Iowa, Illinois, and Wisconsin to trunk line and New England territories, so as not to apply on common glazed sash, found not justified. Glazed Sash to Trunk Line and New England Territories, 91 I. C. C. 731.

(3x) Complainant attacked commodity rates charged on iron or steel sheets and plates, tank iron, galvanized roofing, angles and rivets, carloads, from Ohio, Kentucky, Indiana, Alabama Illinois, Pennsylvania, New York and Missouri to Dallas, Fort Worth and Harrys, Tex., since June 22, 1920, as unreasonable. The points of destination are in what is known as the northeast Texas group. The rates attacked are the same as to Texas common point territory. The factors from points of origin to St. Louis are generally fifth class differentials, which are less than the local rates to that point. The evidence is directed mainly to the factor from St. Louis. In 40 I. C. C. 619, 41 I. C. C. 552 the Commission found the rates on 98 commodities from St. Louis to that group were unreasonable to extent of 5c per 100 pounds. HELD, rates attacked unreasonable to extent the factors from St. Louis exceeded prior to July 1, 1922, 60c to Dallas, and 61.5c to Fort Worth and Harrys, and from and including July 1, 1922 54c to Dallas and 55.5c to Fort Worth and Harrys, reparation awarded. Atlas Metal Works v. A. C. & Y. Ry., 100 I. C. C. 173.

(3y) Complainant attacked commodity rates charged on liquid and solid asphalt, carloads, from Port Neches, Tex., and points taking same rates, to Tulsa, Okla., between Feb. 1, 1922 and Jan. 25, 1923 as unreasonable, unduly prejudicial as compared with rates from St. Louis, Kansas City and Joplin, Mo., and in violation of the fourth section. Allegation of undue preference was withdrawn at the hearing. All shipments moved over T. & Ft. S., to Shreveport, La., K. C. S., to Panama, Okla., and M. V., beyond, prior to July 1, 1922 charged 38c, reduced on that date to 34c, and effective Feb. 15, 1923 reduced to 31.5c, reparation being sought to 25.5c. HELD, rates attacked not unreasonable, complaint dismissed. Standard Paving Co. v. A. T. & S. F. Ry., 100 I. C. C. 233.

(3z) Complainant attacked commodity rates on condensed milk, in cans, in carloads, from Lupton and Johnston, Colo., to Oklahoma as unreasonable and, as compared with rates on other canned goods, unduly prejudicial. A commodity rate of 76c applied on condensed and evaporated milk, in cans, carloads, from Colorado producing points to destinations in Oklahoma. The commodity rate on canned goods generally is 63.5c. The adjustment to the adjacent states of Kansas and Texas is constructed on a different principle, in that canned goods and canned milk now take the same rates to destinations generally in those states, commodity rates of 53.5c and 78c applying to Kansas and Texas, respectively. HELD, rates attacked not unreasonable but unduly prejudicial to extent they exceeded rates on canned goods, reparation denied. Carnation Milk Products Co. v. A. T. & S. F. Ry., 100 I. C. C. 254.

(4a) Complainant attacked commodity rate of 90c charged on 41 cars of doors shipped between March 31, 1921 and June 30, 1922 from Portland, Ore., and Tacoma, Hoquiam, and McLeary, Wash., to Memphis, Tenn., as unreasonable unjustly discriminatory and unduly prejudicial to extent it exceeded subsequently established rate of 83c. The evidence indicates that each group of car-

riers is fostering its own business and that the rates were reduced as a result of competition. Proof is unsufficient to prove damage. HELD, rates attacked not unreasonable, complaint dismissed. Memphis Freight Bureau v. C. & E. I. Ry., 101 I. C. C. 26.

(4b) Complainant attacked commodity rate of 82c charged on wrapping paper, in straight or mixed carloads with toilet paper and paper articles, from Menominee, Mich., and Green Bay and other Wisconsin points to Wichita, Kas., between Nov. 24, 1921 and June 2, 1922, as unreasonable, unjustly discriminatory and unduly prejudicial. Hauls are 804 to 867 miles, average distance of 840 miles, at Chicago, Ill., base rate. Complainants case is based mainly on the fact that rates on a much lower basis apply from the same points of origin to Kansas City, Mo., Topeka, Kas., and other points in the same general territory. Rate prescribed in 66 I. C. C. 571 to Wichita is 151.5 per cent of that prescribed to Kansas City, or 58c on wrapping paper in straight carloads and 70c in mixed cars with toilet paper and paper towels. HELD, rates charged unreasonable to extent they exceeded rates last named, reparation awarded. Wichita Chamber of Commerce v. A. T. & S. F. Ry., 101 I. C. C. 55.

(4c) Complainant attacked commodity rate of 83.5c prior to July 1, 1922 and 75c thereafter, charged on 77 cars of cedar pencil slates from Shelbyville, Murfreesboro, Lewisburg, South Pittsburgh and Chapel Hill, Tenn., to Jersey City, N. J., and New York, between April 1, 1922 and Dec. 31, 1923 as unreasonable to extent it exceeded 66.5c prior to July 1, 1922 and 60c thereafter. Complainant attacked commodity rate of 65c prior to July 1, 1922 and 58.5c thereafter charged on 27 cars of cedar pencil slats from Shelbyville to Savannah, Ga., between March 1, 1922 and Nov. 30, 1923 as unreasonable to extent it exceeded rate from Huntsville and Chase, Ala., which was 40c prior to July 1, 1922 and 36c thereafter. In 25 I. C. C. 203 the 50c rate from South Pittsburgh was found not unreasonable. Distances to New York are 882 miles from South Pittsburgh, 950 miles from Shelbyville, 966 miles from Murfreesboro, 972 miles from Lewisburg and 996 miles from Chapel Hill. The rates on lumber to New York are 46.5c from South Pittsburgh, 47.5 cents from Chapel Hill, 49c from Murfreesboro, 50 cents from Lewisburg and 50.5c from Shelbyville. Subsequent to the hearing the rate from Huntsville and Chase to Savannah was increased from 36c to 58.5c. The rate of 36c from Nashville to Savannah was canceled after the filing of the complaints in these proceedings. The distance from Shelbyville to Savannah is 498 miles, distances from Huntsville and Nashville are 511 and 545 miles, respectively. The rate on lumber from Shelbyville to Savannah is 33c. The rates from the producing points in Tennessee to New York and Savannah are not shown to be out of line with rates from those points to other destinations. Pencil slats are a manufactured product to the extent that lumber is a manufactured product and no more. Both are transported in ordinary box cars and load about the same weight. The risk of damage in transit is practically the same, but the financial loss is greater in the case of slats because of their higher value. Damage so seldom occurs that this consideration is not of much significance. Pencil slats are entitled to reasonable rate as long as they move. HELD, rates attacked unreasonable to extent they exceeded 120 per cent of the lumber rates, reparation awarded. Dixon Crucible Co. v. P. R. R., 101 I. C. C. 415.

(4d) Complainant attacked commodity rate charged on four cars of rig irons shipped from Marion, Ind., to Burnett, Calif., in Oct. and Nov. 1922 as unreasonable, unjustly discriminatory and unduly prejudicial. Shipments moved over Big Four, C. & N. W., U. P., and L. A. & S. L., charged $2.61, minimum 36,000 pounds. Rate charged was applicable on oil well outfits and supplies and was the same in amount as the rate on machines and machinery, except that the minimum weight on these commodities was 30,000 pounds. Effective Nov. 30, 1922 the rate on oil well outfits, was reduced to $2.35 minimum 36,000 pounds, and on machines and machinery to the same amount, minimum 30,000 pounds. Rig irons are rated fifth class in official classification, sixth in southern and class A in western. Oil well supplies are rated fifth class in official and southern and class A in western. No comparisons intended to show that the level of the rate charged was unreasonable was in-

troduced. The record, which is meager, does not conclusively show whether the contents of the cars under consideration consisted chiefly of castings or of partly finished and partly assembled machines or machinery. It is clear that the commodities comprising the shipments were oil well outfits to be used as rig iron drilling outfits for drilling oil or gas wells. The record does not support the allegations of unreasonableness, unjust discrimination or undue prejudice. HELD, rates attacked not unlawful, complaint dismissed. Marion Machine Co. v. L. A. & S. L. Ry., 101 I. C. C. 599.

(4e) Complainant attacked commodity rates charged on handle billets and handle material, carloads, from Marengo and Corydon, Ind., in Sept. 1920 as unreasonable, and in violation of the fourth section in that it exceeded rates from New Albany, Ind., a point farther distant. Marengo is a local station on B. & O. From Huntingburg, 36.7 miles west of Marengo, a branch line of defendant extends northeasterly to French Lick, Ind., where it connects with the Monon. Corydon is the southern terminus of the L. N. A. & C., which connects with the Southern at Corydon Junction, 15 miles east of Marengo. Shipment of Sept. 10. 1920 was routed by shipper care M. C., at Dyer, Ind., and moved over defendants line to French Lick, C. I. & L., to Dyer and M. C., beyond, charged fifth class rate of 32c on wooden handles, n. o. i. b. n. Contemporaneously commodity rates of 24c on handle timber, sawed square, rived or split from the bolt, not further finished, and 26c on handle timber in the rough, sawed or turned to shape, not further finished, were in effect from both Marengo and Corydon to Chicago Heights over the above route to Dyer, E. J. & E., beyond, and also by way of defendant to Princeton, Ind., and C. & E. I. Effective Oct. 1, 1921 these rates were established over lines of defendant and C. I. & L., via French Lick in connection with the M. C., through Michigan City, Ind. Complainant contends rates charged are unreasonable to extent they exceed lumber rates, and lumber rates are unreasonable to extent they exceed rates from New Albany. The record indicates that handle material not further finished than shaved or cut to shape are not in any more advanced stage of manufacture than handle material not further finished than turned to shape, the only difference between the two being that one is produced by hand and the other by machinery. The record indicates that the distance over the route of movement of this shipment is identical with that over the route of defendant and C. I. & L., to Dyer, and E. J. & E., in connection with which joint commodity rates were in effect at time of movement. These rates were subsequently established for application in connection with the M. C., as a delivering carrier through Michigan City, Ind., and the distance over the route by way of that point is greater by about 37 miles than by way of Dyer. HELD, rates attacked unreasonable to extent they exceeded rates on lumber, reparation awarded. Chicago Heights, Mfgrs. Asso. v. B. & O. C. T. R. R., 101 I. C. C. 675.

(4f) Proposed cancellation of commodity rates on furniture, c. l. and l. c. l., from and to points in c. f. a. territory, and substitution therefor of classification basis and in certain instances exception basis, which would result in both advances and reductions, found not justified except as to l. c. l. traffic. Proposed cancellation while at same time continuing relatively lower commodity basis from producing points in adjoining territories would seriously disturb long-standing and important relationship, and create undue prejudice against southern Indiana manufacturers. Furniture from C. F. A. Territory, 92 I. C. C. 97.

(4g) In 77 I. C. C. 473 commodity rates from Memphis to western Louisiana points were found unduly prejudicial to Memphis and unduly preferential of New Orleans. Upon further hearing, former finding modified with respect to rates on sugar. There is no present or probable movement of that commodity from Memphis to Louisiana points and application of rates prescribed would materially increase present rates from New Orleans while other producing points would continue to enjoy lower intrastate rates, thus creating a discriminatory situation against New Orleans and disrupting present origin groupings. Memphis-Southwestern Investigation, 92 I. C. C. 447.

(4h) Commodity rates higher than class rates charged on strawberries from Sarcoxie, Mo., to Kansas City, Mo., via an interstate route, found applicable. While carrier's individual tariff provided class rates on strawberries by not in-

cluding them in list of articles taking commodity rates, the subsequent establishment of a commodity rate had effect of removing that article from the classification and class-rate tariffs which theretofore applied. Furthermore, it is not a condition precedent to application of such a commodity rate that tariff containing it make cross-reference to tariff in which class rates are named. General index to carrier's tariffs contained a reference that commodity rates on fruits and vegetables, including strawberries, were to be found in tariff under which rates were assessed, and this was a sufficient compliance with rule 4(c) of Tariff Circular 18-A. Singer v. St. L. S. F., 95 I. C. C. 667.

(4i) Upon complaint attacking c. l. commodity rates on canned goods from Wisconsin points and from St. Paul, Minn., to destinations in the Mississippi Valley, and proposing adjustment by the rezoning of the State of Wisconsin and adoption of basis of rates prescribed on commodities, c. l., from Chicago to Mississippi Valley in 64 I. C. C. 306, 335. FOUND, that rates from Middleton, Wis., are and for the future will be unreasonable to extent they exceed or may exceed by more than 2 cents the contemporaneous rates from Madison, Wis.; that rates from St. Paul and points basing thereon are and for the future will be unreasonable to extent they exceed or may exceed rates 5 cents lower than present rates; and that throughout the balance of territory under consideration, rates are unreasonable only in instances where, and to extent, existing joint rates exceed those based upon the lowest combination, using St. Louis, Milwaukee, and Chicago, as basing points. Carnation Milk Products Co. v. A. & W. Ry. Co., 96 I. C. C. 208.

(4j) Proposed cancellation of commodity rates on wet phosphate rock, from interior Florida points to Jacksonville, Fla., for export or to be dried and reshipped by rail or water, necessitating the movement of such traffic to the port of Fernandina, Fla., and the disruption of the business of the drying terminals at Jacksonville, found not justified. Neither is the action justified by contention that continuance of such rates is not warranted by volume of movement. Wet Phosphate Rock to Jacksonville, 96 I. C. C. 711.

(4kl) Present commodity rates on iron and steel articles from St. Louis, Mo., to Mississippi Valley points, adjusted in harmony with commission's decision in 64 I. C. C. 306, found not unreasonable as compared with lower rates from Louisville, Ky., to same destinations nor, as applied from Louisville and other points in the St. Louis-Louisville group, unduly prejudicial in relation to corresponding rates from competing points in central territory, on the Ohio River, and in the Southeast, to same destinations. St. Louis Chamber of Commerce v. A. & V. Ry. Co., 98 I. C. C. 29.

(4m) Present commodity rates on sewer pipe from St. Louis, Mo., and points grouped therewith, to Mississippi Valley destinations, found not unreasonable, but these rates and corresponding rates from southeastern producing points to same destinations found to embody a maladjustment of rates due to the revision of rates from St. Louis group pursuant to commission's decision in 64 I. C. C. 306. Defendants notified to make equitable readjustment of rates by June 1, 1925, record being held open for such further action or proceedings as may be necessary or appropriate. St. Louis Chamber of Commerce v. A. & V. Ry. Co., 98 I. C. C. 29, 34, 35.

(4n) Complainant seeking a commodity rate in lieu of first-class rate on artificial silk made comparisons with various commodities rated first class, any quantity on which commodity rates between specific points are published. FOUND, that the commodity rates on those nonanalogous articles were established because of the volume of the movement and competitive and other conditions having no relation to the movement of artificial silk, which is not competitive with any of the articles named. Viscose Co., v. P. R. R. Co., 98 I. C. C. 97, 99.

(4o) Rates on lump coal from northern Colorado to Northport, Nebr., found unreasonable for future to extent it may exceed $3.40 per net ton. Colo. & N. Mex., Coal Operators Asso. v. D. & R. G. W. R. R. Co., 98 I. C. C. 377, 391.

(4p) Commodity rate charged on shipments of tomatoes from St. Louis, Mo., to New Orleans, La., during 1922 and 1923 and the present rate, which equals the rate on this commodity between same points in the reverse direction, found not unreasonable or unduly

preferential, as compared with the adjustment of northbound rates on same commodity established pursuant to Fruits and Vegetables, 43 I. C. C. 291, and with rates on like traffic between other points for similar distances. Complaint dismissed. St. Louis Fruit & Vegetable Asso. v. L. & N. R. R. Co., 98 I. C. C. 553.

(4q) The commission has consistently found that commodity rates must be applied strictly, from which it follows that only the article or articles clearly comprehended within the descriptive terms of the commodity rate can be considered as having been removed from the classification. Contention that commodity item on "Vegetables and fruits, viz, Pears, peaches, and plums," was applicable on tomatoes on ground that classification description of "Vegetables" included tomatoes not sustained. St. Louis Fruit & Vegetable Asso. v. L. & N. R. R. Co., 98 I. C. C. 553, 556.

(4r) Respondents proposed to cancel less carload commodity rates on clean rice from, to, and between points in southern territory. Rice, cleaned, whole or broken, in barrels, boxes or double bags, less carloads, is rated sixth class in southern and fourth class in official and western classifications. Rice in packages, in car loads, minimum 40,000 pounds, is rated sixth class in southern and official classifications and fifth class in western classification. Less carload commodity rates on rice do not, as a rule, apply from interior points in the southeast such as Atlanta, Ga., and Birmingham, Ala., but they are published in about 20 tariffs from certain points, including particularly New Orleans, La., Memphis, Tenn., Mobile, Ala., and south Atlantic ports. The increases which would result from the cancellation of the commodity rates range from 12% to over 40%. The marked increase in some instances is due to the absence of joint class rates to certain of the destinations. There appears to be a considerable movement of less carloads of rice from New Orleans to a few of the farther distant points, but the bulk of the traffic is to distances much less than 1,000 miles. Unquestionably the favorable rates accorded New Orleans are responsible for some of the longer hauls. There appears to be no reason why less carload commodity rates on clean rice on basis of the sixth class rates should not be established. HELD, proposed schedules not justified, but without prejudice to establishment of rates on clean rice in less carloads not in excess of sixth class rates approved in Southern Class Rate Investigation. Rice between points in southern territory 102 I. C. C. 79.

(4s) Complainant attacked combination rate of 50c charged on gasoline and kerosene, carloads, from Cushing, Okla., to Perryville, Mo., as unjust unreasonable and in violation of section four. Shipments moved since Nov. 22, 1923 over MKT and Frisco to Perryville Junction about 559 miles, and C. G. N., beyond, 10 miles, charged 34.5c to Perryville Junction and fifth class 15.5c beyond. Complainant seeks reparation to 29.5c the rate to socalled Missouri A territory. The rate to Missouri B territory, where Perryville Junction is located is 34.5c. A rate somewhat higher than 34.5c is justified. HELD, rate attacked unreasonable to extent it exceeded 42c, reparation awarded. Illinois Oil Co. v. C. G. N. Ry. 102 I. C. C. 154.

(4t) Complainant attacked commodity rates charged on two cars of wire rope shipped in Sept. 1922 from Kansas City, Mo., to Medicine Bow and Rawlins, Wyo., as unreasonable, unduly prejudicial and in violation of section four. Shipments moved over U. P., 819 miles to Medicine Bow and 879 miles to Rawlins, charged $1.26. During the time of movement the rate on oil well supplies or mining machinery, including steel was $1.13 or the same as the rate on like commodities from St. Louis, Mo., to the same points, 1,034 and 1,094 miles, respectively. On Nov. 15, 1922 the rate from Kansas City was reduced to 97.5c and on April 10, 1923, its application was broadened so as to include wire rope. HELD, rate attacked unreasonable to extent it exceeded $1.13 reparation awarded. Black Steel & Wire Co. v. U. P. R. R., 102 I. C. C. 163.

(4u) Complainant attacked commodity rate charged on 3 cars of cowpeas from Navojoa, Sonora, Mexico, to San Francisco, Calif., during Nov. 1923 as unreasonable. Charged $1.33. At the time the shipments moved there was a rate of 94c on peas, Mexican, and this rate was made applicable on cowpeas April 19, 1924 and is now in effect. Shipments moved S. P., of Mexico, West Coast Route, 377 miles to Nogales, Ariz. and S. P., 1,036 miles, total distance 1,413 miles. HELD, rate attacked un-

reasonable to extent it exceeded 94c, reparation awarded. Lewis Simas Jones Co., v. S. P. Co., 102 I. C. C. 245.

(4v) Complainant attacked commodity rates charged on scrap iron or steel borings, old cable, old rails, and old car wheels, and second hand rails, carloads, between Denver, Colorado Springs, Pueblo and Trinidad, Colo., and points taking same rates, on the one hand, and points in the Mississippi river, Peoria, Chicago, St. Paul, Duluth and Missouri river groups, on the other hand, as unjust and unreasonable and unjustly discriminatory. Any class of equipment may be used for its transportation and it usually loads in excess of the minimum of 50,000 pounds. The evidence does not indicate that the rates in issue are out of line with rates on the same or similar commodites moving in the same general territory. HELD, rates attacked not unreasonable or otherwise unlawful, complaint dismissed. Denver Metal & Machinery Co. v. A. T. & S. F. Ry. 102 I. C. C. 255.

(4va) Proposal to cancel commodity rates on salt cake from Pacific coast and related points to certain destination in Wisconsin, leaving in effect higher class rates, found not justified. The present rates compare favorably with those on like and similar traffic between points in same general territory. Carriers propose their cancellation here, but such rates would continue in effect to other destinations in that territory. Salt Cake from Pacific Coast, 102 I. C. C. 261.

(4w) Complainant attacked commodity rates charged on slack coal from mines in Missouri, Oklahoma and Kansas to Superior, Neb., as unreasonable, and that, in their relationships to the rates from the same mines to Omaha and Lincoln, Neb:. they subject Superior to undue prejudice and disadvantage. Superior is on the M. P., Santa Fe Burlington and Northwestern. The rates from Bevier, Mo., to Omaha, Lincoln and Superior apply over the Burlington direct. This carrier also serves Concordia, Kas., to which point the rate from Bevier is $2.33 for 334 miles, compared with a rate of $2.86 from Bevier to Superior for 334 miles. HELD, rates on slack coal attacked are unreasonable to extent they exceed $2.25 from Bevier, $2.45 from Pittsburgh and $3.45 from Henryetta. Nebraska Cement Co. v. A. T. & S. F. Ry. 102 I. C. C. 265.

(4x) Complainant attacked commodity rates charged on 21 cars of refined petroleum products from Mobile, to Gilbertown, Ala., between Feb. 2 and June 29, 1923, and rates charged on 16 cars as unreasonable, unduly prejudicial as compared with rate from Mobile to Waynesboro, Miss. Shipments moved wholly within Alabama over the Southern to Calvert, Ala., thence A. T. &. N., to destination. Charged 29 and 32c, the rate to Waynesboro, a point beyond being 20c. The distance from Mobile to Waynesboro is 83 miles and that over the route of movement to Gilbertown is 102 miles via route of movement. Waynesboro is just west of the Mississippi-Alabama state line and Gilbertown is just east of it. Gilberton is served only by the A. T. & N., and Waynesboro only by the M. & O., not a defendant. The record will not support a finding of undue prejudice. HELD, rate attacked not unduly prejudicial, complaint dismissed. Gulf Refining Co. v. Southern Ry. 102 I. C. C. 274.

(4y) Complainant attacked commodity rate of 53.5c charged on 31 tank cars of liquified petroleum gas from Burkburnett to Tulsa, Okla., during May and June 1921 as unreasonable to extent it exceeded 30.5c. Distance 352 miles, charged 53.5c refined oil rate, reduced to 38c on April 25, 1922 and to 34c on July 1, 1922 the present rate. The rate of 30.5c was found reasonable in 66 I. C. C. 426 for application on refined oil on and after August 26, 1920 from Burkburnett to West Tulsa. HELD, rate attacked unreasonable to extent it exceeded 30.5c, reparation awarded. Tidal Western Oil Co., v. M. K. & T. Ry., 102 I. C. C. 322.

(4z) Complainant attacked commodity rate charged on cotton bagging, carloads, from Nashville territory to Dallas and other points in Texas common point territory since Sept. 20, 1922 as unreasonable, unjustly discriminatory and unduly prejudicial. Prior to July 1, 1922 the applicable rate on cotton bagging and cotton bags was $1.055 except that on bagging from Georgia it was $1. On that date these rates became 95 and 90c. Effective Sept. 20, 1922 the 95c rate on bags was reduced to 75c without any change in the rates on bagging. HELD, rates attacked not unreasonable but unduly prejudicial to extent they exceeded rates on bags, repar-

ation denied. Fulton Bag & Cotton Mills v. A. & V. Ry. 102 I. C. C. 335.

(5a) Complainant attacked commodity rate charged on 40 cars of nut flats shipped from Lackawanna, N. Y., to Milldale, Conn., and fifth class rate charged on four cars of nut flats from Youngstown, O., to Milldale, subsequent to Jan. 29, 1921 as in violation of sections 1, 2 and 3 of the act to extent they exceeded rates on wire rods; iron or steel, in coils. The rates collected were those applicable on bar iron or steel, the fifth class rate from Youngstown and from Lackawanna, a commodity rate lower than fifth class rate by 2c prior to July 1, 1922 and 1.5c thereafter. The commodity rates on wire rods, iron or steel, in coils, were applicable. HELD, rates charged inapplicable, reparation to basis of rate on wire rods, iron or steel in coils, reparation awarded. Clark Bros. Bolt Co. v. N. Y. C. R. R. 102 I. C. C. 355.

(5b) In 95 I. C. C. 66, the Commission found the rate on newsprint paper, carloads, from Thorold, Ont. Can., to New York as unreasonable to extent it exceeded 32c prior to July 1, 1922 and 29.5c thereafter. The rate of 29.5c has been published by the Canadian National under its general concurrences from the other defendants, who consider the rate too low. HELD, findings affirmed. Ontario Paper Co. v. C. N. Ry. 102 I. C. C. 365.

(5c) Complainant attacked commodity rates charged on iron and steel pipe, carloads, from Texas to Oklahoma and from Oklahoma to Texas as unreasonable. It is the general practice of oil companies in the southwest to move pipe from one location where it has served its purpose to another where it is needed. Shipments moved between May 27, 1922 and Feb. 28, 1924. The Texas points of origin are in Texas common point territory, except Alanreed and Channing, in the Panhandle section. The applicable 53.5c rate was blanketed from the northern half of Texas common point territory to all destinations in Oklahoma. The class rates between these points are based on distance to a certain extent and are not so blanketed. The rates asked by complainant are based on the Memphis Southwestern scale prescribed in 77 I. C. C. 473, 595, except that to and from the Panhandle section of Texas a differential over this scale is asked. HELD, rates attacked unreasonable to extent they exceed Memphis Southwestern scale plus fifth class differential to Texas differential territory reparation awarded. Texas Pacific Coal & Oil Company v. C. R. I. & G. Ry. 102 I. C. C. 369.

(5ca) Rates on automobiles and automobile parts from eastern defined territories to all points on Northwestern Pacific R. R. north of Willits, Calif., found unjust, unreasonable, and unduly prejudicial to extent they exceed lower contemporaneous rates on like traffic from same territories to California coast-group points. Reasonable and nonprejudicial rates prescribed and reparation awarded. Eriksen v. A. A. R. R., 102 I. C. C. 374.

(5d) Complainant attacked commodity rates on vegetable oils, carloads, from Oklahoma to Houston, Tex., as unreasonable, unjustly discriminatory and unduly prejudicial. Complainant purchases vegetable oils in Oklahoma in competition with buyers at Kansas City and Dallas, Tex. In 39 I. C. C. 497 the the Commission prescribed a scale of reasonable maximum rates on cottonseed oil from Oklahoma producing points to Kansas City. That scale, graded down for the shorter distances and as increased under the general increases of 1918 and 1920 was prescribed in 64 I. C. C. 213 from Oklahoma, Arkansas and Louisiana to Dallas. In 78 I. C. C. 151 this scale, less the general reductions of 1922, was extended from Arkansas and Louisiana to Houston. HELD, rates attacked unreasonable to extent they exceeded the rates prescribed in 78 I. C. C. 151, reparation awarded. Houston Packing Co. v. A. T. & S. F. Ry. 102 I. C. C 385.

(5da) Commodity rates, reflecting 78 per cent of class basis, on helical springs from Chicago and Waukegan to New Orleans found not unreasonable when applied to occasional shipments. Crescent Bed Co. v. A. & V. Ry., 102 I. C. C. 419.

(5e) Complainant attacked commodity rates on lumber, carloads, from Tishomingo, Belmont, and Golden, Miss., and Red Bay and Vina, Ala., to St. Louis, Mo., and to Buffalo, N. Y., Pittsburgh, Pa., as unjust, unreasonable and unduly prejudicial and to Buffalo-Pittsburgh district as in violation of section four. Tishomingo, Belmont, Golden, Red Bay and Vina are on the I. C., which extends

southeasterly from Corinth. Miss., to Haleyville and Birmingham, Ala. Corinth is on the main line of the Southern between Memphis and Chattanooga, Tenn. Distances to Corinth are from Tishomingo, 27 miles, Belmont, 36 miles, Golden, 38 miles, Red Bay, 42 miles, and Vina 49 miles. TO ST. LOUIS TERRITORY. To St. Louis the short line distance over direct route of the I. C., from Golden through Corinth is about 352 miles, and rate of 27c. The rate of 23.5c from Corinth also applies from stations south thereof on the M. & O., as far as Prairie, Miss., about 84 miles south of Corinth. The lower rate from this group on the M. & O., extends about 35 miles farther from St. Louis than does the higher rate of 27c from Vina, the most distant in the group of complaining points. The M. & O., also maintains rates from much farther distant points than Vina. The rate of 23.5c also applies from stations southwest of Corinth on the G. M. & N., such as Ripley and New Albany, Miss., from stations such as New Albany and Tupelo on the Frisco; and from stations on the Mississippi division of the I. C., southeast of Memphis, such as Holly Springs, Miss. HELD, rate attacked to St. Louis not unreasonable or unduly prejudicial. TO BUFFALO PITTSBURGH TERRITORY. Present rate is 42.5c or 6c higher than rate of 36.5c from Corinth. HELD, rate attacked not unreasonable or unduly prejudicial. HELD, further rate of 43c from Tishomingo, Golden, and Red Bay to Buffalo Pittsburgh territory from July 10, 1922 to May 6, 1924 unreasonable to extent it exceeded 42.5c the aggregate of intermediates on Corinth, this being the present rate, reparation denied, complaint dismissed. Northeast Mississippi Traffic Bureau v. A. &. V. Ry. 102 I. C. C. 611.

(5f) Complainant attacked commodity rates charged on fruits and vegetables, carloads, from Bowling Green, Oakland, and Smiths Grove, Ky., Gibson and Humboldt, Tenn., and Mobile, Ala., to Logansport, Ind., as unreasonable, unduly prejudicial and in violation of section four. L. & N. filed application asking for authority to charge to South Bend and Fort Wayne, Ind., rates lower than to Logansport. Combination rates applied and apply from the points of origin to Logansport, composed of local commodity rates to Louisville or Evansville and class rates beyond. Contemporaneously there were in effect joint commodity rates from the same points of origin to Fort Wayne, South Bend and Lafayette, Ind., and to Chicago, Ill. These rates in most instances were lower than the rates to Logansport, which is intermediate to South Bend and Fort Wayne over the Pennsylvania as delivering carrier. These later rates were originally constructed on the combination basis, but commencing in 1914 with the Five Percent case, 31 I. C. C. 351, various changes have been made in the rates north and south of the Ohio river without corresponding changes in the joint rates, thereby destroying the relationship which formerly existed between the joint rates and those constructed on combination. HELD, rates attacked not unreasonable but unduly prejudicial to extent the rate to Logansport exceeded the rate to Fort Wayne and South Bend, reparation denied. Caruso & Co. v. C. & E. I. Ry. 102 I. C. C. 619.

(5g) Complainant attacked commodity rates charged on fuel and gas oils, carloads, from Okmulgee and Tulsa., to Davenport, Iowa, as unreasonable, unjustly discriminatory and unduly prejudicial. One car of fuel oil shipped June 3, 1921 upon which a rate of 33c was charged and two cars of gas oil shipped on Oct. 2 and 18, 1922 upon which a rate of 29.5c was charged. Reparation is sought to basis found reasonable in 73 I. C. C. 251 which was 5c lower than rates on refined oil. HELD, rates charged unreasonable to extent they exceeded 29.5c prior to July 1, 1922 and 26.5c thereafter, reparation awarded. Davenport Locomotive Works v. C. M. & St. P. Ry. 102 I. C. C. 639.

(5h) Complainant attacked commodity rates charged on green salted hides, carloads, from Nashville, Tenn., since Jan. 15, 1922 to Woburn, North Woburn, Mass., Manchester, N. H., Portville and Ballston Spa, N. Y., and Curwensville and Chester, Pa., as unreasonable, unjustly discriminatory, unduly prejudicial and in violation of the fourth section. The hides composing the shipments were for the most part "country hides" as distinguished from "packer hides." The latter are more valuable than the former Green salted hides are rated sixth class in southern and fifth in official, minimum 36,000 pounds. Defendants concede that the class rates applied were

relatively unreasonable and unduly prejudicial as compared with the rates on green salted hides from other producing points in the south but contend that the rates requested are too low. The skillful handling of "packer hides" is undoubtedly the cause for the higher average weight in central territory in which are located many of the larger packing houses. The violation of the fourth section has been corrected. HELD, rates attacked unreasonable and unduly prejudicial to extent they exceed from Nashville prior to July 1, 1922 to Boston rate points 79c, to Portville, 72c to Ballston Spa 77c, to Curwensville 72c and to Chester 73c, subsequent thereto, 71c, 65, 70, 65 and 66c, respectively, reparation awarded. Tolman Dow & Co. v. T. C. Ry. 104 I. C. C. 37.

(5i) Complainant attacked commodity rate charged on sulphuric acid, carloads, from Grasselli, Ind., to Toledo, O., as unreasonable. Shipments moved between Oct. 25, 1922 and March 9, 1923 via I. H. B., and M. C., charged $4.80, being 90% of fifth class rate, and reparation is sought to basis of $4.30, which became effective May 10, 1923, this being the equivalent of the sixth class rate. The general basis for rates on sulphuric acid between points in central territory was 90% of fifth class when the shipments moved. HELD, rates attacked not unreasonable, complaint dismissed. Royster Guano Co. v. M. C. R. R. 104 I. C. C. 151.

(5j) Complainant attacked commodity rates charged on broom handles, carloads, from Atlantic and Ewen, Mich., and Crandon and Glidden, Wis., to Des Moines, Kansas City, North Kansas City, Mo., and Deshler, Neb., as unreasonable and unduly prejudicial. Shipments moved from Atlantic and Ewen to Kansas City between Oct. 5, 1921 and Dec. 23, 1922; from Atlantic to Des Moines between Sept. 7, 1921 and Nov. 5, 1923; and from Crandon to Des Moines on Oct. 8, 1923. Charged at commodity rates on finished handles. Complainants claim that commodity rates provided for handle timber in the rough, sawed or turned to shape, not further finished, but not applicable on finished handles, were applicable on the shipments. The handles contained in the shipments were turned to shape, with a hole through them near one end. They were shipped in bundles and were not wrapped or packed. The record does not show that the shipments were entitled to the commodity rates applicable to handle timber. HELD, rates attacked unreasonable to extent they exceed rates 1.5c over the lumber rates, reparation awarded. Deshler Broom Factory v. A. T. & S. F. Ry. 104 I. C. C. 183.

(5k) Complainant attacked commodity rates charged on furnaces and furnace parts, carloads, from Holland, Mich., to Milwaukee, Wis., and Chicago, Ill., as unreasonable, unjustly discriminatory and unduly prejudicial and to Chicago prior to Oct. 3, 1921 as in violation of the fourth section. Holland is on the P. M., only. Distance Holland to Chicago is 159 miles and to Milwaukee by defendant is 226 miles. The direct route from Holland to Milwaukee is over defendants line to Grand Haven, 22 miles, and G. T., car ferry beyond, 109 miles, which is less than half of that via the P. M. No joint rates have ever been maintained by defendant to Milwaukee in connection with the G. T., and the combination basis on Grand Haven has applied to shipments routed via the short route, which has always been higher than the rate via defendants indirect single line through Ludington. Defendant maintains joint rates to Milwaukee over its rail and car ferry lines to Manitowoc and the Northwestern beyond, and prior to June 3, 1923 in connection with the line of the same carrier via Chicago, which rates were or are the same in amount as those via defendants single line to Milwaukee. Commodity rates the same as the rates from Detroit have been in effect from Holland to Chicago since Oct. 3, 1921 and from Holland to Milwaukee since Jan. 29, 1923. While the actual distance from Holland to Milwaukee via defendant is 226 miles, the record shows that on traffic to Milwaukee, the carriers have included Holland in a group of points in western Michigan which take scale rates corresponding to distance of 160 miles under the central territory scale. Since the distance from Holland to Chicago is 159 miles it will be seen that the carriers have practically equalized distances from Holland to Milwaukee and Chicago, and the class rates are the same from Holland to each of these points. The conditions of record make it clear that the differences in distances of Detroit and Holland from the destinations herein make it inequitable to charge as high a rate from Holland as from Detroit. Prior to Oct. 3,

1921 when the rate from Holland to Chicago was higher than the rate from Detroit the tariffs naming the rate from Detroit to Chicago carried a rule 77 provision, and complainant is entitled to reparation to the basis of a rate equal to that from Detroit. HELD, charges attacked not unreasonable except that prior to Oct. 3, 1921 the rate of 27c from Holland to Chicago was unreasonable to extent it exceeded 24.5c, and for future will be unduly prejudicial to extent they exceed those based upon rates bearing the same relationship to the fifth class rates from Holland to Chicago that the commodity rates from Detroit to Chicago bear to the fifth class rates from Detroit, reparation awarded. Holland Furnace Co. v. A. T. & S. F. Ry. 104 I. C. C. 286.

(51) Complainant attacked commodity rates charged on numerous carloads of lubricating oils, lubricating greases and paraffine wax, shipped between Jan. 11 and July 10, 1922 from Port Arthur, Tex., to Morgan City, New Iberia, Vinton, Lafayette, Baton Rouge, Welsh, Lake Charles, Crowley, and Jennings, La., as unjust and unreasonable. Shipments were packed in cans, barrels and other packages and were loaded in carrier equipment. They originated on the T. & N. O., and moved beyond over the L. W., or L. W., and M. L. & T. The applicable rates were those on refined petroleum oil of 19c to Vinton and Lake Charles, 20.5c to Welsh, Jennings, Crowley, New Iberia, and Baton Rouge, 21c to Lafayette and 22.5c to Morgan City. Prior to Oct. 8, 1922 these rates applied on shipments in either packages or tank cars. On that date a rate of 16.5c was established to all of these points on shipments in tank cars, and on July 12, 1923 it was established also on shipments in packages. At the time of movement rates on refined petroleum from Shreveport and New Orleans to these points were, and now are, the same on shipments in packages as on shipments in tank cars. The existence of the contemporaneously lower rates on shipments in tank cars and the subsequent establishment of lower rates on shipments in tank cars do not alone demonstrate the unreasonableness of the rates assessed, nor in the opinion of the Commission is it established by the comparisons of record with other rates. HELD, rates attacked not unreasonable, complaint dismissed. Texas Oil Co. v. T. & N. O. R. R. 104 I. C. C. 337.

(5m) Complainant attacked joint commodity rate charged on 63 cars of flour from Grand Rapids, Mich., to Birmingham, Ensley, Bessemer and Montgomery, Ala., between Sept. 1, 1920 and May 1, 1921 as unreasonable, unjustly discriminatory and unduly preferential. Shipments moved defendants lines to Ohio river crossings and L. & N., beyond. Charged joint rate of 62.6c, while aggregate of intermediate to and from Ohio river, based on Jeffersonville, Ind., was 61.5c. The joint rate had been the same as or lower than the combination on Jeffersonville for a number of years prior to Sept. 1, 1920 and was restored to the level of the Jeffersonville combination on April 9, 1921. HELD, rate attacked not unreasonable, reparation denied, complaint dismissed. Valley City Milling Co. v C. & O. Ry. 104 I. C. C. 634.

(5n) Complainant attacked commodity rates charged on sand and gravel from their shipping points to destinations in Ohio, West Virginia, New York and Pennsylvania, as unjust and unreasonable and unduly prejudicial. There is no interstate scale of rates on sand and gravel, as such, in central territory, the rates being published as specific commodity rates to the main consuming points and applied as maxima at intermediate points. They have been established as the business developed under competition, both among the railroads and the shippers, each carrier publishing such rates as its own particular situation called for, resulting in what defendants on brief admit to be a hodge podge of rates. They generally show but little, if any, regard to distances. The marked lack of uniformity in the rates has been commented upon in every case that has been before the Commission dealing with the particular situation. Sand and gravel are among the lowest grade commodities known to commerce, and can not move except at low rates. They are transported exclusively in open top cars, loaded to and beyond the marked capacity of the car, the average being in excess of 50 tons, and move generally in as great a volume as slag and crushed stone. An ample supply of cars is generally near at hand, and loading is usually accomplished within 24 hours. The risk and liability of loss and damage is negligible. The movement is often in train lots, and it is considered desirable traffic. Generally speaking there is no

transportation reason why the rates on sand and gravel should be higher than the rates on slag or crushed stone. In most territories, and in the states, they are given the same rates, and where the Commission has prescribed scales in any territory on all of them they have been rated the same. HELD, rates attacked unreasonable to extent they exceed rates ranging from 60c for 20 miles to 140c for 200 miles, 20c per ton to be added for joint hauls. Penn. Sand & Gravel Prod. Asso. v. B. & O. R. R. 104 I. C. C. 717.

(5o) Complainant attacked commodity rates charged on strawberries and tomatoes, carloads, from points on the L. & N., in Kentucky and Tennessee to Youngstown, O., during May and July 1922 as unjust, unreasonable, unjustly discriminatory, unduly prejudicial and in violation of the fourth section. Woodburn, Franklin and Portland are on the main line of the L. & N., between Bowling Green, Ky., and Nashville, Tenn., and Bristow is just north of Bowling Green. Milan and Gibson are on the Memphis division in Mississppi valley territory. The shipments moved over the L. & N., to the Ohio river crossings and the B. & O., the Pennsylvania lines and Erie beyond, charged at combination of commodity rates to Ohio river and class rates beyond. A lower combination rate of 94.5c made 47c to Louisville and 47.5c beyond was applicable on the tomatoes and one shipment was overcharged to that extent. At time shipments moved defendants maintained a joint commodity rate of 90c on strawberries from these points to Pittsburgh, Allegheny and Erie, Pa., Buffalo, N. Y. and other C. F. A. points in the Buffalo-Pittsburgh district. To Cleveland and Detroit a rate of 88c was maintained, and from Milan a joint rate of $1.025 was in effect to Pittsburgh and Allegheny and $1.05 to Erie and Buffalo. At the time the shipment moved from Gibson a joint rate of 81.5c was in effect on tomatoes from that point to Pittsburgh rate points and 83c to Buffalo rate points. Most of these rates were applicable through Youngstown. HELD, rates attacked unreasonable to extent the rates on strawberries from Milan exceeded $1.025 and from other points of origin 90c, minimum 18,000 pounds and on tomatoes from Gibson unreasonable to extent it exceeded 81.5c, reparation awarded. Coulbourn Fruit Co. v. B. & O. R. R. 104 I. C. C. 734.

(5p) Complainant attacked commodity rate charged on wrapping paper, carloads, and less carloads, from Hartsville, S. C., to Jackson, Miss., as unjust, unreasonable and unduly prejudicial. Since the filing of the complaint the defendants have voluntarily reduced the rate to the level of the Vicksburg rate, the basis sought. Jackson is 44 miles east of Vicksburg on the A. & V., and is intermediate between Hartsville and Vicksburg. The present rate to Jackson is 29c higher than to Vicksburg a more distant point. Jackson is in active competition with Vicksburg in the distribution of wrapping paper and feels the effect of this departure from the fourth section. HELD, rates not unreasonable but are unduly prejudicial to extent they exceeded the rate to Vicksburg, reparation denied. Jackson Paper Co. v. A. G. S. Ry. 104 I. C. C. 758.

(5q) Complainant attacked commodity rate of 22.5c charged on crude petroleum oil, carloads, from El Dorado, Ark., to Houston, Tex., as unreasonable, unjustly discriminatory and unduly prejudicial in its relation to the rate of 14c to New Orleans, La. The Smackover-El Dorado oil fields is within the south central part of Arkansas, El Dorado being a representative producing point therein. The defendant lines directly serving the field are the Mo. Pac. and the Rock Island. From this district a rate of 14c has been recently maintained on crude oil, for export and coastwise movement, to New Orleans and Houston alike. The adjustment on domestic traffic, however, has been different, in that the rate to Houston has been 22.5c, whereas via the foregoing carriers and connections the rate to New Orleans has been 14c, established August 18, 1924. Taking defendants own figures, the average distance to Houston is about 13% greater than to New Orleans. On the other hand, the 22.5c rate to Houston is almost 61% higher than the 14c rate to New Orleans. This spread in the rates is indefensibly disproportionate, the only differentiating consideration disclosed of record being that of distance, and an unduly prejudicial result to the Houston interests is shown. A rate to Houston 13% in excess of the rate to New Orleans would closely approximate 16c. Since the submission of the case and in 104 I. C. C. 651, the carriers concerned sought to equalize the rates to New Orleans and Houston, among other points,

by increasing the New Orleans rate, and by reducing the Houston rate, to 16c. The proposed increased rate was found not justified, and the proposed reduction found justified. Pursuant thereto a domestic rate of 16c to Houston has been published, effective Feb. 26, 1926. HELD, complaint dismissed. United Central Oil Corp. v. M. P. R. R. 107 I. C. C. 1.

(5r) Complainant attacked commodity rates charged on flaxseed, carloads, from South Dakota to Minneapolis and Duluth, Minn., Chicago, Ill., Milwaukee, Wis., Des Moines, Iowa, Omaha, Neb., and Kansas City, Mo., as unreasonable and, compared with the rates on flaxseed from Iowa, Minnesota, Montana and North Dakota to the same destinations unduly prejudicial. Defendants proposed schedules of rates on flaxseed from and to the points in question which are about 120% of the rates on wheat between the same points. The present rates on flaxseed from South Dakota bear no uniform relationship to the rates on wheat. The spread varies from station to station. From Minnesota points to Minneapolis and Duluth, the principal markets for flaxseed, the rates on flaxseed and wheat generally are the same, but in some instances flaxseed rates are 0.5c or 1c higher than the rates on wheat. The interstate rates from North Dakota range from 0.5 to 3c higher than the wheat rates, with a maximum spread of 10% of the wheat basis. From Montana points to North Dakota the flaxseed rates are 0.6c higher than the wheat rates, and to Minneapolis and Duluth certain rates from Montana average 4.5c higher, while from other points the flaxseed rate is 48c and the wheat rate 42c. The wheat rates from this general territory to most of the markets have either been sanctioned or prescribed by the Commission in various grain cases, but not corresponding changes have been made in the flaxseed rates. The question of relationship of flaxseed to wheat rates has not been passed upon by the Commission. It is desirable in arriving at the proper level of flaxseed rates to give consideration to the level of the wheat rates. This is peculiarly true with respect to the rates from South Dakota, first, because the level of the rates on wheat, an analogous commodity which moves steadily and in larger quantity throughout the same territory, has been fixed by the Commission. and thus affords a reasonable standard for comparison, and, second, because the rates on flaxseed from North Dakota and Minnesota points to Minneapolis and Duluth, the markets to which most of the flaxseed moves, are either the same as the wheat rates or 110% thereof as a maximum. The relationship between flaxseed and wheat from a rate making standpoint is affected by the difference between the two commodities in value, volume of movement, character of equipment, loss and damage claims, loading, and supply and demand. The record indicates that the price of flaxseed does not exceed the price of wheat by a greater percentage than the price of wheat exceeds the price of oats and corn, which take rates 90% of the wheat rates. The rates on flaxseed reasonably should be related to the wheat rates. The relatively small volume of movement of flaxseed from South Dakota points to Fredonia do not warrant the Commission in departing from the general rate basis to be adopted on flaxseed from South Dakota to all markets, and in prescribing in lieu thereof a distance scale of rates applicable to Kansas City only. HELD, rates on flaxseed under attack unreasonable to extent they exceed the wheat rates by more than 12%. Schedules under suspension ordered canceled. South Dakota R. R. Commissioners v. C. & N. W. Ry. 107 I. C. C. 35.

(5s) Complainant attacked commodity rate of 30.5c charged on numerous cars of gas oil from Parco, Wyo., to Denver, Colo., made between Sept. 1 and 23, 1924 and rate of 30c subsequently, as unreasonable and unduly prejudicial to extent they exceeded 26.5c and unduly preferential of Ogden, Utah, and contiguous points. The eastbound rates from Wyoming producing points are blanketed over an extensive territory. The rate of 30c from Parco to Denver 260 miles also applies to all points on defendants lines from Wilcox, Wyo., to Omaha, Neb., or for distances ranging from 67 to 673 miles from Parco. While the rate of 26.5c from Parco and Laramie to Ogden and Salt Lake City may be somewhat subnormal, considering the distances to those points, the evidence on the whole shows, however, that that rate is reasonably high for the distance of 260 miles from Parco to Denver. HELD, rate attacked unreasonable to extent it exceeds 26.5c, reparation award-

ed. Colorado Public Service Co. v. U. P. R. R. 107 I. C. C. 97.

(5t) Complainant attacked commodity rates charged on fresh fruits and vegetables, in straight or mixed carloads and in less carloads, from San Francisco and Los Angeles, Calif., and related points, to Prescott, Ariz., as unreasonable. Rates charged were the commodity rates which exceeded the class rates, except that since April 12, 1922, the carload commodity rates have been the same as the class rates. Fresh fruits and vegetables are rated class C in straight or mixed carloads and fourth class in less carloads by exceptions to the western classification applicable generally in the territory west of El Paso, Tex. HELD, rates attacked from Los Angeles group unreasonable to extent they exceeded 86.5c prior to April 12, 1922; on less carloads from the same group unreasonable to extent they exceeded $1.55 prior to July 1, 1922 and thereafter $1.395 rates attacked on less carloads from San Francisco group unreasonable to extent they exceeded $1.60 reparation awarded. Hill v. A. T. & S. F. Ry. 107 I. C. C. 101.

(5u) Complainant attacked commodity rates on products of the farm, including grain and grain products, from points in Washington south of the Snake river to Portland, Oreg., Seattle and Tacoma, Wash., and other north Pacific ports as unjust unreasonable and unduly prejudicial. The evidence does not challenge the intrinsic reasonableness of any of the rates in issue and there is little evidence relating to the rates on farm products generally. The terminal price of wheat is controlled by the principles of supply and demand, and there is no relationship between this price and the freight rates from the fields of production to the terminals. At times the price of wheat at Portland is higher than at Puget Sound ports, and at other times the reverse is true. This is explained by the fact that the Puget Sound markets are dominated by the millers, whereas the Portland market is influenced by the exporters, and the requirements of the millers are not always the same as those of the exporters. In general, the price received by the farmer for wheat represents the price at the terminal less transportation and warehouse charges and various discounts such as for smut and weight. The evidence shows that that part of the basin north of the Snake constitutes a well balanced territory from which a parity of rates properly prevails, but that the portion of the basin south of the Snake is not fairly a part of the parity territory. North of the Snake, the distances favor the Puget Sound ports, and advantages, however, which is offset by the greater costs of the mountain hauls; south of the Snake the distances favor Portland an advantage which is accentuated by the water level hauls. Astoria also possesses water level routes, but the distance is 100 miles longer than to Portland. HELD, rates attacked not unreasonable or otherwise unlawful, complaint dismissed. Walla Walla County Farm Bureau v. N. P. Ry. 107 I. C. C. 110.

(5v) Complainant attacked commodity rates charged on limestone, carloads, between August 5, 1921 and Sept. 29, 1923 from Buffalo, Iowa, to destinations in Illinois on the Burlington as inapplicable and unreasonable. Shipments moved over the Rock Island and Burlington to destinations. During the period of movement and on and after Jan. 24, 1922 joint commodity rates on crushed stone ranging from $1.11 to $2.07 were maintained from Buffalo to all of the destinations but Oliver, and in the absence of specific rates on agricultural limestone, these rates were applicable. The applicable rate to Hooppole was made by combination on Tampico and only the factor to that point is in issue. Two of the shipments moved prior to Jan. 24, 1922 one on Aug. 5, 1921 to Malden and the other on Aug. 5, 1921 to Neponset on which the applicable rate was a joint class E rate of 12.5c. Effective Sept. 29, 1923 defendants established specific joint commodity rates on stone having value for soil treatment only, from Buffalo to all the destinations except Oliver. The specific joint commodity rates established are the same as or somewhat lower than combinations made up of crushed stone rates to Davenport or Rock Island or on agricultural limestone ground or pulverized, to Galva, and the rates in the lower of the two distance scales of the Burlington on the latter commodity beyond those points. They are in all cases substantially lower than the rates applicable on complainants shipments. HELD, rates to Oliver unreasonable to extent they exceeded $1.03 per ton. HELD, rates to other destinations unreasonable on

and after July 1, 1922 to extent they exceeded joint commodity rates established, reparation awarded. Dolese Bros. Co. v. C. R. I. & P. Ry. 107 I. C. C. 127.

(5w) Complainant attacked commodity rates charged on three cars of stone ware from Roseville and Crooksville, O, to Philadelphia, Baltimore and Bushwick, L. I., as unjust, unreasonable, unjustly discriminatory and unduly preferential of glassware, glass bottles and jugs. Allegations under section 1 and 2 were withdrawn and the issue is thus narrowed to one of undue prejudice. The shipments consisted of stone jugs or other containers commonly used for holding liquids or preserves. The rates from Huntington, although lower than the contemporaneous fifth class rate from that point, were as high or higher than the rates paid by complainant. There is no basis in the pleading or in the record for a finding of undue prejudice by reason of the rates from Huntington. Complaintant bases its whole case upon the fact that commodity rates, lower than fifth class, have been accorded to glassware from points in socalled 74% territory in which Roseville and Zanesville are located. The rates attacked form part of a long standing adjustment which should not be disturbed in the absence of clear and convincing proof of their unlawfulness. HELD, rates attacked not unduly prejudicial, complaint dismissed. American Clay Products Co. v. P. R. R. 107 I. C. C. 153.

(5x) Complainant attacked commodity rates of $1.85 and $1.89 charged on crushed stone, carloads, between Jan. and Sept. 1924 from Columbia, S. C., to Wilford and Edwards, N. C., as unjust, unreasonable unjustly discriminatory and unduly prejudicial as compared with rates from other points on the A. C. L., to extent they exceeded $1.71 and $1.76 respectively. Shipments moved A. C. L., 310 miles to Washington, N. C., thence W. & V., to destination. Wilford and Edwards are 4 and 19 miles southeast of Washington. Subsequent to movement $1.89 rate to Edwards was published to Dean Siding. To various stations on its main and branch lines the A. C. L., publishes commodity rates on crushed stone, which are on the basis of its single line distance scale. Prior to Dec. 7, 1923 rates on crushed stone from points on that line to destinations on the Vandemere were a combination on Washington. This basis was and is generally applicable as to all other commodities. Joint rates to the three points considered were published upon request of complainant. The Vandemere, a Class III road in eastern North Carolina, extends southeastward from its junction with the A. L. C., at Washington on the Pamlico river to Vandemere, N. C., on the Bay river, distance 40 miles. It also has rail connection with the Norfolk Southern at Porter Junction, 3 miles east of Washington. The territory served is sparsely settled, and the density of traffic is light. Water competition is encountered on this line, except as to heavy commodities such as stone, sand and gravel. Complainants contention, in substance, is that defendants status is that of a single line and that rates on the single line basis should be applied to the destinations here considered. For joint line hauls complainant admits that the applicable rates, except that to Dean Siding, would be reasonable. The record in this case establishes the fact that the A. C. L., and the Vandemere are carriers under the same management and control. HELD, rate attacked not unreasonable, except to Dean Siding to which point rate attacked unreasonable to extent it exceeded $1.89, reparation awarded. Raleigh Freight Traffic Bureau v. A. C. L. Ry. 107 I. C. C. 156.

(5y) Complainant attacked commodity rates on lumber shingles, poles, pilings and other forest products, in carloads, from points in Washington, Oregon, Idaho, Montana, Nevada, and California to destinations in Iowa as unjust and unreasonable and unduly preferential of dealers at the Missouri river, Twin Cities and Chicago, Ill. Lumber shipping points in the territory under consideration are divided into groups, the most extensive of which are the north Pacific coast and California coast groups. The grouping is described in 78 I. C. C. 746. The interior groups are differentially related to the coast groups. The destination territory is also grouped, the Missouri river and Twin Cities, and certain territory west thereof, being a Group F, Iowa, southern Minnesota, and northern Missouri in Group E, and Chicago and intermediate territory east of the Mississippi river in Group D. Forest products from the northern territorial groups are arranged in commodity groups for rate publication purposes, Group A rates applying

on cedar shingles, Group B rates on cedar lumber, Group C rates on timbers, poles and piling too long to be loaded on single cars, and Group D rates on fir spruce, hemlock, birch and pine lumber. From California the rates are generally equal to the rates on corresponding commodities from the north coast groups but are published on the commodities individually instead of by groups. Complainant asked for a rate of 66c from the coast groups on Group D commodities and for the maintenance of the existing differentials from the other groups of origin and on the other commodities under consideration. The 62.5c rate to the Missouri river cities extends back through the states of Kansas and Nebraska to destinations in Colorado east of Colorado common points. The joint through rate to Chicago at present is 6c lower than the Twin Cities combination, and the proportional from the Twin Cities used in making such combination is 3c less than the local rate. Although the matter of zoning the state of Iowa has been before the Commission in several cases, this is the first attempt to secure for Iowa, treated as a unit, a uniformly lower level of lumber rates from the far west than applies to Chicago and territory east of the Mississippi river. Many of the difficulties that might arise from an attempt to establish different zones in the state would not be encountered under the group plan now suggested. From the standpoint of distance the routes through Omaha are more favorable from the greater part of the cost groups, although history indicates that the routes through the Twin Cities have fixed the rates. The record disclosed that the preponderance of the lumber shipped into Iowa from the far west goes to the Mississippi river cities where extensive manufactories are located, but it does not comprehensively disclose how the movement into Iowa is divided as between the Missouri river and Twin Cities gateways. A large part of the Iowa shipments originating on the G. N., and N. P., and affiliated lines, move through the Twin Cities, although there is a substantial movement from off those lines via Billings, Mont., and Burlington to Omaha. The California tonnage and the tonnage originating on the Union Pacific system lines in the northwest would normally move through the Missouri river gateways. It also appears that a large part of the tonnage originating on the Milwaukee moves via Sioux City. The record herein discloses that the preponderance of empty car movement is westbound. Lumber dealers in the interior of Iowa compete with dealers located at the Missouri river cities in retailing lumber in Iowa. Under the present adjustment the Missouri river dealer has a distinct advantage over the interior dealer. This is in part due to the material spread between the inbound rates to the Missouri river and to the interior points. The record also shows that under the present adjustment manufacturers at the Mississippi river are under a rate disadvantage as compared with Chicago manufacturers at points in the vicinity of Chicago and east. HELD, (a) that the present rate on group D commodities from the north Pacific coast and California coast groups to Iowa is and for future will be unreasonable and unduly prejudicial to extent it exceeds 68c; (b) that the existing rates on the commodities included in the Group A and B descriptions from the north coast, and on the commodities taking equal rates from the California groups are, and for the future will be, unreasonable and unduly prejudicial to extent they respectively exceed the rates herein found reasonable on group D commodities by more than the differences existing under the present rates; and (c) that rates on the commodities in question from the interior groups are, and for the future will be, unreasonable and unduly prejudicial to extent they exceed rates herein found reasonable from the coast groups by more than the existing differentials between the interior and the coast groups. Burlington Shippers Asso. v. A. T. & S. F. Ry. 107 I. C. C. 198.

(5z) Complainant attacked commodity rate of 29.5c charged on four cars of cottonseed between November and December, 1922 from Light, Ark., to Cairo, Ill., was and that rate of 26.5c since Nov. 27, 1923 unreasonable and unduly prejudicial. Shipments were unrouted and moved over the Cache Valley, 10 miles, to Sedgwick, Ark., and thence to destination over the Frisco, C. & E. I., and M. & O., 183 miles. The distance over the short line route of the first two named defendants to Delta, Mo., and M. P., beyond is 173 miles. Effective Sept. 15, 1925, following 98 I. C. C. 183, defendants established on this traffic from Light rates of 25.5c to Cairo and 30c

to East St. Louis. The alleged undue prejudice has been removed. HELD, rate attacked not unreasonable, complaint dismissed. Cairo Cotton Oil Mill v. M. & O. R. R. 107 I. C. C. 299.

(6a) Complainant attacked as unreasonable commodity rates charged on zinc dross, carloads, from Ashland, Ky., to Newport News, Va., July 18 and Sept. 28, 1922 as unreasonable. In 101 I. C. C. 23, rates found not unreasonable, case reopened. Shipments moved over C. &. O., direct, charged commodity rate of 30c. Previous to the movement of the shipment of Sept. 28, 1922 the commodity rate was canceled leaving in effect the sixth class rate of 33.5c Contemporaneously with both shipments the sixth class rate was 33.5c and applying 85%, 81 I. C. C. 645, of the sixth class rates to zinc dross produces a rate of 28.5c. HELD, rate attacked unreasonable to extent it exceeded 28.5c undercharges waived, reparation awarded. Lissberger & Co. v. C. & O. Ry., 107 I. C. C. 308.

(6b) Complainant attacked commodity rates charged on 69 cars of common brick from Iola, Kas., to Kansas City, Mo., between Jan. 16 and Nov. 27, 1923 of 8.5c unreasonable and unduly prejudicial to extent it exceeded 7c. Prior to Oct. 16, 1922 a rate of 8.5c applied on all kinds of brick. In 68 I. C. C. 213, 80% of brick rates were applied on common brick, and rate of 7c was established. Complainants brick was made of a composite of clay and shale and did not come within the description of common brick. In 80 I. C. C. 179 the description of common brick was amended to include brick made from shale as well as from low grade clay, effective Nov. 27, 1923. HELD, rate attacked unreasonable to extent it exceeded 7c, undercharges waived. Reliance Brick Co. v. M. K. & T. Ry. 107 I. C. C. 381.

(6c) Complainant attacked commodity rate of 82c charged on two cars of window glass shipped on May 15, 1922, from Okmulgee, Okla., to Jackson, Miss., as violative of sections 1, 2 and 3 of the act. In 88 I. C. C. 188 the Commission found the rate charged unreasonable to extent it exceeded 69.5c. HELD, reparation awarded. Binswanger & Co. v. St. L. S. F. Ry. 107 I. C. C. 383.

(6d) Complainant attacked commodity rate of 98c charged on 7 cars of fresh meat shipped between Jan. 22 and May 6, 1918 from South St. Joseph, Mo., and Kansas City, Kas., to Camp Wadsworth, S. C., as inapplicable. Charged proportional commodity rate of 30c from points of origin to Cincinnati, O., plus 68c beyond. Bills of lading consigned shipments to Camp Quartermaster, Camp Wadsworth, Spartanburg, S. C., but the shipments were delivered at Camp Wadsworth direct. HELD, rate charged applicable, complaint dismissed. Armour & Company v. Director General 107 I. C. C. 604.

(6e) Complainant attacked commodity rates of 46c on less carloads of certain iron articles, viz., nails, washers, nuts and bolts from Birdsboro, Coatesville, Lebanon, and Pottstown, Pa., to Lynchburg, Va., as unjust, unreasonable, unjustly discriminatory and unduly prejudicial to extent they exceeded the class rates. The joint sixth class rates on nails, iron or steel, in kegs, were and are 33.5c fifth class on washers, nuts, bolts, iron or steel, 40.5c. All of the shipments originated on the Reading and some were unrouted some were routed over the Reading and N. & W., and some over the Reading, Western Maryland and N. & W. HELD, rates attacked not unreasonable nor unduly prejudicial, complaint dismissed. Lynchburg Chamber of Commerce v. R. Co. 107 I. C. C. 610.

(6f) Complainant attacked commodity rates charged on numerous cars of bituminous coal during April, 1922 from Folks and Marva, located in eastern Ohio, on the Pennsylvania, to Munhall, Pa., and from mines in Kentucky, Virginia and West Virginia to Clairton, Pa., as unreasonable, unjustly discriminatory and unduly prejudicial. The destinations are in the vicinity of Pittsburgh. The coal from the Ohio mines originated on the Pennsylvania. That from the other mines originated on the C. & O., N. & W. or their connections, and moved to destination over the Pennsylvania thus receiving a line haul both west and east of Pittsburgh. Combinations of rates to and from Pittsburgh were charged. The movement was unusual. Complainant ordinarily obtains its coal from other sources, in or near Pittsburgh district, but the 1922 coal strike necessitated purchases elsewhere. Complainant shipped this coal regardles of the rates in order to keep its furnace in operation. In the meantime it negotiated for joint

rates from and to the points considered and in the latter part of April, 1922, such rates were made effective based on a differential of 30c over Pittsburgh. Rates charged from Ohio mines to Munhall was $2.29 made up of rates of $1.54 to Pittsburgh and 75c beyond. The rate subsequently established for a limited time, to the basis of which reparation is asked, was $1.84. The rates from the Kentucky, Virginia and West Virginia mines to Clairton were $4.34 and $4.44 and the rates subsequently established were and are $3.38 and $3.48 for hauls ranging from 300 to 550 miles. Under the particular circumstances of this case defendants admit that the rates charged on the shipments considered were unreasonable to the extent they exceeded the rates established subsequent to the movement. Although the publication of these rates was originally intended as a temporary expedient, the carriers have now no objection to continuing them indefinitely. HELD, rates from the Ohio mines to Munhall unreasonable to extent they exceeded $1.84 made on basis of 30c per ton over Pittsburgh; rates from Ohio mines in excess of that rate for future unreasonable, reparation awarded. Rates from Kentucky, Virginia and West Virginia to Clairton not unreasonable. Carnegie Steel Co. v. Pennsylvania R. R. 107 I. C C. 676.

(6g) Complainant attacked commodity rate charged on nine cars of cabbage from Kent and OBrien, Wash., and Troutdale, Oreg., to Denver, Colo., Wichita and Wellington, Kas., Oklahoma City, Okla., Kansas City, Mo., and Peoria and Herrin, Ill., during Nov. and Dec. 1921 as unreasonable and unjustly discriminatory. Distance averaged 2,138 miles, charged $1.46 on fresh vegetables, and effective Nov. 18, 1922 specific commodity rates on cabbage, in carloads of $1.06 to Denver and $1.10 to the other points, minimum 24,000 pounds, were established. HELD, rates attacked unreasonable to extent they exceeded $1.25 reparation awarded. Harmon v. A. T. & S. F. Ry., 109 I. C. C. 90.

(6h) Complainant attacked commodity rate charged on two cars of fresh vegetables shipped in August 1924 from Denver, Colo., to Jacksonville, Fla., as unreasonable, unduly preferential and in violation of the fourth section. Shipments originated on U. P., and moved under refrigeration to East St. Louis, Ill., in connection with the Burlington on one shipment and M. P., on the other, thence, over L. & N., to Montgomery, Ala., thence S. A. L., G. S. & F., and S. A. L., to destination, charged $1.75 through rate. The joint rate exceeded a contemporaneous combination commodity rate over route of movement of $1.74 consisting of a proportional rate of 70c to Evansville, Ind., and $1.04 beyond. HELD, rate attacked unreasonable to extent it exceeded $1.74, reparation awarded. Hulsey Bessent Co. v. S. A. L. Ry., 109 I. C. C. 389.

(6i) Complainant attacked commodity rates on cans, iron, steel, tin and galvanized, in carloads, from Kansas City, Mo., to Fort Smith, Ark., Wichita, Kas., and Sioux City, Ia., as unreasonable unjustly discriminatory and unduly prejudicial. No. 15081. 12 cars of tin coffee cans moved to Fort Smith over M. P., 360 miles, four over K. C. S., 327 miles, and four M. K. & T., and Ft. S. & W., 383 miles, between Sept. 28, 1922 and March 20, 1924, charged commodity rate of 75.5c. No. 15081 Sub. 2. Rate charged 48.5c for 36 ft. car minimum of 14,000 pounds and 33.5c minimum 18,-000 pounds, on tin cans car loads from Kansas City to Sioux City and Wichita, for short line distances of 290 miles to Sioux City and 213 miles to Wichita. HELD, rates attacked not unreasonable or otherwise unlawful, complaints dismissed. Gille Mfg. Co. v. K. C. S. Ry., 109 I. C. C. 408.

(6j) Complainant attacked commodity rates charged on crude feldspar, carloads, from New Hampshire to Manchester, Conn., since April 1, 1923 as unreasonable, unjustly discriminatory, unduly prejudicial and in violation of the fourth section. With the exception of the rate from Canaan which is the sixth class rate, the rates attacked are commodity rates minimum 60,000 pounds. In 92 I. C. C. 675 the Commission found rates on crude feldspar, carloads, from the groups in which Keene and Rumney are located to Trenton, N. J., for average distances of 271 and 362 miles, unreasonable to extent they exceeded 18 and 19c also rate from the Connecticut group to Trenton for an average distance of 136 miles unreasonable to extent it exceeded 16c. HELD, rates attacked unreasonable to extent they exceed to Manchester, 13.5c from Keene, 18c from Rumney, Cardi-

gan, Canaan, and Swainboro, 15c from Cold River and South Lyndeboro, 17c from Burleyville and 16c from Matthews and Ossippee. HELD, reparation awarded. Orford Soap Co. v. B. & M. R. R., 109 I. C. C. 434.

(6k) Complainant attacked commodity rate charged on 560 cars of crushed stone between May and October 1923 from Gary, Ind., to Stillwell and Kankakee, Ill., as unjust, unreasonable, unjustly discriminatory and unduly prejudicial. Gary, Ind., is within the Chicago switching district on the C. & I. W., charges paid at rate of $1.01. Average distance 103 miles to Kankakee and 107 miles to Stillwell. During the period these shipments moved defendants maintained from Chicago rate points other than Gary a rate of 95c to Michigan City, 20 miles north of and beyond Stillwell, and effective August 23, 1923 also established a rate of 95c to LaPorte, Ind., 8 miles north of and beyond Stillwell. The lawful rate was joint sixth class rate of $2.80 per ton. HELD, rate attacked unreasonable to extent it exceeded $1.01, reparation awarded. Taylor v. N. Y. C. & St. L. R. R., 109 I. C. C. 441.

(6l) Complainant attacked commodity rates charged on sheet metal automobile parts, carloads, from March to Dec. 1917, April 5 1918 to Feb. 28, 1920 from Detroit, Mich., to Forth Worth, Tex., as unreasonable and unjustly discriminatory. Charged 76.9c prior to June 25, 1918, and 96c thereafter. Class A rates were 95.9c prior to June 25, 1918 and $1.20 thereafter. Effective Feb. 29, 1920 defendants voluntarily established a commodity rate of $1.20 minimum 22,000 pounds, subject to rule 34. The applicable charges assessed were higher than the charges that would have accrued under the class A rates. HELD, rates charged unreasonable to extent they exceeded class A rates, reparation awarded. Chevrolet Motor Co. v. C. & A. R. R., 109 I. C. C. 462.

(6m) Complainant attacked commodity rates charged on lard substitutes and vegetable cooking oils, carloads, from Houston, Tex., to Arkansas and Louisiana are unreasonable and unduly prejudicial. In 101 I. C. C. 563 the Commission found these rates on and after Nov. 20, 1925 unreasonable to extent they exceeded rates therein prescribed. HELD, based upon decision in 101 I. C. C. 563, reparation awarded. Merchants & Planters Oil Co. v. A. T. & S. F. Ry., 109 I. C. C. 477.

(6n) Complainant attacked commodity rates charged on mine timbers, including mine props, mine bars and mine ties, carloads, between Sept. 1, 1922 and June 12, 1924 from Missouri on the M. P., and Frisco to Ziegler, West Frankfort, Benton, Herrin, Livingston and Virgen, Ill. In 87 I. C. C. 622 the Commission found the rates here in issue since June 30, 1922 unreasonable to extent they exceeded a distance scale prescribed therein. HELD, rates attacked unreasonable and reparation awarded on basis of rates prescribed in 87 I. C. C. 622. Bell & Zoller Mining Co. v. I. C. R. R. 109 I. C. C. 484.

(6o) Complainant attacked commodity rate charged of 13.5c per 100 pounds on core sand, fire sand and sea sand, carloads, since Jan. 1, 1923 from Provincetown, Mass., to Norwich, Conn., as unreasonable to extent it exceeded 7.5c. Core sand is used by complainant for making cores for iron boiler castings. It is high in silica and differs also from common sand in its grain or sharpness. common or building sand, usually must be screened before it is fit for use, whereas core sand is not screened or processed in any way. Shipments moved via the New Haven, distance 171 miles. Core sand always loads in excess of the marked capacity of the car, is not liable to loss or damage and constitutes desirable traffic. The 7.5c rate claimed is applicable on common sand. HELD, rate attacked unreasonable to extent it exceeds 11c, reparation awarded. Richmond Radiator Co. v. N. Y. N. H. & H. R. R., 109 I. C. C. 497.

(6p) Complainant attacked commodity rate of $1.445 charged on 10 cars of gasoline shipped between Feb. 9 and 21, 1921 from Somerset, Tex., to Phoenix, Ariz., as unduly prejudicial to extent it exceeded $1.26. Somerset is on the San Antonio Southern, 4.6 miles from Kirk, Tex., a point on the I. & G. N., 16 miles south of San Antonio, Tex. Rate charged combination of 18.5c to Kirk and $1.26 applicable from Texas refining points generally to Phoenix and California. On Jan. 16, 1922 the $1.26 rate was established from Somerset. HELD, rate attacked unduly prejudicial to extent it exceeded $1.26, reparation

awarded. Pioneer Oil & Refining Co. v. S. A. A. Ry., 109 I. C. C. 551.

(6q) Complainant attacked commodity rates on lumber, carloads, from Ashland, Wis., to points in Illinois, Central and trunk line territories as unreasonable, unjustly discriminatory and unduly prejudicial to extent they exceed rates from Wisconsin points in Hurley group to the same destinations. Ashland is at the extreme edge of the Duluth group. Hurley group lies adjacent, immediately east of the Duluth group. Both groups extend along the southern shore of Lake Superior. Rates from Ashland group apparently range from 0.5c to 3.5c higher than those from the Hurley group. Complainants prayer for a rate parity is based primarily on commercial conditions. Prior to 1915 the rates from the Duluth group to the destinations in question were lower than those from the Hurley group, this being due to water competition, but after the denial of fourth section relief the rates from the Duluth group were made higher to reflect the longer hauls. To apparently typical points in the destination territory involved, the average short line distance from Ashland is about 39 miles greater than that from Hurley. HELD, rates attacked not unreasonable, unjustly discriminatory or unduly prejudicial, complaint dismissed. Schroeder Lumber Co. v. A. C. & Y. Ry., 109 I. C. C. 553.

(6r) Complainant attacked commodity rate of 2.5c charged on 129 cars of sand and gravel shipped between Aug. 21, 1919 and Oct. 21, 1919 from Hammond, Ill., to Chicago, Ill., as illegal and unreasonable and in violation of the fourth section. Shipments moved entirely over the Milwaukee, charged 2c to Chicago. Contemporaneously a commodity rate of 2.5c was published in the same tariff to Division St. Ill. Prior to June 25, 1918 the rate to both points was 1.5c, but on that date it became 2.5c. On Aug. 15, 1919 the rate to Chicago was reduced to 2c but no change was made in the 2.5c rate to Division St. On Dec. 18, 1919 the rate to Chicago was increased to 2.5c, thus restoring the former parity in rates. The rate to Chicago was unrestricted as was that to Division St. Hammond is on the main line of the Milwaukee, 34.1 miles west of Chicago, cars being billed to and unloaded by complainant at its siding on the Milwaukee at North Branch and Halsted Sts. within the City of Chicago. All freight bills, accounts, and other shiping documents are handled through the agency at Divison St. Station as are those for shipments to or from complainants siding. No specific rates were published to Division St. Station or North Branch and Halstead Sts. The tariffs are ambiguous and uncertain in their application. Although it may have been intended to apply the Division St. rate to all points within what the carrier considers its Division St., district, that fact can not be definitely determined from the tariffs. HELD, rate of 2.5c charged inapplicable and rate of 2c applicable, complaint dismissed. American Sand & Gravel Co. v. Director General, 109 I. C. C. 557.

(6s) Complainant attacked commodity rate of 45c charged on numerous cars of lubricating oil and gasoline shipped during the period March to August 1920 from Okmulgee, Ponca City, Cushing and Tulsa, Okla., and Independence and Augusta, Kas., to Detroit, Mich., as unreasonable, unreasonable, illegal and unduly prejudicial. Shipments moved through East St. Louis, no joint rates in effect. Rate charged combination of proportional commodity rates, 22.5c to East St. Louis and a like factor beyond. The tariff which named the eastern factor carried the combination rule. The combination in effect in June 24, 1918 was 40c composed of 20c to and from East St. Louis. The applicable rate was the sum of the local rates in effect on June 24, 1918 plus a single increase of 4.5c. HELD, shipments overcharged to extent they exceeded 44.5c, reparation awarded. White Star Refining Co. v. A. T. & S. F. Ry., 109 I. C. C. 577.

(6t) Complainant attacked commodity rates charged on wheat bran, in straight carloads, and in mixed carloads with grain and grain products from Colorado, Utah, Wyoming, Idaho, Montana, Nebraska, Kansas, Iowa, Missouri, Oklahoma, Texas and New Mexico to points in Louisiana, Texas and New Mexico as unreasonable and unduly prejudicial. In 101 I. C. C. 14 the Commission found the rates on wheat bran, carloads, from and to the points here in question for the future would be unreasonable and unduly prejudicial to extent they might exceed the rates on wheat middlings or shorts, coarse grain and coarse grain products from and to the same points, and reparation denied. HELD, rates at-

tacked not unreasonable, unjustly discriminatory or unduly prejudicial, complaint dismissed. Robinson Milling Co. v. A. & S. Ry., 109 I. C. C. 595.

(6u) Complainant attacked commodity rate of 25c on crude feldspar, carloads, from Dekalb Junction, N. Y., to Manchester, Conn., as unreasonable and unduly prejudicial. Dekalb Junction is on the N. Y. C., 51 miles north of Watertown, N. Y. Manchester is on the New Haven 31 miles south of Springfield, Mass. Shipments moved N. Y. C., to Albany, 207 miles, B. & A., to Springfield 102 miles, and New Haven beyond 31 miles, total 340 miles. HELD, rate attacked unreasonable to extent it exceeded 19c, reparation awarded. Green Hill Mining Co. v. N. Y. C. R. R., 109 I. C. C. 632.

(6v) Complainant attacked commodity rate of $1.45 charged on brick, carloads, from Joliet, Ill., to Gary and Indiana Harbor, Ind., and South Chicago, Ill., as unreasonable to extent it exceeded $1. Shipments are packed in straw and loss and damage claims are small. In 68 I. C. C. 213 the Commission prescribed a base rate of $1.75 from Danville and Attica, Ind., to Chicago and prescribed a fixed differential for Joliet of 30c under those points, and also prescribed a distance scale for short haul traffic in central territory. The rate of $1.75 fixed from the Danville-Attica group for an average short line distance to Chicago of 121 miles is 5c under the rate for that distance under the scale. Joliet for a short line haul of 37c is 25c over the scale. On the scale basis this rate would be $1.20. HELD, rate attacked unreasonable to extent it exceeds $1.20 per ton. General Refractories Co. v. E. J. & E. Ry., 109 I. C. C. 635.

(6w) Complainant attacked commodity rate of 33.5c charged on 97 cars of fuel and crude oils from Smackover, Ark., to Lincoln, Neb., as unreasonable, unjustly discriminatory and unduly preferential Shipments moved between Dec. 1922 and April 8, 1923. Rate to Omaha was 33.5c on refined oil and 27.5c on crude and fuel oils, Lincoln usually being accorded the same rates as Omaha. The distance from the Smackover field is about the same to Lincoln as to Omaha. Effective April 8, 1923 defendant reduced the rate to Lincoln to the Omaha basis. HELD, rate attacked unreasonable to extent it exceeded the rate to Omaha of 27.5c, reparation awarded. Lincoln Traction Co. v. M. P. R. R., 109 I. C. C. 653.

(6x) Complainant attacked commodity rate of 19c charged on candle pitch, carloads, from New York to Lancaster, Pa., as unreasonable and unduly prejudicial. Prior to March 12, 1925 the sixth class rate of 22.5c was applicable and on that date a commodity rate of 19c was established which was the rate then in effect from Jersey City to Lancaster. Distance New York to Lancaster is 157 miles. HELD, rate attacked not unreasonable or otherwise unlawful, complaint dismissed. Armstrong Cork Co. v. Pennsylvania R. R., 109 I. C. C. 655.

(6y) Complainant attacked commodity rate charged on curtain poles, dowel pins and broom and mop handles from Lumberton, Miss., to New Orleans, La., as unjust, unreasonable, unjustly discriminatory and in violation of the fourth section. Rate attacked is 15c and on the commodities when finished 19c. No commodity rate on these articles is published by the G. & S. I., from Lumberton to New Orleans and sixth class rate of 40.5c applies, distance 90 miles and lumber rate 9c. HELD, rate attacked unreasonable to extent they exceeded 11c or 2c over lumber rate on unfinished articles and on curtain poles and dowel pins 12.5c, reparation awarded. Lumberton Broom & Mop Handle Factory v. N. O. & N. E. Ry., 109 I. C. C. 659.

(6z) Complainant attacked commodity rate of 52c charged on three cars of linseed oil from St. Louis, Mo., to New Orleans, La., in August and October 1922 as unreasonable, unjustly discriminatory and unduly prejudicial to extent it exceeds rates on cottonseed, soya bean and analogous vegetable oils from and to the same points. Like the other oils, linseed oil is usually shipped in tank cars and barrels, and in other respects has similar transportation characteristics. Its value weight use and physical characteristics are in many respects similar to those of the other oils. The commission has found in many cases that the carload rates on these analogous oils should be the same. HELD, rate attacked unreasonable to extent it exceeded 41.5c, reparation awarded. Glidden Co. v. I. C. R. R., 109 I. C. C. 721.

(7a) Complainant attacked commod-

ity rates charged on meat animals, carloads, from Alabama to Moultrie, Ga., as unreasonable compared with intrastate rates in Alabama for similar distances; that by reason of the disparity complainant is subjected to undue prejudice. Moultrie is in the southwestern part of Georgia and is served by the A. B. & A., G. N., and G. & F. Prior to Dec. 19, 1921 the rates on livestock from Alabama to Moultrie were based on combination of intermediate rates when points rates were established intrastate and interstate on relatively the same level. On May 16, 1923, the so-called compromised distance scale of rates interstate was established. The Alabama Commission declined to allow the establishment of these rates intrastate. All of the defendants agree with complainants contention that the lower level of rates on livestock within Alabama results in unjust discrimination against Moultrie. HELD, interstate rates not unreasonable, but intrastate unduly prejudicial which should be removed by increasing them to the inter state basis. Swift & Company v. G. N. Ry., 109 I. C. C. 733.

(7b) Complainant attacked commodity rates on soft coal, carloads, from Birmingham, Ala., district to Tennessee, Alabama, Mississippi, Louisiana, Texas, Missouri and Arkansas as unduly prejudicial in favor of shipper from southern Illinois and western Kentucky. What is sought is a differential relationship, Birmingham under the competing fields of western Kentucky and southern Illinois, which will give complainant the advantages to which it believes itself entitled by reason of its geographical location. This is purely a section 3 case. Whatever the equities of the situation at Memphis may or may not be, the Commission can not under the law make a finding of undue or unreasonable prejudice or disadvantage. No one line serves Memphis at the base rate from the Alabama field on the one hand, and the western Kentucky and Illinois fields on the other. Independent carriers serve this common market. As to Memphis no undue or unreasonable preference or advantage exists upon which a differential adjustment in favor of the Birmingham district can be justified. HELD, the relationship between the rates on coal, in carloads, from the Birmingham district in Alabama on the one hand and the western Kentucky and southern Illinois on the other hand, to destinations in the territory embraced in the complaint, except Missouri, is, and for future, will be, unduly prejudicial to complainant and unduly preferential of western Kentucky and southern Illinois to extent it varies from an adjustment outlined as follows: For each 25 miles or major fraction thereof, beginning with a difference in distance of 25 miles, in which the average distance from the I. C., mines in the southern Illinois-western Kentucky district exceeds the average distance from the Frisco group 2, and Southern groups 4, 11 and 12 miles in Alabama, a differential of 5c per net ton over the base rate from the Birmingham district is prescribed in favor of the Alabama mines. To destination points east of the Mississippi river, distance shall be computed from the distance tables set forth in DeCamps Exhibit 24 the distance by the shortest routes listed therein governing the amount of the differential. To destinations points west of the Mississippi river, the distance scales of the carriers shall prevail, based upon the same origin mining groups and computed in the same manner as prescribed to points east of the river. In the few instances where the rates from the Birmingham mining groups are not on a parity the lowest rate shall be considered the base rate. DIVISIONS. This question is not one which arises between carriers who are parties to the joint rates nor has there been a protest on the part of any locality. The public evidently is not concerned as to the divisions agreed upon by the joint carriers so long as the through rates are not involved, unless one or more of the divisions are so low as to throw a burden upon other traffic and the Commission has no such evidence upon this record. There is no question as to the efficient operation of the I. C. That carrier explains that it can afford to be generous in its divisions to the short lines in Mississippi on southbound coal in return for the more remunerative northbound traffic which it receives from them. It appears that it reserves the same or about the same amount of the through rate at common junction points as it reserves by the carriers which serve the Alabama mines. As long as this basis of equality is maintained, as long as the divisions of the I. C., are not so low as to throw a burden upon other traffic, and the weak-

er short lines are beneficiaries of its policy the Commission can not see that complainant is subjected to any undue or unreasonable prejudice or discrimination. Alabama Mining Institute v. I. C. R. R., 109 I. C. C. 740.

(7c) Complainant attacked commodity rate charged on 27 cars of paper and paper articles shipped between June 20 and Dec. 13, 1922 from Urbana, O., and St. Louis, Mo., to Dallas, El Paso and San Antonio, Tex., as unreasonable. Shipments originated on Rock Island, M. P., St. L. S. W., and Pennsylvania. HELD, rates attacked unreasonable to extent they exceeded rates published effective Dec. 15, 1922, reparation awarded. Graham Paper Co. v. C. R. I. & P. Ry., 112 I. C. C. 51.

(7d) Complainant attacked commodity rate on sand, carloads, from Sand Springs, Okla., to Kansas and Missouri as unreasonable and unduly prejudicial. Sand Springs is on the Sand Springs Ry. Effective April 4, 1923 Sand Springs was accorded a rate of 6.5c to points between Coffeyville, Kas., and Parsons, Kas., The rate on Sand from Sand Springs is 0.5c higher than the rate from Osage to numerous points and Osage has rates of 6.5c and 7c to other points to which in the absence of commodity rates from Sand Springs higher class or combination rates apply. The present rates from Osage seem to have been made with relation to the rates from Kansas City to the same points. By placing Sand upon the same basis as Osage the alleged undue prejudice with respect to the rates from Kansas City will be removed. HELD, rates attacked from Sand Springs on the same basis as from Osage not unreasonable but for future will be unduly prejudicial to Sand Springs to extent they exceed same rates from Osage. Arkansas River Sand Co. v. M. K. & T. Ry., 112 I. C. C. 92.

(7e) Complainant attacked commodity rates charged on paper boxes, carloads, knocked down flat, in bundles not corrugated, from Chicago to Oklahoma City, Denver, Topeka, and Lincoln between April 4, 1922 and June 9, 1922 as unreasonable. Following 66 I. C. C. 571 rates attacked unreasonable to extent they exceeded rates found reasonable therein and published July 10, 1922, reparation awarded. Beatrice Creamery Co. v. A. T. & S. F. Ry., 112 I. C. C. 113.

(7f) Complainant attacked commodity rate of 39.5c charged on 87 cars of rough oak and gum staves and headings shipped between April 1 and Oct. 31, 1921 from Bonita, La., to Louisville, Ky., as unreasonable. Previous report in 93 I. C. C. 593 complaint dismissed. Bonita is local on the M. P., shipments moving over that line to Memphis, Tenn. L. & N., beyond. Subsequently the rate of 34.5c, applicable from stations in Arkansas and Louisiana on the lines of carriers other than the M. P., was established from Bonita. HELD, rate attacked unreasonable to extent it exceeded 34.5c reparation awarded. Louisville Cooperage Co. v. L. & N. R. R., 112 I. C. C. 228.

(7g) The inferior quality of a commodity can not be made the basis for prescribing rates that are lower than rates on the same commodity for comparable hauls in the same general territory. Dixie Portland Cement Co. v. N. C. & St. L. Ry., 88 I. C. C. 147, 149.

(7h) Question of an improper relationship between the rates on two commodities is not determined by a finding of the commission that rates on one of the commodities is not unreasonably high and on the other not unreasonably low. Undue prejudice may result from the relationship of two rates, each of which lies within the zone of reasonableness. Lackawanna Steel Co. v. P. R. R. Co., 88 I. C. C. 759, 762.

(7i) Proposed cancellation of commodity rates on tanning extract from Norfolk and Newport News to Memphis, Chicago, and other destinations in c. f. a. territory, leaving in effect higher class rates, found not justified. Suspended schedules would create departures from long-and-short-haul provision of fourth section of the act. Tanning Extract from Norfolk and Newport News, 102 I. C. C. 196.

(7j) Class and commodity rates from Jackson, Miss., to destinations in Louisiana west of Mississippi River and southern Arkansas, found unjust, unreasonable, and unduly prejudicial to Jackson and its shippers and unduly preferential of shippers at New Orleans, Memphis and Natchez, to extent they exceed rates for like distances between points west of Mississippi River herein prescribed, plus charges for Mississippi River crossings prescribed in 93 I. C. C. 463. Reasonable and nonprejudicial rates prescribed. Jack-

son Traffic Bureau v. A. & V., 102 I. C. C. 129.

I. TEST OF STATUS.

§½. In General.

See Hours of Service Act.

(a) A company not being in fact a common carrier, order of state Public Service Commission, declaring it such and regulating use of its property, is void. McCoy v. Pacific Spruce Corporation 1 Fed. (2d) 853.

(b) That right of way for a railroad, acquired by the United States during the war to aid in spruce production, was taken by it under the war power or right of eminent domain, does not charge it and the road built thereon by such government with a public use, giving the public a right to demand a common carrier service. McCoy v. Pacific Spruce Corporation 1 Fed. (2d) 853.

(c) Conveyance by the United States of a right of way, acquired by it for war purpose, and a road built thereon by it, to a corporation organized, owned, and used by it for the same war purpose, did not charge the property with a public use. McCoy v. Pacific Spruce Corporation 1 Fed. (2d) 853.

(d) Railroad built by United States for war purpose of aiding spruce production was not charged with a public use by temporary gratuitous permit to operate it while corporation organized by the government was winding up its affairs after close of war. McCoy v. Pacific Spruce Corporation 1 Fed. (2d) 853.

(e) That purchaser, on close of war, of railroad built by United States for war purpose of aiding spruce production, consented to continuance for two months, till it was ready to begin logging operations, of operation of road by an individual, begun under temporary permit from government instrumentality, did not charge the road with a public use. McCoy v. Pacific Spruce Corporation. 1 Fed. (2d) 853.

(f) A "common carrier" is one who, by virtue of his calling and as a regular business, undertakes to transport persons or commodities, offering his services to such as may choose to employ him and pay his charges. McCoy v. Pacific Spruce Corporation 1 Fed. (2d) 853.

(g) The word "organized," in Interstate Commerce Act, §20a, subsec. 1, as added by Transportation Act Feb. 28, 1920, § 439 (U. S. Comp. St. Ann Supp. 1923, § 8592a), defining "carrier" as "* * * any corporation organized for pur-

pose of engaging in transportation by railroad subject to this act," is used to describe present and existing status of corporation, and not its status or condition at some past time. Whitman v. Northern Cent. Ry. Co., (Md., 1924) 127 Atl. 112.

ALL OTHER CITATIONS

Depreciation Charges of W. Ry. & E. Co., 85 I. C. C. 126.

§1. Incorporation.

(a) The courts recognize the general principle that ownership alone in one corporation by another does not create an identity of corporate interest between the two companies, or render the stock holding company the owner of the property of the other, or create the relationship of principal and agent or representative between the two; although they hold that a mere fiction of corporate entity could not justify what otherwise would be unlawful discrimination. Peoria & Pekin Union Ry. Co., 93 I. C. C. 3, 13.

§3. Public Offer to Carry.

(a) It is the right of the public to use the roads facilities and to demand service of it rather than the extent of its business which is the real criterion determinative of its character. Piper v. Blair 96 I. C. C. 102, 105.

(b) It is duty of "public or common carrier of passengers," as distinguished from "special or private carrier," to receive all who apply for passage as long as there is room and no legal excuse for refusing. North American Acct. Ins. Co. v. Pitts, (Ala., 1925) 104 So. 21.

(c) Test of whether one is "common carrier" by land, water, or air, is whether he held out that he would carry for hire, so long as he has room, all persons applying, or goods of every one bringing goods to him, for carriage. North American Acct. Ins. Co. v. Pitts, (Ala., 1925) 104 So. 21.

(d) Holding that a particular industrial railroad is a common carrier means simply that it serves the public as well as the proprietary industry. It does not change the character of service performed for the proprietary industry. Pressed Steel Car Co. v. Director General, 93 I. C. C. 224, 232.

§5. Stock Ownership.

(a) Ownership alone in one corporation by another does not create an identity of corporate interest between the two companies, or render stock-holding company the owner of property of the other, or create the relationship of principal and agent or representative between the two. See Southern Pacific Terminal case, 219 U. S. 498. Peoria & Pekin Union, 93 I. C. C. 3, 13.

II. DETERMINATION OF STATUS.

§6½. In general.

(a) The same person or corporation may be engaged in one line of business as a common carrier, and in another line of business as a private carrier. Chenery v. Employer's Liability Assur. Corp., 4 Fed. (2d) 826.

§7½. Who are Common Carriers.

(a) Motor truck or wagon transfer companies are not common carriers subject to the act. Tariffs embracing motor truck or wagon transfer service, 91 I. C. C. 539, 546.

(b) Newburgh & South Shore Ry. Co., Monongahela Connecting R. R. Co., Union R. R. Co., and South Buffalo Ry. Co., found to be common carriers subject to the act, and lawfully entitled to receive from trunk-line connections divisions of joint rates or absorptions of switching charges under appropriate tariffs, such divisions or absorptions to be reasonable. Jones & Laughlin Steel Co. v. P. & L. E. R. R. Co., 91 I. C. C. 300.

(c) Puget Sound & Cascade Ry. Co. found to be a common carrier subject to the act, which may lawfully participate in joint rates with trunk lines and in divisions thereof. Puget Sound & Cascade Ry. Co. v. Director General, 91 I. C. C. 467.

(d) Commission has consistently found that motor-truck or wagon transfer companies are not common carriers subject to the act. Parmalee case, 12 I. C. C. 39. Motor-Truck or Wagon Transfer Service, 91 I. C. C. 539, 540, 546.

(e) Hannibal Connecting R. R. Co. found to be a common carrier engaged in interstate commerce and subject to recapture provisions of section 15a of the act. Contention that such carrier was not subject to recapture provisions, upon theory that its excess earnings came

from intraplant service, not sustained following Dayton-Goose Creek case, 263 U. S. 456. Intrastate and interstate operations are so inextricably commingled as to make segregation impracticable, and to segregate would also defeat plan of Congress to control excess profits due to level of whole body of rates. Status of H. C. R. R. Co., 91 I. C. C. 744.

(f) Where railroad which was organized and did business for many years as a common carrier leased its system to another, whereby lessee performed actual work of transportation of leased system, but lessor was required to discharge many duties as a carrier, is still organized to act as carrier, and in event of default by lessee must again operate railroad system as a carrier, HELD, that it still remained a "common carrier," within meaning of Interstate Commerce Act, §20a, as added by Transportation Act Feb. 28, 1920, §439 (U. S. Comp. St. Ann. Supp. 1923, § 8592a). Whitman v. Northern Cent. Ry. Co., (Md., 1924) 127 Atl. 112.

(g) The Lorain & Southern R. R. Co., found to have been and to be a common carrier subject to the act, which may lawfully participate in joint rates with other common carriers or have its switching charges on interstate shipments absorbed under appropriate tariff provisions by roads having the line haul. Ohio Quarries Co. v. N. Y. C., 92 I. C. C. 703.

(h) Where defendant, under contract with creamery, hauls perishable produce, such as cream, butter, eggs, etc., from creamery to a shipping point, it being necessary to ship same several times a week, and has never transported for other persons, such carriage will not be enjoined as interfering with plaintiff's operation of a stage and passenger line. Davis & Banker v. Metcalf (Wash. 1924) 229 Pac. 2.

(i) Peoria & Pekin Union Ry. Co., found to be an independent common carrier subject to the act, and as such entitled to assess reasonable and otherwise lawful charges for transportation services which it renders, such charges to be filed and published in accordance with the provisions of section 6 of the act. Peoria & Pekin Union Ry., 93 I. C. C. 3, 22.

(j) Overruling Conf. Ruling 341. FOUND, that where a common carrier subject to the act performs an intermediate service in connection with traffic moving at joint rates, it should concur in such joint rates and receive divisions thereof, the divisional arrangements to be so adjusted as to, in effect, result in absorption thereof by line that delivers traffic to carrier performing the intermediate service. Peoria & Pekin Union Ry., 93 I. C. C. 3, 32.

(k) Blair R. R. extending from Kregar to Jones Mill, Pa., found not to have been or to be a common carrier subject to the act. Evidence fails to disclose a bona fide holding out to the public of the right to use the line as a common carrier as contemplated by decision of the Supreme Court in The Tap Line Cases, 234 U. S. 1. Piper v. Blair, 96 I. C. C. 102.

(l) Strouds Creek & Muddlety R. R. found to be a common carrier subject to the act. It holds itself out to transport interstate traffic, has a contract with the United States Government for carrying mail, and many persons avail themselves of its service, a daily schedule being maintained to and from Allingdale, W. Va., the junction point. Tioga Coal Co. v. B. & O., 101 I. C. C. 611.

(m) Upon further hearing, finding in original report, 80 I. C. C. 269 that the Pittsburgh & Ohio Valley Ry. was and is a common carrier subject to the act, affirmed. Interstate shipments have been and are transported by the Valley and its facilities are open to the public. Carnegie Steel Co. v. Director General, 101 I. C. C. 638.

ALL OTHER CITATIONS

Depreciation Charges of W. Ry. & E. Co., 85 I. C. C. 126; Hampton & Branchville R. R. & Lumber Co. v. A. C. L. R. R. Co., 88 I. C. C. 77.

III. OBLIGATIONS.

See Facilities and Privileges II; Loss and Damage §5½; Pipe Lines §4, II; Tap Lines II; Transportation II.

§8. In General.

(a) A carrier's right of way which is merely a right of user in common with use made of the same property by others, may be compared with trackage rights given by one railroad to another, the tracks being used jointly, or with right of a railroad in a street used in common with the public. In either case the right is not valued the same as though the right of way were owned or used exclusively by the carrier being valued. See

Texas Midland R. R., 75 I. C. C. 1, 123. New York Dock Ry. v. B. & O. R. R. Co., 89 I. C. C. 695, 705.

(b) Application of provisions of the act is limited to certain classes of common carriers expressly named and specified in section 1, none of which include motor trucks. Motor Truck or Wagon Transfer Service, 91 I. C. C. 539, 546.

(c) Although language employed in section 1 of the act in connection with the term transportation would be broad enough, if standing alone, to include every form of motor-truck or drayage service, its meaning must be determined by referring to definition of common carrier by "railroad," which names among other things "terminal facilities of every kind used or necessary in the transportation of the persons or property designated herein." Construed in this manner provisions of the act, and consequently commission's jurisdiction, are applicable to service by motor-truck or drayage transfer only when they can be regarded as terminal facilities. Motor-Truck or Wagon Transfer Service, 91 I. C. C. 539, 546.

(d) Charges to public for motor-truck service under commission's jurisdiction must be published in tariffs same as charges for any other service granted by carriers as part of their transportation service, and if such drayage or transfer charges are absorbed tariff must show conditions and the amount of charges absorbed. Contracts under which carriers employ truck or drayage companies to perform transportation services for them should also be filed with commission to prevent any suggestion of unjust discrimination. Motor Truck or Wagon Transfer Service, 91 I. C. C. 539, 547.

(e) Commission has no jurisdiction over line-haul rates of motor-truck companies operated as extensions of lines of rail or water carriers. Motor-Truck or Wagon Transfer Service, 91 I. C. C. 539, 547.

(f) While motor-truck or wagon transfer companies are not common carriers subject to the act, truck or wagon transfer services performed in connection with terminal services of a common carrier subject to the act, or with transfer of freight in transit at an intermediate point by such common carriers, are subject to commission's jurisdiction. Such service is a part of a transportation service by a carrier over which commission has jurisdiction. Motor-Truck or Wagon Transfer Service, 91 I. C. C. 539, 547.

(g) One bound to furnish transportation to public as common carrier must serve all up to capacity of his facilities, without discrimination and for reasonable pay. Michigan Public Utilities Commission v. Duke, 45 Sup. Ct. 191.

(h) Railroads, being servants of the people, must render adequate service, without discrimination, to public as a whole, and at the lowest rate possible consistent with a fair return on their property. Louisville & N. R. Co. v. Johnson's Adm'x (Ky., 1925) 270 S. W. 58.

(i) Overruling Conf. Ruling 341. FOUND, that where a common carrier subject to the act performs an intermediate service in connection with traffic moving at joint rates, it should concur in such joint rates and receive divisions thereof, the divisional arrangements to be so adjusted as to, in effect, result in absorption thereof by line that delivers the traffic to carrier performing the intermediate service. Peoria & Pekin Union Ry., 93 I. C. C. 3, 22.

(j) Defendant is a common carrier engaged in interstate commerce and is bound under the express provisions of the act to accede to every proper application for service, subject only to such reasonable regulations as it may prescribe. It must accept less desirable traffic as well as that which is more desirable, and, although its best interest might be promoted by refusing to perform the service here in controversy, it has no right to refuse to transport iron pipe or any other article not dangerous to handle and which is ordinarily accepted for transportation. Alcoholic liquors via. L. & N. 102 I. C. C. 202, 204.

ALL OTHER CITATIONS

Hampton & Branchville R. R. & Lumber Co. v. A. C. L. R. R. Co., 88 I. C. C. 77; Section 28 of Merchant Marine Act, 88 I. C. C. 651.

IV. ALLOWANCES.

§9. In General.

See Allowances.

(a) There are some items of operating expenses which properly would be chargeable in a cost study of a common carrier but not in the cost of operating a plant facility. The difference ordinarily would be slight, as the general

character of the service performed for the proprietary industry is the same whether it be performed by a plant facility or a common carrier. Carnegie Steel Co. v. Director General, 101 I. C. C. 638, 643.

II. REASONABLENESS OF CHARGES.

See Reasonableness of Rates.

(a) By compressed cotton is meant cotton originally baled in flat or uncompressed bales and then compressed to a density of about 22.5 pounds per cubic foot, thereby lessening dimensions of the bale and enabling many more to be loaded into a car. Mississippi Railroad Commission v. A. & V. Ry. Co., 89 I. C. C. 47, 49.

(b) Respondent, St. L. & S. F. R. R., proposed certain rules and regulations with respect to the concentration, compression and storage of uncompressed cotton at compress points in southeastern Missouri and northeastern Arkansas, and transit arrangements on compressed cotton at East St. Louis, Ill., and Jonesboro and West Memphis, Ark. Complainant attacked as unreasonable and unduly prejudicial present rules and regulations of the Frisco which permit transportation from one compress point to another compress point of uncompressed cotton for concentration and compression. **Floating uncompressed cotton from one compress point to another.** Blytheville, Steele and Hayti are on the main line of the Frisco extending from Memphis to St. Louis, and from 70 to 90 miles north of Memphis. Caruthersville is on a branch of the Frisco about 8 miles east of Hayti. West Memphis is on the Marion cut off, 4.2 miles south of Marion, Ark., a point on the main line of the Frisco about 15 miles from Memphis. Jonesboro is on the Frisco 64.4 miles northwest of Memphis and 24 miles south of Walnut Ridge, Ark. Malden, Mo., the most distant of the protesting compress points, is on a branch of a branch line of the Frisco some 137 miles from Memphis. It has long been the practice of cotton carrying roads to afford to cotton growers and buyers certain transit services and facilities in connection with the movement of uncompressed cotton to points at which compresses are located, where the cotton is usually sampled, graded, sold and, after compression to standard density, forwarded to the va-

rious textile markets for consumption. Compression also conserves equipment, the evidence indicating that two carloads of flat cotton can be loaded into one car after compression. Upon this record, HELD, the commission can not do more than require removal of the undue prejudice under both the present and proposed rule to certain compress points. Obviously that prejudice could be removed either by the establishment of a rule which would permit the indiscriminate floating of uncompressed cotton from one compress point to or through another compress point without regard to distance, or by a flat requirement that, except in case of disability, the cotton must be compressed at point of origin if a compress is located there. In lieu thereof, the commission offers the tentative suggestion that the floating of uncompressed cotton from one compress point to another might well be permitted at least to the same extent that cotton from noncompress points is permitted to pass by one compress point to another in transit. HELD, present rules unduly prejudicial. **Storage in transit of compressed cotton at East St. Louis, West Memphis and Jonesboro.** Under the present rules cotton and cotton linters may be stored in transit at East St. Louis, Ill., when originating at Blytheville, Fort Smith, Jonesboro, Van Buren, Walnut Ridge, and Caruthersville and reshipped to trunk line territory, the movement out of East St. Louis to be covered by the balance of the through rate with an additional charge of 6.5c for the storage in transit service. The only essential change in the proposed revision relating to East St. Louis is the addition of Hayti, Malden and Steele to the list of points of origin. Respondent proposed to establish storage in transit at Jonesboro and West Memphis similar to the present service at Memphis. As is well known, storage in transit at primary and intermediate markets is quite generally practiced. Memphis and East St. Louis are large markets with adequate storage facilities. The storage in transit of compressed cotton at these points is to the interest of cotton growers and shippers alike, and there is nothing objectionable in respondent's practice which permits storage in transit of compressed cotton at such points. HELD, suspended schedules in so far as they relate to storage at East St. Louis, West Memphis and Jonesboro justified. Compression, Concentration and Storage of Cotton, 91 I. C. C. 472.

(c) Respondent, M. & O., proposed to establish certain rates for the transportation of cotton, compressed at the shipper's risk and expense, from Meridian, Miss., to Carolina territory. The schedules suspended merely proposed to restore the normal relationship between uncompressed and compressed cotton from Meridian to Carolina territory; that relationship having been disrupted Nov. 5, 1921, by a tariff publication, effective that date, which increased the differential from 12.5c normal at that time, to 26.5c, and to 28c from Meridian only to certain destinations in Carolina territory only. This disruption was published only by the M. & O., and applied only on shipments delivered to it at Meridian. From all other points in the territory surrounding Meridian the normal differential was maintained by all carriers and the result was the creation of unauthorized departures from the requirements of the fourth section. The record shows no good reason why Meridian should longer benefit by unduly low rates on compressed cotton to Carolina points. HELD, suspended schedules justified. Cotton to Carolina Territory, 92 I. C. C. 125.

(d) Respondents proposed to increase the rates on cotton and cotton regins, uncompressed, any quantity, with privilege of carriers of compressing and on cotton linters, uncompressed, less carloads, with privilege to carriers of compressing, from Cairo, Brookport, Gale and Thebes, Ill., to eastern points. In 1910 rates were increased from Memphis and St. Louis but no change was made from Cairo. Respondents concede that the commodity rates bear no fixed relation to the class rates, but they urge that the difference in distance, together with the fact that class rates from Cairo are uniformly higher than from St. Louis, justify a similar difference as to the rates here considered. HELD, suspended schedules not justified. Cotton, cotton linters, and regins to eastern cities, 93 I. C. C. 453.

(e) If cotton is transported flat (uncompressed) in order to meet trade requirements and convenience, the resulting use of additional car space should be paid for by the shipper. Savannah Traffic Bureau v. A. & R. R. R., 96 I. C. C. 749, 753.

(f) The real purpose of compression of cotton in transit at the expense of carriers are conservation of equipment and economy of transportation. Cotton con-

centrated at the request of the shipper usually moves out of the concentration point in round lots of 50 bales or more, and, as compressed cotton requires less space than cotton uncompressed, the carriers by paying the cost of compression are required to furnish fewer cars for its transportation. The evidence indicates that the factors which determine whether compression in transit will be performed at the expense of the carrier are the length of the haul from the compress point to the billed destination of the cotton and the prevailing car supply. Savannah Traffic Bureau v. A. & R. R. R., 96 I. C. C. 749, 755.

(g) Complainant alleged defendants failure and refusal to absorb out of the applicable local rates the entire compress charges of 15c on various shipments of flat or uncompressed cotton originating at and forwarded from Jonesboro, Pine Prairie, and Marmou, La., on the Rock Island in Louisiana, between August 31 and Dec. 13, 1918 compressed at Alexandria and reshipped over the T. & P., between Dec. 14, 1918 and Jan. 29, 1919, resulted in unreasonable rates. The applicable local intrastate rates were assessed into and out of Alexandria. The waybills and freight bills carried the notation compress charges paid by shipper, and freight charges were assessed at the applicable rate on compressed cotton of 50c. The inbound bills of lading were not made a part of the record, and there is nothing to show whether they contain notations to indicate that the cotton was intended for destinations beyond Alexandria. The shipments of uncompressed cotton which originated at points other than Alexandria, were billed care of the compress at Alexandria, compression having been arranged for and paid by complainant to the compress company. The shipment which originated at Alexandria proper were delivered by the shippers to the compress company and were not offered to the T. & P., until after compression, and the compress charges was paid to the compress company by complainant. Under the applicable tariff provision the outbound shipment must necessarily be redelivered to the line bringing the cotton into the transit point. This was not done. The through published rates of the Rock Island were 60c from Pine Prairie, Marmou and Alexandria, and 64.5c from Jonesboro to New Orleans. It is clear from the record that the compression was not at the expense of the carrier and as the shipments were not redelivered to the Rock Island at Alexandria, but to the T. & P., for delivery, they were separate and independent transactions properly subject to the local rates to and from that point, and so far as the movement from Alexandria to New Orleans was concerned, the freight charges have been correctly assessed on basis of the rate applicable on compressed cotton tendered to that carrier compressed, on which the shipper has paid the cost of compression of 15c. The T. & P., tariffs publish a 50c rate from Alexandria to New Orleans containing practically the same rules as to the application of rates therein on uncompressed and compressed cotton as the Rock Island, viz., 50c on cotton delivered to the carrier compressed with compress charges paid by the shipper, whereas the rate on cotton uncompressed with privilege to the carrier of compression is 60c. HELD, local rates properly applicable, complaint dismissed. Haas & Co. v. Director General, 98 I. C. C. 619.

(h) Proposed establishment by M. & O. R. R. of new rates and charges on uncompressed cotton from Meridian, Miss., to Carolina territory, for purpose of restoring normal differential relationship between rates on uncompressed cotton with carrier's privilege of compressing, and cotton compressed at shipper's expense, found justified. Disrupted relationship was published in error only by M. & O. and applied only on shipments delivered to it at Meridian, whereas from surrounding points normal differential was maintained. Moreover, commission's tariff rules require changes in rates to be specified in tariffs containing them, either as advances or reductions, but tariff here referred to published increases as though they had been mere continuations of rates previously in effect. Cotton to Carolina Territory, 92 I. C. C. 125.

(i) Applications for authority to continue rates for transportation of cotton, compressed or uncompressed, from Phoenix and other Arizona points to Columbus, Eatonton, Macon, Thomaston, and other points in Georgia which are higher than rates on like traffic to more distant points, denied. Southwest Cotton Co. v. A. E. R. R., 92 I. C. C. 563, 568.

(j) Rate on uncompressed cotton, damaged by fire and water, from Pine Bluff, Ark., to Galveston, Texas, found not unreasonable as compared with rate

on cotton to be compressed in transit. There never has been a rate on uncompressed cotton between these points, and in 69 I. C. C. 318 the commission cancelled rate on the same commodity from the Mississippi Valley and Arkansas to New Orleans. The evidence is general to the effect that if uncompressed cotton were given the same rates to Galveston as those now in effect on cotton to be compressed in transit there would be a substantial movement of uncompressed cotton. Complainants, however, do not state that they have any need for a rate from any point on uncompressed cotton, unless they desire to ship cotton which could not be compressed in transit because of damage by fire and water. McFadden & Bro.'s Agency v. St. L. S. W., 96 I. C. C. 267.

(k) Failure of defendant carriers to absorb out of the applicable rates the entire compress charges on various shipments of cotton originating at and forwarded from Jonesboro, Pine Prairie, and Marmou, La., compressed at Alexandria, La., and reshipped to New Orleans, La., found not unreasonable. Carriers' privilege of compression was not recognized in the transaction, as compression charges were arranged for and paid direct by shipper of consignee, and as the outbound shipments were not redelivered to the carrier bringing into the transit point. in accordance with the applicable tariff provision cited, but were reshipped via another route, the movements were separate and distinct transactions on which the local rates were properly applicable. Haas & Co. v. Director General, 98 I. C. C. 619.

(l) Present adjustment of rates on cotton from Oklahoma, Arkansas, Texas and Louisiana to Texas Gulf ports found unduly prejudicial to the uptown and interior warehouses and compresses and unduly preferential of the water-front warehouses and compresses; the rates should be so adjusted that one rate will apply for all deliveries within the usual switching limits of the ports, except that the export rates should be made higher than the domestic rates by amount equal to the wharfage charge. This finding is not to be construed as condemning the practice of the carriers of absorbing drayage charges in lieu of switching. Reasonableness of the rates was not an issue and the findings herein are not to be construed as authorizing the carriers to increase their present revenues, rather, the rates should be so readjusted as to preserve existing revenues. Application of Rates on Cotton to Gulf Ports, 100 I. C. C. 159.

III. RULES AND REGULATIONS.

(a) Complainant alleged defendants refusal to absorb out of the applicable rates the entire compress charges of compress companies on any quantity shipments of cotton forwarded from points in Texas, Louisiana, Arkansas and Oklahoma to interstate destinations between August and December, 1920, resulted in unreasonable charges. Prior to Nov. 1, 1918, the charge for compressing in transit was 10c increased on that date to 15c. On August 20, 1920, this charge was advanced to 20c but defendant's tariffs did not provide for the absorption of the additional 5c. Prior to August 26, 1920, the compress charge on cotton moving intrastate between points in Texas was the same as that applicable on interstate traffic. On that date the compress charge on cotton moving intrastate was increased to 20c and the carriers under appropriate tariff authority absorbed the full amount thereof except when the rates were less than 81.5c, in which cases the absorption was limited to the amount that the rates exceeded 61.5c. HELD, failure of defendants to provide for the absorption out of the applicable rates of the entire 20c compress charge except where the rates were less than 81.5c in which cases the absorption out should be the amount which the rates exceeded 61.5c on shipments that moved during the period in question was unreasonable, reparation awarded. Houston Cotton Exchange v. A. & R. R. R., 92 I. C. C. 220.

CONCENTRATING RATES AND PRIVILEGES.

See Compress Companies and Charges; Facilities and Privileges §4; Penalty Charges; Through Routes and Joint Rates; Transit.

(a) Shipments moved into concentration point over M., K. & T., and while held there the outbound service over that line was discontinued under an arrangement whereby Ft. Smith & Western handled outbound traffic for both roads.

Upon advice from M., K. & T., complainant tendered shipments to Ft. S. & W. for movement outbound without apprising that carrier that they had moved inbound over M., K. & T., or that they be routed in connection with that line. Shipments were forwarded outbound in connection with lines other than M., K. & T. and claims for refund of inbound charges were rejected. FOUND: Since tariffs of both these carriers permitted concentration and reshipment under joint rates from origin of shipments to final destination, conditioned upon both inbound and outbound movements being over same line, it can not be held that shipments were overcharged. Anderson, Clayton & Co. v. Director General, 91 I. C. C. 233.

(b) Failure of carriers to publish either concentration rates or stopping in transit to complete loading arrangements in connection with wool and mohair shipments found unjust and unreasonable. Such arrangements are desirable, as they are conducive to heavier loading and result in more economical transportation. Moreover, small growers will be able to secure benefit of c. l. rates by being permitted to consolidate their l. c. l. shipments into carloads. Reasonable charge per car for each stop prescribed. Wool Rates Investigation, 1923, 91 I. C. C. 235, 281.

(c) Rules and regulations of St. L. S. F. Ry. Co., governing concentration and compression of cotton at Jonesboro, Ark., and at Hayti, Steele. Caruthersville, and Malden, Mo., whereby such points are denied right to draw or "float" uncompressed cotton from points at which compresses are located while granting such privilege to Blytheville and West Memphis, Ark., and Memphis, Tenn., found unduly prejudicial to former points and preferential of latter. Compression, Concentration,and Storage of Cotton, 91 I. C. C. 472.

(d) Proposal to restrict territory of origin in rules governing stop-off in transit of lumber westbound at Black Rock, Buffalo, and North Tonawanda, N. Y., while no similar restriction is proposed at Falconer and Jamestown, N. Y., and Corry, Pa., competing points, found not justified. Proposal is induced by fear of unsatisfactory divisional arrangements with connecting carriers, but this is not recognized as sufficient justification for increased rates. Moreover, there is no warrant for extending to Buffalo, Black Rock, and North Tonawanda different treatment from that accorded Falconer, Jamestown, and Cory. Transit Privileges on Lumber at Buffalo, 92 I. C. C. 181.

CONSTITUTIONAL LAW

See Act to Regulate Commerce I; Commodities Clause I; Crimes §1; Interstate Commerce §4, §5; Long and Short Hauls §1, §3; Loss and Damage §1; Pipe

Lines §2; Special Contracts §1; State Rates and Regulations.

(a) Statute of limitations, requiring existing actions to be brought within prescribed time from date when cause of action arose, is constitutional and within legislative powers, if reasonable time thereafter be given for commencement of suits, cause of which had accrued when law became effective. Philadelphia B. & W. R. Co. v. Quaker City Flour Mills Co., (Pa., 1925) 127 Atl. 845.

CONTRACTS

See Cars and Car Supply IV; Exclusive Contracts; Special Contracts; Tariffs IV.

(a) No implied contract binding defendant carrier could be inferred from dealings between the shipper and the federal Railroad Administration. Pennsylvania R. Co. v. S. M. Hamilton Coal Co. (Md. 1923) 125 A. 405.

(b) Shipper's claim against carrier for breach of contract to collect freight from consignee and to refund it to shipper, even if such contract is an illegal discrimination, HELD not to arise out of a "civil wrong," under Interstate Commerce Act, § 8 (Comp. St. § 8572), on which suit must be brought within two years, under sections 2, 9 (Comp. St. §§ 8564, 8573). Pennslyvania R. Co. v. Chesapeake & Ohio Coal & Coke Co., 297 Fed. 249.

press Companies §1½; Finance Dockets VIII; Freight Charges; Interstate Commerce Commission II; §2 §3, VII, §17; Loss and Damage; Reparation §23; Special Contracts IV; Tariffs §20; Undercharges §1½; War Legislation.

I. ACTIONS.

§1. In General.

See Actions at Law; Discrimination §16; Reparation §23.

(a) Whatever may be the rights or equities of the consignor and the consignees arising out of their contract as to variations in their agreed price for the commodity, dependent upon changes in the transportation rates, they present no question that is cognizable by this Commission, dealing, as it does, with the legal public obligations of the carrier, which is a stranger to the private contract between consignor and consignee. Crawford County Commissioners v. St. L. S. F. Ry., 93 I. C. C. 502, 505.

(b) It is not within commission's province to pass upon question of whether a court erred in its determination. American Hominy Co. v. Director General, 93 I. C. C. 256, 259.

(c) Upon contentions that (1) the building of mine lead track was beyond scope of powers granted to complainant by its Illinois charter and that (2) an order requiring defendant to install switch connection would require extension of defendant's line without its consent and be without due process. HELD, these contentions are primarily matters for judicial interpretation and need not be further considered here. Dering Coal Co. v. C., C., C. & St. L., 96 I. C. C. 143, 151.

(d) Whether complainant was a lessee during the period of the stays in court proceedings is a question for the courts. If, under the laws of the State of New York, he was a tenant, he was entitled to the completion of the transportation service by delivery of the cars consigned to him. Gallup v. N. Y., N. H. & H. R. R. Co., 98 I. C. C. 453, 455.

(e) U. S. District Court of Indiana restrained the Public Service Commission of Indiana from interfering with intrastate rates prescribed in 60 I. C. C. 337. Upon vacation by commission of its order, the court vacated its injunction with proviso that State commission might not pass on the reasonableness of intrastate rates during effective period of order, without prior consideration of the specific rates by this commission. Upon such consideration, certain exceptions to order made. Indiana Rates, Fares and Charges, 100 I. C. C. 169, 170.

(f) Defendant recovered judgment in Indiana courts for demurrage charges and appeal is pending. If the average-agreement plan was in operation during period in question, the charges assessed were straight overcharges and that issue now before the Indiana courts is not before the commission. Acme Coal Co. v. C. C. C. & St. L., 101 I. C. C. 79, 80.

II. APPEAL.

§6. In General.

(a) Appellee may not attack a decree, with a view either to enlarging his own rights thereunder or of lessening appellant's rights. United States v. American Ry. Express Co., 44 Sup. Ct. 560. Southeastern Express Co. v. Same, 44 Sup. Ct. 560. Southern Traffic League v. Same, 44 Sup. Ct. 560.

(b) Appellee may, without taking a cross-appeal, urge in support of a decree any matter appearing in the record, though his argument involves an attack on reasoning of lower court or an insistence on matters overlooked or ignored by it. United States v. American Ry. Express Co., 44 Sup. Ct. 560. Southeastern Express Co. v. Same, 44 Sup. Ct. 560. Southern Traffic League v. Same Sup. Ct. 560.

(c) On appeal from decree holding appellants in contempt for violation of decree, the Supreme Court, in absence of cross-appeal, will not consider question of appellees' right to amendment of original decree, so as to impose additional condition. Terminal R. Ass'n of St. Louis v. United States, 45 Sup. Ct. 5.

III. UNITED STATES COURTS.

§6½. Jurisdiction in general.

See Through Routes and Joint Rates §1 (f).

(a) An order of the Railroad and Warehouse Commission fixing street railway fares ends the legislative function of rate making, and the hearing

provided by Laws Minn. 1921, c. 278, § 10, is not a continuation of the legislative rate-making process, nor does the remedy provided by such statute preclude resort to the federal courts. Duluth St. Ry. Co. v. Railroad and Warehouse Commission, 4 Fed. (2d) 543.

(b) Under Commerce Court Act June 18, 1910, c. 309, § 1, and Act. Oct. 22, 1913 (Comp. St. §§ 992, 994), abolishing that court and transferring its jurisdiction to the District Courts a District Court has jurisdiction of a suit to set aside the final valuation of the property of a railroad company by the Interstate Commerce Commission pursuant to Interstate Commerce Act, §19a, as amended (Comp. St. Ann. Supp. 1923, §8591). Los Angeles & S. L. R. Co. v. United States 4 Fed. (2d) 736.

(c) Court had jurisdiction of railroad's action for certain fixed storage charges claimed to be due under uniform interstate tariff filed with Interstate Commerce Commission involving no question of fact, either in aid of construction or in other respect, or question of administrative discretion, notwithstanding absence of previous resort to Interstate Commerce Commission. Payne v. Rodgers, 4 Fed. (2d) 827; Rodgers v. Payne, 4 Fed. (2d) 827.

IV. UNITED STATES SUPREME COURT.

§10. In general.

(a) Under Expedition Act Feb. 11, 1903 (Comp. St. §§ 8824, 8825), a justice of the United States Supreme Court could allow appeal from decree of District Court in contempt proceedings, and on appropriate security grant supersedeas, notwithstanding Rules of Supreme Court, No. 36, authorizing allowance of appeal and granting supersedeas in cases provided for in Judicial Code, §§ 238, 252 (Comp. St. §§ 1215, 1229), in view of Rev. St. §§ 999, 1012 (Comp. St. §§ 1659, 1673), and appeal is not limited to question of jurisdiction. Terminal R. Ass'n of St. Louis v. United States, 45 Sup. Ct. 5.

(b) Jurisdiction of Supreme Court to review judgment of District Court depends on presence of some substantial constitutional question, and a conviction for violation of priority order of Interstate Commerce Commission under Transportation Act 1920, tit. 4, §402 (15), being Comp. St. Ann, Supp. 1923, §8563 (15), cannot be taken to the Supreme Court on writ of error, all constitutional questions having been resolved in favor of the validity of the statute by previous decisions. Avent v. United States, 45 Sup. Ct. 34.

(c) Determination of the state Supreme Court that respondents in mandamus to compel railroads to eliminate grade crossings are not entitled to jury trial will be accepted by the federal Supreme Court as a correct determination of the local law. Southern Ry. Co. v. City of Durham N. C. 45 Sup. Ct. 51.

(d) The United States Supreme Court, in affirming decree enjoining enforcement of state statute, because violative of federal Constitution, will not pass on question whether statute violates state Constitution, in absence of decision of state Supreme Court thereon. Michigan Public Utilities Commission v. Duke, 45 Sup. Ct. 191.

(e) United States Supreme Court having jurisdiction to review judgment of conviction in District Court on writ of error under Judicial Code, §238 (Comp. St. §1215), because constitutional question is involved, must decide other questions arising on the record. Brooks v. United States, 45 Sup. Ct. 345.

(f) The United States Supreme Court has jurisdiction to review on certiorari, at instance of the United States, judgment of Circuit Court of Appeals reversing judgment of conviction in a criminal case under Judicial Code, §240 (Comp. St. §1217), providing that any "civil or criminal" case may be certified to Supreme Court "by certiorari or otherwise upon the petition of any party thereto." U. S. v. Gulf Refining Co. 45 Sup. Ct. 597.

V. STATE COURTS.

See Actions at Law; Discrimination §16; Interstate Commerce Commission §2; Loss and Damage §5; Overcharges; State Rates and Regulations; Undercharges §7½; War Legislation.

§11. In General.

(a) Under Federal Control Act 1918, §10 (U. S. Comp. St. 1918, U. S. Comp. St. Ann. Supp. 1919, §3115¾j) and Transportation Act Feb. 28, 1920, §§206

(a), 206 (f), being Comp. St. Ann. Supp. 1923, ..10071¼cc, and presidential proclamation of April 11, 1918 (Comp. St. §1974a), state courts have jurisdiction of action against Director General to recover overcharges on intrastate shipments. Gorham Bros. Co. v. Ann Arbor R. Co. (Mich., 1924) 200 N. W. 287.

VI. PRACTICE AND EVIDENCE.

See Evidence; Procedure Before Commission; Reparation §23.

§12. In General.

(a) American courts cannot give judgment in sterling currency. Pennsylvania R. Co. v. Cameron (Pa., 1924) 124 Atl. 638.

(b) Meaning and application of general language in decree rendered in contempt proceeding is to be limited by specification of details in same section of decree. Terminal R. Ass'n of St. Louis v. United States, 45 Sup. Ct. 5.

(c) Where decree rendered in suit by the United States against the Terminal Railroad Association, its subsidiary and proprietary railroads, for violation of Sherman Anti-Trust Act (Comp. St. §§ 8820-8823, 8827-8830), did not purport to regulate rates, or prescribe divisions of joint rates, or fix liability for transfer charges, and expressly provided that decree should not affect Interstate Commerce Commission's power to determine rates, the refusal of certain railroads entering from the east to bear transfer charges on west-bound through freight held not to constitute contempt. Terminal R. Assn. of St. Louis v. United States, 45 Sup. Ct. 5.

(d) Defendants will not be held in contempt for violating decree, in absence of showing that injury has resulted to petitioners, or that they are entitled to relief. Terminal R. Ass'n of St. Louis v. United States, 45 Sup. Ct. 5.

(e) In contempt proceedings for its enforcement, a decree will not be expanded by implication or intendment beyond the meaning of its terms, when read in the light of the issues and the purpose for which the suit was brought, and the facts found must constitute a plain violation of the decree so read. Terminal R. Ass'n. of St. Louis v. United States, 45 Sup. Ct. 5.

(f) Contempt proceeding, based on violation of decree and instituted to enforce rights claimed by parties thereunder, and not to vindicate court's authority is a civil and remedial, and not a criminal, proceeding. Terminal R. Ass'n of St. Louis v. United States, 45 Sup. Ct. 5.

(g) In carrier's action to recover demurrage, reasonableness of time allowed for loading and unloading cars, and charge made for detaining them beyond that time, was not required to be passed on by Appellate Court, where no claim was made in brief that either time or charge was unreasonable. Davis, Director General of Railroads v. Steele (Ind., 1925) 146 N. E. 425.

(h) In action against Director General of Railroads to recover demurrage, war tax, and reconsignment charges which plaintiff was required to pay because of transportation of car to point other than that stated in the bill of lading, testimony that the demurrage, reconsignment charges, and war tax were paid to the joint agent of railroads at a certain point held admissible, since payment to the joint agent was in effect payment to the Director General. Davis, Director General of Railroads, v. Stamford Mill & Elevator Co., (Tex. 1924) 260 S. W. 1081.

§14. Injunctions.

See Injunctions.

(a) District Court had jurisdiction of railroad's suit to enjoin enforcement of order made by division of Interstate Commerce Commission relating to divisions of interstate joint rates, under Interstate Commerce Act, § 15 (6), as amended by Transportation Act 1920, § 418 (Comp. St. Ann. Supp. 1923, § 8583), despite railroad's failure to apply to the full Commission for a rehearing; the question of whether relief should be denied until all possible administrative remedies have been exhausted being a matter of judicial discretion. United States v. Abilene & S. Ry. Co., 44 Sup. Ct. 565.

(b) A suit for injunction under Transportation Act, §402 (Comp. St. Ann. Supp. 1923, §8563), to restrain the unlawful construction of an extension, is not one of a local nature, which must be brought in the district where the proposed track is situated. Lancaster v. Gulf C. & S. F. Ry. Co. (Tex. 1924) 298 Fed. 488.

(c) Where the state statutes do not provide for a judicial review of orders of the state Railroad Commission, an order made without any substantial evidence on which to base it is arbitrary, and is not due process of law, and its enforcement may be enjoined by any court of equity of competent jurisdiction. Illinois Cent. R. Co. v. Railroad Commission of Kentucky. 1 Fed. (2d) 805.

(d) Where an order of a state Railroad Commission was temporarily enjoined to enable the commission to reconsider it, the commission HELD to have jurisdiction to hold a further hearing. Illinois Cent. R. Co. v. Railroad Commission of Kentucky 1 Fed. (2d) 805.

(e) After a hearing before three judges under section 266, Judicial Code (Comp. St. §1243), they may delegate to the local judge the issue of injunction after conditions are performed, but they will not decide a motion to dismiss the bill. Illinois Cent. R. Co. v. Railroad Commission of Kentucky. 1 Fed. (2d) 805.

(f) A federal court is not without jurisdiction of a suit to enjoin enforcement of an order of a state Railroad Commission reducing rates on complaint of a shipper, because the difference between the two rates as to that one shipper may not amount to $3,000, where the aggregate difference on all shipments affected would equal that amount within a short time. Illinois Cent. R. Co. v. Railroad Commission of Kentucky 1 Fed. (2d) 805.

(g) A suit to enjoin an order fixing street railroad fares is not premature because no test period had intervened since the order fixing the fares. Duluth St. Ry. Co. v. Railroad and Warehouse Commission, 4 Fed. (2d) 543.

(h) Neither the court nor the special master in suit to enjoin order of Railroad and Warehouse Commission fixing street car fares can fix rates, their function being to determine whether the rates fixed by the legislative authorities are confiscatory or take private property without due process. Duluth St. Ry. Co. v. Railroad and Warehouse Commission, 4 Fed. (2d) 543.

(i) Generally equity will not interfere to prevent the enforcement of a criminal statute even though unconstitutional, but will interfere to prevent prosecution under unconstitutional statute, when necessary to effectually protect property rights. Hygrade Provision Co. v. Sherman 45 Sup. Ct. 141; Lewis & Fox Co. v. Same, 45 Sup. Ct. 141; Satz v. Same, 45 Sup. Ct. 141.

§15. Limitation of Actions.

(a) If steps to make injunctive order of federal court against interference with establishment of new telephone rates effective are not taken, old rates are effective, and federal court will not restrain prosecution in state court of action by telephone user to recover excessive payment made under protest. Pacific Telephone & Telegraph Co. v. Agnew, 2 Fed. (2d) 155.

(b) Order of federal court, enjoining interference with telephone company in putting into effect certain rates, did not have the effect of increasing rates, until Rem. Comp. Stat. Wash. 1922, §10376, had been complied with by filing schedule, in view of section 10372. Pacific Telephone & Telegraph Co. v. Agnew 2 Fed. (2d) 155.

§16a. Enforcement of Commission's Orders.

(a) While rulings of Interstate Commerce Commission are not binding on Supreme Court, they are particularly persuasive, where the matter of a connection between coal company and railroad is bound up with whole subject of interstate traffic, of which such commission has jurisdiction. Cleveland C. C. & St. L. Ry. Co. v. Commerce Commission ex rel. J. K. Dering Coal Co., (Ill., 1925) 146 N. E. 606.

CROSS REFERENCES

See Allowances IV, VII, VIII, §8 (7); Credit Account; Divisions IV; Express Companies IX; Loss and Damage IV; Overcharges; Special Contracts §3; Tay Lines §7.

I. THE ELKINS ACT.

See Elkins Act.

§1. Constitutionality.

See Constitutional Law.

(a) Congress, in the exercise of police power, can regulate interstate commerce to the extent of forbidding and punishing use of such commerce as agency to promote immorality, dishonesty, or the spread of any evil or harm from one state to another. Brooks v. United States, 45 Sup. Ct. 345.

IV. MISBILLING.

See Classification §8.

§5. In General.

(a) Any willful misstatement by the shipper of the value of his goods forwarded under actual-value rates is a misbilling which may subject the shipper to prosecution under the criminal provisions of the statutes. Crown Overall Mfg. Co. v. Director General, 100 I. C. C. 471, 475.

VI. REBATING.

A. Elements of offense.

§7. In general.

See Allowances VII; Crimes §18; Discrimination §5; Evidence §48; Water Carriers II.

(a) In prosecution of refining company under Elkins Act Feb. 19, 1903, §1, as amended by Act June 29, 1906, §2 (Comp. St. §8597), for receiving concessions and discrimination in rates on gasoline, in which was shown that the rate charged was that on unrefined naphtha, evidence, including evidence as to reduction of specific gravity and vapor tension under regulations of Interstate Commerce Commission, authorized by Transportation of Explosives Act March 4, 1909, §233 (Comp. St. §10403) amending Act May 30, 1908, §2 held insufficient to prove that the product shipped was gasoline and not unrefined naphtha. United States v. Gulf Refining Co., 45 Sup. Ct. 597.

§8. Intent and Knowledge.

(a) Railroad does not "knowingly and willfully" violate Twenty-Eight Hour Law (Comp. St. §§8651-8654), unless, with knowledge that statute is about to be violated, it purposely and intentionally disregards statute. United States v. Southern Ry. Co. 1 Fed. (2d) 607.

C. Liability.

§15. Act of Agent.

See Agency.

(a) Comp. St. §§8564, 8574, 8597, prohibiting preferences and making it an offense for any carrier, or any of its officers or employees, to willfully grant such performances which have for their object the prevention of discrimination by a common carrier between its patrons, and the offenses denounced can be committed only by the carrier, and in so far as the statute expressly includes other persons it is only as aiders, abettors, accomplices, or accessories of the carrier, while acting within the scope of their employment. United States v. Peterson 1 Fed. (2d) 1018.

VII. INDICTMENT.

A. Charging Elements of Offense.

§17. In general.

(a) In prosecution for violation of National Motor Vehicle Theft Act Oct. 29, 1919, §3 (Comp. St. Ann. Supp. 1923, §10418d), indictment charging that defendant transported in interstate commerce described automobile which "had been stolen from" named person, "and that the defendant did not have the consent of the owner to transport it * * * all of which he, the said R. (defendant), then and there well knew," HELD sufficent to charge that defendant knew that automobile had been stolen. Brooks v. United States, 45 Sup. Ct. 345.

(b) Where defendant was tried under two indictments, each of which contained two counts, and was convicted on both counts of each indictment, and was given concurrent sentences on each count for same period, and where convictions on the first counts in each indictment could be sustained, error in charging as to second counts was not ground for dismissal. Brooks v. United States, 45 Sup. Ct. 345.

§18. Concession or rebate.

(a) "Concession" means a voluntary grant or yielding to a claim or demand, and cannot be applied to something obtained through deception or trickery. United States v. P. Koening Coal Co. 1 Fed. (2d) 738.

(b) Obtaining the furnishing of a car for, and the transportation by a carrier of, a carload of coal, in violation of Service Order No. 23 of the Interstate Commerce Commission of July 25, 1922, by means of an order for the coal ostensibly for hospital purposes, which was entitled to preference, but which coal was diverted to other uses, not preferential, HELD not the acceptance or receiving of a "concession," made an offense by Elkins Act, §1, as amended by Hepburn Act, §2 (Comp. St. §8597 (1)) United States v. P. Koening Coal Co. 1 Fed. (2d) 738.

D. Venue.

§26. In general.

(a) The venue in a prosecution under Laws 1923, c. 120 (G. S. 1923, §3907), forbidding one engaged in the business of buying milk, cream, or butterfat for manufacture or for sale from discriminating between different localities by purchasing at a higher price in one locality than he pays in another, due allowance being made for the cost of transportation to the place of manufacture or of sale, may be laid in the county where the lower price is paid. State v. Fairmont Creamery Co. (Minn., 1925) 202 N. W. 714.

VIII. DEFENSES

See Courts §2.

§26½. In General.

(a) Before a man can be punished for a crime, his case must be plainly and unmistakably within the statute. United States v. Peterson 1 Fed. (2d) 1018.

IX. PROCEDURE.

See Procedure Before Commission.

§28¾. In general.

(a) In prosecution of refining company under Elkins Act Feb. 19, 1903, §1, as amended by Act June 29, 1906, §2 (Comp. St. §8597), for receiving concessions and discrimination in rates, based on payment of rate on unrefined naphtha instead of gasoline, the government had the burden of proving beyond a reasonable doubt that the property shipped was gasoline and not unrefined naphtha. U. S. v. Gulf Refining Co., 45 Sup. Ct. 597.

XI. STATE REGULATION.

See State Rates and Regulations.

§33. In general.

(a) Laws N. Y. 1922, cc. 580, 581, making it a crime to sell or expose for sale, with intent to defraud, meat or meat preparation falsely represented to be "kosher," or product "sanctioned by orthodox Hebrew religion requirements," HELD not violative of due process or equal protection clause of Fourteenth Amendment, even though word "kosher" and phrase "orthodox Hebrew religious requirements" are indefinite and uncertain, in view of the intent to defraud required. Hygrade Provision Co. v. Sherman 45 Sup. Ct. 141; Lewis & Fox Co. v. Same, 45 Sup. Ct. 141. Satz v. Same, 45 Sup. Ct. 141.

XII. ALLIED OFFENSES.

§34. In General.

See Anti Trust Laws.

(a) Transportation of an automobile, knowing the same to have been stolen, from a point in one state to a point in the same state, but moving in its course through another state, is a transportation in "interstate commerce," and constitutes an offense, under National Motor Vehicle Theft Act Oct. 29, 1919, §3 (Comp. St. Ann. Supp. 1923, §10418d). United States v. Winkler, 299 Fed. 832.

(b) An employee of an interstate railroad company, who embezzled passenger tickets from the company and sold them at reduced rates, held not to have committed an offense under the Interstate Commerce Act (Comp. St. §8574), since that statute applies only to acts done within the scope of his employment and for which the company would be responsible. United States v. Peterson 1 Fed. (2d) 1018.

(c) In prosecution for conspiracy to use deadly weapons against employees of Bureau of Animal Industry of United States Department of Agriculture, with intent to prevent them from discharging their duties of supervising the dipping of cattle, in order to prevent spread of diseases and to eradicate cattle fever tick, in violation of Criminal Code, § 62 (Comp. St. § 10230), admission of contract between state veterinarian and Chief of Bureau of Animal Industry, if error, was harmless. Thornton v. United States, 2 Fed. (2d) 561.

(d) In prosecution for conspiracy to use deadly weapons against employees of Bureau of Animal Industry of United States Department of Agriculture, with intent to prevent them from discharging their duties of supervising the dipping of cattle, in order to prevent spread of diseases and to eradicate cattle fever tick, in violation of Criminal Code, §62 (Comp. St. § 10230), contract between state veterinarian and Chief of Bureau of Animal Industry HELD admissible to show that federal employees were present by authority of the state, and were not merely intruders. Thornton v. United States, 2 Fed. (2d) 561.

(e) Act Cong. June 29, 1906 §1 U. S. Comp. St. §8651), prohibiting confinement of live stock by carrier for more than 28 consecutive hours, without unloading, rest, water, and feed, except on owner's request, when period of confinement may be extended to 36 hours, prescribes pecuniary penalty for violation recoverable only by the United States. Hogg v. Louisville & N. R. Co. (Ga. 1925) 127 S. E. 830.

(f) National Motor Vehicle Theft Act Oct. 29, 1919 (Comp. St. Ann Supp. 1923, §§ 10418b-10418f), prohibiting in section 3 (Comp. St. Ann. Supp. 1923, § 10418d) the transportation in interstate or foreign commerce of motor vehicle with knowledge that it has been stolen, and in section 4 (Comp. St. Ann. Supp. 1923, § 10418e), the receipt, concealment,

or sale of motor vehicle moving in interstate commerce with knowledge that it has been stolen, HELD valid, being within the police power. Brooks v. United States, 45 Sup. Ct. 345.

(g) Congress may prohibit importation of opium in any form and as a measure reasonably calculated to aid in enforcement of the prohibition may make its concealment with knowledge of its unlawful importation of crime. Yee Hem v. U. S., 45 Sup. Ct. 470.

(h) Act Feb. 9, 1909, as amended by Act Jan. 17, 1914, §§2, 3 (Comp. St. §§8801, 8801a), declaring that smoking opium found within the country more than four years after passage of the act should be presumed to have been unlawfully imported, and that possession of such opium should create a presumption of guilt, in absence of satisfactory explanation, HELD not so illogical or unreasonable as to be violative of due process or compulsory self-incrimination clause of Const. Amend. 5. Yee Hem v. U. S., 45 Sup. Ct. 470.

§35. False Accounts.

(a) An indictment under Interstate Commerce Act, §20, subsec. 7 (Comp. St. §8592), for falsifying the records of an interstate carrier, need not allege that such records were prescribed by the Interstate Commerce Commission. United States v. Tippitt, 298 Fed. 495.

(b) Interstate Commerce Act §20, subsec. 7 (Comp. St. §8592), making it a criminal offense to falsify the records of an interstate carrier, applies to express companies. United States v. Tippitt, 298 Fed. 495.

(c) Counts in an indictment charging that defendant, as an employee of an interstate express company, failed to forward to another employee, as was his duty, certain on hand cards, covering deliveries of C. O. D. shipments, which were to become part of the permanent records of the company, HELD not to charge the making of a false "entry," nor to allege a "means or device for falsifying a record," within the meaning of Interstate Commerce Act, §20, subsec. 7 (Comp. St. §8592). United States v. Tippitt, 298 Fed. 495.

XIII. APPEAL FROM CONVICTION.

§37. In general.

(a) On writ of error from Supreme Court to review conviction for violation of Interstate Commerce Commission's order prescribing preferences for shipments of coal under Transportation Act 1920, tit. 4, § 402 (15), being Comp. St. Ann. Supp. 1923, § 8563 (15), the Supreme Court must assume that an emergency contemplated by the statute existed as found by the Commission and alleged in the indictment. Avent v. United States, 45 Sup. Ct. 34.

(b) One convicted of violation of Interstate Commerce Commission's order under Transportation Act (Comp. St. Ann. Supp. 1923, §10071¼ et seq.) for preference in movement of traffic cannot urge that order was invalid as granting preference to ports of one state over those of another, such matter being of no concern to him. Avent v. United States, 45 Sup. Ct. 34.

CUMMINS AMENDMENT

See Loss and Damage I, §2½; Released Rates.

CUSTOMS

See Adjacent Foreign Country (a); Blanket Rates §5.

(a) Proposed charge of 25 cents per shipment for opening, recoopering, and rewrapping packages for customs examination at the border ports on import shipments by express from Canada to points in the United States found not justified. This charge would not apply on shipments where the American Express Co. acts as the broker and attends clearance details, nor on shipments of milk or cream. The suspended schedules ordered canceled without prejudice to the filing of new schedules which will provide that a charge of 12 cents per shipment be assessed on shipments when one or more packages are actually opened by order of the customs and will not apply on any shipments where the American Express Co. or other concern or individual acts as broker for the importer and in that capacity attends to the physical work above described. Charge for Opening, Recoopering, and Rewrapping Packages for Customs Examination, 98 I. C. C. 284.

(b) Complainant attacked storage charges assessed at El Paso, Tex., on a

car of whiskey shipped May 21, 1920 from Louisville Ky., to El Paso, Tex. Shipment was consigned to shippers order notify Botica de Guadalupe, Juarez, Mex., care of collector of customs El Paso. The consignee was notified on May 31. The whiskey was intended for persons in Juarez who failed to apprise the proprietors of the drug store Botica de Guadalupe that it was coming consigned to them. On June 9 the shipment was unloaded in order to release needed equipment and the whiskey was placed in a bonded warehouse at El Paso. On August 19, 1920 the United States attorney for the western district of Texas filed a libel against the shipment, alleging that the whiskey was intended for beverages purposes contrary to law. The property was attacked by the U. S. marshall and by command of the U. S. Court the collector of customs was notified to detain the shipment in his custody. On Feb. 16, 1922 the agent of defendants at El Paso served notice of lien on the goods for freight, war tax and storage. On June 14, 1923 the court proceedings were dismissed. The shipment was returned to Louisville after storage charges of $4,568 had been paid by complainant on the basis prescribed in Fairbanks I. C. C. 4. This tariff provided that where carload shipments were stored by carriers to release needed equipement, storage charges would be at the same rate as demurrage charges. Rule 8 of the tariff provided that no demurrage charges should be collected under the rules for detention of cars due to "delay by U. S. Customs. Such additional free time shall be allowed as has been lost through such delay." It appears that detention by the collector of customs for purposes other than those incident to customs inspection and clearance for export occasioned delay in the further movement of this shipment during the period for which these storage charges were assessed. The terms of rule 8 of the tariff are sufficiently broad to preclude assessment of charges under the circumstances. HELD, storage charges inapplicable, overcharged, to extent of $4,568 with interest. complaint dismissed. Sunny Brook Distillery Co. v. A. T. & S. F. Ry. 107 I. C. C. 77.

I. CONTROL AND REGULATION.

See Control and Regulation.

§1. Jurisdiction of Commission.

See Interstate Commerce Commission; Jurisdiction of Commission.

(a) Interstate Commerce Commission has statutory authority to make, interpret, and enforce rules in reference to demurrage charges on interstate freight shipment, and to determine disputed questions arising thereunder. Davis v. Rochester Can Co. (Dec. 1924) 207 N. Y. S. 33.

II. RIGHT TO ASSESS.

§2. In General.

(a) Coke ovens which recover products other than coke in the carbonization of coal are generally referred to as by-product ovens. Other coke ovens, commonly known as beehive ovens, produce coke only, and are generally located in coal-mining districts. Demurrage Rules on Coal and Coke, 89 I. C. C. 230.

(b) Demurrage charges are no part of the rate or through charges in effect at the time the shipment is forwarded from point of origin. Although they may follow the shipment and be collected together with the transportation charges, they are for a distinct and separate service. Krauss Brothers Lumber Co. v. Director General, 92 I. C. C. 450, 452.

(c) It is well settled that storage and demurrage charges are not assessed primarily for revenue purposes and, also, that they are not based upon a fair rental value of the equipment, but are rather in the nature of penalties to prevent wasteful and extravagant use of equipment. Coastwise Lumber & Supply Co. v. P. R. R., 93 I. C. C. 288, 289.

(d) A shipper may offer for shipment all he sees fit, but if he makes more shipments than he can handle it is not the carriers concern. If demurrage then accrues the shipper alone is to blame. Coastwise Lumber & Supply Co. v. P. R. R., 93 I. C. C. 288, 293.

(e) Adverse business conditions do not justify the cancellation of accrued demurrage. Tidewater Coal Exchange v. B. & O. R. R., 96 I. C. C. 612, 622.

(f) The assessment of demurrage charges has a tendency to deter the shipper or consignee from accumulating and detaining in cars quantities of coal generally in excess of what would be transshipped within a reasonable time. Tidewater Coal Exchange v. B. & O. R. R., 96 I. C. C. 612, 622.

(g) While a classification of traffic for the purpose of demurrage charges must be reasonable, and not arbitrary, the interests of shippers of a particular kind of commodity are not alone to be regarded, but those of the carrier and the general shipping public as well. Turner, Dennis & Lowry Lumber Co. v. Chicago, M. & St. P. Ry. Co., 2 Fed. 291.

(h) Demurrage charges are not part of the rate or through charges in effect at time of shipment if forwarded from point of origin, Getz Bros. & Co., 85 I. C. C. 673. Although they may follow the shipment and be collected together with transportation charges, they are for a distinct and separate service. Krauss Bros. Lbr. Co. v. Director General, 92 I. C. C. 450, 452.

(i) Heavy machinery unloaded from cars on railroad's premises about 30 feet from premises of railroad leased by consignee, where it was to be permanently installed, and left at such place by consignee, who, had given railroad receipt therefor and paid freight charges thereon, of its own volition, and without agreement with railroad, HELD not "freight received for delivery or held to complete shipment, or for forwarding directions" on which railroad could recover demurrage, under rules constituting part of railroad's tariff charges with Interstate Commerce Commission. Davis v. Williams Creamery Co. (Wis., 1925) 202 N. W. 663.

(jk) Following act of registration of vessel, carriers not at liberty to dump coal into vessel until disposition orders received from exchange. In such instances cars held for dumping orders and demurrage not assessable until such orders placed. Similar situation exists when a shipper loads a car and tenders it to carrier without billing. Demurrage tariffs are uniformly interpreted to mean that when a car is held for forwarding directions, demurrage accrues until the necessary data are supplied. Tidewater Coal Exchange v. B. & O., 95 I. C. C. 612, 623.

(l) Demurrage tariffs are uniformly

interpreted to mean that when a car is held for forwarding directions demurrage accrues until the necessary data are supplied. Tidewater Coal Exchange v. B. & O. R. R. Co., 96 I. C. C. 612, 623.

(m) Carriers interpretation of the rules of the tariff to mean that settlement for demurrage may not be made on a car until it is released, held to be correct. Tidewater Coal Exchange v. B. & O. R. R. Co., 96 I. C. C. 612, 624.

(n) Complainant found not entitled to the basis of settlement for the use and detention of foreign freight cars prescribed in 61 I. C. C. 551, in view of the fact that it performs a line-haul service, and not a switching service, and performs no service at all on the majority of its own shipments moving over defendant carrier's line. Were it given the demurrage basis sought it would secure practically the free use of trunk-line equipment, and its connections would have to pay per diem for the extra free time asked. Such a basis would be more favorable to complainant than straight per diem. Western Pine Lumber Co. v. Director General, 96 I. C. C. 625.

(o) Proposal of Missouri Pacific to exempt coke ovens on its line from the operations of the demurrage rules found not justified, in view of the fact that experience has demonstrated that the application of such rules at the only by-product coke oven on the line of this carrier has not worked any hardship. Proposed schedules making car-distribution rules applicable would afford its oven an undue advantage in the use of its equipment over other users of said equipment, with the exception of coal mines and coke ovens adjacent to mines and operating under car-distribution rules. Demurrage Rules on Coke, 96 I. C. C. 731.

(p) The commission has frequently pointed out the desirability of uniformity in dealing with car detention, and has on a number of occasions declined to approve exceptions to the uniform demurrage rules, in favor of particular traffic. Demurrage Rules on Coke, 96 I. C. C. 731, 734.

(q) Respondent, Tennessee Railroad, proposed to amend its rule providing for the exemption from demurrage rules of empty cars placed for coal loading, and cars under load with coal, at coal mines on its line, by making such exemption inapplicable to the mines on its line and providing in lieu thereof for the assessments of a charge of $1 per car per day on all cars held after 48 hours from the next 7 a. m. after placement until released. Although respondent states that the proposed schedule was published for the sole purpose of recovering its car hire cost on cars under load, it would be applicable to all cars. In other words, it would have the effect of largely offsetting respondents cost of car hire by assessing shippers an amount equal thereto beyond a certain time. The general practice throughout the country as exemplified by the tariffs to which the proposed exception is to be added is that the demurrage rules will not apply on empty cars for coal loading or cars under load at the mines where car distribution rules are applied in lieu of demurrage. Respondent has car distribution rules in effect, but indicates by its action in publishing the suspended schedules that they are not in lieu of demurrage. It is generally understood that car distribution rules better conserve the car supply at mines than do demurrage rules, and that the matter can be supervised more efficiently and economically in that way. Uniformity in dealing with car detention is desirable, and this proposed exception has no apparent purpose except to transfer respondents car hire costs to the coal operators. HELD, proposed schedules not justified. Demurrage on coal and coke 102 I. C. C. 554.

(r) The failure of defendants to furnish cars for the movement of other grain stored in the elevator can not be regarded, under the circumstances of this case, as a reason why demurrage charge should not be assessed on the inbound shipments. To allow the assessing of demurrage on inbound shipments to depend upon the furnishing of cars for outbound movement, a separate transaction would open the way to abuses not necessary in order to protect a shipper from unlawful acts of the carrier. Lexington Elevator & Mill Co. v. B. & O. R. R., 109 I. C. C. 542, 544.

McGarry & Co. v. W. Ry. Co., 88 I. C. C. 301; National Lumber Co. v. N. & W. Ry. Co., 88 I. C. C. 357.

§2¼. Commandeering of Vessels or Customs Delay.

(a) Complainant attacked demurrage charges on 146 cars of beans and peas held between the docks and warehouse

at Seattle, Wash., during February, March and April 1919 as illegal. Shipments originated in Japan and Manchuria, were consigned to complainant at Seattle, and arrived at that port in ships. Being foreign, the shipments were subject to customs regulations and were in bond to the U. S. Government. The shipments were sold to the United States Food Administration by complainant at a price f. o. b., cars and under contract that the goods were of a certain grade supported by a weight certificate when imported and placed in a bonded warehouse. The goods remained in bond and were eventually transported through New York to Europe. The shipments were unloaded on the docks under custody of the customs representative. It was his duty to protect the Government revenues, the import duty of 25c per bushel on these commodities not having been paid by the consignee. The docks are transient sheds and must be utilized for different cargoes. War time conditions prevailed at this time, greatly congesting docks and other terminal facilities at Seattle. When the shipments reached the docks the food administration had not supplied complainant with final destination and, therefore, it was not feasible to immediately forward them east. It is the practise to clear cargoes from the docks either by a general order of the customs official in charge or by warehouse entry made by the importer, and it appears that these shipments were removed under one or the other of these methods. Empty cars were then ordered by the pier or dock agent and when loaded this agent ordered them transferred to the Importers & Exporters Warehouse. This was a switch movement over the Nor. Pac. Loaded cars began to move early in Feb. 1919 and accumulated on the tracks later in that month because of the inability of the warehouse to unload them. The director general held the undelivered cars on the Nor. Pac. tracks until orders were received to set them at warehause. HELD, demurrage charges applicable, complaint dismissed. Western Import Co. v Director General 104 I. C. C. 396.

§3½. Embargo as Reason.

See Embargoes.

(a) Complainant attacked demurrage and penalty charges collected on a car of lumber shipped on March 1, 1920 from Elba, Ala., to Cincinnati, O., held at Latonia, Ky., and reconsigned to Detroit, Mich., as illegal and unreasonable. The car arrived at Latonia on the L. & N., on March 5, 1920 and complainant was promptly notified of its arrival. On March 12, complainant surrendered the bill of lading to the agent of the L. & N., at Birmingham and requested that the car be reconsigned to Detroit, P. M., delivery, at the same time advising that a permit issued by the terminal manager of the Detroit operating committee was being mailed to agent of L. & N., at Cincinnati. This permit was never received by the Cincinnati or Latonia agents of the L. & N. Prior and subsequent to a short interval embracing the period of movement the P. M., accepted shipments at Detroit on permits issued by the Detroit operating committee, but at the time of movement its embargo notice provided that cars for delivery at Detroit would be accepted only when covered by permits issued by its superintendent of car service. As the first reconsigning instructions indicated that a permit had not been secured from the proper party the L. & N., refused to honor them. On Mar. 18 permit having been obtained from the party specified in the embargo notice, the consignee so notified the L. & N., at Cincinnati, and the car was immediately released and forwarded to destination. HELD, reconsignment tariffs of the L. & N., provided that shipments would not be reconsigned to embargoed points except under authorized permits. The detention of the car at Latonia was due to the failure of complainant to furnish a proper permit and does not appear to have been due in any way to negligence of the carriers, charges not unreasonable, complaint dismissed. Laumer Lumber Co. v. A. C. L. R. R., 96 I. C. C. 93.

(b) Due to strike of defendant's employees, certain destinations were embargoed, resulting in complainant being unable to make outbound, or unloaded inbound, shipments. Necessity for embargo was unquestioned and record failed to establish that defendant refused to furnish cars for shipments to unembargoed points. Complainant might have stopped cars from arriving at its plant before storage capacity became exhausted by diverting cars to other points. HELD: Under above circumstances demurrage charges assessed were not unreasonable or otherwise unlawful. Big

Diamond Mills Co. v. C. G. W. R. R., 92 I. C. C. 709.

(c) Demurrage and penalty charges on a shipment of lumber from Paden, Miss., to Cairo, Ill., and reconsigned to Cleveland, Ohio, which were assessed from the time of notification of the existence of an embargo over the route specified in the reconsignment order until the date on which the embargo was lifted, found to have been applicable and not unreasonable, following decision of the court that such charges had been legally assessed. Complaint dismissed. Krauss Bros. Lumber Co. v. I. C. R. R. Co., 95 I. C. C. 760.

(d) Embargo notice of delivering line specified in routing instructions provided that delivery at embargoed point would be accepted only on permits issued by its superintendent of car service. Shipper obtained permit from an operating committee from which delivering line had withdrawn, resulting in shipments being held at reconsignment point until proper permit obtained. FOUND, demurrage and penalty charges accruing during interim found not illegal or unreasonable since applicable reconsignment tariff provided that shipments would not be reconsigned to embargoed points except under authorized permits, and the detention here was due to failure of shipper to furnish proper permit. Laumer Lbr. Co. v. A. C. L., 96 I. C. C. 93.

(e) Demurrage and penalty charges on a shipment of lumber from Paden, Miss., to Cairo, Ill., and reconsigned to Cleveland, Ohio, which were assessed from the time of notification of the existence of an embargo over the route specified in the reconsignment order until the date on which the embargo was lifted, found to have been applicable and not unreasonable, following decision of the court that such charges had been legally assessed. Complaint dismissed. Krauss Bros. Lumber Co. v. I. C. R. R. Co., 96 I. C. C. 760.

ALL OTHER CITATIONS

Gerhard & Hey (Inc.) v. Director General, as Agent, 88 I. C. C. 293; Empire Lumber Co. v. Director General, as Agent, 88 I. C. C. 424.

§3½a. Empty Cars.

(a) Proposal of Tennessee R. R., a short-line carrier, to amend its rule providing for exemption from demurrage rules of empty cars placed for coal loading, and cars under load with coal, by making such exemption inapplicable to mines on its lines and providing in lieu thereof for assessment of the current per diem rate on all cars held after free-time allowance after placement until released, designed apparently for no purpose except to transfer carrier's car-hire costs to coal operators, found not justified. Demurrage on Coal and Coke, 102 I. C. C. 554.

(b) General practice throughout the country is that demurrage rules will not apply on empty cars for coal loading or cars under load at mines where car-distribution rules are applied in lieu of demurrage. Car-distribution rules better conserve car supply at mines than do demurrage rules, and matter can be supervised more efficiently and economically in that way. Demurrage on Coal and Coke, 102 I. C. C. 554, 558.

§4. Failure of Consignee to Accept.

See Infra §9½; Consignor and Consignee.

(a) It is the "act or neglect of consignee" or "inability of consignee to receive" cars which warrants their constructive placement, and this is not confined to a disability of tracks or lack of trackage space, but may include other causes as well. Mere track capacity to receive more cars is not sufficient. However, where a shipper has established that additional trackage space was available for placement of cars, the burden is on carrier to show that its failure to deliver more cars was due to conditions of the private tracks, or because of other conditions attributable to consignee. Union Bag & Paper Corp. v. Director General, 95 I. C. C. 222, 226.

(b) Complainant attacked demurrage charges on one car of hollow building tile detained at State College, Pa., from August 29 to Sept. 30, 1921 as unjust and unreasonable, unauthorized and contrary to tariff. Shipment was from Haydensville, O., consigned to J. M. Hoy, State College. The car was placed for unloading on defendants track at destination on August 26, and consignee was immediately notified. Consignee informed defendant that he would be unable to pay the freight charges for several days. Defendant continued to hold the car and from time to time called the attention of consignee to the increasing demurrage charges. On Sept. 26 upon being notified by defendant that

something would have to be done to release the car, consignee stated that defendant could do as it pleased with it. On the same date defendant advised complainant, the consignor, of these facts and asked what action he desired taken, adding that otherwise we will sell the shipment for the charges in accordance with law. This notice was sent by mail, instead of by wire as provided in defendants tariff, and was received by complainant on Sept. 27. On Sept. 28 complainant requested defendant by telegraph to release the car to consignee, promising to guarantee all charges. The term "unclaimed" implies, in the absence of an actual refusal, the failure of consignee to claim or accept the shipment. The advice given defendant by consignee, which may be construed to mean that the shipment would be accepted within a few days, is not the equivalent of claiming the shipment, which contemplates a demand for delivery and a readiness to pay the charges. It therefore was defendants duty, at the expiration of five days from the first 7 a. m. after the day on which notice of arrival was given consignee, to notify complainant in accordance with its tariff that the shipment was unclaimed. Having failed in this duty, it could not lawfully demand demurrage for the detention thereafter. Notice had to be by wire, as no alternative method was authorized. HELD, demurrage charges exacted for the period subsequent to the expiration of five days from the first 7 a. m. after the day on which notice of arrival of the car was sent to consignee were illegally collected, and should be refunded, complaint dismissed. National Fireproofing Co. v. B. C. R. R. 102 I. C. C. 345.

(c) Shipments of sugar-making machinery moved from Corcoran, Calif., at which point charges were not prepaid as required by the tariff, to Whitney, Idaho and Lewiston, Utah, where demurrage accrued owing to inability and failure of complainant and his predecessors and successor in interest to pay outstanding charges on the shipments prior to respective dates on which cars were released. FOUND: Such failure and inability could not have been reasonably anticipated by carriers, and in any event can not be ascribed to them, and demurrage charges assessed were applicable and not unreasonable. Complaint dismissed. Johnson v. O. S. L. R. R., 101 I. C. C. 39.

(d) Shipment was placed for unloading and notice of arrival immediately forwarded to consignee. Owing to consignee's inability to pay freight charges demurrage accrued. Consignor was notified of facts by mail and disposition orders requested, whereupon it paid accrued charges and shipment was released. FOUND: Demurrage charges were illegally assessed, since the tariff specifically provided for furnishing of notice to consignor that the shipment was unclaimed at expiration of 5 days from the first 7 a. m. after the date on which notice of arrival was given consignee. Having failed in this duty carrier could not lawfully demand demurrage for detention thereafter. See 85 I. C. C. 331. In addition notice had to be by wire, no alternative method being authorized. Davis v. Henderson 266 U. S. 92. Nat'l Fire Proofing Co. v. B. C. R. R., 102 I. C. C. 345.

(e) The term "unclaimed" implies, in absence of actual refusal, the failure of consignee to claim or accept shipment. Advice given carrier by consignee to effect that he would be unable to pay freight charges for several days, which may be construed to mean that shipment would be accepted within a few days, is not equivalent of claiming shipment which contemplates a demand for delivery and a readiness to pay charges. National Fire Proofing Co. v. B. C. R. R., 102 I. C. C. 345, 346.

(f) Term "unclaimed" implies, in absence of an actual refusal, the failure of consignee of shipment to claim or accept it; and mere advice to carrier that it expects to accept some time is not the equivalent of claiming the shipment, which would contemplate a demand for delivery and a readiness to pay the charges. Person v. I. C. R. R. Co., 88 I. C. C. 21, 23; Marfield Grain Co. v. A. & W. Ry. Co., 88 I. C. C. 126, 128.

ALL OTHER CITATIONS

Republic Coal Co. v. C. St. P. M. & O. Ry. Co., 85 I. C. C. 331; American Box Co. v. Director General, as Agent, 85 I. C. C. 750.

§5. Fault of Shipper.

(a) Complainant attacked demurrage charges assessed for detention at Whitney, Ida., and Lewiston, Utah, of 42 cars containing secondhand sugar making machinery, as illegal and unreasonable. Both destinations were nonagen-

cy stations. The refusal of defendant to permit the cars to be unloaded without the surrender of the original bills of lading and the payment of the proper charges can not be constructed as improper tender of delivery. The fundamental theory of complainants case is that, if on the first or succeeding shipments prepayment had been demanded as required by the tariff, the remaining shipments would not have been tendered to the carrier and demurrage would not have accrued thereon. As to this the record is not convincing. On the other hand, the record clearly shows that the demurrage would not have accrued but for the inability and failure of complainant and his predecessors and successor in interest to pay the outstanding charges on the shipments prior to the respective dates on which the cars were released. Such failure and inability could not have been reasonably anticipated by the carriers, and in any event it can not be ascribed to them. HELD, demurrage charges applicable and not unreasonable, complaint dismissed. Johnson v. O. S. L. R. R. 101 I. C. C. 39.

§7. Order-notify Shipments.

See Bills of Lading V; Demurrage §16 (q); Order-Notify Shipments.

(a) Complainant attacked demurrage charges improperly assessed on cars of hay and grain held for constructive placement at Mount Vernon, N. Y., between November, 1922, and January, 1923. Prior to Nov. 15, 1922, there was no necessity for holding shipments of complainants at Mount Vernon yards. They were few enough to permit of their being brought to the Claremont Park team tracks, or to complainants' siding direct. On that date, 16 of complainant's car load shipments were received at the Mount Vernon yards. Defendant notified complainants, on its usual form, that the cars were on tracks at the Mount Vernon yards, but could not be delivered because complainants' siding could not receive them, and that they were subject to demurrage charges applicable to shipments constructively placed. Most of the shipments were order notify shipments. Unquestionably all the cars held at Mont Vernon yards could not have been handled on the siding, if promptly sent to Claremont Park. The question arises whether defendant should have sent some of the cars. It did send cars as needed by complainants, upon their specific designation by car number of the particular cars they desired to have released and placed. The record does not show that the cars designated were not promptly placed on the siding, or that complainants stood prepared, or desired, to receive additional cars. If additional cars had been placed on the team tracks at Claremont Park they would have been subject to demurrage until actually placed on the siding for unloading. They would also have been subject to demurrage if placed on the siding but not in position for unloading. The record does not show wherein complainants would have been in any better position by holding the cars at Claremont Park instead of at Mount Vernon yards. Defendant was not authorized by law to deliver the shipments without surrender of the bills of lading. HELD, demurrage charges properly assessed, complaint dismissed. Murphy & Murphy v. N. Y. C. R. R., 92 I. C. C. 259.

(b) Due notice of arrival was mailed to "order notify" party who refused to take possession of shipments. Consignor was so notified and disposition orders requested. Contention that demurrage accruing was not applicable because consignor was not promptly notified by delivering line that cars were held awaiting disposition not sustained. Delivering line's tariff carried no provision for such notification within any specified period, when consignor was actually advised that shipments were unclaimed it did not act promptly in effecting disposition, and failure to receive such advice sooner was not the proximate cause of detention. Delivering carrier fully discharged its duty under applicable tariff when it mailed notices to order notify party. Southwestern Milling Co. v. W. & O. D. Ry., 95 I. C. C. 719, 722.

(c) Disposition instructions repeatedly asked on a refused "order notify" shipment. Complainant tendered initial carrier certified check in lieu of original bill of lading with instructions to deliver to storage company at destination. This company refused to pay accrued charges and shipment not unloaded. Contention that in view of complainant's credit account with initial carrier it was delivering line's duty to waive payment of charges, and that demurrage was not applicable subsequent to first tender of delivery, not sustained. Delivering carrier did not know of credit arrangement, on the contrary, initial carrier advised that

it had no authority to direct release of shipment and that check was in lieu of bill of lading only. HELD, delivering line is not chargeable with responsibility for detention resulting from failure of initial carrier to act promptly and effectively on complainant's instructions. Southwestern Milling Co. v. W. & O. D. Ry., 95 I. C. C. 719, 720, 722.

(d) Demurrage assessed at Fort Worth, Tex., on shipment of milo maize shipped from Brawley, Calif., to Fort Worth and then reconsigned to St. Louis, Mo., found applicable. Shipment was tendered to Southern Pacific unrouted and complainant requested notice of arrival at Fort Worth from the Houston & Texas Central, a part of the Southern Pacific system, on the assumption that since same system served both origin and destination it would transport over its own lines. Rates via Southern Pacific system were same as those via route of the Southern Pacific and Texas & Pacific and shipment moved via latter route, the Texas & Pacific sending notice of arrival to "notify party" from whom complainant had purchased shipment. Demurrage accruing before complainant located shipment found to result from failure to specify desired delivery. Ralston Purina Co. v. Director General, 98 I. C. C. 456.

§7½. Penalty Charges.

See Penalty Charges.

(a) Car-distribution rules, as ordinarily in force, are expected to and do provide a penalty for detention of equipment which, while not of the same character, accomplishes the same purpose as the penalty provided by the demurrage rules. A shipper who does not pay a penalty of either character is at a manifest advantage over other shippers who operate either under car-distribution rules as properly applied or under demurrage. Demurrage Rules on Coal and Coke, 89 I. C. C. 230, 232.

(b) Complainant attacked penalty charges assessed for detention of three cars of lumber shipped from Stockbridge, Mass., two on June 10 and 14, 1921, to Pawtuckett, R. I., and one on June 16, 1921, to Providence, R. I., and all subsequently reforwarded to South Providence, R. I., as unjust, unreasonable and without tariff authority. Cars were consigned to complainants and were placed in public delivery yard ready for delivery. Subsequently complainants notified defendant to reship the cars to South Providence. Defendant advised complainants on July 5, 1921, that he could not issue a new bill of lading, and, on the same day, forwarded the car. Its agent at Pawtuckett signed and returned the new bills of lading, and on July 13, 1921, forwarded the cars held there. Charged sixth class Stockbridge to original destinations and from those points to South Providence. The definition of reconsignment clearly indicates that the shipment must still be in the custody of the carrier. These carloads never left the custody of the carrier until they were delivered at South Providence. If reshipment is to have any meaning differentiating it from reconsignment, and thus serve any useful purpose in the tariff, the line of demarcation must be drawn there. HELD, these were reconsignments and the application of the penalty charge was not illegal, complaint dismissed. Stetson Cutler & Company v. N. Y., N. H. & H. R. R., 91 I. C. C. 3.

(c) In 73 I. C. C. 640, the Commission found that certain penalty charges collected in addition to demurrage charges for detention at Solvay, N. Y., in December, 1920, and January, 1921, of two cars of cooperage stock shipped from Pelham, Ala., to Solvay, and reshipped thence to Syracuse, N. Y., were illegal and awarded reparation, and that shipments were subject to rule 12 of the reconsignment tariff, which provided for a charge of $7 per car. Shipments were placed on a siding of defendant which connects with an interchange track of the Solvay Process Co., consignee, whence the latter removed them to its plant. On January 10, 1921, both cars were returned by the consignee, without having been unloaded, to the tracks of defendant, with the information that the shipments were refused, and on instructions of complainant, the cars were moved by defendant to a warehouse for storage. Rule 12 provided that when car has been placed for unloading at the original billed destination and is reforwarded therefrom without being unloaded to a point outside the switching limits, it will be subject to the published rates to and from the point of reconsignment, plus $7 per car reconsignment charge. HELD, reconsignment charge unreasonable. Hollingshead Co. v. N. Y. C. R. R., 91 I. C. C.. 657.

(ca) Complainant attacked transportation, demurrage and penalty charges assessed on a car of lumber shipped Feb.

25, 1920 from Demopolis, Ala., to Louisville, Ky., reconsigned to Bluefield, W. Va., as unreasonable, unjustly discriminatory and illegal. Shipment was originally consigned to complainant at Louisville, where it arrived over the Southern, March 2, 1920. That carrier thereupon deposited in the mails a postcard containing notice of arrival addressed to the consignee at Louisville, but the complainant had no place of business at this point and the notice was not received. On March 8 the Southern wrote the consignor asking for disposition orders. Its letter, received by the consignor on March 11, was thereupon forwarded by that party to the complainant, who received it March 12. Sale of the lumber was not effected until March 18, and on that date complainant wired the Southern reconsigning directions and the shipment was reconsigned to Bluefield. The 27 cent rate applied to Roanoke over the route of movement through Louisville in connection with the C. & O., and N. & W., beyond, and under the authority of rule 5 b of tariff circular 18 A the 37.5c rate was available at Bluefield over that route. The shipment was thus misrouted by the Southern in that it was not turned over to the C. & O., at Louisville. The present transaction falls within that class of cases where the arrival notice should have been sent in stamped envelope bearing return address, and preserved on file if returned. Had defendants notice to the consignor of March 8 been a telegraphic notice as required by the tariff, it should have been received on the same day. As it was not received until March 11 it may not be regarded as a notice prior to that date. Allowing for 24 hours free time, and an intervening Sunday, the shipment was subject to five demurrage, amounting to $13. The provision of the tariff as to penalty charges has no application during the period demurrage does not accrue and the aggregate penalty charges was $50.00. HELD, shipment overcharged to extent demurrage and penalty charges exceeded $13 and $50, shipment misrouted, reparation awarded. Standard Lumber Co. v. Director General, 93 I. C. C. 58.

(cb) Complainant attacked demurrage and penalty charges on one car of pine lumber shipped April 20, 1920 from Paden, Miss., to Cairo, Ill., and reconsigned from that point to Cleveland, O., as illegal and unreasonable. Shipment was consigned from Paden to Cairo over the I. C. It was transported by that line to Mounds, Ill., which is the reconsigning point for cars destined to Cairo and it arrived at Mounds on April 28, 1920. Complainant was notified of the arrival of the car at Mounds and on April 29, 1920 after being informed by defendants agent that there was nothing to prevent reconsignment to Cleveland, ordered the car reconsigned to that point specifying Big Four delivery at that point. At the time of reconsignment all carload freight to Cleveland over the Big Four was embargoed. Complainant did not know of the existence of the embargo at the time the car was reconsigned, and was not advised that such an embargo existed until May 9. After learning of the embargo no disposition of the car was ordered by complainant and the lumber was not transported to Cleveland until May 20 when the embargo was lifted. Demurrage charges were assessed. If by reason of commercial contracts, entered into under prior misrepresentation on the part of the carrier, complaint found itself in such a position that it could not abate the demurrage, the question of damage arising from such a situation is for the courts to consider. HELD, demurrage and penalty charges applicable and not unreasonable, complaint dismissed. Krauss Bros. Lumber Co. v. I. C. R. R., 96 I. C. C. 760.

(d) An additional demurrage or storage charge for detention of cars beyond a stated time held not invalid as discriminatory because limited to cars loaded with lumber held for reconsignment, where it appeared that it was a common practice to hold such cars for an unreasonable time awaiting reconsignment, thus keeping the cars out of normal use, to the detriment of the carrier and the public. Turner, Dennis & Lowry Lumber Co. v. Chicago, M. & St. P. Ry. Co., 2 Fed. (2d) 291.

(e) A regulation made by the Director General of Railroads during federal control and continued by a carrier as part of its tariff schedule after such control ceased, imposing an additional demurrage or storage charge in the nature of a penalty for detention of cars beyond a stated time, is not a penal law for punishment of an offense which comes within the purview of constitutional guaranties, but is within the powers of the carrier under Interstate Commerce Act, subject to revision or abro-

gation by the Interstate Commerce Commission. Turner, Dennis & Lowry Lumber Co. v. Chicago, M. & St. P. Ry. Co., 2 Fed. (2d) 291.

(f) The penalty of $10.00 per car for detaining lumber cars at destination after 48 hours, in effect from 1919 to 1922 held reasonable. Turner, Dennis & Lowry Lumber Co. v. Chicago, M. & St. P. Ry. Co. 2 Fed. (2d) 291.

§8. Pending Dispute or Demanding Advanced Charges.

See Infra §9.

(a) Complainant attacked demurrage charges for detention of a car of yellow pine lumber at Cleveland, O., from July 1, 1922 to August 7, 1922, as illegal. Car was shipped from River Falls, Ala., May 24, 1922 to complainants at Cincinnati, O., and arrived June 7, 1922. On June 17, it was reconsigned to complainant at Cleveland, O., arriving at that point July 1 released from demurrage August 7, 1922. Instructions for the reconsignment of the car at Cincinnati were mailed by complainant on June 17. The car was held under demurrage until June 19 and the amount of $33, advance charges of the L. & N., erroneously included a charge of $5 for the latter date. The charges for this detention were subsequently corrected to $28 and refund of the overcharge was made to complainant on March 8, 1923. The record shows that the charges against the shipment on arrival at Cleveland actually included an overcharge of $5, representing the erroneous assessment of excess demurrage for the detention at Cincinnati, and that complainant, upon being advised of the amount of the charges, called this fact to the attention of the agent at Cleveland, and requested correction to the proper basis. While defendant was not in possession of information as to what disposition to make of the car during the period of detention, nevertheless the furnishing of such instructions by complainant would not have settled the dispute as to the correctness of the outstanding charges; and had such instructions been given and delivery made, complainant would thereupon have been liable for the charges assessed. The fact that complainant failed to give instructions for disposition of the car during the pendency of the controversy did not prevent the application of the demurrage rule. The computation and billing of charges against the shipment must be regarded as a demand for payment. There is nothing in the rule which suggests that the agent must make a demand in addition to the usual bill or forms of advice as to the amount claimed to be due. HELD, demurrage charges illegal, reparation awarded. Milne Lumber Co. v. C. C. C. & St. L. Ry., 93 I. C. C. 661.

(b) Applicable tariff provided that demurrage would not be assessed for detention where carrier's agent demanded payment of transportation charges in excess of tariff authority. Charges billed against car after its arrival at reconsigned destination included an admitted overcharge which shipper promptly questioned. HELD, billed charges must be regarded as a demand for charges in excess of tariff authority and demurrage was not assessable against the car during period of detention pending controversy over the legal charges. See Conf. Ruling 32. Milne Lbr. Co. v. C., C., C. & St. L., 93 I. C. C. 661.

(c) Disposition instructions repeatedly asked on a refused "order notify" shipment. Complainant tendered initial carrier certified check in lieu of original bill of lading with instructions to deliver to storage company at destination. Storage company refused to pay accrued charges and shipment not unloaded. Contention that in view of complainant's credit account with initial carrier it was delivering line's duty to waive payment of charges, and that demurrage was not applicable subsequent to first tender of delivery, not sustained. Delivering carrier did not know of credit arrangement, on contrary, initial carrier advised that it had no authority to direct release of shipment and that check was in lieu of bill of lading only. HELD, delivering line is not chargeable with responsibility for detention resulting from failure of initial carrier to act promptly and effectively on complainant's instructions. Southwestern Milling Co. v. W. & O. D. Ry., 95 I. C. C. 719, 720, 722.

(d) Complainant attacked demurrage charges collected on two cars of yellow pine lumber, one of which was shipped on Nov. 20, 1922 from Haslam, Tex., and the other on May 21, 1923 from Standard, La., consigned to Herrick and Marine, Ill., and reconsigned to Detroit, Mich., and Chicago, Ill., respectively, as illegal. Shipment from Standard was consigned to complainant at

Marine, Ill., and reconsigned to complainant at Chicago routed, C. & N. W., road haul. The car arrived at Northwestern State St. station, Chicago, June 15, 1923 and was promptly placed on a public delivery track at that station. Notice of placement was mailed the same day to complainant at Chicago. Complainant being unknown to defendants agent at that station, the latter at the same time notified defendants freight claim agent, who promptly telegraphed complainant at St. Louis that the car was undelivered and to furnish disposition. By letter dated June 19, complainant directed that the car be reconsigned on basis of joint through rate to Thornton Claney Lumber Co. at defendants North Avenue station, but that if reconsignment could not be made at the joint through rate it be promptly advised so that other disposition could be given. Defendant received these instructions on June 20, 1923 and on June 21 telegraphed complainant that the car could not be reconsigned at the through rate and to advise if other disposition was desired. Upon receipt of that telegram, complainant wrote defendant that a through rate of 39.5c could and must be protected and to arrange immediately to deliver the car. On June 25, defendant replied that the through rate could not be protected but that the applicable additional rate would be 2.5c, and inquired whether, in the circumstances, the car should be forwarded. By letter dated June 26, 1923 complainant reiterated the view that reconsignment could be made at the through rate of 39.5c, and requested defendant to explain why that rate could not be protected, and directed that in the meantime the shipment be not held. This letter was received by defendant but the date of receipt cannot be definitely established. The post mark on the envelope in which it was enclosed shows that it was received at the St. Louis postoffice at 7 p. m. June 26. In the ordinary course of business this letter should have reached defendant the following day, June 27. Following this latter defendant made two further requests for instructions as to disposition of the car, and on July 3 complainant directed that delivery be made and proper charges be collected. The car was thereupon moved by defendant to its North Avenue station and was delivered to and apparently unloaded by the Thornton Claney Lumber Co. Charged 39.5c including $6.30 reconsignment at East St. Louis and Chicago, demurrage of $28 at East St. Louis and $53 at Chicago, and track storage of $22 at Chicago. Applicable rate was 39.5c to State St. and local commodity rate of 2.5c beyond, undercharge $8.60. HELD, demurrage and track storage charges on and after June 27, 1923 illegal, reparation awarded. The shipment from Haslam was originally consigned to Herrick, Ill., and reconsigned in transit to complainant at Detroit mail address St. Louis. It moved from Haslam in MKT car 83044 and was transferred enroute to C. M. & St. P. 92600. On Jan. 8, defendant M. C., mailed to complainant at Detroit notice of arrival at that point of S. P., 92600. This notice was forwarded by the Detroit postoffice to complainant at St. Louis and was received by it Jan. 13. The shipment did not actually arrive at Detroit until Jan. 23, 1923. Notice of arrival was mailed to complainant at St. Louis on Jan. 30. Charges assessed prior to the expiration of free time following the date of mailing on Jan. 30, 1923 of notice of arrival the shipment admittedly were inapplicable. Although defendants telegram of Feb. 6 showed the incorrect initials of the cars it apparently sufficed to enable complainant to dispose of the shipment. HELD, shipment subject to demurrage subsequent to Feb. 6, but demurrage on and prior to that date illegal, reparation awarded. Milne Lumber Co. v. C. & N. W. Ry. 107 I. C. C. 653.

§8½. Pooled Shipments.

ALL CITATIONS

Smokeless Fuel Co. v. N. & W. Ry. Co., 85 I. C. C. 395.

§9. Prior to Actual Delivery.

See Supra §8; Infra §12.

(a) Complainant attacked commodity rate charged on one car of yellow pine lumber from Millry, Ala., to Oneonta, N. Y., and reconsigned to Carman, N. Y., as unjust, unreasonable and unlawful, demurrage only being involved. Car routed Sou-Erie-Binghamton & D. & H. If the car had been forwarded as routed, it would have moved A. T. & N., to York, Ala. A. G. S., to Chattanooga, Tenn., C. N. O. & T. P., to Cincinnati, Erie to Binghamton and D. & H., beyond. The agent of the A. G. S., at York routed the shipment via Potomac Yard, Va. Under this routing the Erie did not

handle the car at all. Shipment arrived at Oneonta on June 10. Defendants acknowledge it was misrouted but contended it reached Oneonta over the D. & H., as specified. On June 14 complainant instructed agents of the Southern and Erie at Birmingham to divert the shipment to Carman. The car had arrived in Oneonta four days before orders to reconsign were given. Apparently these instructions were not forwarded by the Southern and by successive carriers that handled the car and it was not until June 23 that the D. & H., at Oneonta received instructions direct from complainant to reconsign the car to Carman. HELD, demurrage charges from June 16 to 26 unlawful, reparation awarded. American Lumber & Export Co. v. A. T. & N. R. R., 96 I. C. C. 576.

(b) Demurrage charges on cars constructively placed short of billed destination, due to inability of complainant to receive and unload because of congestion on its private siding, found legally assessed. Notice of constructive placement was furnished in accordance with applicable tariffs, and cars were actually placed for unloading in accordance with complainant's specific designations. It was not shown that complainant desired, or stood prepared to receive, additional cars or that cars designated were not promptly placed on the siding for unloading. Moreover, defendant was not authorized by law to deliver shipments without surrender of bills of lading and record does not establish that complainant stood ready to surrender the bills on certain shipments while they were being held under constructive placement. Murphy & Murphy v. N. Y. C. 92 I. C. C. 259.

(c) Demurrage charges collected on cars constructively placed short of destination, found applicable and not unreasonable. Complainant's employees from day to day selected cars on hand which they wished placed and record indicates no lack of switching power or delay on part of defendant in making desired deliveries. There was a strike on or anticipated at time cars accumulated. Detentions accrued either on complainant's trestle or on its lead track and were such as to obstruct exchange of loads and empties. It would have been futile for defendant to have brought additional cars to yards at billed destination as it would have rendered congestion there greater than it was. Constructive placement short of billed destination was carrier's duty under the tariff. Burns Bros. v. P. R. R., 92 I. C. C. 615.

(d) Instructions of complainant, on June 2, 1920, for specific delivery of cars were equivalent to renewal of agreement between complainant and defendant with respect to holding cars short of destination for orders. Demurrage charges applicable on cars constructively placed prior to, or on June 2 were those accruing from dates of actual placement to dates of release, and on cars constructively placed after that date those accruing from dates of constructive placement. Charges found not unreasonable. Standard Underground Cable Co. v. L. V. R. R. Co., 96 I. C. C. 503, 507.

(e) The term "unclaimed" a demand for delivery and a readiness to pay the charges are equivalent to claiming the shipment. Northwestern Fruit Exchange v. Erie R. R., 112 I. C. C. 29, 32.

§9½. Refused Shipments.

See Demurrage §4.

(a) Upon arrival of cars they were rejected by consignee. Consignor notified and disposition orders requested but not furnished. As to certain shipments defendant again wrote consignor "that unless disposition orders were received on or before a certain date such shipments would be sold." As to others a telegram was forwarded stating "that shipments would be sold on a specified date." Demurrage charges collected up to time shipments were sold by defendant found illegal to extent they exceeded those which would have accrued up to and including date of telegram as to shipments covered by it, and up to and including date specified in defendant's letter as to shipments specified therein. Reparation awarded. Wallingford Coal Co. v. Director General, as Agent, 89 I. C. C. 353.

(b) Complainant's name did not appear in billing. Shipment was transferred en route and new car number and change noted on waybill. In accordance with customary practice, notice of arrival was given consignee by service of expense bills. Shipment was rejected by consignee who failed to so notify complainant until after receipt of second notice requesting disposition orders, similar notice having been sent by carrier to complainant. HELD, since notice given consignee contained all information available from bill of lading, and no obligation rested upon carrier under governing tar-

iff to notify shipper of refusal of shipment, the consignee, rather than defendant, was responsible for any negligence which may have occurred in failing to notify complainant of the rejection. Demurrage found legally assessed. Toberman, Mackey & Co. v. Director General, as Agent, 89 I. C. C. 365.

(c) Complainant attacked as illegal assessment of demurrage charge on hay, carloads, shipped May 7, 1918, from Avoca, Mich., to Camp Jackson, S. C. Shipment delivered to P. M. at Avoca, May 7, 1918, consigned to Camp Jackson, routed Big Four and Southern. At Cincinnati the hay was transferred to another car. The change was noted on the through waybill by crossing out the original car number and noting the transfer and new car number. The shipment arrived at Columbia, S. C., on May 19, and on May 24 the quartermaster at Camp Jackson was notified that the car had been placed on the siding. According to the practice in effect at the camp at that time, notice of delivery was given in the form of an expense bill made out by the local agent. The original car number was shown thereon as well as the number of the car placed. The shipment was rejected, because of poor quality on the day that it was delivered. Upon refusal of complainant to guarantee the accrued demurrage charges defendant finally sold it to satisfy demurrage charges of $330.00. It appears that the consignee, rather than defendant, was responsible for any negligence which may have occurred in failing to notify complainant of the rejection of the shipment. HELD, demurrage charges attacked legally assessed, complaint dismissed. Toberman Mackey & Company v. Director General, 89 I. C. C. 365.

ALL OTHER CITATIONS

Republic Coal Co. v. C. St. P. M. O. & O. Ry. Co., 85 I. C. C. 331.

§10. Private and Trap Cars.

See Private Cars; Trap Cars.

(a) Under the existing practice of carriers, private cars are made the subject of demurrage when standing on the private tracks of owners. It is agreed by both carriers and owners that tariffs should be so worded as to exempt a private car from demurrage under such circumstances. It was stated that provision would have been made some time ago for such exemption except for the difficulty of determining who was the owner of the car. It was agreed that a shipper who leases a car for a term is to be considered the owner during such term, and that a stencil mark on the car as defined in the tariffs should be conclusive as to ownership for purposes of exemption from demurrage. International Agricultural Corp. v. A. & W. P. R. R., 93 I. C. C. 189, 190.

(b) Tariffs of carriers are to be so changed that private cars standing on the private tracks of owners shall not be subject to demurrage charges. International Corp. v. A. & W. P. Ry., 93 I. C. C. 189, 190.

(c) Tariff rule governing demurrage on private cars on private tracks, published following the Private Car case, 50 I. C. C. 652, defining a private car and requiring full name of owner or lessee to be painted, stenciled, or boarded thereon, in which event car is exempt from demurrage for lessee only, and if name of lessee is not painted, stenciled or boarded on the car, it will be exempt from demurrage for owner only, found not unreasonable. Rule was adopted after mature deliberation, has worked out in practice in a generally satisfactory manner, and no better substitute has as yet been brought to commission's attention. International Agricultural Corp. v. A. & W., 93 I. C. C. 189.

(d) Assessment of demurrage charges on private cars under lease on tracks of lessee found not unreasonable. Tariff rule provided that private cars are exempt from demurrage while on tracks of owner or lessee if owner's or lessee's name is marked on car. Cars here involved were not so marked, and only evidence that cars were under lease to complainant was a letter, which admittedly did not comply with the rule. Complainant had ample notice and actual knowledge of existence of the rule and could have complied therewith by making proper notations on cars. International Agricultural Corp. v. A. & W. P. R. R., 93 I. C. C. 189.

(e) Fact that commission's finding in Private Car case, 50 I. C. C. 652, with regard to demurrage on private cars while standing on private tracks of owners, was of a broad and unlimited nature affords no basis for contention that in publishing the rule in accordance therewith, carriers might not include such reasonable and proper conditions as would tend to facilitate its practical application and prevent abuses. It was not only their

right, but their duty to do so. International Agricultural Corp v. A. & W., 93 I. C. C. 189, 191.

(f) Complainant attacked demurrage charges for detention of 10 empty private tankcars at Watsonville, Calif., in Nov. and Dec. 1919 and Jan. 1920 as unreasonable and illegal. The cars were leased to complainant from the California Dispatch Line and were forwarded by that line to complainant at Watsonville. When the cars arrived at Watsonville the sidetrack used by complainant for loading and unloading was occupied, and they were held on the tracks of the S. P. Notice of arrival was given complainant by the carrier, and as space became available on complainants sidetrack, which had a capacity of only two cars, the cars were placed thereon for loading. The demurrage charges were collected for the detention of the cars on the carriers tracks prior to loading. The demurrage tariffs specifically provided that empty private cars stored on carriers tracks would not be subject to demurrage charges provided the cars were not placed or tendered for loading on orders of a shipper. There is no evidence that complainant, the shipper contemplated by the rules, gave any order of placement for loading of the cars, and in the opinion of the Commission the cars were exempt from demurrage until such orders had been given. HELD, demurrages charges attacked illegal, reparation awarded. Jones Bros. & Co. v. Director General 104 I. C. C. 413.

§10½. Reasonableness and Discrimination.

See Discrimination; Reasonableness of Rates.

(a) Complainant attacked demurrage charges of $1.635 charged on 27 cars of ties, shipped from points on the Northwestern Pacific by itself to itself at Albion, Calif., during December, 1919, as illegal and unreasonable. Cars moved to complainant's wharf at Albion, but at time of delivery a part of the wharf where the shipments were to be unloaded was destroyed by a steamer which was driven through the wharf by a storm. The ties remained on the wharf in cars until damages were repaired. The cars could have been unloaded on the wharf at Albion or elsewhere, and the complainant could have thus avoided the assessment of demurrage. HELD, demurrage charges attacked not unreasonable, complaint dismissed. Albion Lumber Co. v. Director General, 92 I. C. C. 297.

(b) A railway company has the right, under supervision of the Corporation Commission, to charge demurrage for the unreasonable detention of its cars, in unloading freight, where such unreasonable detention is attributable to the fault of the consignee. Atchison, T. & S. F. Ry. Co. v. Johnson (Okla. 1924), 225 Pac. 939. (State Shipment.)

(c) Complainant alleged that the charges for the use and detention of foreign cars on its line under the per diem code and car service rules of the American Railway Association as unjust and unreasonable. Complainant has accounted to defendant for car hire, making weekly settlements on an estimated basis, and final settlements monthly, under the rules of the association which require subscriber roads to collect from their nonsubscriber connections an amount equal to the per diem rate. As a common carrier participating in joint rates, complainant is under an obligation to furnish its share of the equipment. This it may do either by purchase or rental. The per diem that complainant pays for car hire is merely equivalent to interest, depreciation, insurance, taxes and other car ownership costs which it would have to bear if it owned the cars used in interline traffic. HELD, defendants practice not unjust or unreasonable, complaint dismissed. Virginia Blue Ridge Ry. v. S. Ry., 96 I. C. C. 591.

(d) Complainant, alleged application since Sept. 1, 1919 of full demurrage charges on cars handled by its line has resulted in the exaction from it of charges which were and are unjust and unreasonable. From 75 to 80% of the traffic of complainants line consists of its own logs moving to the mill at Klickitat. At various times there have been from three to eight independent shippers on the line, and the balance of the traffic consists of shipments, mainly of lumber, made by them. Complainants sawmill is on its line a short distance north of Klickitat, as are its coal bunkers. Complainant and defendant are not parties to joint tariffs. Inbound interline shipments are handled on a combination of locals. Defendant collects the through rate to destination on this basis, and remits to complainant an amount equal to its local charge. On out bound interline shipments complainant collects

its local rate to point of interchange and defendant collects its local rate beyond. The complainant herein performs a line haul service, and not a switching service, and performs no service at all on the majority of its own shipments moving over defendants carriers line. Were it given the demurrage basis asked it would secure practically the free use of trunk line equipment, and its connections would have to pay per diem for the extra free time asked. Such a basis would be more favorable to complainant than straight per diem. The complainant is under duty to perform its common carrier obligation and furnish its share of the equipment. HELD, complainant not entitled to basis of settlement asked for use and detention of cars in its possession, complaint dismissed. Western Pine Lumber Co. v. Director General, 96 I. C. C. 625.

(e) Demurrage charges of $3 per car per day for first four days after expiration of free time, $6 for next three days, and $10 per day thereafter, found unreasonable to extent they exceeded $2 for first four days and $5 thereafter, the uniform scale contemporaneously observed by carriers throughout the country at time of movement. Reparation awarded. Southwestern Milling Co. v. W. & O. D. Ry., 95 I. C. C. 719.

Republic Coal Co. v. C. St. P. M. & O. Ry. Co., 85 I. C. C. 331.

§10⅝. Strikes.

(a) Complainant attacked demurrage charges assessed on cars held for unloading at its plant at Morristown, Minn., during March, April and May, 1920, as unreasonable and unjustly discriminatory. Complainant admitted that they were collected in accordance with the lawfully published tariffs. During the period in which the demurrage charges accrued a switchmen's strike prevailed on defendant and other lines. Because of this strike defendant laid an embargo against all shipments moving from complainant's plant at Morristown destined to Chicago, Ill., and points east thereof. The necessity for this embargo is not questioned. Complainant contended that the strike and the embargo prevented it from making outbound shipments and thereby prevented the unloading of inbound shipments. The record does not show that defendant refused to furnish cars for shipments to other points than those under embargo, and defendant contended that complainant might well have stopped cars from arriving at its mill before the storage capacity became exhausted or diverted cars to other points. The applicable demurrage tariff provided that a party who entered into an average agreement should not be entitled to a refund of demurrage charges under the so-called bunching rule. There was no evidence in this case to show that the cars arrived in accumulated numbers in excess of daily shipments. HELD, demurrage charges attacked not unreasonable or otherwise unlawful, complaint dismissed. Big Diamond Mills Co. v. C. G. W. R. R., 92 I. C. C. 709.

(b) Complainant attacked demurrage charges of $96 exacted between June 15 and June 30, 1920 on various commodities consigned to Maurer, N. J.,as unreasonable, unjustly discriminatory unduly prejudicial and inapplicable. Complainant takes delivery of inbound loaded cars on interchange tracks within its plant and performs the movement there from. The capacity of these interchange tracks is about 40 cars, and the working capacity of complainants yard for cars from defendant is about 40. From April 10 to 27, 1920, there was a strike of defendants yard employees. During the period from June 15 to June 21 there was a strike of laborers in complainants plant. The demurrage asked to be refunded accrued after June 15. On the morning of June 15 there were 11 cars of all commodities in complainants yard, and 72 cars for complainant were being held in defendants yard at Perth Amboy N. J., about 1 mile from Maurer. It is not reasonable to assume that on the date of the strike at complainants plant and for several days thereafter defendant should have issued placement notices arbitrarily, or that complainant, after receiving such notices, should not take action to have cars delivered if it was in position to receive them. Until June 22 complainant acquiesced in the constructive placement of the cars, as it concedes that it received due notice of constructive placement. HELD, complainant requested defendant to stop delivery of cars to it from June 15 until further notice of June 18 as to coal and June 22 as to all commodities. HELD, demurrage charges attacked not inapplicable or otherwise unlawful, except charges resulting from defendants failure to place 6 cars each on June 18, 19,

and 21 and 14 cars of June 30 were inapplicable and should be refunded, complaint dismissed. Barber Asphalt Paving Co. v. L. V. R. R., 112 I. C. C. 41.

II. PUBLICATION AND TARIFFS.

See Storage §3; Tariffs.

§10¾. In General.

(a) Proposed amendment to tariff rule providing for exemption from demurrage rules of empty cars placed for loading coal at coal mines, coal-mine sidings, and coal washers, or coke at coke ovens, so as to make that exemption inapplicable at by-product coke ovens which are not adjacent to coal mines or operated in conjunction therewith, found not justified. Proposed amendment makes a distinction between by-product coke ovens and other coke ovens which are not operated in immediate vicinity of the coal mines, and no reason appears why a by-product oven should be treated differently from a beehive oven if both are similarly situated and are subject to car-distribution rules in lieu of demurrage. Moreover, provisions of this amendment are not so clearly stated that misinterpretation and confusion in applying them could be avoided. Demurrage Rules on Coal and Coke, 89 I. C. C. 230.

(b) Railroad yard leased by Hay and Grain Exchange for benefit of its members, even though not strictly private, was "other than a public delivery track," within demurrage tariff. Granger v. Davis, 2 Fed. (2d) 695.

(c) Yard in which congestion causing delay occurred HELD private yard of Hay and Grain Exchange, of which consignees were members, and not general railroad facility, within rules published in demurrage tariff, relating to demurrage where car has been consigned to "other than a public delivery track." Granger v. Davis, 2 Fed (2d) 695.

(d) Where demurrage rates charged by carrier against coal exchange, as general consignee, were based solely on its tariffs, recourse to rules and regulations of exchange to determine amount of demurrage was not necessary, and it was not necessary for the rules and regulations of the exchange relating to demurrage charges to be filed with the Interstate Commerce Commission. Smokeless Fuel Co. v. Chesapeake & O. Ry. Co. (Va., 1925), 128 S. E. 624.

(e) Right of carrier to make demurrage charges is not mere matter of contract between it and a coal exchange as general consignee, but is to be determined by published tariff, and carrier has no choice in matter, nor could it waive such right. Smokeless Fuel Co. v Chesapeake & O. Ry. Co., (Va., 1925), 128 S. E. 624.

(f) Complainant attacked demurrage, loading and unloading charges amounting to $62 which were advanced by defendants as illegal and unreasonable. On Aug. 23, 1922 complainant shipped a carload of lumber from Wausau, Wis., to Stillwater, Minn. On Sept. 8, 1922 it was accepted by the consignee and freight and demurrage charges paid. The consignee becoming dissatisfied with the lumber, it was reloaded by it and shipped to Bay City, Mich., on Nov. 18, 1922. The defendant thereupon advanced to the consignee at Stillwater $62, which amount represented demurrage charges of $38 and the consignees unloading and reloading charges of $24. Upon arrival of the shipment at Bay City, these charges, in addition to the freight charges, were paid to the P. M., by the consignee at that point and deducted from complainants invoice for the lumber. The real issue is whether under the tariffs defendants were authorized to advance the charges of $62 collected at destination. The evidence shows that the movement from Stillwater to Bay City was a separate and distinct shipment by complainant under a new bill of lading, and obviously no legitimate charges of a connecting rail line attached to such shipment, nor does the tariff authorize the advancement of the charges attacked. HELD, shipment overcharged $62, refund ordered. Heineman Lumber Co. v. C. St. P. M. & O. Ry. 107 I. C. C. 62.

§11. Obligation to file.

(a) Charge for demurrage is on same footing as any other charge in connection with transportation, and was properly included in schedule required to be filed with Interstate Commerce Commission and published under Hepburn Act June 29, 1906, §2, pars. 1, 7 (U. S. Comp. St. §8569, pars. 1, 7), amending Interstate Commerce Act, §6, pars. 1, 7, and Federal Control Act March 21, 1918, §10 (U. S. Comp. St. Ann. Supp. 1919, §3115¾j). Davis Agent v. Keystone Steel & Wire Co., (Ill., 1925) 148 N. E. 47.

(b) Complainant attacked charges

on one car of pine lumber from Brooklet, Ga., April 8, 1918 to South Camden, N. J., as illegal, in that an authorized stake weight allowance was not made and that a demurrage charge of $70 was improperly assessed for detention in transit. Applicable joint rate was collected and is not attacked. Shipment originated on the Midland, which was not under federal control. That line hauled it to Savannah, Ga., for movement beyond over lines under federal control, billing demurrage charges of $70 as advances. Complainants sworn statement, not rebutted, is that any detention which may have occurred on the Midland was for the purpose of readjusting the lading and was a detention for which neither the consignor nor the consignee was responsible; and that the demurrage charges were collected without tariff authority. HELD, defendant illegally collected the demurrage charges, reparation awarded. Yellow Pine Co. of Phila. v. Director General 104 I. C. C. 371.

IV. DEMURRAGE RULES.
